The Commerce Department's Bureau of Statistics publishes a statement showing, by comparisons of average import prices, that prices have increased elsewhere as well as in the United States. These import prices are the wholesale rates in the countries from which the goods come. When those of this year are compared with those of ten years ago, the increase—especially with respect to coffee, rubber, flax, clothing, wool, tin plate and certain other commodities—is seen to be very large. But everybody knows that the cost of living has been rising abroad as well as here. Evidence of the effect of this advance has been seen in the discontent manifested in various ways in European countries. It was shown in last week's questions and debate in the German Reichstag.

In a statement recently prepared, the Treasury Department at Washington points to a slight decline in the average ad valorem rate of the tariff, this rate having fallen from 43.15 per cent., in the last year of the Dingley duties, to 41.52 in the first and 41.22 in the second, year of the Payne-Aldrich law. These are correct figures, of course, but they will have little weight with those Americans, a great number, who think that the increased cost of living is due to the Republican party's revision of the tariff in 1909.

We suspect that the leaders of that party do not realize how great an issue this will be in the approaching national campaign. If they did they would be trying to convince the people that the higher cost of living is due to something else, and would be striving to show what this something else has been.

## The Stock Market

THERE was a dull market on the New York Stock Exchange last week until Friday, when, on the news (made known late the day before) of the Government's suit against the Steel Corporation, there were large transactions at a considerable loss, the total rising to 1,365,000 shares, more than half of which were Steel stock. The fall of Steel that day was 8½ points, to 50, the lowest price of the year, with a recovery to 52½. On Saturday the market was comparatively quiet, Steel gaining a little, but its loss for the week was 7 points. Steel shares were 42 per cent. (1,191,000) of the week's trading; transactions in Steel, Reading and Union Pacific were 66 per cent. of the total. Railroad declines were small, as a rule; industrial issues suffered greater loss in sympathy with Steel. Reports as to the condition of general trade were favorable, on the whole, showing a little gain. Iron and steel prices continued to show a downward tendency. The proposed reduction of ore freight rates from the Minnesota mines will range from 40 to 80 cents on the quantity of ore required to make one ton of iron.

....This year's apple crop is about 30,000,000 barrels. It exceeds last year's by 20 per cent. One-sixth of it is in the State of New York.

....The Norfolk & Western Railway, a majority of whose common stock is owned by the Pennsylvania Railroad, has increased its dividend rate from 5 to 6 per cent.

....The Mexico Light and Power Company, which supplies power for the Mexican capital from a distant hydro-electric plant at Necaxa, is about to increase its output by 30,000 horse power, and to construct electric interurban railways from the capital to Puebla, 129 miles, and to Pachuca, 94 miles.

....The mining enterprises organized and promoted by Julian Hawthorne, novelist, son of Nathaniel Hawthorne, are under investigation by a Federal grand jury in New York, owing to an inquiry begun some time ago by the post office authorities. For these enterprises Mr. Hawthorne prepared and circulated well written and alluring prospectuses.

VOL. LXXI NEW YORK, THURSDAY, NOVEMBER 9, 1911 No. 3284

## Survey of the World

**Our Naval Show**

One hundred and two warships of the United States navy, including twenty-four battleships, having assembled in the Hudson River, off New York City, under command of Rear-Admiral Osterhaus, were reviewed last Thursday by President Taft. The fleet afforded a striking contrast with the squadron of twelve ships which represented the United States in the Columbian celebration of eighteen years ago, or the fleet reviewed by Admiral Dewey off Tompkinsville on his return from the Pacific Ocean. On November 1 Mr. Meyer, Secretary of the Navy, and the Senate and House committees on Naval Affairs inspected this, the most powerful American fleet ever collected. On Sunday the ships had been visited by an immense throng of visitors, while hundreds of thousands circled the fleet in excursion steamers or conned it from Riverside Drive. Navy men are keenly interested in the possibility of the hydroplane as an adjunct to their service, and flights were made last week. On Monday there was a boat race between sixteen twelve-oared cutters from the battleships. Each of the big warships has its football team, and these have taken frequent practice ashore, culminating in a championship game between the "Connecticut" and the "Nebraska" on Monday. Monday and Tuesday evenings the fleet was illuminated, and on Monday night there was a searchlight drill. An effort was made to bring about the attendance of as many Congressmen and Senators as possible at the inspection. It is said that the naval show was arranged by Secretary Meyer to stir up popular and Congressional interest in this branch of the service, and to make possible legislation providing for an increased naval force, and specifically an increased number of officers and men. It is asserted in naval circles that our ships are undermanned. "It's a good navy, but we're wasting money if we don't have a better," said Mr. Taft, after reviewing the fleet from the bridge of the "Mayflower." At the late review at Spithead, where only 30 per cent. of the British navy was on show, there were one hundred and sixty-seven ships in line, including thirty-two battleships.

**The President**

From New York Mr. Taft went on Thursday to Hot Springs, Va., where he remained four days, spending some of his time at work on his annual message to Congress. The message will, in great part, be devoted to tariff reform, with reference to the forthcoming report of the Tariff Board on the wool and cotton schedules. He will also discuss the trust question, and recommend the enactment of the Federal Incorporation bill, drawn up and presented to Congress two years ago.—— Mr. Taft's tour is the longest ever taken by an American President, aggregating 13,436 miles. This exceeds Mr. Taft's earlier record by 500 miles. And before returning to Washington, November 12, the President will add 1,800 miles to the record. He has passed thru twenty-six States, and made speeches in twenty of them. He has met the Governors of all these States, and also twenty-seven Senators, six of them being Democrats and seven acknowledged insurgents. He has also met seventy-seven members of the other House. Mr. Taft has been "on the road" fifty-four days since he left Beverly, Mass., and started West, and he

has made 300 speeches. According to the record kept by Mr. Hilles, his secretary, he has addressed more than one and a half million persons, and been seen by about five million. He has been in constant communication with Washington, his secretary receiving some five thousand letters and telegrams en route.—— At Fremont, Neb., Champ Clark lately declared that "nine-tenths of the people of this country favor the annexation of Canada," and he doesn't care who hears him say it.

"I am willing," he said, "to make this proposition. You let me run for President on a platform calling for annexation of Canada, in so far as this country can accomplish that end, and let President Taft run against me, opposing annexation, and I would carry every State in the nation."

The Speaker said also that the Republican party would have two Presidential candidates in 1912, it being his opinion that Mr. Taft would be renominated and that the insurgents would split away and name Senator La Follette. —— The President has stirred up widespread sentiment for the arbitration treaties with Great Britain and France, and won assurances of support from many Senators formerly hostile to them, in consequence of his swing round the United States.

**Panama Canal Tolls**

Reports from Washington say that the Progressives in Congress will exert their influence at the coming session to make tolls on the Panama Canal as low as possible, in order that competition with the transcontinental railroads may be promoted. It is pointed out that Mr. Taft said at San Francisco that either there should be no charges for American ships, "or, if that cannot be done under the treaty, that they should be met by a contribution from the Treasury amounting to as much as the tolls will be." Speaking at Minneapolis, on the 25th ult., he said:

"Then there is the question of tolls. We have agreed that we will charge equal tolls to all countries and there arose the question how far we may favor our own vessels between coast and coast, as we exclude vessels of any other country from that trade. It seems to me of the utmost importance that we should make that canal a means of affecting beneficially to the great public interest the trade between the two coasts. I have no idea that it is going to break up the railroad transcontinental trade. It will do a business that the transcontinental lines cannot do, and it will do a business that will bring the two coasts so much more closely together that if that were the only benefit it would justify construction. We have invested $400,000,000, and we ought to put the canal as soon as we can on a reasonable paying basis, but it is better a great deal that we should get our benefit from the canal indirectly than that we should impose tolls which would limit its usefulness."

Those who oppose remission of tolls to American ships, by rebate from the Treasury or otherwise, assert that it would be a violation of the Hay-Pauncefote treaty, which declares that the canal shall be "free and open to the vessels of commerce of all nations, on terms of entire equality, so that there shall be no discrimination against any nation, or its citizens or subjects, in respect to conditions or charges of traffic, or otherwise."

**Various Items**

The Lorimer investigating committee had heard 2,500,000 words of testimony up to October 29, and no end is in sight. While it continues sitting in Chicago, the expense is about $750 daily. ——Mr. Lorimer is to be denied service upon the Republican national committee. ——Calbraith P. Rodgers reached Pasadena, Cal., Sunday afternoon, and planned to reach the coast Monday. His flight has covered over 4,200 miles; his flying time to Sunday, inclusive, was 4,924 minutes. The aviator left Sheepshead Bay, New York, September 17. His ocean-to-ocean flight has been made in a Wright biplane of less than standard size. The aviator is in his thirty-third year; his experience in flying dates only from July, 1911.

**Cuba and Other Islands**

The work of the excavators in and around the wrecked battleship "Maine" is nearly finished, and the final inspection by a board of officers will soon take place. All indications continue to confirm the opinion of the original board of inquiry that the ship was destroyed by an external explosion.——Cuba's Association of War Veterans persists in demanding the removal from office of men who were hostile to the forces that fought for independence. It issued a manifesto last week, but this was more moderate in tone than the resolution sent

to President Gomez week before last. ——The sugar crop, which has escaped injury from cyclones, will be very large, between 1,600,000 and 1,700,000 tons, and will be sold at high prices.——Immigrants coming to Cuba from the Canaries, Spain and elsewhere are favored by the care of the Government, which places them on farms or plantations. ——Santo Domingo has granted a valuable concession to an American, who, by means of a dam across the Yaque River, will produce electric power for use in Puerto Plata, Santiago, La Vega, Moca and the capital.—— Fire swept thru the Chinese district of Manila, on the 2d, causing a loss of $1,000,000. The commercial center of the city was saved only by the work of American soldiers.

**Nicaragua's Currency Loan**

Nicaragua's currency is to be reformed under the direction of Charles A. Conant, of New York, who reorganized the currency of the Philippine Islands, and Francis Harrison, of London, formerly manager of the Paper Currency Department of British India. They will soon sail for Central America. Nicaragua has obtained a loan of $1,500,000 from Brown Brothers & Co. and J. & W. Seligman & Co. This money will be used for the work, and a national bank, under American control, will be established. The same bankers will increase the loan to $15,000,000 if our Senate ratifies the loan treaty now pending.——The Government of Honduras has won two battles with revolutionists commanded by Ocho Velasquez, formerly a member of the Cabinet; but it is reported that a large number of rebels, led by General Carias, are invading the country from Salvador, with the aid of many exiled supporters of Zelaya, the deposed President of Nicaragua. Both Honduras and Guatemala have demanded that Salvador shall either deport or imprison the many resident exiles who, it is asserted, are fomenting revolutions in each of the complaining countries. It is said that Guatemala has assembled an army on the border of Salvador. Revolutionists in Honduras protest against the rule of Manuel Bonilla and object to the proposed American loan.

**Old and New in Mexico**

Congress decided, last week, that the inauguration of Madero should take place on the 6th inst. The official count shows that Suarez, for Vice-President, had only 54 more than half of the whole number of electoral votes, which was about 20,000. Madero has suffered in public estimation because of the prevailing belief that he has secretly encouraged Zapata, the bandit leader, who still defies the Government in three States near the capital. Business men in all parts of the country have urged Madero to induce Zapata to lay down his arms. It was said last week that an agent of Madero was negotiating with Zapata and promising to make him military commander in the State of Morelos. General Figueroa, now opposing Zapata, but formerly his associate in the revolution, published a proclamation offering pardon to all Zapatists if they would surrender within fifteen days. Some say that Madero has befriended Zapata because he felt that the bandit's army would be useful if there should be a revolt in the regular army against him and in behalf of General Reyes.—— Prominent revolutionists, in a public meeting and afterward in an interview with Madero, urged him not to take into his Cabinet Ernesto Madero, Manuel Calero and Rafael Hernandez, asserting that these men had been admirers of Diaz and associates of Limantour. He rejected their protest, saying the accused men enjoyed his confidence.——In several parts of the country peace has not been restored. At Torreon, last week, drunken Maderist officers attacked a policeman. After one had been placed in jail, forty Maderists released him. Then there was a clash with the troops, and six Federal soldiers were killed. On the following day the engagement was renewed, with the loss of several lives. General Banderas attacked Sinaloa, drove Colonel Ochoa, the Federal commander, from the town, and with 500 men took possession of it. In Juchitan, near the Tehuantepec isthmus, there was a revolt against the new mayor, the rebels being led by one Gomez, whom he had removed from office. It is reported that nearly 100 were killed by the Federal troops.——Two hundred army officers, it is said, have resigned because of

the favor shown to revolutionist officers, and on account of a recent address, in which Madero spoke of the "detested help of bayonets which served the old regime."——It is asserted that the Pearson oil properties have been sold for about $25,000,000 to the Standard Oil Company. They include a famous "gusher" well, recently opened, from which already 3,000,000 barrels of oil have been taken.

**Colombia's History for Schools**

Colombia has prepared, for use in schools, an official history setting forth its views about the relation of the United States to the secession of Panama. This history accuses the United States of "criminal intent," of procuring the aid of criminals, and of committing, in association with them, "one of the greatest acts of perfidy, violence and rapacity registered in the annals of nations." It has already been adopted as a textbook by the province of Boyaca, where the Director of Public Instruction has ordered that school children be required to memorize the Panama chapter. Mr. Roosevelt is called "the soul of the conspiracy."——In Argentina a Tobacco Trust has been formed by a London syndicate, which has bought, for $21,000,000, fourteen of the eighteen cigaret factories.——Peru's Minister of Foreign Affairs addressed the Senate, on the 4th, in a pessimistic vein, saying that the country must continue to arm itself because complications with Ecuador were foreshadowed, Bolivia longed to acquire a coast line, and Chili apparently had resolved to violate the Ancon treaty concerning Tacna and Arica. Chili has decided to buy another Dreadnought battleship.——Uruguay will adopt the agricultural methods of the United States, and will take from this country six experts and thirty assistants to put these methods in practice. A majority of these men are to be drawn from our agricultural colleges. Uruguay will also, in connection with this undertaking, import $150,000 worth of United States live stock. Victor Benavides, Director of Public Water Works, is in this country studying our irrigation methods, Uruguay having decided to spend $5,000,000 in making a dam across the Negro River, in irrigation, and in improving 185 miles of that stream. He was the director of the port improvements recently completed at Montevideo, the cost of them having been $22,000,000.

**The Invasion of Tripoli**

The Italians have lost ground during the week, both literally and figuratively speaking. Persistent Turkish attacks upon the outposts forced in their lines while the reports of the massacre of Arab prisoners have aroused the indignation of all Europe. It seems that the Italians were deceived in thinking that the Arabs were friendly or at least viewed with indifference the expulsion of their Turkish rulers. On the contrary the Arabs in the desert have taken the leading part in the attempts to recapture the city and those inside the lines attacked the Italians from the rear. The Italian defenses were drawn about Tripoli in a semicircle of about four miles radius, ending at the coast on either side. Between these lines and the city walls there is an oasis containing Arab houses and plantations. The inhabitants were left undisturbed as they were supposed to be peaceful non-combatants. But in the midst of a Turkish attack from the desert the Italians were suddenly fired upon by Arabs sheltered by the buildings and trees behind them. The Italian soldiers, infuriated by this treacherous attack, cleaned out the oasis, taking prisoner all of the Arabs, regardless of age or sex. Many of these were killed immediately without pretense of ascertaining their guilt. Batches of prisoners, including old men, cripples and boys, with their hands bound were driven forward by punches of bayonets and blows with the butt end of rifles and as they were driven into the desert they were shot in the back. At one point fifty men and boys were caught between three walls and slaughtered in a heap. The Italians, officers and men, are reported by eye-witnesses to have taken a fiendish delight in striking and abusing the prisoners. Many of the soldiers had lived in America and English is frequently heard among them as, for example, "Gee! there's another of them darn niggers.

Get a move on, cecco." A German correspondent reports that over 4,000 natives were shot down, among them many women and children. Lieut. Herbert Montagu, an English officer serving voluntarily in the Turkish army, telegraphed via Tunis:

"Imagine my feelings when . . . we discovered the bodies of some 120 women and children with their hands and feet bound, mutilated, pierced and torn. Later on we found a mosque filled with bodies of women and children, mutilated almost beyond recognition. There must have been 300 or 400."

Premier Giolitti denies that any women or children have been killed, and says that the army has carried humanitarian feelings to an excess. The Italians charge the Turks and Arabs with the torture and mutilation of their prisoners, and assert that the women are far worse than the men in their execrable treatment of wounded Italians falling into their hands. The wanton slaughter of non-combatants, including women and children, by the Italians, is, however, attested by several eye witnesses, and photographs corroborate their evidence. The first order issued by General Caneva, commander of the Italian forces, authorized soldiers in charge of officers to shoot all Arabs found with arms, but as this was not effective, the order was extended to include any Arabs who could reasonably be suspected of having borne arms. The soldiers construed this order liberally and for four days ranged the streets shooting at sight.——The Italian lines proved to be too widely extended for safe defense, so an inner line was hastily constructed and protected with barbed wire entanglements, leaving to the enemy the possession of the outer oasis and one or more of the Turkish forts. The Turks advanced their artillery and shelled the city, one shell dropping into the headquarters of General Caneva. The Italians are said to have lost over a thousand men in killed and wounded, and there have been many deaths from cholera and other diseases. ——King Victor Emmanuel, in a decree signed November 5, announces that "Tripoli and Cyrenaica have been definitely and irrevocably placed under the full and entire sovereignty of Italy."

**The Moroccan Question Settled**

On November 4 the agreement between France and Germany in regard to their African possessions was signed at Berlin by Minister of Foreign Affairs Herr von Kiderlen-Waechter and Ambassador Cambon. In brief it may be said that Germany gives France a free hand in Morocco in exchange for a portion of French Kongo. The German territory of Kamerun is extended southward to a point below Spanish Guinea, at Mondo Bay, on the southern part of Corisco Bay, just north of the French port of Libreville. The new boundary runs eastward from this point to the Sanga River and down this to the Kongo River. Here Germany gains a frontage of 6 kilometers (3.7 miles). Then the line parallels the Ubangi (Mobangi) River, but keeping a few miles to the westward of it until Bangui is reached, and here again the Germans secured enough of the shore line for a trading station. From this point the boundary line runs northwestward to the Logone River and follows this to or near Lake Chad. This gives France that portion of Kamerun lying between the Shari and Logone rivers commonly known, from its peculiar shape, as the "duck's bill." Contrary to expectation, nothing is said in the treaty about a cession of the northern extremity of German Togoland. The territory ceded by France in the Kongo has an area of about 96,500 square miles, containing about a million inhabitants, and has a commerce now valued at $2,400,000 a year. The advantages of these concessions are discussed in our editorial columns. Three of the fourteen articles of the convention deal with the rights of France in Morocco and the next nine articles provide in detail for safeguards and guarantees to protect the commercial and economic opportunities of other countries. Germany virtually concedes to France the privilege of establishing a protectorate over Morocco at any time in the future, altho the word is not used. The Moroccan National Bank, the customs service and state railroads will have representatives of other Powers on their governing or auditory boards. Foreign owners of

mines, farms and factories will have the right to build railroads connecting with the state lines or seaports. Disputes between foreign citizens are to be adjudicated by the consuls of the countries involved, and if they are unable to agree, an appeal may be made to the French consul.——The agreement is more favorably received in France than in Germany. Senator Clemenceau, who was intending to attack the Government on this issue, declares it quite satisfactory, considered altogether. The German expansionists are furious at being crowded out of Morocco, long the object of their exprest ambitions. Dr. Lindequist, Secretary of State for the Colonies, and Herr von Danckelmann, Councillor of the Colonial Office, have resigned on account of their dissatisfaction with the concessions made by the German Government.

**China's Constitution**

The preliminary draft of a constitution as drawn up by the National Assembly and accepted by the Throne on November 3 is given below. It follows in general the plan promulgated by the late Emperor in the edict of August 27, 1908, but limits still further the imperial prerogatives in articles 10 and 14 relating to his powers over military and financial affairs. It is modeled after the Japanese constitution, but is more democratic. Since this is the plan which has been under discussion for many years and has met with most general approval among the reformers, it is probably about what will be ultimately adopted, unless, of course, the republican movement in the south becomes so strong as to sweep away the monarchy altogether. The outbreak of the rebellion, tho it has destroyed the power of the Manchu princes, has upset the plans of the constitutional party, which was working for the gradual and peaceful transition to a limited and constitutional monarchy. The constitution, which the Emperor promises to issue on yellow paper and swear to in the temple of his ancestors, reads as follows:

"1. The Emperor shall reign forever.

2. A person of the Ta Ching dynasty (the great pure dynasty, the same being the name adopted by the ruling family) shall be Emperor inviolable.

3. The power of the Emperor shall be limited by the Constitution.

4. The order of succession to the throne shall be prescribed by the Constitution.

5. The Constitution shall be drawn up and adopted by the National Assembly and promulgated by the Emperor.

6. The power of amending the Constitution shall belong to Parliament.

7. The members of the upper house shall be elected by the people from among those particularly eligible.

8. Parliament shall elect and the Emperor shall appoint the Premier, who will recommend the other members of the Cabinet, who shall also be appointed by the Emperor. The imperial Princes will be ineligible for the office of Premier or members of the Cabinet or administrative heads of the provinces.

9. If the Premier, when impeached by Parliament, does not dissolve Parliament, he must resign. One Cabinet shall not be allowed to dissolve Parliament more than once.

10. The Emperor shall assume direct control of the army and navy, but when this power is used in connection with internal affairs the Emperor must observe special conditions to be decided by Parliament.

11. Imperial decrees cannot be issued to replace the law except in the event of urgent necessity, in which case they may be issued in accordance with special conditions.

12. International treaties shall not be concluded without the consent of Parliament, but a treaty for the conclusion of peace or a declaration of war may be made by the Emperor if Parliament is not sitting, the approval of Parliament to be obtained afterward.

13. Ordinances in connection with the administration shall be settled by acts of Parliament.

14. In case the financial budget fails to receive the approval of Parliament, the Government may not act upon the budget of the previous year, nor may items of expenditure, not provided for in the budget, be appended thereto. The Government shall not adopt extraordinary financial measures outside the budget.

15. Parliament shall fix the expenses of the imperial household and any increase or decrease therein.

16. Regulations in connection with the imperial family must not conflict with the Constitution.

17. The two houses shall establish the machinery for the administration of the court.

18. The Emperor shall promulgate the decisions of Parliament.

19. The National Assembly shall act upon Articles 8, 9, 10, 12, 13, 14, 15 and 18 until the opening of Parliament."

**The Child Emperor's Confession**

The Imperial Government, now thoroly frightened, is making concessions on all points. Edicts have appeared in rapid succession during the week, sometimes several in one day, granting various demands of the Na-

tional Assembly and the army, and asking for further suggestions, which the Government pledges itself in advance to grant if they are in accordance with public opinion. The edict in which the Emperor Hsuan Tung surrenders the autocratic authority enjoyed by his predecessors from time immemorial and grants a constitutional government to his people, still maintains in its wording the assumption that he is personally responsible for all that has been done in his name. The pathetic language ascribed to the five-year-old Emperor must be quoted at some length:

"I have reigned three years and have always acted conscientiously in the interests of the people. But I have not employed men properly, as I am without political skill. I have employed too many nobles in political positions, which contravenes constitutionalism.

"On railway matters one whom I trusted deceived me. Hence public opinion was antagonized. When I urge reform, officials and the gentry seize the opportunity to embezzle. Much of the people's money has been taken, but nothing to benefit the people has been achieved.

"On several occasions edicts have promulgated laws, but none of them has been obeyed. The people are grumbling, yet I do not know. Disasters loom ahead, but I do not see.

"The whole Empire is seething. The spirits of our nine deceased Emperors are unable to enjoy the sacrifices properly, while it is feared that the people will suffer grievously.

"All these things are my own fault, and I hereby announce to the world that I swear to reform and with our soldiers and people to carry out the Constitution faithfully, modifying legislation, promoting the interests of the people, and abolishing their hardships, all in accordance with their wishes and interests. The old laws that are unsuitable will be abolished. The union of the Manchus and Chinese, mentioned by the late Emperor, I shall carry out now. Finances and diplomacy have reached bedrock.

"Even if all unite, I still fear that we may fall. If the Empire's subjects do not regard and do not honor fate, and are easily misled by outlaws, then the future of China is unthinkable. I am most anxious day and night. My only hope is that my subjects will thoroly understand."

**Shanghai Insurgent**

The native city of Shanghai, at the mouth of the Yang-tse, was seized by the revolutionists on November 3 and the forts surrendered without resistance on the following day. There was a slight skirmish in the capture of the arsenal but otherwise little disorder. The white flag of the rebels was promptly displayed everywhere and soldiers, police and populace now wear white badges on their arms. A dozen coolies in a sampan, steered by an old woman, went out to the two gunboats in the river and demanded their surrender and the white flag was accordingly hoisted in the place of the dragon banner. At the arsenal a rifle and a box of cartridges was given to every man who applied. Several thousand volunteers were thus armed, most of them students and clerks. No animosity is shown to foreigners. The station of the Nanking-Shanghai Railroad was occupied by British troops altho it is outside the foreign concession, but they were afterward withdrawn when it was found that the revolutionary authorities were able to maintain order.——Yuan-Shi-Kai has accepted the responsibility of negotiating with the rebels and has gone south for that purpose, but he continues to refuse to serve as Premier. A second edict assures him that he has everybody's confidence and orders him not to decline the premiership any more. Tang-Shao-Yi likewise refuses to take the office of Minister of Communications in the new cabinet.——The fighting at Han-kow the last days of October resulted in the destruction of most of the native city by fire and in the slaughter of thousands. The imperial troops, when they recaptured the city swept thru the streets with a ferocity that spared neither women nor children. The Wesleyan mission in the track of flames was consumed and the patients in the women's hospital and the blind boys from the asylum were barely got out of the buildings and on to the lawn in time to save their lives. The inmates, numbering 300, spent the night huddled together on the grass, scorched by flames, and under the fire of the imperialists and rebels.——Admiral Sah's gunboats, after setting Han-kow on fire with their shells, dropped down the river out of ammunition and provisions. When they arrived at Wu-sung and Shanghai they were astonished to find these ports in the hands of the revolutionists.——Every day new cities are reported to have declared for the republic. Among the latest important accessions are Su-chow, Han-chow, Wu-hu, and Ning-po. In the provinces of Shansi, Shensi, Hu-nan and Sze-chuan the revolutionists are gaining ground.

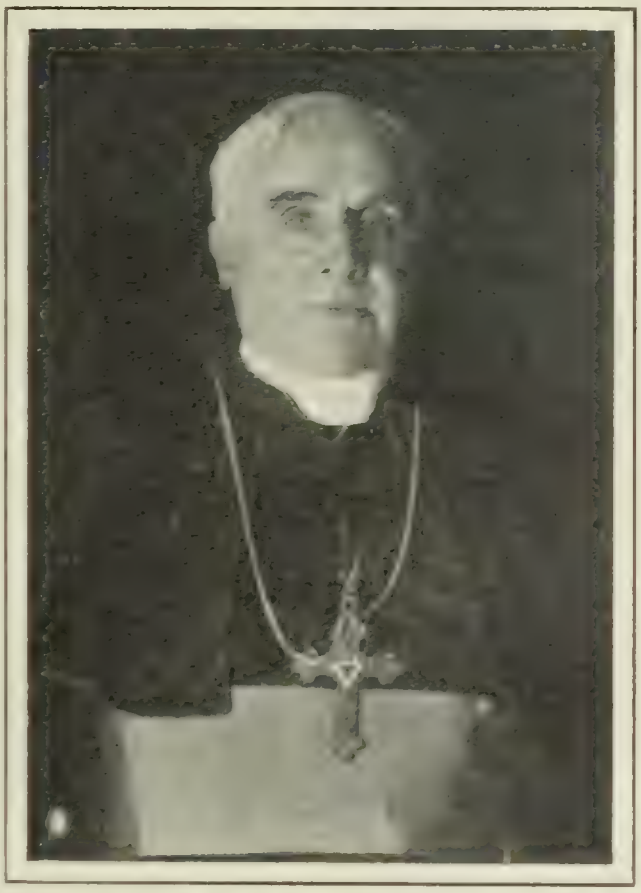
# Our Three New Cardinals

BY JAMES J. WALSH, M.D., Ph.D.

[We have asked Dr. Walsh, who is well known to our readers, to write on the appointment of the three new American Cardinals. He is a personal friend of all three, and has known Cardinal Farley and Cardinal O'Connell for over fifteen years. Dr. Walsh is Dean of the Fordham University School of Medicine, and has for some years been Professor of Physiological Psychology at the Cathedral College.—Editor.]

THE appointment of three Americans, out of the seventeen new Cardinals created for the Sacred College at Rome, shows the position that the Catholic Church in America has gradually come to occupy in the minds of ecclesiastical rulers at Rome. When it is recalled that at the foundation of our Government there were altogether probably less than 30,000 Catholics out of 3,000,000 people, less than one in one hundred, while there are now probably 16,000,000 out of less than 100,000,000, something more than one in six of our population, it will be readily understood that a corresponding change in the position of the United States in the attitude of those in authority might be expected. With four American Cardinals, the American Church may now be expected to wield the influence due to it, because of its rapid growth and present position.

The three American Cardinals are men of very individual and quite contrasting characters. They are all devoted churchmen, yet of extremely different dispositions. Nothing would show more clearly that it is not men of any one type who are chosen to be the hinges on which the great work of Church administration swings, if we accept the derivation of the word for cardinal from the Latin word for hinge, but that men are chosen quite regardless of their personalities if only they have demonstrated their thoro Christian spirit, their administrative ability, and their power to conduct large affairs to an issue worthy of the Christian Church. There has been no exhibition of any unworthy ambition or self-seeking on the part of any of these men. They have done the work they had to do with thorogoing devotion and with simple directness. They have been advanced from one post to another in the Church with confidence, because the last work they had to do had been so successfully conducted. Having managed smaller things they have been placed over higher, until now their appointments to the highest position in the Church comes very naturally and is only what has been expected for some time. All three of them are known as men whose interior lives are as interesting to those who from their duties necessarily know something about them as their exterior accomplishment has made them of interest to the people around them.



## Cardinal John M. Farley

For New Yorkers of course the most interesting feature of the recent announcement from Rome was the elevation of the Archbishop of New York to the College of Cardinals. As the Archbishop of one of the largest and most populous dioceses in the world, with a Catholic population of nearly 2,000,000 —for it must not be forgotten that his jurisdiction includes not only Manhattan, the Bronx and Richmond, but all the towns up the middle Hudson and to the east and west of it as far as the Connecticut and Pennsylvania lines, Dutchess, Orange, Putnam, Rockland, Sullivan, Ulster and Westchester counties and the Bahama Islands—it has seemed for some time almost inevitable that Archbishop Farley should be made a Cardinal. His whole career pointed to such an honorable culmination, for he has accomplished every work that his hand was set to with noteworthy success and with a lack of friction that has become a characteristic of all that he does. There is so little manifestation of energy except in actual accomplishment that the onlooker scarcely realizes how much is being done until after some years the finished product proves to be of great significance. A friend once said that his action was like

a bit of nature's own work, accomplished entirely without fuss yet with admirable efficiency.

Cardinal Farley was born April 20, 1842, in County Armagh, Ireland, and received his early education in Macarten's College, Monaghan County, Ireland. He did not come to this country with his parents until he was about seventeen, and then entered St. John's College, now Fordham University. After his graduation he went to the provincial seminary at Troy, where his successful scholarship attracted the attention of Cardinal McCloskey, who sent him to Rome to complete his studies in theology. He was ordained priest in Rome in 1870, at the age of twenty-eight. The celebration of the fortieth anniversary of his ordination was an important event in the history of the archdiocese of New York. On his return to this country he was assigned for duty at St. Peter's Church, Staten Island. At the end of two years, however, he was chosen as the secretary of the Archbishop, a post that made him familiar with all the administrative details of the archdiocese and gave him many opportunities to meet distinguished ecclesiastics both in this country and in Europe while in attendance on the Cardinal. In 1884 he was made a private chamberlain to the Pope, with the title of Monsignor. He then became the pastor of St. Gabriel's Church, in East Twenty-seventh street, New York.

He was offered the position of president of the American College at Rome, of which he was a distinguished graduate, but he had become so indispensable that he could not be spared from New York. Successively, then, he reached higher dignities in the Church, being made Vicar General, Domestic Prelate, Prothonotary Apostolic, and then Auxiliary Bishop to Archbishop Corrigan, who had succeeded Cardinal McCloskey. During the ten years while these dignities were coming to him, his work as the pastor of St. Gabriel's Church was full of the deepest spirit of Christianity. No member of his parish was neglected, and he was especially careful of the needs of the poor and the education and provision of incentives for the children. His parochial schools became models and his parish itself developed in every phase of its church life until priest and people were most thoroly in sympathy.

THE MOST REVEREND JOHN M. FARLEY
Archbishop of New York

Cardinal Farley has been particularly successful as the patron of education and of the intellectual life of his diocese. His parish schools at St. Gabriel's were the first marvelous fruits of his power to inspire educational advance and progress. With his appointment as Archbishop came the foundation of the Cathedral College, which provides undergraduate courses for young men who are to study for the priesthood. This has succeeded wonderfully, not only in point of numbers, but in the standards that have been maintained and the thoroness of the work done. There is probably no college in which a higher seriousness of purpose prevails or better work is done. Tho scarcely more than half a dozen

years old the college has over four hundred students on its rolls. The Diocesan Seminary, at Dunwoodie, the creation of Archbishop Corrigan, the predecessor of Cardinal Farley, has been developed and enlarged with an important addition to its buildings and with additions to its faculty that make it one of the most important institutions of its kind in this country.

It was largely owing to Archbishop Farley's interest, to his personal appeals to prominent Catholics, and to his own contributions toward its capital, that the Catholic Encyclopedia was originally begun and has been carried on so successfully. There is no doubt now that it is to be not only a great literary and educational success, but that it will reap also a financial success to demonstrate the wide popular interest aroused in it. During the Archbishopric of Cardinal Farley, St. John's College at Fordham, of which he is a distinguished alumnus, developed into a university under his patronage and with his encouragement. That it now has over 1,000 students on its rolls, nearly one-half of whom are in the graduate departments of law and medicine, shows how Catholic educational interests have developed in the great archdiocese under his care.

Cardinal Farley's power to accomplish things has been due to his wonderful influence over men. A steady, quiet, untiring, efficient worker himself, he has aroused others to work as few men are capable of doing. He has known how to choose men, to encourage them, to bring out the best that is in them, and so has made them as efficient as himself. Deeply charitable, the poor and children have been the two great interests of his life. He has been for many years the director of the Society of Saint Vincent de Paul in New York, encouraging it in the work of personal service for the poor, which means so much. He has felt that life is service, and has given himself unsparingly, thinking for others, feeling for others, doing for others.

To know him is literally to love him. He is one of the most courteous and kindly of men, with an ease of manner that makes it hard to understand how he is able to accomplish so much. Those who know his closest friends, know that they are all the hardest of hard workers. It is this sort of man that above all appeals to him, and his consultors and advisors are all men noted for their power to get things done. Hard work does not deter them, as it never did the Cardinal himself at any stage of his career.

Tho approaching his seventieth year the Cardinal is hale and hearty, and does not at all look his years. Probably one of the greatest surprises in the midst of the announcements of the new dignity, even for many of his friends of long standing, has been to find from the sketch of his life that he was almost three score and ten. He has many years of usefulness before him. His new dignity will only enable him to use his added prestige and influence in the Church for the great causes of Catholic education and of Catholic social service, to which he has been devoted all his life. All over the country his selection as Cardinal has met with the heartiest response and the most cordial congratulations. He deserves them all, tho he will take them as modestly as he has every other distinction that has come to him, and will continue to labor with the same simple directness and successful thoroness that has always characterized his work.

## Cardinal Diomede Falconio

Cardinal Diomede Falconio might seem, from his foreign name, scarcely to deserve the title of an American Cardinal. We are all so comparatively new here in America, even those who can trace their descent for five or six generations, that surely a man who voted for President of the United States in 1872, and who had been here for nearly ten years before that, must be considered an American. Cardinal Falconio was born in 1842 in Italy, and at the age of eighteen became a Franciscan. A few years later he came to this country to teach the classics at St. Bonaventure's College, Allegheny, Cattaraugus County, New York. After his ordination he spent some years as assistant parish priest in St. Anthony's parish, in Sullivan street, New York City, where the growing colony of Italians had just been founded. Later he became a president of St. Bonaventure's College, and here his administrative ability manifested itself. In the course of subsequent duties he was sent to Newfoundland to assist the Bishop of

Harbor Grace, where his faculty for administration attracted the attention of his ecclesiastical superiors in Rome, and he was not long after made the Archbishop of an Italian diocese.

His American experience, together with his successful administrative ability, naturally suggested him as a representative of the Pope when difficulties occurred or special arrangements were to be made in Church matters in America. It is said that he was thought of for the position of Apostolic Delegate to the United States when that position was established. The appointment of Cardinal Satolli only meant that Cardinal Falconio's selection was delayed. In the meantime there came the school troubles in the Province of Manitoba, and Archbishop Falconio as the Pope's representative greatly assisted a satisfactory solution. His tact and diplomatic ability in the best sense of that word were commented on very favorably at the time and it was evident that he was thoroly capable and able to bring order out of confusion in delicate situations. His appointment as Apostolic Delegate to the United States was not unexpected, then, and in this new post he has proved to have all the precious qualities that were noted by those who had watched his career with sympathetic eyes before.

He has won the favor of every one with whom he has come in contact. His duties as the representative of the Pope have necessarily brought him into intimate relations with the Presidents of the United States in the last ten years and with prominent members of the Government. He stood high in the estimation of President Roosevelt and is not less highly esteemed by President Taft. Difficult problems in connection with the negotiations over the Friars' lands in the Philippines and knotty questions in connection with the older relations of Church and State in the Philippines and their modification for the new order of things have been largely settled by him. His management in these matters has won the admiration of Americans at Washington and been productive of satisfaction at Rome.

In the questions that have so constantly to be determined in the legal settlement of Church affairs, his thoro going

MGR. DIOMEDE FALCONIO,
Apostolic Delegate to Washington

recognition of rights, and above all, his gentle kindliness and sympathetic humanity, have won golden opinions. The spirit of the gentle Francis, to whose order he belongs, is in him, and has enabled him to win hearts even under trying conditions. He has proved himself deeply interested in all the great movements in the Church here in America, has often graced banquets by his presence and helped large conventions by his readiness to lend the encouragement of his words. What he has had to say has always been simple, straightforward and direct, usually suggesting forcefully the great Christian moral solutions of our social problems, and dwelling rather on the prospect of amelioration of conditions than on the evils that need correction. He has all the charm of the Italian gentleman and that fine courtesy that Marion Crawford familiarized us with in some of his higher Italian ecclesiastics, and that Henry Harland depicted so sympathetically.

His appointment as Cardinal marks his departure from America as the Apostolic Delegate. He leaves many regrets behind and goes accompanied by the best

wishes of all classes of people who have known him here. There is no doubt that in any situation in which he may be placed one can look with confidence for the same tactful, happy administration of affairs, no matter how difficult they may be, that has characterized his career during the last twenty years. In spite of his nearly seventy years he is active, capable, thoro and able to accomplish a great deal of work. Much may still be looked for from him, and there is no doubt that his wide knowledge of the affairs of the Church in all parts of North America particularly will make him an extremely valuable counselor to the Curia at Rome.

## Cardinal William H. O'Connell

The new Cardinal Archbishop of Boston is a much younger man than either of the other newly appointed American Cardinals. He will not be fifty-two years of age until December. He was born in Lowell, Mass., and distinguished himself in his studies early in life. His success as a student at Boston College in the undergraduate department brought him the reward of a scholarship in the American College at Rome. Here he was ordained priest, but remained at the college as prefect for nearly two years, until the end of 1885, when he returned to Boston. Ten years later he was appointed Rector of the American College, where he had graduated. This is an institution founded by bishops of the United States and maintained by them, on property which they were able to secure mainly thru the liberality of Pope Pius IX when he was civil ruler of Rome. It was rightly considered that the education of young men in Rome itself, surrounded as they are by the memorials of more than twenty centuries of history, close to what has been the center of Christendom during all the ages, and in intimate touch with Church matters at the fountain head, would train ecclesiastics of the highest type of scholarship and devotion. This idea has been fully exemplified in the lives of the graduates of the American College at Rome, many of whom have imprest themselves deeply upon the Catholic Church in America. It is easy to understand that the man selected as Rector of the American College is always looked up to as one specially chosen for qualities of mind and heart, and whose career is only just beginning. For five years the present Cardinal continued as President of the American College, and if one wants to know a proper estimate of his character it may be very well obtained from young men now priests thruout this country who were students at the American College at this time. They agree in considering him a man of high spiritual power and intellectual capacity, with abundance of human sympathies. He has administrative ability of a high order, as displayed during his years as college president. During this time he became very well known to the ecclesiastical authorities at Rome, and especially to Pope Leo XIII, that wonderful knower of men and chooser of those who would best serve great purposes.

In 1901 he was chosen as the Bishop of Portland, Maine, and consecrated in the great Church of St. John Lateran, on May 19 of that year. His administration of his diocese proved that the choice had been excellent and that those who had known him in Rome had not been deceived in their estimate of him as an efficient administrator. In 1905 he was chosen by Pope Pius X to go to Japan as a special legate to make arrangements for the appointment of a Vicar Apostolic in that country. His selection proved that he was as highly thought of by Pope Pius X and his advisers as he had been by Pope Leo XIII. His mission to Japan was most successful, and as such missions usually bring ecclesiastical recognition, there was not much surprise when the comparatively young Bishop of Portland was announced as the choice of the Pope for the Archbishopric of Boston.

Here Archbishop O'Connell was given a magnificent scope for his powers as an administrator. The old metropolitan city of New England with its environs has become a great center of Catholicity. In the archdiocese there are probably 1,000,000 Catholics. Archbishop Williams was a grand old man, genial, saintly, fine in all his beautiful ways, but advancing years told against his power to administer this large archdiocese and there was need of a younger man's energy. Archbishop O'Connell has proved just that source of energy that was need-

ed. Already during the short four years since his appointment he has organized over forty new parishes in Boston and has given opportunities for men whose years were being spent as curates to express themselves in the thoroly Catholic organization of their people.

This has not been accomplished without friction. Nothing in the world that really ever gets anywhere proceeds without some friction. Whatever there has been of this useful element in nature has only been just sufficient to enable the movement to get on unceasingly. Older priests with very large parishes have found themselves somewhat shorn of dignity and prestige by the division of these parishes, sometimes into many parts, but the result has been good in every way. The Christian life of the people was made more active, the needs of congregations are better looked to, a more personal, intimate union between pastors and people has come, and in every way there has been growth in the spirit. Above all, younger men have been given opportunities to use the mature, full powers of their early middle age in the organization of parishes and the uplift of their people.

THE MOST REVEREND WM. H. O'CONNELL.
Archbishop of Boston

Some of the work accomplished in this way has been wonderfully well done. For many years now I have had invitations to New England to talk to Catholic organizations of various kinds. What has impressed me above all is the thoro organization of parish work, and the union above all of the men of the parishes with their pastor. In this way work is being accomplished that is charmingly reminidful of the old days of medieval Christianity, when the parish was the unit of Church organization, and when there gathered around a parish church the schools, the guilds, the Church societies of many kinds, the organization of popular entertainment and the best opportunities for the expression of the heart and soul of the people.

This is what is coming back in New England in simply beautiful fashion. It is this parish life that Archbishop O'Connell is ready to foster in every way and has made thoroly possible by the breaking up of large parishes that were too unwieldy for the personal influence of their pastors. Besides, he has been deeply interested in education and especially the education of his clergy, and has been the patron of every mode of intellectual development. There has come a wonderful unification of interests in the archdiocese and a drawing together of all its forces so as to make it solidly one. The most important note of the Church has always been its unity, and living in the midst of populations that wandered away from the Church in the persons of their forefathers four centuries ago because of disunifying principles, it is especially important to emphasize this and it has become the main purpose of the Archbishop's work.

A typical example of Archbishop O'Connell's thoroly practical methods may be seen in the organization of the Guild of St. Luke of Boston and the Association of Catholic Physicians, among whose members are to be found all the most prominent Catholic physicians of

the city. He has kept in touch with it during its existence and it represents a power for good in the ethics and the Christianity of the community that means much. Its discussion of ethical subjects leads to the clarification of difficult social problems and fulfills a function in professional life the value of which can scarcely be overestimated.

It is easy to understand then what a promising future is opening for the Church in New England now that the head of its great archdiocese is made a Cardinal and one of the close advisers of the head of the Church. Those who have watched Cardinal O'Connell's career and have seen it constantly fulfill even more than was anticipated of it, are quite complacent in their expectations for the future.

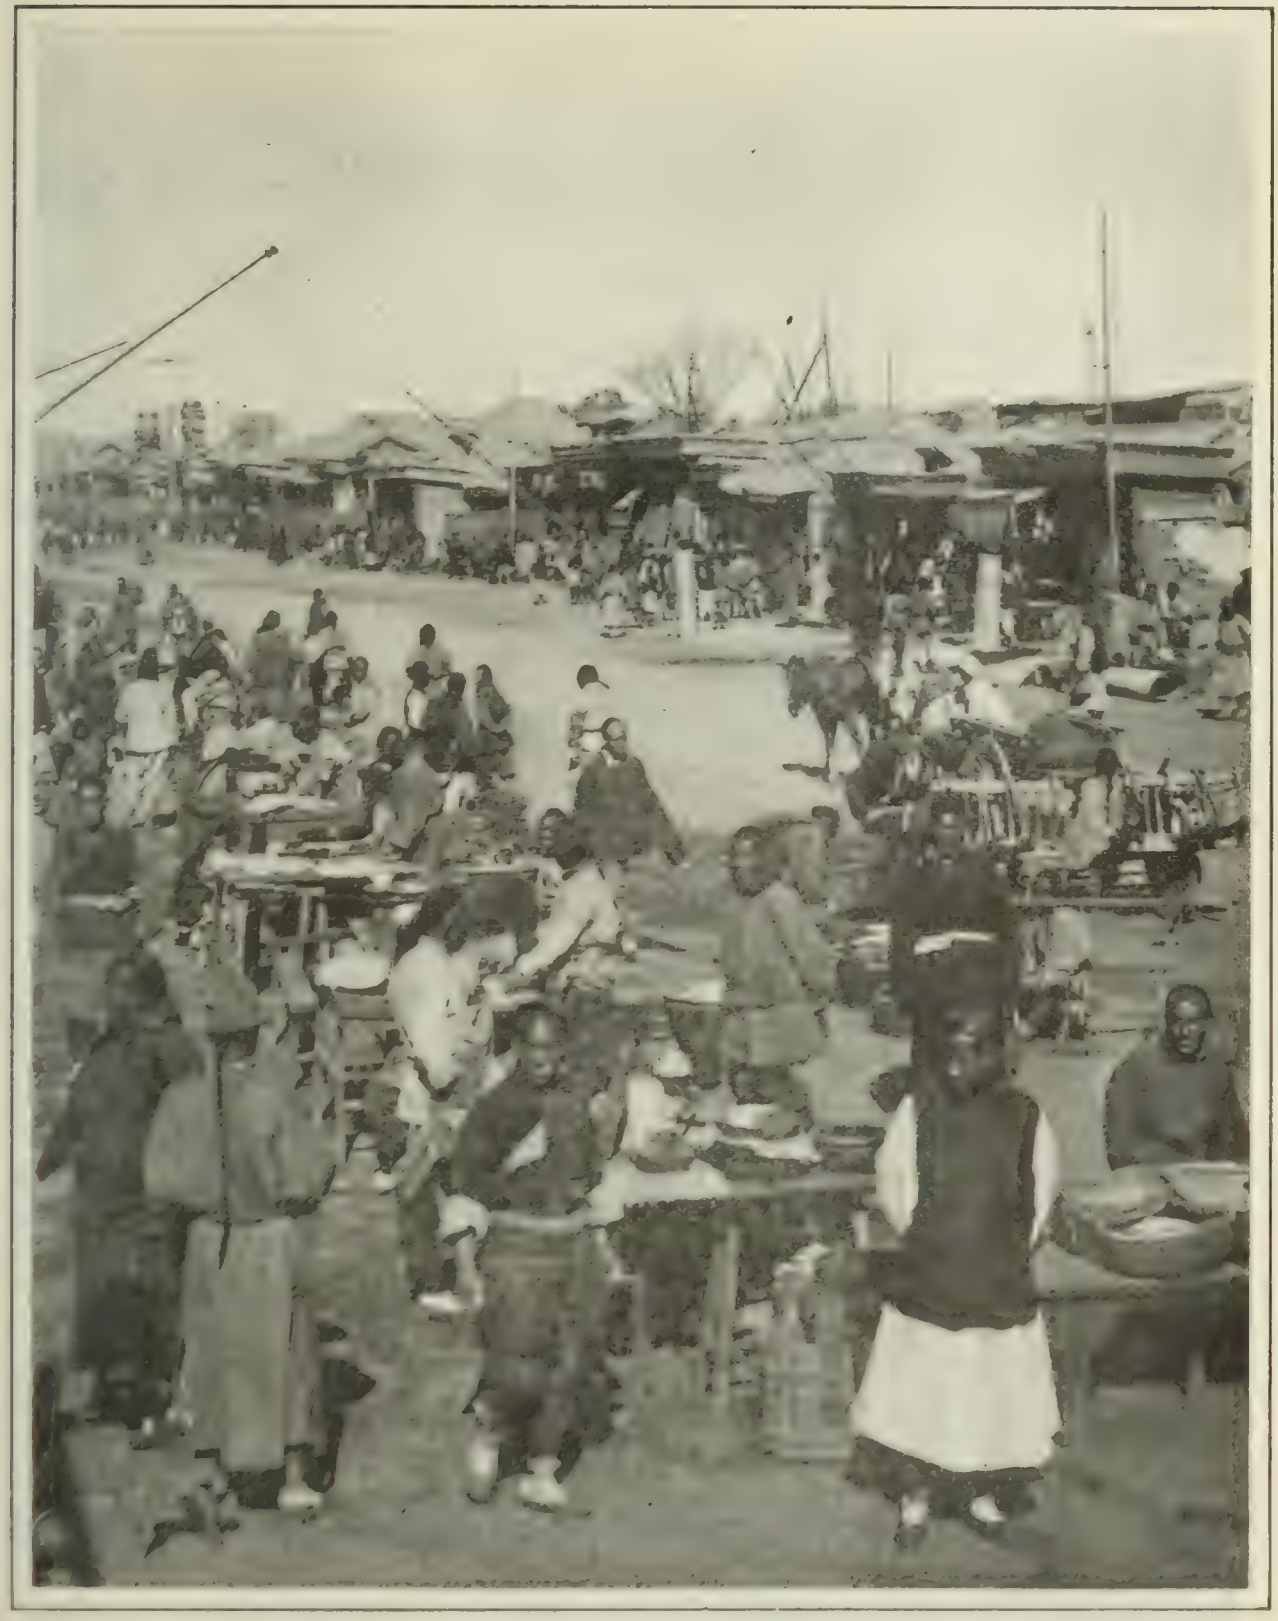
New York City.

# Why the Chinese Revolt

BY EDWARD ALSWORTH ROSS

[In our issue of September 7, 1911, Professor Ross, of the University of Wisconsin, contributed an article, entitled "The Race Mind of the Chinese." He recently spent a half-year in China, traveling 10,000 miles in and about the Empire, and penetrating to the capital of the innermost province. His book, "The Changing Chinese," has just been published. The present illuminating article has been written at our special request to explain to our readers a very complex situation.—EDITOR.]

IN a gorgeous native restaurant in Peking I sat at meat with five men, and four languages were needed for communication. The one white man was born in China, the son of a missionary. The rest were foreign-educated Chinese retained in Government service as experts. One was a Berlin Ph. D., another a Cornell doctor of philosophy, a third came from the University of London and had spent two years in the British Post office. The fourth was an A. M. of the Antwerp School of Commerce, licentiate of the University of Paris, and had served two years in the Banque de France. They had been in government service for from two to six months.



"How do you like it?" I asked.

They threw up their hands in despair. They were patriotic, eager to apply their hard-won knowledge to their country's need, but all had found that the Manchu blocks the way. "What is the use," said one, "of my studying the gathering of statistics in the various countries and reporting a plan for the coming Imperial census, when my chief is an ignorant Manchu who will light his fire with it?" "How can I put any heart into working out a reform for the Post Office," said the London man, "after I realize that my recommendations are not even read?" "We now see," said another disgustedly, "that the Government gives us posts and salaries in order to keep us educated men under surveillance here at Peking where we can't reach or influence the people. 'Reform' is all for show and the one absorbing thought of our rulers is to keep their graft."

The head of a provincial college, a ripe scholar, a Han-lin man, in fact, told me he could hardly endure his position. "How can I keep my self-respect," he broke out, "when constantly the Board of Education at Peking forces me to do foolish things? Here is an applicant thirty years old, who passes a brilliant entrance examination; but Peking won't let me admit him to my college because, forsooth, he is not 'a graduate of a middle school.'"

The Manchus are not a cultured people, mark you, and when they climbed into the saddle of empire about the time of Cromwell, they were on a level with the Afghans of today. They are to the Chinese what the Goths were to the Romans; and a Manchu directing the new education of China is as out of place as a Goth presiding over the schools of Athens in the fourth century. It is the brilliant Chinese, not the Manchus, who travel and study abroad. Yet when they return they are balked by the huge pervasive Manchu machine.

Sometimes high Manchu officials are totally illiterate, and I heard of one

Copyright, Underwood & Underwood, N. Y.

A BUSY MARKET IN PEKING

Ha-ta-men Street between the South Gate and the Chienmen Gate

Manchu "literary chancellor" who could not even read the examination essays submitted for provincial honors. So he piled them on top of his bed canopy, poked them with his cane as he lay smoking, and the thirteen that slid off first were declared winners!

In the Board of War at Peking are six hundred employees; but fifty do all the work. The rest are Manchus who sit in a chair, suck the pipe and watch the clock.

One of the directors of the Shanghai-Hangchow Railway—a purely Chinese

line—told me their chief trouble in building the road was the harassing "inspections" which obliged them to bribe the officials in order to go on with the work. Moreover, Peking forced upon the company a large, unneeded, foreign loan which would have been expended by Government men without the stockholders knowing how much stuck to the fingers of the officials. So, instead of using the money for building the road, the company loaned it out in small amounts at a high interest and will repay it as soon as the terms of the loan permit.

When the Manchu Tartars overpowered China, they placed Tartar garrisons in the chief cities. These "bannermen," living, a privileged caste, in their own walled quarter, and fed by Government rice, have vegetated and multiplied for generations. Usually the Tartar quarter is a dismal picture of tumbling walls, decay, indolence and squalor. On the big drill grounds you see the runways along which the horseman gallops and shoots arrows at a target while the Tartar military mandarins look on. These lazy bannermen were tried out in the new army, but proved flabby and good-for-nothing; they would break down on a twenty-mile march. Fattening on their hereditary pensions, they have given themselves up to sloth and vice, and their poor chest development, small, weak muscles and diminishing families foreshadow the early dying out of the stock.

"Reform" is in the air in China, but there are two brands of reform—that of the Manchu rulers and that of the leaders of the people. By "reform" the Government means the suppression of weakening vices like opium-smoking and gambling, the building of railroads, the establishing of a trained police, the strengthening of army and navy and the opening of new sources of Government revenue. But among the patriots "reform" means universal education, industrial training, an improved agriculture,

A GENERAL VIEW OF WUCHANG

The present rebellion broke out in this ancient city on the Yang-Tse River, which is the capital of the so-called Chinese Republic

sanitation, a free press, a humane penal system, the expenditure of taxes for the benefit of the people, accounting for public money and the responsibility of Government to the chosen representatives of the people.

What Peking wants is policies that will help them to hold the Powers at bay, swell their revenues and leave them in serene enjoyment of the matchless graft to be tapped from three hundred millions of industrious Celestials. In their naïve Asiatic view, the Government exists in order to magnify the luxury and glory of the Imperial Clan. Among the Manchu masters there is no tradition of service, nor can they acquire it in our time. Millions burn with patriotic ardor, and thousands acquainted with Western knowledge realize clearly just what might be done for the people. But the Manchus are careful to exclude them from high places and, after the manner of hereditary parasites, they go on in their old, self-indulgent way.

I talked with an eminent Chinese diplomat, known in two hemispheres, who was en route to Peking to sit on a Government board. "I don't suppose I shall be able to accomplish anything," he said. "The men who make the present Government of China are incapable and selfish, and their sole policy is to keep their lucrative places."

When, forty-four years ago, Japan faced about, her Emperor led the way. Spectacled doctors of philosophy headed Government bureaus and enjoyed the immense advantage of putting thru their reforms in education or sanitation or agriculture or forestry with the prestige of the oldest reigning dynasty on the globe. But in China the Government does not take the lead in Westernization. In zeal for progress the solid enlightened class, the natural leaders of the people, are far ahead of their rulers, and too often they find the Government a barrier in their path. Not long ago a queue-cutting movement starting at Hongkong spread among the people. But the stupid Government, which had obliged its soldiers and its foreign representatives to cut their queues, recalled that in the old days the Manchu conquerors had forced the queue upon the Chinese as a badge of submission. Accordingly they construed the unauthor-

Photograph by Pictorial News Co., N. Y.

CHINESE TROOPS IN ACTION
The soldiers of Yuan-Shi-Kai engaged in field maneuvers

ized cutting of the queue as a kind of treason. They persecuted the short-haired, false queues came into style and the movement ceased; but imagine the disgust!

The Regent is earnest, but the young man is not strong enough in character to overcome family pressure and petticoat intrigue and palace cabal. Censor after censor has been dismissed after denouncing—as is his bounden duty—that corrupt old blood-sucker, Prince Ching; but the Prince still remains the chief adviser of the Regent. Yuan-Shi-Kai and Tuan Fang, the strongest men that have appeared, the men who do things, were gotten rid of and control has fallen into the hands of weak and grasping men.

I was tiffining at the Astor House at Shanghai with two old American diplomats who had known China for decades. "Do you realize," said one, "that China has long been on the down grade? Marco Polo, if he traversed the Empire today, wouldn't begin to find the beauty he found in it six centuries ago. It's no use trying to do anything with the present dynasty. The Manchus are intellectually and morally effete, hence incapable of providing an efficient government. The Chinese have all the brains. The country needs a new dynasty, for only Westernization, and that *soon*, can save China from partition." "Yes," agreed the other, "nothing can be done till they get a new dynasty."

"All my best students," said the president of an American Mission College, "are in these secret anti-dynastic societies that ramify all thru South China; the finest minds, the noblest spirits. But the selfish, calculating fellows steer clear of conspiracy, for they cast in their lot with the powers that be and are on the lookout for Government jobs."

It is certain that the Chinese who have traveled or studied abroad, or lived in California or the Philippines or the Straits Settlements, despair of their country under its present leadership, and

many of the best elements of the nation are leagued to expel the Manchu parasites. Insiders tell me that the revolts that break out here and there are premature flashes in the pan; the work of organizing and smuggling in arms is yet far from complete. It may be years before the Big Thing comes off. Last spring the plot to capture the Viceroy at Canton and issue orders in his name failed through a slip. The Viceroy trapped the revolutionists, had their throats quietly cut, and piled up the corpses in his yamen for the world to look at. Yet, no doubt, he hates the Manchus as much as they did and will do his part when the hour strikes. But he had to butcher them to keep himself straight with Peking.

If China flings off the incubus, one prays that it be done quickly. In a crowded country where myriads cling to existence by their finger tips, the least shock precipitates countless human beings into the abyss. "Nine out of ten in this city," said a missionary at Ichang, "don't know where tomorrow's rice will come from." The brief interruption of river traffic, a short blocking of the interchange between town and country, a brigandage that keeps the terrified cultivator a few days from his fields, and thousands must starve. The vast unpeopled spaces within the walls of Nanking and Soochow and the ruined state of many a South China city testify to the appalling havoc wrought by the Taipings. Certain inner provinces, yet sparse from the Mohammedan rebellions, bear witness to the awful destruction of life in any prolonged civil convulsion in China. Even a successful revolution, that did not promptly replace in every district the crumbling Manchu rule with an efficient government of its own, would work more harm to China than good.

MADISON, WIS.

# The Situation in Mexico

BY CHESTER T. CROWELL

[Mr. Crowell has been in active journalism in Mexico City, and has made a deep study of the country. Our readers will remember several articles from his pen in THE INDEPENDENT last spring and summer during the disturbances on the Mexican border. Mr. Crowell is managing editor of the *Statesman* of Austin, Texas.—EDITOR.]

THE most important bit of Mexican public opinion of today, written in one sentence, would be: If Mexico is to remain an independent nation every citizen must be a patriot, at least until the crisis is over.

That is the explanation of the remarkable—one might even say astounding—display of good common sense by numerous former followers of General Diaz who are holding up the hands of Dr. Francisco I. Madero, President-elect. His bravery in starting the revolution and his unselfish efforts to bring its evil after effects to a close as soon as possible have challenged their admiration; his sincerity and honesty win their kindly consideration but above everything else they are impressed with the fact that he is destined to be President of Mexico, beginning some time during the month of November, and they want to stand by him at least until order is restored, lest some unlucky moment find them face to face with foreign intervention.

If Mexico had the same opportunity as Canada, a vote would show we are no more popular with our neighbors on the south than with those on the north. In spite of all the diplomatic declarations made during the last twenty years, the bulk of Mexico's population still believes the United States would like to take Mexico. How can they help it when so many millions of dollars of American gold are invested there and the stream of American immigrants and investors is never ending? They are afraid of the other nations and they want peace and order before anything else. While this is nothing more than a display of rudimentary common sense it is still quite

better than the average Latin-American nation will do, during times such as those thru which Mexico is now passing. In fact, this bit of good judgment is the most encouraging feature of the whole situation. It looks toward the day when feuds and clamor will end with the counting of the ballots—as in a real republic.

Any one who has ever been far enough across the Rio Grande to engage a Mexican in conversation will never doubt his patriotism. These revolutions which spring up from time to time show not only the disturbed condition of the public mind—they show also that Mexico has among her poorest citizens the sort of men who would be martyrs for their country. They are entirely too ready to show it on the battlefield; thus when, for once, they show it by remaining off the battlefield it must be given more than passing comment.

The enemies of Madero are not few in Mexico. It would be by no means difficult for any leader of ability to gather strength that would wreck his administration or at least embarrass him beyond all possibility of good work. But the public opinion of Mexico was clearly shown in the decisive defeat of the candidates who opposed Madero in the presidential election and the defeat of Dr. Francisco Vasquez Gomez, candidate for Vice-President, for Gomez and not Pino Suarez is a hero of the revolution. The worst thing any one can say about Suarez with entire truthfulness is that he doesn't amount to much. He is comparatively unknown and in all probability will return to Yucatan to be governor, after his inauguration as Vice-President. It seems Madero is going to follow the precedent of Diaz by keeping the Vice-President in the background. Ramon Corral's chief recommendation was that he never got in the way. The custom of a man being governor of a State and having a Cabinet office or some other important post is quite common in Mexico. It will be remembered that Enrique C. Creel while Ambassador to the United States was also governor of the State of Chihuahua. While he was in the United States the officer next in rank administered affairs. Inversely, Suarez will probably remain at Merida, capital of Yucatan, and at the same time be, constitutionally, the Vice-President.

The withdrawal of Bernardo Reyes turned the critical situation of the campaign for President into an incident. General Reyes would have received a very large vote for President and would have been more and more a disturbing element in the country. He is so utterly out of sympathy with the purposes of those who won the revolution and so entirely undeserving of any honors at the hands of the people, since he was in Europe on the payroll of the Diaz Government at the time of the revolution, that it is slight wonder the ardent followers of Madero were rude to him when he tried to make a speech in the City of Mexico. There is very good reason for believing he went to San Antonio to start a revolution. His future plans still remain in some doubt, altho he recently went before Governor O. B. Colquitt of Texas and assured him that he is in Texas not to foment a revolution, but to seek safety. He said he considered his life in danger while he was in Mexico. Certainly it wasn't endangered by any connivance of Madero. It seems, on the whole, that this was a mere attempt to inflame the minds of his partisans.

Looking forward to the administration of Madero one can see much ground for optimism. Imbued as he is with progressive ideas, gathered on this side of the border, Madero will make strenuous efforts to establish a rule of law and respect for the letter and spirit of the constitution. He will restore to the courts that high position in the respect of the people which is essential to constitutional government. He will urge liberal laws for the advancement of material interests and tend away from the Diaz policy of encouraging development of the country by the granting of concessions to foreign syndicates.

One of his most definite statements with reference to his policy is that he will oppose monopolies. He promises safety to only such holders of concessions as can prove they received them according to the laws of the country, and have complied with the conditions prescribed. While there has always been a certain amount of suspicion with reference to the

manner in which concessions were given out under the Diaz administration, it is more than likely investigation will develop that most of them are entirely within the letter of the law and that in a vast majority of the cases the conditions have been complied with. One might not like the way Diaz did things, but he did them in an orderly manner, at least. There was very little cheap subterfuge.

Madero will undoubtedly soon have Mexicans discussing many of the economic problems which engage the attention of this country. They exist in Mexico, but they haven't been discovered yet. The only danger is that he may overreach himself and suffer the failure of the reformer who arrives prematurely.

There are a lot of "ifs" in the way when one tries to forecast success for the administration of Madero. He is such a flighty sort of person one never feels quite sure he will not spoil everything by to-morrow's move, but luck has been with him thus far. If he will just start on the substantial things first he is fairly safe. If he begins by opening a few hundred of the public schools closed by the revolution it will help enormously. If he will resume work on the Government irrigation dams and port works at the same time he will have annexed one of the main sources of the strength of Diaz. The people will be ready, then, to listen either with attention or amusement when he tries to lead the way to more practical self-government. If he just helps them in a practical way at first, he is in less danger of stirring resentment by any new ideas imported from the United States.

Mexico is struggling pretty hard just now to keep up with all the new things it has to learn. It is in about the same position as a small boy suddenly jerked from the third grade into college. Faith in the teacher is pulling Mexico along all right thus far, but the teacher carries a heavy load of responsibility. Nothing is more indicative of the difficulty of the situation than that the men who won the revolution didn't know how to vote after the victory was theirs and the ballot boxes open before them. But the pessimist must remember it was at no convention of college professors that the Magna Charta was signed. Friends—for the most part friends of Madero—showed the voters how to make out their ballots. Incidentally it might here be remarked that the revolution has placed more able men in the public mind than Mexicans knew the country possessed before. Already it is assured that Francisco Leon de la Barra, provisional President, whose patriotism and sense of justice kept him from being a candidate for the Vice-Presidency when he would have won, will some day receive even greater honors at the hands of his countrymen.

At present, affairs in Mexico are in a bad way. Business is suffering heavily. The tourist traffic is dead. Immigration has ceased. Disorders break out from time to time and keep the soldiers busy hurrying from place to place to quiet incipient revolutions. Fortunately for the country, most of these have occurred in the remote places. The cities and towns are fairly well guarded. There has been enough disorder to force foreign intervention for the protection of life and property had the disorders occurred where foreign money is invested. But they didn't, and this is due in equal shares to the discretion of the people, the care of the Government, and luck.

The Mexico of today is not the Mexico of ten years ago, however, and it takes a lot of disturbance to wreck such a rich country. The world must have silver and gold and copper and scores of other products the country exports. Material interests, dormant at present, should not be pictured as an infant industry needing the diligent care of a paternal government, but as a giant stunned. Sometimes, in the most important affairs of state, luck must be taken into account. If nothing terribly untoward occurs Mexico will be well on the way to normal conditions within three months. It will take years to overcome all of the results of the revolution, but there is new vigor in the people and new enthusiasm. Whatever the conditions of the day, Mexico has won for itself an undertone of optimism instead of pessimism or the constant dread of the question that remained uppermost in the public mind and unanswered for a quarter of a century: "After Diaz, what?"

Austin, Texas.

# November Meteors

BY MARY PROCTOR

[Miss Mary Proctor is the daughter of the distinguished astronomer, R. A. Proctor, and is herself an astronomer of wide reputation. She was born in Dublin, Ireland, and graduated from the College of Preceptors at London. She has viewed several total eclipses of the sun on scientific expeditions, and has written and lectured on astronomical subjects. Editor.]

"The seeming stars fall headlong from the skies, and shooting thru the darkness, gild the night with sweeping glories and long trails of light."—Virgil

DURING the month of November we may look forward to two special displays of meteors. The first occurs between November 13 and 15, and is known as the Leonids, because all the meteors seem to radiate from the sickle-shaped group of stars in the constellation Leo. The great display does not begin till after midnight, and is seen at its best between 3 and 4 o'clock in the morning.

The second display occurs between November 17 and 23, and is known as the Andromedes, because the meteors seem to radiate from the constellation of Andromeda. That is, if their paths were traced backward, they would all pass thru or near that constellation. As it is overhead at 8 o'clock on the 22d, one can observe the Andromedes at a rather more convenient hour than in the case of the Leonids.

The Leonids travel very swiftly, since we meet them, and they are of a bluish-green tint, with bright trains. The Andromedes move slowly, as they overtake the earth. In color they are reddish, being less intensely heated than the Leonids, and their trains are not as bright. It is a singularly impressive spectacle to watch these silently gliding messengers from space illuminating the starry heavens. The unerring aim with which they plunge into the atmosphere surrounding our planet, the startling velocity, and the vivid brightness of these apparitions in the sky, excite our admiration, and the question naturally arises, "What can they be?"

Various theories have been suggested regarding their origin. According to the noted French scientist, M. Stanislaus Meunier, meteoric stones are fragments of an ancient satellite of the earth, smaller than the present moon. For this reason it ran thru its career more rapidly, ultimately going to pieces. These still continue to circle around the earth. Some scientists considered that the meteorites represented the débris of a shattered world.

Camille Flammarion advanced the theory that the meteorites were of terrestrial origin, ejected from the interior of volcanoes in long past ages and finally recaptured by the earth. Other scientists were of the opinion that they were hurled from volcanoes on the moon, or that they were the left-over fragments from which the planets were originally formed. As a matter of fact, the erratic wanderers in space, which form part of the great meteor swarms known as the Leonids and Andromedes, are undoubtedly the débris of a shattered comet.

This brings us to one of the most remarkable discoveries of nineteenth century astronomy. At the time of the great meteoric shower of 1833, Professors Olmstead and Twining, of New Haven, were the first to draw special attention to the radiant point of the meteors, as indicating the existence of a swarm of meteors revolving around the sun in a permanent orbit. Professor Olmstead went so far as to call the swarm a comet. In 1864, Professor Newton, of New Haven, showed by an examination of the old records that there had been a number of great meteoric showers at intervals of thirty-three or thirty-four years, and he predicted confidently a repetition of the shower on November 13th or 14th, in the year 1866. The shower occurred as predicted

and was observed in Europe. It was followed by another the next year, which was visible in America.

The meteoric swarm extended in a procession so long as to require more than two years to cross the earth's orbit. The researches of Professor Newton, supplemented by those of Adams, the discoverer of the planet Neptune, showed that the swarm moves in a long ellipse, within a period of thirty-three years. A return of the shower was expected in 1899 or 1900, but failed to materialize, tho during the early morning of November 14-15, 1903, a well marked shower occurred, best seen west of the Mississippi, and especially on the Pacific Coast. The total number that fell were estimated at tens of thousands.

Next came the discovery by Schiaparelli, the Milanese astronomer, of the remarkable fact that the Perseids or August meteors were moving along the same path as that of Tuttle's comet, which appeared in 1862. Shortly after, Leverrier published his orbit of the Leonid meteors, and almost at the same time Oppolzer, of Vienna, published his orbit of Temple's comet of 1866, and the two orbits were seen at once to be practically identical. Three years later came the shower of Andromedes, following in the track of a little comet which was first discovered in 1827. In 1846 it reappeared as twin comets, and since then has never been seen. Along its pathway the swarm of meteors known as the Andromedes now pursue their way, apparently the fragments of the ill-fated comet, which has ceased to exist. As final proof of the undoubted connection between comets and meteor swarms, Prof. Alexander Herschel found that among more than one hundred of the distinct meteor swarms now recognized, five are similarly related to a comet.

AHNIGHITO, THE GREAT CAPE YORK METEORITE

Its weight exceeds 36 tons, and it is the largest and heaviest meteorite known. We reproduce this photograph by the permission of Dr. G. F. Kunz, who is shown with his friend, the late Mr. Parker, editor of *Popular Science News*.

THE METEOR OF JUNE 7, 1899
Photographed with six-inch Bruce telescope, Yerkes Observatory, by Prof. E. E. Barnard

There is no longer any doubt, therefore, as to the relationship existing between comets and meteor swarms. In the case of the Leonids and the Andromedes the meteoric swarm follows the comet, and the prevailing belief at present seems, on the whole, to be that the comet itself is only the thickest part of a meteoric swarm, and that the clouds of meteors scattered along its path result from its breaking into fragments.

That comets eventually break up and go to pieces is not surprising, when we consider how strongly they are attracted by the sun, and the varying force of the planets, according to their distance. For this reason the comet is, as it were, constantly pulled in all directions, which is bound to end disastrously. Furthermore, it has internal troubles of its own, for when trying to round a curve, at times, some parts of the comet have to turn faster than others, just as when a motor car rounds a corner the outer wheels turn faster than the inner ones. This is the time for the chauffeur to make use of a mechanism called the "differential gear," to permit this difference in speed, otherwise the motor and its occupants are apt to come to grief.

Now, in the case of the comet, there is no "differential gear," and in consequence, as the comet rounds a curve, all the parts of which it consists are trying, because of the momentum, to move at the same rate of speed, but they cannot do so. As a result they are torn apart, as in the case of Biela's comet. Nevertheless, tho the particles forming a comet may dissolve partnership, yet they are always subject to the controlling influence of the sun. Every tiny particle continues on its way around this luminary in perfect safety, until it plunges at a terrific rate of speed into the atmosphere surrounding our planet. Then we see the sparks fly, and the brief career of a shooting star is ended.

Fortunately for us, the earth is enveloped in a protective atmospheric shield. Otherwise we would be subjected to such a bombardment by these meteoric stones as to seriously menace life. These celestial bullets would be constantly hitting us, making bullet-proof houses and iron umbrellas a necessity when venturing out of doors. As it is, they must be a constant source of danger to aviators, accounting possibly for many unexplained fatalities.

While meteorites have fallen in plenty, yet we have only one instance of a meteorite connected with a meteoric shower. In this case it was supposed to be a fragment from the Andromedes, or shattered remains of Biela's comet, which came to grief so mysteriously. It is known as the Mazapil meteorite, because it fell at Mazapil, in Northern Mexico, in 1885, during the shower of Andromedes, or "Bielids," which occurred that evening. "Whether the coincidence was accidental or not, it is interesting," to quote the words of the late Prof. A. C. Young. "Many high authorities speak confidently of this piece of iron as being a piece of Biela's comet itself." Were it endowed with speech it could give us much valuable information with regard to its brief career as part of a comet which at one time attracted so much attention.

This is one of the few instances in which purely iron meteorites have been actually seen to fall. The other seven places are: Agram, Croatia, Austria, in 1751; Dickson County, Tenn., U. S., in 1835; Braunau, Bohemia, in 1847; Victoria West, South Africa, in 1862; Nedagollah, Arabia, in 1870; Rowton,

England, in 1876, and Cabin Creek, Ark., U. S., in 1886. Specimens of more than three hundred meteors which have been seen to fall are treasured in our museums, the finest collection in the world being that at Vienna. The collection of the British Museum, and that at Paris, and the American Museum of Natural History, are also of great value, and the cabinet of Yale University is especially rich.

It seems scarcely worth while for scientists to concern themselves about these particles of iron and dust, yet they are of special interest from many points of view, if only from the fact that they add materially to the mass of the earth. According to Professor Newcomb, no less than 146,000 million meteoric particles fall upon the earth during the course of a year. Thus, day by day, year by year, millions of meteorites increase the mass of the earth, but the amount is infinitely small compared with its actual mass. For, if each meteor which falls weighs but a grain, then the earth's weight each year is increased by more than 99,000 tons, a mere nothing compared with the actual mass of the earth.

According to Professor Young: "If we assume a fall of twenty million each day, weighing one-sixtieth of a pound, the total amount would be about fifty thousand tons a year; and if the specific gravity of the meteoric dust averages the same as that of granite, it would take about eight hundred million years for the deposition of a layer one inch thick on the earth's surface" ("Manual of Astronomy," page 467).

Mr. William Frederick Denning, the self-made English astronomer, is an expert with regard to meteoric showers, and as his researches on the subject have been entirely non-telescopic, he has shown how much may be done for astronomy in this line by observation with the unaided eye. In 1890, he wrote regarding his meteoric observations: "My plan of working may be briefly described as follows: All the observations were made in the open air and from the garden adjoining the house. Attention was almost invariably given to the eastern sky. In mild weather I sat in a chair with the back inclined at a suitable angle; but on cold, frosty nights I found it expedient to maintain a standing posture, and sometimes to pace to and fro, always, however, keeping the eyes directed towards the firmament in quest of meteors."

Mr. Denning uses a perfectly straight wand as a help and corrective to the eye in ascribing the lines of flight. "When the meteor was seen, the wand was immediately projected upon its track and the position quickly noted and reproduced on an eighteen-inch celestial globe." An accurate knowledge of the constellations and the brighter stars becomes a great help in locating the path of the meteor. To determine the duration of its visibility some recite rapidly familiar verses until the meteor vanishes, noting the exact word said at the instant of disappearance. A simpler method is to count the numerals in their order, then by rehearsing the same number before a clock, the time during which the meteor remained visible can be accurately determined.

Naturally, during a meteoric shower, only a few specially bright meteors could be observed in this way, as they follow each other so rapidly. There is also a tendency to overestimate their size and distance, tho as a rule they first appear at an altitude of 80 or 100 miles, and disappear at a hight of from 5 to 10. The length of the path is generally between 50 and 500 miles, though in some cases it has been much greater. In 1860 a meteor passed from over Lake Michigan,

SECTION OF THE CHACO METEORITE
Illustration from "The Story of the Heavens," by Sir R. S. Ball. Permission of Cassell & Co., Ltd.

across the country, and fell into the sea beyond Cape May. Sometimes brilliant fireballs are seen during meteor showers, and they have been variously described as comparing in size with the moon, and in brightness with the first magnitude star Sirius. Extravagant statements have been made by amateurs in many instances, greatly detracting from the value of the observation in consequence.

Yet the following interesting experiments, which were made by Prof. J. Lawrence Smith, of the University of Louisville, Ky., and described by him in a lecture on Meteoric Stones, to be found in the tenth annual report of the Smithsonian Institution, Washington, D. C., for the year 1855, gives some idea of the extreme difficulty in determining size and brightness with accuracy. These experiments, that would be considered ordinarily waste of time, were made to prove the perfect fallacy of making any but a most erroneous estimate of the size of luminous bodies by their apparent size, even when their distance from the observer and their true size are known.

Without going into details of the experiment, the following were the results:

The actual diameter of the carbon point, as seen at ten inches, was three-tenths of an inch; at two hundred yards it seemed one-half the diameter of the moon's disk; at the distance of a quarter of a mile it appeared equal to three times the diameter of the moon's disk; and a half mile away it apparently equalled three and a half times the moon's disk. With the limelight, at ten inches away it appeared to be four-tenths of an inch; two hundred yards distant it was one-third the moon's disk; a quarter of a mile made it appear twice the size of the moon, and the same as seen at the distance of half a mile. The incandescent steel seemed two-tenths of an inch at a distance of ten inches; one quarter the diameter of the moon at two hundred yards; as large as the moon at a quarter of a mile, and the same at the distance of half a mile. How much more difficult, then, must it be to determine the size of a meteor as it swiftly vanishes.

Sometimes stray meteors are trapped by the camera and have their pictures taken while they are speeding across a region of the star-depths which is being photographed. Prof. E. E. Barnard, of the Yerkes Observatory at Williams Bay, Wis., has been specially fortunate in capturing unwary meteors. He has kindly allowed a photograph showing a meteor trail to be used as one of the illustrations for this article.

Sometimes disputes have arisen regarding the ownership of meteors; that is, whether they belong to the observer who saw it fall or to the man who owns the land whereon it was found. On the occasion of a fall of a meteor, November 5, 1841, at Bourbon, in the Department of Vendée, France, the case was decided in favor of the discoverer who saw it fall. However, a stone which fell in 1872 in southern France was awarded to the owner of the land. In his book on meteorites, M. Stanislaus Meunier cites an instance from the *Echo du Monde Savant* for November 24, 1842, in which the statement is made that a mass of iron fell in a field in the United States, but the American Government fined the owner for not paying duty on imported foreign goods! When Sir Robert S. Ball tells the story, he usually transfers the scene to his own country.

Among the meteorites in the Foyer collection at the American Museum of Natural History, New York City, is one termed the Willamette, which has a length of ten feet, hight of over six feet, and thickness of four feet three inches. This huge mass, weighing fifteen tons, was found by two prospectors in the autumn of 1902, in a forest south of Portland, Me. With the utmost difficulty, one of the prospectors removed the meteorite to his ranch, and the owner of the land on which it was found instituted suit for its recovery. The contest was carried to the Supreme Court, and decided in his favor. It was presented to the Museum by Mrs. William E. Dodge in April, 1906.

Sometimes meteors have been the cause of fearful accidents, as they crash down with terrific speed upon the earth. In the year 616, it is said, a large stone fell in China, smashing a carriage and killing ten men. In 944, according to the Froissart chronicles, a fiery meteor set some houses on fire; and on March 7, 1618, one started a fire in the Palais de Justice, Paris. Three men were killed at

sea in 1647, and one at Milan in 1654. In 1794, according to Flammarion, "a peasant of Kansas City was killed by an aerolite, which shattered a tree, reaching the ground with amazing velocity. In the East Indies a meteorite killed a man and wounded a woman, January 16, 1825; and on February 16, 1827, a meteor fell in that same part of the world, killing a man instantly with the force of the shock. A piece of this meteor is preserved in the Museum at Paris.

On the confines of Hungary a meteor fell on September 7, 1514, with a deafening noise. It was looked upon as a messenger from the gods, and later on was fastened by a chain in the middle of a temple erected in its honor by the people. Another example of the same kind occurred in Artois, France, only in this case the meteorite was fastened with a chain of iron, because it had the reputation of leaving the place on certain nights each year. A meteorite weighing over a thousand pounds served at one time as an idol in the church at Charcas, Mexico, but reposes at present in the Museum at Paris. In East Africa, at a place called Wanika, a meteor fell on March 6, 1853. The natives looked upon it as a god, anointed it with oil, covered it with garments embroidered in pearls, and placed it in a temple, where it received special honors.

Reference to the fact that meteorites were worshiped by the ancients is made by Aristotle, Seneca and Virgil. The Arabians thought they were fiery stones thrown by angels on the heads of demons when the latter ventured too near the sky. This legend is mentioned in the Koran, and referred to by the poet Moore in his "Paradise and the Peri," in the lines:

"Fleeter than the starry brands
Flung at night from angel hands
At those dark and daring sprites
Who would climb th' empyreal hights."

NEW YORK CITY.

# The Wonder-Worker

BY MINNIE LEONA UPTON

When the Wonder-worker waves
  Carelessly, imperiously—
His mysterious wand, nor craves
  Any leave from you or me,

Values change, or vanish quite,
  With kaleidoscopic shift:
What was worthless to the sight
  Now appears the choicest gift;

What was burden turns to boon
  What was hard full easy seems;
'Neath the sun, as 'neath the moon,
  All the world is land o' dreams.

Maiden, maiden, run and hide!
  'Ware the Wonder-worker's wand!"
Nay, she stands, with sweet eyes wide,
  Held as by a magic bond.

Can she neither speak nor stir,
  Hear no word of old or wise?
He has laid his wand on her
  Ah, the glory in her eyes!

BOSTON, MASS.

# The Spirit of Seattle

BY BARON D'ESTOURNELLES DE CONSTANT

[The author of this article recently made an extended trip thru the United States on a mission of peace, addressing thousands of people. The Baron is a member of the French Senate, a judge of the Hague Court, was a delegate from France to both the second and the third Hague Conferences and last year a recipient of the Nobel Peace Prize. On his journey thru this country he wrote a series of letters for *Le Temps* of Paris, which will be reprinted in book form, both abroad and by Ginn & Co. in this country. He has given THE INDEPENDENT an opportunity to publish in advance one of his articles. We have selected "Seattle" as a representative example of this distinguished foreigner's impressions of our American activities.—EDITOR]

I AM now at the most northerly point of my journey in the West. As every one knows, Seattle—which dates from yesterday, or, to be exact, from sixty years ago—is already a very large city, laid out on a vast scale like the others, and even more so. Here, again, the Americans have prepared for the future on unlimited lines. It must be admitted that Nature seems to have settled the proportions of American cities. The Greek and Roman acropola are grand in proportion to their surroundings, and this harmony constitutes their beauty; but American cities of the twentieth century cannot be on these lines. They are gigantic, like the country, the mountains, trees, gulfs and rivers.

The celebrated Douglas fir trees, which are beginning to yield to the progress of civilization, are several yards in diameter and are several thousand years old (6,500 years, it is said). The pillars of a temple, built for the University of Seattle's forestry exhibition and still standing, were made out of enormous tree trunks, all identical and each in a single piece, larger than any monolith or stone obelisk.

From San Francisco to Portland, and from Portland to Alaska and the Rocky Mountains, everything is big, and how could Seattle be small?

Such an enterprise could not have been carried out without a great amount of money and a still greater amount of confidence. Not only has the forest been cleared away, but even the mountains are being leveled. From the thirteenth floor of my hotel I can see series of hills interspersed with lakes and gulfs. These hills are partially cleared of forest, and are already dotted here and there with houses. Building lots are marked out among new streets that have been carried up the steepest slopes, paved, and provided with sidewalks. In a few months these streets will be lined with houses. They are already served by busy, restless tramways, with their surprising contempt for gradients and uninhabited localities; and they are lighted, after the Seattle style, with a wealth of five-branch electric standards worthy of the Avenue de l'Opéra in Paris.

In certain places, notably near the New Washington Hotel, the gradient was really too much even for the Seattle tramways; but no time was lost in hesitating, and the hill was simply decapitated. It is now being treated just as one might take off a layer of cake. This gets rid of a hill about three hundred feet high and provides a comparatively level roadway. This bold operation, however, was not foreseen, and some of the inhabitants had established their homes on the top of the hill, whence they enjoyed a splendid view over the gulf and lakes. The existence of these houses was a mere detail. They were simply moved down. Like another Macbeth, I have seen these houses come down the hill, and they are moving as I watch. I have to go and satisfy myself that I am not under some optical illusion. Most of these pretty houses are built of wood, but brick and even stone houses are successfully moved in the same way. The wooden houses are comparatively large, the most spacious containing at least ten rooms. Perched on the hillside, which in the meantime is attacked night and day by boring machines, the earth being

conveyed elsewhere by a series of railways, they may be said to be ready for traveling. The foundations, which rest on a square frame of lumber, are soon laid bare. Two immense wooden beams pointing downhill like an enormous chariot are slipped under the lumber, a sort of bridge or inclined plane leading downhill having been previously made. Piles of roughly hewn logs are placed one above the other like a child's building blocks, their number being smaller and smaller as the inclined plane, to which they act as supports, comes nearer the level of the new site, where everything is made ready for the house. Down this rudimentary bridge, which looks as if it had been designed by a child, the two beams, and the house with them, are gently lowered by means of a clever combination of ropes until the house has reached the plot that is waiting for it. Strong wheels are then fitted to the beams, and the house is steered to the exact spot desired and is ready for immediate occupation.

I had a conversation with the owner of one of these houses while she was putting the finishing touches to a small garden in front of her veranda in its new place. My surprise, or rather my astonishment, seemed to amuse her, and she was kind enough to tell me all I wanted to know about her removal. "Nothing could be simpler," she said. "Everything inside the house was left as it was. The furniture, fixtures, pictures, all stayed in their places. We did not even have a window pane broken." It was perfectly true, and I have seen other houses moved in the same way, with their windows intact and the curtains in their place just as if nothing unusual were going on. I afterward saw the same thing at Minneapolis and St. Paul, and at Buffalo I saw a stone house moved. The lady's satisfaction, however, was not altogether unalloyed, inasmuch as, according to what she told me, the moving cost her $25,000, including everything. I asked if she could not have had a new house built for the same cost, to which she replied, philosophically, "Probably."

The contractor, whom I found at his works, was more optimistic. He pointed out that by letting one of these transplanted houses for five or six years the owner gets back the cost of moving it. In the meantime the land increases in value and the house can be rebuilt for a permanency.

None the less, shaving off the top of a hill and moving the ground, with the houses on it, into the valley—an operation known as "degrading"—is an uncommon exploit, except at Seattle, where extraordinary things are the rule and the principal object is to accomplish the impossible. People talk about the "Seattle spirit," "what Seattle wants," and the "Seattle walk," and there is some truth in it. I have met many Americans with a "sure-to-get-there" style of walking, just like their conversation.

This confidence has already shown what it can do. Confidence was what led the citizens of Seattle to discuss plans for laying out the city on a larger scale while the terrible fire of 1889 was still raging. Thanks also to confidence, they compelled the railway companies to pay attention to their district, which was thought of very little account at that time. The companies refused to carry their roads to Seattle and establish a terminal in such a chaos of mountains and lakes. They set down the idea as impossible and crazy. Not to be discouraged, the Seattle men set to work themselves in gangs and, without any outside help, they built the most difficult section of the line, starting from Seattle, ready to connect with the future trunk line. Since that time Seattle has become a center for all the transcontinental railroads. At present it has six; there will soon be eight, and, no doubt, others later on. In this way a great center for trade with the Far East has been built up; and it is easy to understand why Seattle absolutely refuses to join in any so-called patriotic movement against Japan. Seattle has shortened the journey from the Atlantic to the Pacific and Japan by eight hundred miles. In connection with the surrounding ports, such as Everett, Victoria, Vancouver and Portland, Seattle has become the great supply center for Alaska and British Columbia. A great many people work in the Klondyke during the summer and return to Seattle for the winter.

Prophets of ill-omen predict all sorts

of failures and disappointments for too ambitious Seattle. The bolder spirits reply:

What does that matter? We can stand disappointments. We are not working for ourselves alone, but for the city, the country and the future. Nothing venture, nothing win; if we have setbacks we will begin again, and if we still fail, others will get the benefit of what we have done. Nothing is lost. It makes no difference whether the Panama Canal is finished or how fast the cities competing with us grow. The port of Seattle is in the middle of such a rich district that it is bound to take its place not only as a connecting link between East and West, but as a market for produce. This is why so much Eastern money is invested here, and why the rise in value of real estate justifies us in spending lavishly with an eye to the future. Lake Washington, which is deep enough for the biggest fleets in the world, will soon be connected thru the city with the Sound; we shall begin to get coal out of our mines, and our crops will give ten times as much as they do now.

"Capital from outside works with a vengeance at Seattle, and it has come to such a point with us that the question of property presents itself in a new light. Henry George's theories have a good many believers here, and it is easy to understand why. Look at this piece of real estate. Ten years ago it was worth nothing, and now it would sell for a million dollars. Its owner is simply waiting while the city works for his benefit. He lives at Chicago or New York and does nothing. He is speculating on other men's labor. Is this right or just? The same question has arisen at Vancouver, and it has been settled, not by Socialism, but by what is called the single tax, based on the value of the ground, according to Henry George's system. Land should bring in revenue for the community and not for the owner alone.

"You gentlemen from Europe and the East will have to understand that we cannot accept your ways of settling things, and that we must find our own. Do not try to measure us by your standards. We are different from you thru the force of circumstances and thru your own fault. Civilization has always moved westward with the sun, and now it has reached the end of the journey, where we are. On us lies the burden of all your disappointments and excesses, as also of whatever good you have done. We have to deal with all the problems you have not been able to solve. At least let us view the task thru our own eyes and take it in hand in our own way. We are a new people in a new sphere, and we have to find new ways—our own ways, and not yours."

Thus, it will be seen, the Seattle spirit does not accept European ideas without due examination. The Seattle spirit takes nothing for granted. It shows itself in every department of activity; in the churches, for instance. The Presbyterian church, in which I spoke, is not only a place of worship, but of debate and an educational center, where I was introduced to the audience and listened to exactly as I was at the university. It was the same at the Congregational church, the most democratic of all and also the oldest. It is under no bishop, and is not connected with any organized church system. Its congregation consists of so many people who combined to build their own church and manage it after their own way, without any interference from outside or above. As the number of churches increases, they combine in turn. The members of the congregation elect their minister and organize their Sunday school, concerts and lectures, which are delivered by any one considered to have something useful to say.

This, moreover, is how a great many Protestant churches in America regard their educational mission. They are open to moral instruction of any kind. The teaching of conciliation and international justice is by no means outside their program, but, on the contrary, forms part of it. There are a great many who think that the schools ought to be used for purposes of general instruction, outside school hours. Their theory is that the schools belong to the people, and that the people ought to have the use of them.

PARIS, FRANCE.

# A Stirring Interval

BY JUSTIN McCARTHY

IN my latest contribution to the columns of THE INDEPENDENT I described the condition of London as then absolutely absorbed in the terrors and dangers created by the spread of strikes here and there and everywhere thruout the trading quarters of the great metropolis. Just now we are under the influence of alarms much greater in every sense than the terrors engendered by the prospects of an era of trades strikes, which threatened to include a compulsory suspension of all manner of railway traffic in various parts if not indeed thruout all parts of England, Scotland, Ireland and Wales. Now we find ourselves once again restored to our more familiar and frequent alarms about wars and rumors of wars, and I think I may say that we most of us feel more at home and less, if I may use such an expression, "put out" by the threatenings of foreign fleets off our coasts than by the announcements of strikes in our commercial pursuits. Italy has got into trouble with Turkey, and without professing or pretending to know much about the merits of the controversy, I may at least venture to say that I can hardly conceive the possibility of any quarrel arising between Italy and Turkey in which the land of Julius Cæsar would not have the sympathy of the people of these islands rather than the monarch of Constantinople. Then we have not very recently received news of disturbances between France and Germany concerning Morocco. But these, I believe, show every prospect of being brought to a satisfactory conclusion. In fact, the number of alarms which we have lately been receiving and discussing seem as if they ought to have had nothing whatever to do with the world of science and commerce and international intercourse and all the conditions of civilization which the modern world is supposed to have created and permanently established. When here in England we now take up a morning paper we look into its columns with the expectation first to read some rumors of a coming war, just as when we open a number of *Punch* we expect to be confronted by a joke. Naturally, when we are talking about wars in the near future we expect to find Germany taking a prominent part in them, and the fact is that at present there is a strong and almost universal belief that Germany is much inclined to find another occasion for war with France in some arrangements which

MAHMOUD SHEVKET PASHA
The Turkish Minister of War

France is understood to be making for a perilous controversy. I find it hard to understand how a people like the Germans, ranking among the very best educated of all existing peoples, and who have in our own days won the greatest warlike triumphs of the present age, could feel any temptation whatever to go in quest of new adventures which could add but little to the fame of their past triumphs and might only end in utter disappointment.

But now already additional excitement is given to the alarms about coming wars in the announcement, not as a rumor, but as a matter of fact, that Italy has actually declared war against Turkey. Today the *Daily News* publishes an article on the subject of Italy's declaration of war, a quotation from which I think will interest and astonish my American readers.

"Italy declared war on Turkey yesterday. It is plain that Turkey was prepared to make the most extensive concessions in order to preserve peace, but Italy was determined to exact at all costs the full measure of her demands. Thus opens the first war which French action in Morocco has launched upon Europe; the first, but who knows whether it will be the last? The best that we can now hope is that war will be confined to Tripoli, that the dead will be numbered in hundreds instead of by scores of thousands. That is a hope hardly likely to be gratified. Already there are rumors of risings in Albania, of menaces to Greece. These are guesses, doubtless, but guesses based upon fact. The rulers of the world have thrown over law and morality; appetite alone now dictates their conduct, and appetites in the Balkans are coarse and strong. Where the ancient civilizations, the model states, have set so tempting an example, how shall we expect the mushroom states, their pupils, not to follow? And when the scramble is once in motion, who is there that may not be drawn in? Today the peace of Europe is at the mercy of any wanton, and nobody knows where next the delirium may break out. To this pass have the rulers of Europe, the select statesmen, the men claiming to govern by virtue of superior wisdom, brought the world. Judged by their works, they are infinitely inferior to the masses whom they profess to lead and instruct, for the universal sentiment wherever plain citizens are gathered together is of unbounded disgust; disgust, with Italy, but not with Italy alone, nor even especially with Italy. Italy has done nakedly, without disguise, without hypocrisy, what during the last twelve years every other great Power has done or tried to do."

I must say that for myself I could feel nothing but regret that a country like Italy should condescend to follow the vulgar example of the states that make use of the declaration of war as a means of self-advertisement. I have met Cavour and heard him speak on some important subjects and occasions; I knew Garibaldi and met him often during the later years of his life, and I could not associate either of these men, the statesman or the soldier, with the advertising of his country by the means of an unexpected declaration of war. But I must say that if the challenge is taken up by Turkey, I shall certainly look with hope for the full success of the Italian arms. It may be that we shall yet discover that Italy has some powerful support promised to her in this most recent adventure, and that she will come out of it fully triumphant in the end. That would at all events be much more gratifying to civilization in general than her defeat and humiliation by Turkey and whatever allies the Ottoman Empire can bring to her own aid. The news received already is often very conflicting and is almost always rather confusing. We hear accounts of Ottoman war vessels completely destroyed, and on the other hand we read narratives equally positive of Italian war movements against Turkey's fleet or Turkish battalions proving utter failures, and just at the present there is no possibility of bringing the conflicting accounts to any final settlement. For the present, then, we here in Europe—I mean all those of us whose sympathies and hopes are with Italy—are left to live on those sympathies and hopes and to believe that they will justify themselves as this chapter of history broadens and brightens upon us.

In our domestic politics we are also in a condition, as my American readers will, I am sure, be glad to learn, of cheerful expectation. There is every reason to believe that with the coming of next year's session of Parliament will come the passing of Ireland's measure of Home Rule. More than one member of the Government, and even of the Cabinet, has already spoken out frankly his own conviction that this is the determination of Mr. Asquith and his colleagues at

present and that there is no prospect of any change in the political determination. Much interest has been felt thruout England in the visit of the Eighty Club to Ireland. The Eighty Club is one of the old-established, almost historical, London clubs which give themselves up mainly to political interests, and the members this year paid a visit to Ireland in order to make themselves better acquainted as to the actual genuineness and nationality of the demand for Home Rule. From all that I have read and heard of their experiences I believe that even in the province of Ulster they found that Home Rule had the majority of supporters. I may out of my own personal experiences offer some distinct support to this impression from the fact that I sat in the House of Commons for some years as the representative of the city of Derry, in that part of the north of Ireland which was long believed to be the most thoroly Orange of Ireland's northern communities. Apparently the Eighty Club received a welcome thru the greater part of Ireland which satisfied them that the general feeling of the island was on the whole very favorable to the cause of Home Rule. For myself, I feel the most serious doubt whether there is any country in the world whose population are more thoroly agreed upon any political question than the Irish people are agreed upon the question of Home Rule, and I feel well convinced that the fact that the great majority of Ireland's population being thus united in opinion has of late been making itself more and more apparent with every passing week to even those classes of Irishmen whose personal interests set them against the whole agitation for the restoration of Irish nationality.

One of the London papers, *The Daily Mail,* announces a marriage which will be heard of with much and equal interest thruout the world of titles and the world of letters here in Britain. The bridegroom is Mr. Algernon H. Talbert, son of the British Minister at Brussels, a member of the aristocratic Clarendon family, and the bride is Miss Beatrix Paul, daughter of Herbert Paul, one of the most distinguished among living English journalists and authors. I was for many years a colleague of Herbert Paul, when we both were writing leading articles for *The Daily News,* and our personal friendship has maintained itself ever since. Herbert Paul distinguished himself in the writing of historical and biographical volumes as well as in leading articles, and I doubt whether the newspaper literature of Great Britain ever had a more brilliant writer of leading articles than my dear old friend, to whom I am rejoiced to be able to offer my congratulation on the happy marriage of his daughter. Herbert Paul is the author of a "Life of Gladstone," a "Life of Matthew Arnold," "Men and Letters," and many other works, each one of which added to the reputation of my old friend and colleague. I may add that I was for some years a parliamentary as well as a journalistic colleague of my friend when he too occupied, as I did, a seat in the House of Commons.

I began this article with some remarks on the change which had taken place in public interest and therefore public talk on the subject of strikes, which at the time when I was engaged with the production of that article was engrossing the absolute attention of all that large proportion of the British public which occupies itself in the consideration and reconsideration of the items of news supplied by the daily and weekly journals. The war between Italy and Turkey came in for a while to distract our attention from such merely domestic questions as strikes, but we are now, it seems, threatened once again with a series of the most alarming and indeed the most distracting and destructive strikes in almost all the great departments of British trade and British everyday operations. For the moment, therefore, the attention of most of us has been diverted, or perhaps I should better say distracted, since the phrase "diverted" gives, whether we mean it or not, a suggestion of something humorous, which certainly could not be found in the prediction of some disturbing events, the disturbing effect of which is to be confined altogether to the domestic life of these countries.

London, [illegible]

# Literature

## Prosody and Versification

THOSE who wish to study the anatomy of verse may well look to Professor George Saintsbury's *Historical Manual of English Prosody*.[1] They will find verse there in its bones and their articulation, in its processes of taking on muscle, with a hint now and then that there is blood somewhere at work, and a head, lungs, and feeders of various usefulness. The history of this anatomy in all its parts from the beginning of rhythmic construction out of which has grown the vast body of English verse of which we justly boast is here written. Even the vast terminology of poetics is traced from the Saxon days before verse began to walk on "feet" down to the days when, with Shelley and Swinburne, it took wings with the lark and nightingale and lifted song to the skies, and, with Browning, disappeared in the clouds themselves. In other words, it is a complete manual and thesaurus of verse-in-the-building, such a thesaurus as will almost satisfy that want in the student of song which is never quite filled until the student can talk about and about the art which he affects as the German classicist can talk about the missing vocables in a manuscript of Æschylus. The learned author tracks the iamb, the trochee, the dactyl and anapest, the spondee and Bacchius home to the very borders of that endless discussion whether there is any foot at all save the iamb and trochee, and whether, after all, the trochee is anything but an iamb changing step to rest itself, and the dactyl and anapest anything but the frolicsome hop-skip-and-jump of these two.

If the cheerful and light-hearted reader wishes only the psychology of verse, he may go with confidence to Professor Brander Matthews's *A Study of Versification*,[2] in which the author announces at the start that he will have little to say of the history of prosody. What he aims at is "a beginner's textbook of metrical rhetoric. Its aim is to explain to the inquirer the technic of verse-making and to show him how the poets have been able to achieve their effects. It sets forth what I believe to be the fundamental principle of the art,—that all poetry is to be said or sung, and that its appeal is to the ear and not to the eye. This principle is here asserted, unhesitatingly; and from it all the practices of modern English versification are here derived. No other principle is even discussed, and all controversy has been rigorously eschewed. . The student will not be confused by any attempt to refute any other theory; and his time will not be wasted by the confutation of any code long ago disestablished." From his emphatic statement of the case that "all poetry is to be said or sung," that its appeal is to the "ear" and not to the "eye," one begins to tremble a little lest the reader who is to answer the appeal shall prove to be Tennyson himself, or Wordsworth, or, peradventure, some "pulpit-drum ecclesiastic." Bayard Taylor's visit with Tennyson and Emerson's patient ear lent to Wordsworth's sonorous declamation of his own poems warn us off from the loan of an ear. One rather prefers that inner ear of the mind that has been trained in the articulation of the forest, the sea, and the wind—of the mind,

> "That ocean where each kind
> Doth straight its own resemblance find,
> Yet it creates transcending these
> Far other worlds and other seas."

than precisely what the poet had in his thought. Listening somewhat assiduously with that inner ear, man has built up a perfect factory of musical instruments in his head to interpret nature. With such a definition of "ear," one may accept the author's bold and startling dictum, and follow him with delight as he leads us among the great masters of song courteously requesting of each singer his best music. Courteously,—for Professor Matthews has a well-tuned inner ear for what the real masters have

[1] MANUAL OF ENGLISH PROSODY. *By George Saintsbury.* New York: The Macmillan Co. $1.60

[2] A STUDY OF VERSIFICATION. *By Brander Matthews.* Boston: Houghton Mifflin Co. $1.25

to say aloud, and there is no courtesy so fine as a just appreciation of the gift one is in receipt of. His definitions of the technical parts of versification lie in the illustrations. With a judicious finger he points us to the illuminated passage of a poet, and we find there our direction to the author's art. Professor Matthews is nothing if not bold and dashing—dogmatic, is it called?—at any rate, dashingly right or dashingly wrong, as when he nearly knocks the breath out of the useful and very prevalent spondee—the spondee which obligingly lends its ox-like back to the burden of trochee or iamb, anapest or dactyle, and yet comes down with unshakable might, on its own solid base, when a Milton is weighting the lines.

**The Life of John Oliver Hobbes.** By John Morgan Richards. New York: E. P. Dutton & Co. $4.

Pearl Mary Teresa Craigie wrote her novels and dramas under the name of John Oliver Hobbes: "I chose the name of John because it is my father's and my son's, Oliver because of the warring Cromwell, and Hobbes because it is homely." She had a genius for friendship, and to one with that best gift of the gods the most natural means of expression is by personal letters. The letters given in this large volume reveal a most attractive personality. They are not stilted or conventional, yet they are veiled by a womanly decorum more engaging than the greater abandon the reader might expect from the author of several very successful comedies. Mrs. Craigie was a deeply religious woman, a Catholic in her later life. "I believe I am a lover of souls, but people scare me out of my wits. I am not at home; I talk about things which I do not believe in, to people who do not believe me." But she is "at home" in her letters. Mrs. Craigie had many warm friends among men of letters. In an appreciative note from J. M. Barrie, he gives an astonishing disclosure of his feeling toward Sentimental Tommy:

"As for the death of Thomas, I question whether I could have written the book had I not had the looking forward to the gleeful telling of the rope that would leave him sticking."

Mrs. Craigie's own letters are charming, with touches of her art as a writer of comedies:

"I am delighted to have Seligman's book. The lucidity of American professors is Almighty God's recompense to us for the vulgarity of some American millionaires. . . . It is lovely here (in Calcutta), but even the birds sing in Hindustanee. . . ."

Small wonder that the greatest men in England and America were her loyal friends and valued her regard as well as admired her talent. In her short life, for Mrs. Craigie died at thirty-eight, she accomplished an enormous amount of work. Her last book was "The Dream and the Business." After much activity, many sorrows and disappointments to offset the success, the "business" of life was over, and the dream of rest at length realized.

**Adrian Savage.** By Lucas Malet. New York: Harper & Brothers. $1.35.

One figure stands out in *Adrian Savage* from a crowd of commonplace, or, at least, conventional characters—that of a lonely and unlovely woman who has an ingrowing egoism and a hysteric self-consciousness. Joanna Smythwaite is a pathetic, yet dignified figure, never positively absurd altho she dreams that a young man loves her, when his heart is quite otherwise engaged, spinning her web of fantastic illusion out of trifles light as air. The gentleness and courtesy of a sympathetic personality and the care given by a conscientious trustee to her interests mislead Joanna to a tragic mistake. It is a study of the malarial stagnation of unmarried women's lives in upper middle class England as painful as it is powerful. We feel its truth. Adrian Savage, himself, is a debonair young man with a winning manner, but he never achieves the reality of poor Joanna. The heroine is scarcely more than a lay-figure, an unsubstantial feminist, and the villain an unbelievable brute, altho the instances of his brutality are told with conviction. The work of Lucas Malet is always that of a skilled writer, but aside from the portrait of Joanna and the story of her starved affection, *Adrian Savage* is a disappointing book, in spite of its power.

**Across China on Foot.** Life in the interior and the reform movement. By Isaac T. Dingle. New York: Henry Holt & Co. $3.50.

This is a personal narrative of travel not differing essentially from many others that have been published except that it is more recent and covers in part unfamiliar ground. The author in 1909-10 entered China by the front door at Shanghai and went straight thru to the back in British Burma. His route up the Yang-tse River takes him thru the heart of the revolutionary region of Hupeh and Sze-chuan. He was at Hankow in January, 1911, when the anti-foreign riots broke out there, a sort of dress rehearsal for the more serious insurrection now centering there, and his book is full of warnings that the Boxer spirit is not dead, but likely to flare up at any moment. The most original feature of the volume is its illustrations, a hundred half-tones from the author's photographs, unusually well taken and printed.

**City Government by Commission.** Edited by Clinton Rogers Woodruff. New York: D. Appleton & Co. $1.50.

Rapid and widespread interest in the commission form of municipal government and in charter reform generally is a most conspicuous development of recent years. In part it is another expression of the oft-betrayed American confidence that changes of political machinery would automatically ensure reform. But also this volume shows that it has succeeded in enlisting city officials from outside the ranks of professional politicians as well as in inspiring, with its provisions for the referendum and recall, a fresh democratic fervor. Its efficacy is thereby greatly strengthened. Yet it is no panacea for all municipal ills. Its dangers and its limitations are as patent as its advantages. The National Municipal League has therefore brought together the papers on the subject that have been read at its meetings from time to time by experts in various branches. The cons as well as the pros are presented, the facts are sifted, the varied forms which go under the common name are analyzed, the history of the movement is narrated and the conclusions that can at present be safely drawn are summed up.

The commission plan has established a *prima facie* case. Whether or not this will be permanent, and the same results will be obtained when the newness of the broom has worn off and the novelty of the change has gone, only the longer experience of a larger number of cities can show. . . . A change in the form of government without a change in the hearts of the people will avail nothing."

One disadvantage of bringing together a number of essays by different writers is that repetitions will be common unless they are rigorously pruned by the editor. In this case the editor has been more considerate of the writers than the readers. The account, for example, of the tragic circumstances which gave rise to the Galveston plan is given over and over again. But no citizens' committee for framing a new charter will be fully equipped without copies of this volume.

## Literary Notes

....A good exposition and honest criticism of "New Thought" may be found in Prof. J. B. Anderson's *New Thought, Its Lights and Shadows* (Sherman, French & Co.; $1).

....From time to time May Isabel Fisk publishes a volume of her amusing monologs. *The Eternal Feminine* (Harpers; $1) is the latest of these, full of genuine fun, and satirizing with genial humor, a certain type of woman.

....A valuable addition to the housekeeper's shelf of books is *The Cook Book of Left-Overs,* by Helen Carroll Clarke and Phoebe Deyo Rulon (Harpers; $1). The 400 recipes given are sensible and practicable for the cook who caters to the average small family.

....Scientific detective tales are popular and interesting. *Average Jones,* by Samuel Hopkins Adams (Bobbs-Merrill, $1.25), is a book of this class. The stories of Jones's skill are gay and full of action, and each revolves about an advertisement in some daily paper.

....*The Mansion,* by Henry Van Dyke (Harper's, 50 cents), is the story of the mansion a soul builds for itself in the world to come, and the surprise it may be to a benevolent but self-seeking man. It is a Christmas book and is illustrated by Elizabeth Shippen Green.

....The Oxford University Press has published in pamphlet form Professor Sanday's lectures on *Personality in Christ and in Ourselves* (50 cents), to which is added a chapter in "Retrospect," in which some criticisms are

answered. Professor Sanday acknowledges that he has here been "trespassing off my own proper ground. The only excuse that could be made was that it was trespassing in pursuit of game started on the theological side of the hedge."

....Marie Louise Van Saanen, in her new novel, *The Blind Who See* (Century; $1.20), has made a variation in the eternal triangle by enlisting the sympathy of the reader for the husband, who is a blind violinist of great gentleness and personal charm. The wife, who deserts him for an inferior man, deserves no sympathy and gets none.

....*The Far Triumph*, by Elizabeth Dejean (Lippincott; $1.25), tells the story of a young girl caught in the net of circumstances and of her brave struggle to extricate herself and rehabilitate her life. It has the doubtful distinction of containing the most unnatural and evil mother in the pages of fiction. The other characters are more believable.

....Under the uncertain title of *A Corner Stone of Colonial Commerce*, John A. Stoughton has published a rambling collection of notes on the early trade of the Connecticut River Valley. Many of them refer to the tobacco industry. Pious maxims and evidences of local self-sufficiency are larded thru the text. (Little, Brown; $1.50.)

....We trust there are still some people in this rushing world who have time in which to enjoy puzzling out charades. Two volumes of rimed charades come to our desk: *Broken Words*, by William Bellamy (Houghton, Mifflin Co.; $1), and *Charades*, by An Idle Man (Little, Brown & Co.; $1). Both are sufficiently ingenious to whet the reader's wits.

....During the past year most of us have wished we knew more about Mexico. Margaret Cameron, in *The Pretender Person* (Harper; $1.30), gives a moving picture of the country, its scenery, its color, its picturesque social life, as described by one of a party of traveling Americans. These impressions are strung on a thread of three love stories.

Paul Elder & Co. send us from San Francisco a copy of their recently published *Good Things* bound in a dainty cover and filled with "Ethical Recipes for Feast Days and Other Days, with Graces for All the Days." The recipes are in themselves piquant dishes, prepared by Isabel Goodhue, and the appropriate decorations are furnished by Walter Francis.

Eleanor Hallowell Abbott, the author of "Molly Make-Believe," has collected ten short stories under the name of *The Sick-a-Bed Lady*. The title story contains a mystery of lost identity, with an unexpected solution. Of the other tales, "Woman's Only Business" is the most powerful, altho all have a wistful charm: the interplay of emotion and humor and unusual situations carefully wrought out. (Century, $1.30.)

....The addresses delivered at the Buffalo Conference which organized the Men and Religion Forward movement have been published in a handy volume by the Y. M. C. A. Press, N. Y. (50 cents), under the title of *Men and Religion*. The book furnishes full knowledge of the purpose and scope of the movement as understood by such men as James G. Cannon, John R. Mott, Graham Taylor and a dozen others.

....The treasures of old monasteries in the East are still being recovered. Two works by Church Fathers of the third century are among the latest discoveries: one a commentary by Hippolytus on the "Blessings of Jacob"; and another by no less a scholar than Origen on a large portion of the Book of the Revelation. They are published in German in Harnack's series of "Ancient Church Literature."

....An excellent gift to any girl at her graduation would be *Girls and Education*, by President Briggs, of Radcliffe College (Houghton, Mifflin Co.; $1). A sentence from the chapter "To the Girl Who Would Cultivate Herself": "There is a vast difference between feeling too big for a place and being too big for it, and feeling too big for one's work and surroundings seldom if ever results in culture," will give a taste of its quality.

....Dr. Drax, in *The Mating of Anthea*, by Arabella Kenealy (John Lane Company; $1.25), carries out a theory of education for young girls likely to excite controversy. His ward, Anthea, is not allowed to learn to read, she does not even know her letters, but is encouraged to "grow up spontaneously." She is also to be married to a man of the doctor's choosing as an ill-advised experiment in eugenics. That Anthea is not more unlike other girls surprises Dr. Drax.

....*Household Administration* (Holt; $1.50) is a compilation of several able papers by English women, who are lecturers on some branch of domestic science in a woman's college or members of boards of education. It has an introduction by Catherine Schiff, and the object of the book is to enforce the necessity of the "right conduct of the home on scientific lines." It is a valuable piece of work, honest in execution as it is sensible in intention.

....Will N. Harben is most at home in his Georgia mountains, a field to which he has returned in his novel *Jane Dawson* (Har

press $1.00, which has for its theme the religion of the mountaineer and the tragedy of its harsher aspects as they affect a young girl. The Pharisees seem to us exaggerated in their hypocrisy, and the followers of "The Light of Reason" magnified in their honesty and sincerity. There are some dramatic passages in the book, but much of its pathos is overstrained.

....*The Second Amendment*, by Henry Clay Hansbrough (Kansas City: Hudson Publishing Company; $1.40), has for its theme the doings of the "Altocratic" political party in America, but its style is that of the eighteenth century, and the effect is that of a masquerade. The definition of an Altocrat is attractive: "One who puts love of country and the good of his fellow man above party and personal gain," and there is a struggle between the Altocrats and the Plutocrats, but its details are hard to discern thru the ponderous phrasing of the novel.

....The Cole Lectures this year at Vanderbilt University were delivered by Robert E. Speer, on *Some Great Leaders in The World Movement* (Revell; $1.25), by which, of course, is meant the missionary propaganda. Mr. Speer's keen interest in missionary biography, his quick understanding of significant forces, and his deftness of style, combine to make his book one of the best in this series of publications. Lull, Carey, Duff, Bowen, Laurence and Gordon are the heroes whose lives he so graphically sketches.

....No one could possibly pack more unmixed sentimentality into 113 pages than Mary E. Waller, proclaimed as author of "The Wood-carver of 'Lympus," puts into *My Ragpicker* (Little, Brown & Co.; 75 cents). An artist is supposed to tell the story to a group of his fellows, and the scene is Paris. We never met the artist, however, nor yet his ragpicker, nor any of the subsidiary characters. Those who prefer fiction that is unmistakably fictional—not because it is "too good" to be true!—will doubtless delight in this rococo idyll of the dump.

....From Crowell come two attractive volumes of uniform format entitled *The Best English and Scottish Ballads*, selected by Edward A. Bryant, and *The Twelve Best Tales by English Writers*, selected by Adam L. Gowans (75 cents each). In this second volume the choice is limited to "authors no longer living" and to stories not exceeding 15,000 words. It is absurd to exclude Poe, however, from such an anthology, whatever his nationality. There is too much Dickens here; besides Dickens, a little Hogg, Thackeray, Mrs. Gaskell, Dr. John Brown and R. L. S.

....The introduction of selections from the Old Testament literature into school reading courses has laid new emphasis upon the pedagogical methods of utilizing biblical material An excellent handbook for teachers and parents to use as a guide in the work of instruction has been prepared by T. Raymont, M. A. *The Use of the Bible in the Education of the Young* (Longmans; $1.25) is full of solid and easily apprehended material on the subject. The author's suggestions in regard to the study of the Bible, his review of its literary aspects, the outline of a proposed course of instruction, and his discussion of the preparation and presentation of lessons are all marked by scholarship and a thoro knowledge of the principles and difficulties involved. The admirable treatment given to such subjects as the Old Testament myths and legends, the stories of the Virgin Birth, and the varying accounts of the resurrection, will command general approval. The book is to be strongly commended, not only to teachers in the day schools, but also to alert teachers in Sunday schools.

....Among the many religious booklets that have come to our table several deserve special mention and commendation. From Scribner's we receive two excellent stories: *The Sad Shepherd* (75 cents), a Christmas story, by Henry Van Dyke, and *The Courage of the Commonplace* (50 cents), by Mary R. Shipman Andrews. McClurg sends *From the Heights* (50 cents), by John Wesley Carter, and Paul Elder & Co. favor us with a *Recipe for a Happy Life* ($1), made up from appropriate quotations collected by Marie West King. The Pilgrim Press contributes *A Letter to the Rising Generation* (25 cents), by Cornelia A. P. Comer; *The Man Who Missed Christmas* (25 cents), a story by J. E. Park; and *My Four Anchors* (50 cents), a statement of "what we know about religion," by Lyman Abbott.

....*The Hibbert Journal* celebrates its ten years of life by publishing an unusual and very valuable number for October. It is by all odds the most valuable of all our quarterlies devoted to religion and religious philosophy. It is quite sufficiently hospitable, so that we may find included articles of extreme orthodoxy and of advanced critical faith or unfaith. This present issue is an example. Principal P. T. Forsyth discusses "Revelation and Bible" in a way that would hardly offend Professor Warfield, of Princeton, while the Abbé Loisy discusses "The Christian Mystery" so as to leave the impression that the sacraments, and indeed the Christian philosophy and theology generally, in the years following our Lord's death, and principally thru Paul, took form and color from the pagan mys-

teries. The first two articles are, one of them by Bergson, the French philosopher who is now beginning to impress indirectly our theism, and the other by Hon. A. J. Balfour, a leader in philosophy as well as in Parliament, who offers a careful appreciation and criticism of Bergson. From Bergson's paper one can get quite clearly the drift of his teachings as found in his "Creative Evolution." Of the remaining half dozen other admirable articles we may mention only one by Professor Harnack, which includes the account of a very religious, almost Christian, essay by Porphyry, the foe of early Christianity; another by Professor Sanday, and yet another by Prof. J. A. Thomson. This is an extraordinary number, but always it appeals to thoughtful clergymen and studious laymen. (Sherman, French & Co. Boston; 75 cents a copy.)

....In the November *Bookman* the editor chats of the part North America plays in European fiction. "Allusions are plentiful; descriptions of definite localities comparatively few." In French fiction there is, of course, the inevitable *oncle d'Amérique*. He appears in a comic and unstereotyped manner in Maupassant's "Pierre et Jean." He appears in so recent a play as the "Adventurer" of M. Capus.

"North America in French fiction may be said to play the same part as it does in the romances dealing with Daudet's Tartarin of Tarascon. Tartarin never went to North America in reality. But he had been there a great many times in imagination—under the guidance of Captain Mayne Reid."

Chateaubriand, to be sure, who tells about America not only in his "Voyages" and his "Memoirs," but also in "René," had himself visited this continent. But he greatly exaggerated the extent of his wanderings, and poetized the forests, the great lakes and the river "Meschacebé." Before Chateaubriand, another novelist had used Louisiana: the Abbé Prevost in "Manon Lescaut." In Eugene Sue's "Mysteries of Paris" two or three chapters deal specifically with one of the Southern States, presumably Florida. San Domingo, at the time of the revolution of Toussaint l'Ouverture, furnishes the background of Hugo's "Bug Jargal." Halévy lays certain scenes of the "Abbé Constantin" in Montreal and New York. Jules Verne in several novels makes use of the North American background. More recently, the United States have provided the scene and the characters for some of M. Abel Hermant's sarcastic pieces, notably "Les Transatlantiques." A scholar sent to Harvard on the Hyde Foundation has lately repaid the kindness by writing a preposterous romance about life in Boston, and at those near-by institutions of learning, Harvard and Wellesley, the title does not suggest itself, but M. Girardoux is the young author's name. Then, of course, America figures more or less conspicuously in British fiction, from the time of Dickens and Thackeray down to "Captains Courageous." Canada, too, figures here: Conan Doyle ("The Refugees"), David Christy Murray ("Despair's Last Journey"), Robert Barr ("In the Midst of Alarms"), Besant and Rice ("Le Chien d'Or"), Harold Bindloss ("A Sower of Wheat"), Mrs. Ward ("Lady Merton"); these are only a few of the names that may be cited.

## Pebbles

THE Chinese Dragon acts as if he would like to be a chameleon.—*N. Y. Tribune.*

IF the Chinese Emperor is as much to blame as he says he is he deserves a spanking. —*N. Y. Times.*

FOR RENT—A nicely furnished front room and alcove rooms, suitable for young couple or four young men, also barn, in a nice quiet family.—*Elgin (Ill.) Courier.*

Now that the Greek and Latin classics are tabooed in the American curriculum, Pope's Homer is no longer a favorite, but Baker's "homer" is universally acclaimed as a winner that must stay.—*Catholic Standard and Times.*

"AREN'T you afraid that stenographer will divulge some of your business secrets?" "No," said Mr. Growcher. "I'm safe on that point. I've got one who can't read her own notes."—*Washington Star.*

STRANGER in Town—So that is the haunted house? What gave it such a significance?

Resident—Well, there's been something uncanny about it from the beginning. Even when it was built it didn't exceed the contractor's estimate.—*Puck*

"You have captured one of our generals," said the South American commander. "Yes," said the leader of the insurgents, "we have." "We will exchange two colonels for him." "Nix." "Then two colonels and a captain" "Nothing doing. You can have him, however, for a can of condensed milk."—*Louisville Courier-Journal.*

"SINCE I rose this morning," said Smith, "I've put down a linoleum, laid three carpets, prepared four rooms, set up a stove, swept out the hall——"

"My dear boy!" cried Jones compassionately.

"Mended a chair," continued Smith, "made a couple of beds, set the table thrice, washed up the things afterward, shifted a piano and a chest of drawers and hung nine pictures."

"Poor old chap," gasped Jones. "Did your wife make you do all that?"

"No; my little girl did," replied Smith. "I've just given her a doll's house."—*Tid Bits.*

# The Independent

Entered at New York Post Office as Second Class Matter

Published by Clarence W. Bowen
130 Fulton Street - - - - New York

A WEEKLY MAGAZINE FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.50 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and club-bing rates will be granted as low as offered by any responsible agency.

Notice in the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

## Cotton and the Governors

At the conference of Southern Governors, Commissioners of Agriculture and cotton growers, in New Orleans, on the 30th ult., a delegate from North Carolina reported that the Farmers' Union cotton planters in that State had adopted and signed a resolution binding themselves to reduce their cotton acreage to 60 per cent. of their "open tillable land," and to pay a penalty of $10 for every planted acre in excess of 60 per cent. This agreement is to become effective on January 1, 1912, and to continue in force "until the average price of cotton shall have remained at 12½ cents, or higher, for two successive seasons."

On the preceding day the same North Carolina Farmers' Union sent two lawyers to New York to attend the proceedings in court concerning the reorganization of the American Tobacco Company, or Tobacco Trust. These attorneys were to insist upon a complete dissolution of the agreement of the several parts of this company, and a full restoration of competition in the tobacco manufacturing industry.

Governor Mann, of Virginia, a member of the committee which prepared the report and recommendations of the conference, remarked in his address to the delegates that "the strong arm of the law should be used against corporations that seek to throttle and stifle trade." The report recommends a reduction, by agreement, of the present cotton acreage by 25 per cent.:

"We recommend, and for ourselves agree, that the Governor of each cotton State proceed at once to appoint a representative in each county, who in turn shall appoint a representative in each school district or voting precinct, to secure from every farmer a binding written pledge to reduce his cotton acreage, in 1912, 25 per cent. below his acreage in 1911."

Mr. Ousley, of Texas (also a member of the committee), at whose suggestion Governor Colquitt called this conference, had urged such a reduction even if it should be necessary to compel it by the power of the State Governments. We quote from a report of the proceedings:

"If no other escape from this injustice [the present price of cotton] is available, Mr. Ousley said he would favor as a matter of desperate self-defense in the Cotton States an interstate compact apportioning cotton production, with uniform legislation penalizing the excess under a system of State constabulary to prescribe each man's acreage. 'If we must match power with power,' he said, 'then we may well consider the employment of the power of government to force a monopoly price for a monopoly product.'"

In the discussion of questions involving production, competition, the fixing of prices, etc., it is sometimes difficult to avoid inconsistency. The Burley tobacco growers of Kentucky, who recently renewed their pool for a term of five years, an agreement for which night-riders have occasionally shown much respect, are severe critics of Trusts and similar combinations in manufactures and trade. Among those who attended the conference in New Orleans were Frank B. Hayne and W. P. Brown, who were indicted some time ago on account of their connection with what was called the "cotton corner," and are to be prosecuted by the Government. In a speech at the conference banquet, Mr. Hayne referred to his indictment, saying that if by his operations in the market he had enhanced the value of last year's cotton crop, he was willing to go to jail for it. The view of the Department of Justice was that the accused speculators raised the price for their personal advantage.

and not primarily for the benefit of the cotton growers. Mr. Hayne's remarks show, however, that he had their welfare in mind. This is known by one of the New Orleans papers, which speaks of him and Mr. Brown as "two of the leading bulls, men who were willing to sacrifice themselves as victims to the Federal grand jury to raise the price of cotton for the South." When he said he was willing to go to jail for this service, he was interrupted by "a tumult of applause and cheers that prevented him from being heard for almost a minute." He complained that while certain cotton "bulls" were prosecuted, cotton "bears" were not disturbed. Therefore the conference in its report said that if conspiracy to advance the price of cotton by purchase was a violation of the Sherman act, the "bears" who conspire to reduce the price should also be prosecuted. This seems reasonable.

The market price of cotton is now in the neighborhood of 9 cents a pound. Last year's average price was about 14½ cents. The decline is due mainly to the size of this year's record-breaking crop, which probably is not less than 14,500,000 bales and may be even 15,000,000. It is asserted that in parts, at least, of the cotton belt, 9 cents is less than the cost of production. Cost has been growing. When the price rose to 10 cents, about ten years ago, after seven or eight years of lower prices, it was not said that 9 cents was the cost of producing the staple. But, as we have said, the cost is higher now. The fall of 3 cents within the last few weeks, following proof as to the crop's size, was accelerated by pressure to sell.

The conference sought to prevent low prices for the present crop by urging the growers to stop selling, or to market gradually what had not been sold. It is not expected, however, by those familiar with the cotton trade that selling will be restrained by this advice. Many growers have small cotton fields and must sell to meet their obligations. A committee appointed by the conference is inquiring as to certain European bankers who are willing, it is said, to buy and hold 2,000,000 bales. To prevent in future years that hasty selling, at the beginning of the season, which depresses the price, the conference asks planters so to diversify their crops that they shall not be compelled to rely on cotton alone. But its most important recommendation relates to warehouses in which the cotton may be stored. An amendment to Louisiana's Constitution has permitted that State to undertake the construction of such warehouses. The report says:

> "In order that the producer of cotton may be enabled to market his crop gradually and in such a manner as will realize for him the intrinsic value thereof, it is necessary that he have secure, adequate and inexpensive warehouse facilities for holding his cotton, and that the receipt issued therefor shall carry on its face such undisputed evidence of validity and solvency that it can be readily negotiated at low interest rates, not only in the locality of its issue, but in the commercial centers of the world. To realize these essential advantages to the maximum degree, it is necessary that a strong, stable and comprehensive warehousing system be established in each of the cotton-producing States, and in order that such system may not fall into the hands of private interests which might utilize it to the detriment of the producer, a strong public power of control is advisable. It is therefore earnestly recommended that the several State Governments shall take appropriate action to bring about such warehousing system or systems as will best serve the interests of the producer of cotton."

Growers will not now withhold cotton from market; the proposed acreage reduction of 25 per cent. will not be made; but the States may decide to build warehouses. Evidently the conference had in mind warehouses made and owned by State Governments. It remains to be seen whether the Legislatures will favor such paternalism. It may be easier, as a Southern Congressman suggests, to raise the money by an assessment of 10 cents a bale, to erect the warehouses with this money, and then to provide supervision by State officers. We shall await with interest the development of the warehouse project.

Cotton growers should not forget the manufacturer and the consumer. The mills suffered by reason of last year's high prices, which caused much curtailment of production here and abroad, because goods could not be sold at a profit. From this embarrassment there has not been full recovery. One well-known factory was closed last week. The old law of supply and demand has not been repealed. Nor should they forget that

The national policy, as indicated by statute and prosecutions, is hostile to suppression of competition and an enhancement of prices by combination agreements of producers. Limitation and apportionment of output by compact, with a fine for excess—as suggested by prominent delegates to this conference—have been regarded by the national Government as sufficient warrant for the prosecution of more than one group of manufacturers.

## "Vital Interest, Independence, and Honor"

WE are glad that in *The Outlook* Mr. Roosevelt tells us what he would do with questions which in his view defy arbitration. Every treaty, he says, must be backed by force; Turkey suffers, notwithstanding a plenty of treaties, because she cannot back her rights by force. He then repeats a previous proposition of his that "it would be not merely foolish but wicked for us as a nation to agree to arbitrate any dispute that affects our vital interest or our independence or our honor." He dwells on these three terms, "vital interest," "independence" and "honor," and further says that we must be ourselves judges what these are, for the decision as to their nature cannot be left to arbitration.

What, then, would he do with questions that might arise between us and other nations as to questions of vital interest, independence or honor? If they cannot be arbitrated, what can be done with them? His answer is not as hopeless as we might have feared. He rejects arbitration, and yet he allows it. He refuses to ask an arbitrative court to tell us whether a dispute involves vital interest, independence or honor, and yet he does allow some such court to tell us what we ought to do. He says:

"We should agree to submit definitely to arbitration all disputes that do not involve the vital interest, the independence or honor of the nation, and we should at the same time make provisions which will tend to bring about a pacific solution of all disputes not covered by the treaty."

Since "all disputes" that do not affect vital interest, independence and honor are referred to arbitration, then "all disputes not covered" by arbitration must be those that are left, namely, those that do involve vital interest, independence or honor. What provision will he make to secure for them a peaceful solution? He proceeds as follows:

"To this end a provision should be inserted in such treaty that if either party to it claims that a dispute involves its vital interest, its independence or its honor, then (always provided neither party takes a position that necessitates immediate action by the other), upon the request of either party, all questions of fact and all questions of law involved in the dispute shall be referred to arbitrators, who shall have no power to decide the dispute, but shall be authorized to pass upon the controversy as to questions of fact and law, and to recommend such adjustment of the dispute as they may deem just and honorable to both the contracting nations."

He adds that their recommendations should be published, and if not rejected within a specified time they should become binding.

The difference of method he would advise as to the treatment of cases which do, and of those which do not, involve questions of vital interest, independence or honor, is that in the latter case we promise beforehand to abide by the verdict of the arbitrators, while in the latter case we do not so pledge ourselves. We will, however, put ourselves under such pressure that we shall be very likely to agree, but in rare cases we may not. So far as we can see, the entire question in dispute is referred for a decision, called a recommendation, to arbitrators, both the law and the facts; and we do not see that anything is left. We are then to say whether we can in honor accept the decision of such an impartial arbitration. Of course we would and should. We can hardly imagine a case in which we should be justified in refusing. And this is to be added, that in any sort of arbitration either party can refuse to accept it; indeed, an arbitral decision has been rejected in one or two cases. There is no international executive force as yet that can enforce acceptance. In real fact the exceptions made by Mr. Roosevelt are no essential exception. He allows arbitration that will be virtually effective even in the cases which he refuses to include.

We have not the least fear to go with President Taft and openly to put all possible disputes with nations under one

general rule of arbitration. Yet we are very glad to see in ex-President Roosevelt a loyal friend of arbitration, who is also ready, in a way and measure which does not seem to miss the same result, to refer to arbitration questions of vital interest, independence and honor, words that raise in some minds needless anxiety.

And now Oscar S. Straus, dear friend of peace and arbitration, so stirred by his sympathy for Turkey and his indignation at Italy that he is ready to give up his faith in unlimited arbitration and join Mr. Roosevelt in allowing exceptions. Of course, there are cases in which arbitration will not work, but those are cases that do not need putting into treaties. There is no parleying with a sudden midnight assassin. You don't propose to go to law with him before the courts; there is no time—one must act. As we have said previously, when a nation makes sudden war to grab unprotected territory, arbitration is excluded; one must fight, and, under civilized arbitration treaties, it is only in protection against such a possible barbarian nation that a country needs a strong army or navy. Against such a possible enemy, if such there be, armed peace is the assurance of continued peace.

## The Franco-German Bargain

THE Moroccan question, which has three times within the last six years brought France and Germany to the verge of war, has at last been settled amicably and let us hope permanently. It was not a matter which could properly be brought for decision before The Hague Court or any third-party arbitrator because it did not depend upon the interpretation of treaties or the adjudication of historic claims. France and Germany have been bargaining in ambitions rather than rights. France has no legal claim to territory in Morocco and Germany has none to territory in Kongo, but by swapping one for the other they have arrived at an agreement which is mutually acceptable if not equally satisfactory.

It is somewhat idle to speculate as to which got the best of the bargain. The agreement is a compromise and as such affords opportunity for gratulation or complaint on either side. On the face of it Germany comes out ahead, since she has exchanged an anchorage off Agadir for about one hundred thousand square miles of solid ground. But on the other hand, if France has really secured the withdrawal of the German veto to her "pacific penetration" of Morocco it was well worth the sacrifice of a part of her equatorial territory. Except for certain inconvenient Spanish claims, France has now no obstacle in the way of applying to Morocco the same process of gradual absorption and assimilation that she has successfully used in the case of Algeria and Tunis. This will leave in Africa only two countries under native control, Liberia and Abyssinia. But Liberia is under the protection of the United States, as France and England have recently been reminded, and Abyssinia has demonstrated that she is amply able to protect herself, at least against the Italians.

The details of the territorial cession made by France in the Kongo region in exchange for a free hand in Morocco are not given with sufficient clearness in the cablegrams for us to prepare a map, but the main features of the agreement are clear. Germany's first claim of territorial compensation was for the whole of the triangular area of French Kongo bounded by the Kongo River, the Atlantic Ocean and German Kamerun. But this claim has been whittled down by the long and tedious process of bargaining to more moderate dimensions; namely, a bit of the Atlantic coast south of Spanish Guinea but not the French port of Libreville, a point of contact, three or four miles long, on the Kongo River, and a similar strip along the bank of its chief tributary, the Ubangi. This gives Germany three valuable trading points and extends Kamerun by an area equal to twice the size of the State of New York, land lying under the equator and rich in rubber and ivory. Having now gained access to the Kongo River, Germany may be able to carry out her plan for an equatorial railroad connecting Kamerun with German East Africa and crossing at right angles the proposed British Cape-to-Cairo line. All that is necessary is the consent of Belgium to the crossing of the Kongo State, and in view of the increasing domination of Germany in

Belgium doubtless this could be easily obtained, if indeed it has been already arranged for.

By granting Germany access to the Kongo and Ubangi rivers the continuity of French Kongo has been cut at two points, but this is not so bad as it seems, for the French will keep possession of the islands in the river and they have the right stipulated in the treaty of running a railroad across the territory acquired by Germany.

The upper end of German Kamerun, touching on Lake Chad, has always been conspicuous from its queer shape, resembling a duck's head. The bill of the duck has now been cut off thru the cession to France by Germany of the land lying between the Shari and Logone rivers. Whether Germany is cut off from Lake Chad or not the reports do not explain.

Virtually then the partition of Africa has been completed this fall by the acquisition of Tripoli by Italy and of Morocco by France. African border warfare will hereafter be conducted in European chancelleries. A map of the dark continent is a queer looking thing, its edges notched and fringed with alternating nationalities, resembling the claims in a western mining camp when the boom is over. Great Britain, first on the ground, got the lion's share. France has nearly as much in area but much of it is sand. Germany, late in taking a hand in the game, has by skilful diplomacy, active exploration and aggressive commerce secured a surprisingly large amount of territory. Obviously all parties would gain by a general exchange and a rectification of frontiers, thus obtaining more continuous and convenient possessions, but it is not likely that such a wholesale repartitioning will ever be undertaken. The map of Africa will probably long remain much as it is now, the curious product of chance, jealousy, ambition and enterprise.

## Pitiful Pennsylvania!

PENNSYLVANIA has lately enjoyed an unenviable notoriety. First of all, there was the Coatesville atrocity; murder done by citizens of the town, without hindrance by the local authorities. Instead of speeding the conviction of those who had blackened the community name a great part of the population were openly hostile to the prosecution of Walker's lynchers, received the defendants in the case with applause upon their return from West Chester, acquitted thru the failure of justice, and nominated one of the police officers indirectly, at least, responsible for the crime (of which full warning had been given) to a public office. Next came the Austin disaster. A dam that every one knew to be unsafe gave way, at last—to the destruction of life and property. The State authorities had once more failed to avert a catastrophe the imminence of which the Johnstown flood should have taught them. The people of the town took no steps to bring about the safeguarding of Austin and the neighboring countryside, "for fear," says a newspaper, "of doing anything supposed to be contrary to the desires of the Bayless Company, on the continuance and extent of whose operations the prosperity of the place was dependent."

Finally, there is the case of Philadelphia, a rich city, with a population made up to an unusual extent of the American-born. The charge has been published, apparently upon information furnished by a disgruntled Republican politician (one of the Vares, for example?) that certain contractors, in association with United States Senator Boies Penrose, have "staked" the Mayor, and his Director of Public Safety, to the extent of some million dollars. These same contractors have been awarded by Mayor Reyburn's administration many times that sum in municipal contracts. A more openly corrupt and disgusting bargain cannot be imagined. Senator Penrose and his contractor friends have not denied these charges; Mr. Earle, the Republican candidate to succeed Reyburn, has paid no attention to them; one of Mayor Reyburn's cabinet is under indictment for fraud in the award of departmental contracts; the Catlin commission of the State Legislature, that was, apparently, upon the point of incriminating the leaders of the Republican party in Pennsylvania, has been called off by those leaders. And yet, as Election Day approached, some Philadelphians still felt that there was "nothing to do"; there was "no use fighting Penrose"!

What is the matter with Philadelphia? What is the matter with Pennsylvania? Is popular government a failure in that great State and in that prosperous city—rich in tradition and in "Americanism" as well as in trade and manufactures? Is public opinion impotent in Pennsylvania? With mob rule in Coatesville, with the setting of dollars and cents above human life in Austin, with the rule of fraud, electoral debauchery and coarsely unconcealed graft in Philadelphia, one may well ask, What has happened to the manhood of that commonwealth?

## The Vatican's Care for the American Church

DURING the last few weeks the Vatican has given particular evidence of its interest in the Catholic Church in the United States, and with very good reason, for in this country and its possessions the Church has a body of the faithful not surpassed in any other country for intelligence, loyalty and generous devotion.

First—or, rather, last, we have the announceemnt which raises the number of American Cardinals from one to three, or to four if we include Mgr. Falconio, who, tho an Italian by birth, is an American citizen, but who will, with his new duties, hereafter make his residence near the Vatican. The two Archbishops chosen to receive the honor emphasize the full obedience of the American Church to the central authority. We catch its meaning in the comment made on Archbishop O'Connell's elevation to the Cardinalate by the Rev. A. F. Roche, one of the Archbishop's Council:

"Archbishop O'Connell's elevation means a crushing defeat for modernism in this country, which has used as one of its specious arguments that American Catholic interests were not understood or were ignored by the Vatican.

"No one can question the extraordinary ability, courage and prudence of the new Cardinal, and no one dares to insinuate that he is not intensely loyal to the Church and to the flag of his native land."

There is a concealed meaning in these remarks. The one man who has most criticised the paucity of American Cardinals is Mr. Desmond, editor of *The Catholic Citizen*, which is regarded as particularly favorable to Archbishop Ireland, and Archbishop Ireland has been suspected of Modernism, and his claims for the Cardinalate have been rejected; and this is the "crushing defeat of Modernism." Of course, Archbishop O'Connell has never been under such suspicion. He is "intensely loyal."

Just before the announcement of the creation of American Cardinals there was promulgated from Rome a special instruction to the American Church on the holding of Church property. Very possibly the troubles in Maine gave occasion to it. There a few months ago several laymen were excommunicated for their activity against their bishop in trying to secure the passage by the legislature of a law putting Church property in the hands of trustees as in Canada, instead of being in the sole possession of the bishop. This has a certain bearing on the French law of religious associations to hold property which was condemned by the Pope. In this country, under various State laws, the method of holding churches and other property has varied, and there has been occasion for objection and criticism, and appeal has been made to Rome, which has spoken positively.

It is decided that the best way to hold church property is by what is called a parish corporation, but one after the New York State pattern, which is a corporation consisting of the bishop, his vicar-general, the parish priest, and two laymen. This holds the property safe to the Church; and where present State laws do not allow it, an effort must be made to secure such a law. When this best method is not available, the second method is allowed temporarily, that of property held by the bishop as a "corporation sole," as in Maine, under which at his death, the property automatically passes to his successor. In such a case, however, the Vatican lays down a new and very important rule, such as was not found in the decrees of the Third Baltimore Council, namely, that the bishop, as corporation sole, shall seek the advice of his official "consultors," and shall take no important action without their consent. Further, it is required that the method in some places adopted by which the bishop holds Church property in "fee

simple," that is, in his own name, transmitting it by will to his successor, shall absolutely cease. And yet this method was allowed and approved by the Baltimore Council of 1884, while the parish corporation, now commanded, was not even mentioned. Indeed the "fee simple" method would seem to be the right way, and the Baltimore Council bases its rules on the old Apostolic Canon 41, which says:

"We direct that the bishop hold the property of the Church in his own power. For if the more precious souls of men are entrusted to him, much more must he carry the care of the money, so that under his power all things may be dispensed by his priests and deacons, and be carefully administered in the fear of God."

The present action of the Vatican has very properly taken another view, and recognizes the rights of the people as well as of the bishop.

A third action of the Vatican on behalf of the American Catholic Church has been promulgated by the Apostolic Delegate Falconio. It absolutely forbids once more, and with new emphasis, a common but reprehensible custom in Catholic churches of meeting every worshipper at the door and requiring a fee for a seat at mass. This practise was utterly condemned by the Baltimore Council, but it has continued even in large churches just the same, because the priest felt he must get the money, and put on pressure for it. Of course, it tended to keep poor people away from church services. The failure of the bishops to secure obedience to their own laws proves a weakness in what is thought a very strong system, and it is not sure that the renewed rule will root out the evil. The Baltimore Council had said:

"The practise, if it happen to exist anywhere, of demanding money at the door of the church on Sundays and holy days, as a condition of entering and being present at the holy sacrifice of the mass, long ago ought to have been eliminated. For Pope Pius IX condemned it and directed that it should be henceforth abolished."

But the Council did not quite forbid that money be taken at the door. It merely required that in every church there should be a free space where the poorest could be admitted without cost. The present rule goes farther and removes the money changers entirely. The old bad custom will probably not be entirely given up, and it may return as it has before; but those priests who must have the money can, as has been suggested, take two collections, one for those who have seats that they will be willing to pay for, and another later for those who have no seats, but are given standing room. This does not, however, strike us as an edifying method, as it makes a sharp distinction against the poor.

All three of these late acts, the increase of American cardinals, the recognition of laymen in the holding of Church property, and the abolition of entrance fees for seats, indicate the desire of the Church authorities at Rome to recognize both the needs and the rights of American Catholics, and they show modern progress if not modernism.

**Regulation of Railroad Traffic**

The unanimous decision of the Supreme Court that all locomotives and cars used on any interstate railroad, even those engaged in traffic beginning and ending within a State, must be equipped and operated in compliance with th Federal Safety Appliance act, is reasonable, just, and in the public interest. It does not necessarily point, however, to an eventual elimination of State authority over the intrastate operations and rates of interstate lines. Still, the logic of it does not promise approval by the court of the arguments to be presented in January by Minnesota and the committee of Governors in the Minnesota rate case. It may indicate that the court will not approve State action that interferes with or prevents national regulation of interstate traffic. A decision to this effect would be reasonable and for the public good.

**The President to Negroes**

We turn back to the address of President Taft to the negroes of Los Angeles on race prejudice. We have no word but approval of what he said, and in condemnation of the "cruel and unreasoning race prejudices" which our colored people have had to meet. He then told them that Dr. Washington is their greatest leader, and that he has had the courage

to tell his people that "it is work, attention, industry" that will make them valuable to their community, will cure the prejudices against them, and will compel the white people to respect them. This is all true, and it is what Dr. Washington has preached, and all pretty nearly that a man in his position can safely teach without endangering his institution. But there is more to be said which we would have been glad to hear from the President. When speaking of the good friends the negro has in the North and the South, we wish something had been said of his enemies who are also enemies of the laws of their country. And it it would have been right to have said some other things that Booker T. Washington cannot so prudently say, namely, that the negroes should seek to do citizens' duty and that the effort to suppress their vote is a fearful wrong. To do work and get property is excellent, but manhood and education and independence are more. Wealth without courage, protected by cowardice, will not make a worthy people, and this additional lesson needs telling.

**Suppression of Vice**

The journal *Vigilance,* devoted to purifying civic conditions, recently inquired of the chiefs of police in our cities asking what their method and success has been in regard to social vice. A few cities confessedly practise segregation with monthly license tax, while others do much the same thing but not so frankly. We are particularly pleased with the report from two cities. One of these is Fall River, whose Board of Police replies:

"This department has endeavored to suppress prostitution and enforce the laws against it. Excellent results have been obtained. It is believed that there is not a regular house of prostitution in Fall River. Any department that is honest and alert can keep such houses out of its territory."

A similar report comes from Lincoln, Neb.:

"What we attempt to do is to suppress the social vice entirely, the same as any other crime. . . . For two years we have not had a dive of that kind in the city. We are much better satisfied with present conditions than with conditions under the segregation policy.

"We find that the argument commonly used in favor of segregation—that otherwise it will be driven into blocks in other portions of the city—is not sustained by our experience. We do not have as much trouble with this vice in blocks and rooming houses as we had when we had a segregated area. We do not find it a difficult matter to keep notorious characters out of the city entirely now, and we can unqualifiedly recommend the policy of suppression. I do not believe there is a single valid argument in favor of licensing or segregation of this evil, any more than there would be of pocket-picking or stealing."

What Fall River and Lincoln have done can be done elsewhere. When it is not done the reason is because the authorities have not their heart in doing it. Often there is easy graft in it. It is time for the women to take it in hand where the men will not.

**Gambling at Church Fairs**

There is hope that in this State, at least, the reprehensible practise of gambling at church fairs is likely to come to an end. The Society for the Suppression of Vice is trying to stop it. It called the attention of Archbishop Farley to the fact that such a gambling device, called a raffle, with valuable prizes, was to be employed at the Carmelite Fathers' Church in this city, and he stopped it at the last moment, when tickets to the amount of $5,000 had been sold. While Catholic churches have been notoriously addicted to this vicious way of raising money other churches and benevolent organizations have had their share in it. There is this excuse for the continuance of the practise, that only of late years has the evil of such gambling been clearly seen, and we believe that it has not been hitherto interdicted in the Catholic Church, and in many countries is regarded as perfectly innocent.

**Canadian Manners**

We have an intelligent correspondent, an American by birth and residence, who is glad that Canada rejected reciprocity, for, he says, he would not have Canada copy the bad manners of this country. He speaks of the multitude of murders here, unpunished, the trials long protracted and then the prisoners pardoned. He says:

We have had distressing murder cases in our State in broad daylight, witnessed by a

dozen or more reputable persons, where the trials have dragged out over years, and some of the murderers finally pardoned out. Pretty much every governor we have had of late in Nebraska has gone into office with a reasonable determination to let the work of the courts go undisturbed, but before their terms have expired every one of them has been so beset by politicians and public clamor that he has ended his term with wholesale pardonings, including always red-handed murderers. In Canada criminal trials are, practically speaking, all prompt and punishment sure.

Then there are divorces, frequent with us, but very rare in Canada. He finds further Canadian superiority in Sunday observance. How can we answer these criticisms, even if we do not see what bearing they have on reciprocity? Even China, he reminds us, is better able to deal with her opium evil than we are with our liquor curse. He concludes thus severely:

Among the great rank and file of our people, religious or otherwise, there is as yet an overtowering provincialism and a density of ignorance of what applied, concrete good government really is. A large present American tendency is to treat with contempt in its press and when traveling abroad foreign institutions and government everywhere.

These matters are worth thinking of.

**The Destruction of the "Maine"**

Once more the reports from the excavation of the wreck of the "Maine" seem to show that it was destroyed by a mine under it and not by the accidental explosion of its own magazine. But let it be understood that this does not at all show that it was destroyed by a mine specially and secretly set for the purpose of blowing up the vessel. It is much more probable that in swinging about in the wind the "Maine" happened to hit a mine that had at some previous time been laid in the harbor, and which had, with Spanish carelessness, been left there. When this mine was hit and exploded this would have been sufficient to break the vessel, and the concussion would have exploded the contents of the "Maine's" own magazine, which would have completed the wreck. This is the view held by some good authorities in naval matters, and it relieves the Cuban Spaniards from any treacherous action in time of peace, such as was so generally believed and was exprest in the vengeful cry, "Remember the Maine."

**Our Shipping Laws**

This time we have from an eminent British authority, Mr. Howard Houlder, the senior member of one of the very largest firms operating great steamship lines to New York and South America, the patent statement that our idiotic navigation laws have been a vast injury to the shipping interests of this country. Once our flag was in every port; now it can be seen scarcely anywhere. He repeats the statement, so familiar to all except the ship builders, that one of the first alterations should be such as will allow foreign-built ships to be placed under the American flag. He says:

"As a British ship owner, it is not to my interest to say this, but it is of enormous value to the commerce of the United States and would result in the building up of her mercantile marine with the possibility of a big naval reserve in the future."

The necessity very soon to fix rates for passage thru the Panama Canal ought to bring this matter of our navigation laws before Congress. There ought to be an immense commerce thru the Canal from New York and New Orleans to the west coast of South America, but it will all have to be carried under the British flag.

**A Bitter War**

We have come to the end of the "peaceful war," the "playing at war," which we heard of for several weeks after Italy opened the present conflict with Turkey. It is not peaceful in Tripoli. There has been severe fighting, and it looked for a while one morning that the Italian troops would be driven to their ships. Men have been killed and wounded by the hundreds if not by thousands, and the Italians have been executing Arabs when captured in great numbers, and the Turks, who are mostly Arabs, take no prisoners. It is war of a peculiarly barbarous sort. And it is likely to be worse. It will be if, as reported, Enver Bey has succeeded in going from Constantinople and meeting the leaders of the Senoussi tribes in the hinterland of Tripoli and gaining them over to attack the Italians in a holy war. If so, the Italians may find, as we feared, a much harder task that they expected. They were right in regarding the Turkish opposition in Tripoli as negligible,

but they should have anticipated that they might be opposed by hordes of fairly armed fanatics who put no value on their own life, and were merciless fighters. Italy had to retreat before the Abyssinians as much humiliated as was Russia before the despised Japanese; and these Senoussi are no less desperate as soldiers, and their number is far from contemptible. We see no sign of peace.

**Dust**

The automobile stands for the application of the largest amount of speed and power that is safe to country life. It gives to the village and to the isolated farm initial and executive advantages which have been heretofore confined to cities or to lines of country touched by steel rails. But the automobile adds to the dangers of country life a new factor that must be considered promptly. It is impossible to use it on dirt roads without endangering the health as well as the comfort of occupants. Road filth is ground up, and caught up as speed increases, and the dust laden air becomes not only very disagreeable but dangerous to breathe. This is also flung over upon roadside gardens and into roadside houses, endangering the lives of the people who dwell in them. One who has no personal knowledge of the danger will be astounded at an exhibition of common road dust thru spectroscopic analysis. Mineral and vegetable poisons rival each other. The dust laden air, at five feet above the roadway, is a dust storm, contains, we are told, 200,000 micro-organisms to every ten liters. One thousand horses, in every working day of eight hours, deposit ten tons of manure and five hundred gallons of urine. These substances constitute only a fraction of the poisonous fouling of highway dust; a considerable part of which is picked up by the flying wheels, and scattered over the gardens and door yards. It is estimated that taking one hundred dry days in a year, 50,000,000 tons of material are thus swept up out of the streets, and placed where most of it is not wanted. Houses must be built father back from the street, and the management of dust must be more complete. As suburbanism widens out to take in a large part of the country cleaner roads are becoming an absolute demand. We have before us the problem of a vast intra-urban life covering at least a dozen States, from Maine to Louisiana, with the best of roads, best of air, best of water, everywhere, for everybody.

Recent legislation for the protection of game birds and birds of passage is having its effect, according to all reports. The white egrets of Florida are once more multiplying with rapidity, and are seen around the little lakes by the dozen. In some localities remote from habitation, and where the hunter cannot be easily tracked, the slaughter is still carried on most murderously. Shutting the market against the sale of bird plumes is the best way devised for meeting this outlawry. Birds very soon discover when and where they are safe. Quails in Florida are curiously hidden and their presence not mistrusted during the period when hunting them is legal; but as soon as March comes and they are protected by law they find it out by some sort of instinct, and their cry is heard even into the yards and the dooryards of the people. This bird, or fowl, whichever it is, can easily be taught to feed with our hens, and becomes one of the most valuable allies of the farmer. The law should reach still farther than it does, and allow them to multiply with as much freedom as the robins. A bevy of quails at your back door is a surety that insect pests will be kept down.

A gentleman in Missouri was considering sending his younger brother to the Massachusetts Agricultural College, but wrote inquiring what is the nature of the chapel service which students are required to attend four times a week. He was informed that they consist of the usual undenominational reading of the Scripture and a prayer by one of the instructors, and a hymn, with the notices of the day. The inquirer properly understood that this was such a Protestant service as in his Church its members are not allowed to attend, and he exprest his dissatisfaction that attendance was required. We agree that non-Protestant students — Catholic, Jewish, Mohammedan or Buddhist — ought to be excused from attending such a service to which their religious superiors object,

on condition that they attend a service of their own order. This is an institution supported by United States funds, aided by public taxation.

Evanston, the fashionable suburb of Chicago, has just opened its first theater, in the building of which a good many religious people took part. The opening announcement tells us that no plays will be tolerated in which profane or suggestive language is used, nor will any Sunday performances be allowed. The American stage has been undergoing a sort of double drift: in one way toward laxity and coarseness, in the name of art and freedom; in the other way toward ethical purpose and refining culture. We have a strong conviction that the better sense of the American people is going to come out ahead, and that the theater will be used, as Calvin used it, for moral ends and character building. This will not debar the highest art, nor limit rational freedom.

We doubt if Governor Blease can be re-elected Governor of South Carolina. Certainly the man who could even in temper say the following ought to be retired to private life:

> "If I were not in politics I would whip the newspaper editor who lied about me. If I were not man enough to do it, I would get a double-barreled shotgun and kill him."

He had been denouncing A. E. Gonzales, editor of the Columbia *State*, whose brother, while editor, was shot and killed eight years ago by Lieutenant-Governor Tillman, a relative of the Senator of the name. The two leading papers of South Carolina, the *News and Courier* and the *State*, are sharp opponents of Governor Blease.

Mosquitoes may be very important in the economy of nature, as Wallace says, for feeding birds in their Arctic migrations, but they are not needed around a human center like New York. It is amazing that New Jersey does not condemn the extensive salt meadows, drain them, kill all the mosquitoes and recover vast wealth of land now useless. It can be done, and the Orange commuters have appealed to Governor Wilson to attempt this reform quite comparable with political ones.

To this extent the articles in the magazines showing the cruelty of the late Mexican Government to the Yaqui Indians are justified; for the Madero Government has made peace with them, has agreed to bring the exiles back from Yucatan, and will give land to all of them, and pay them for making needed irrigating ditches, and will remit taxes for thirty years. With these privileges there ought to be no occasion for them to renew marauding expeditions against the neighboring towns.

Interstate Commissioner Lane now follows Commissioner Prouty in saying that there should be a national Trade Commission or Corporation Commission to supervise and regulate manufacturing corporations engaged in interstate business. In our opinion, the Trust problem calls for a commission of inquiry, which, we think, would recommend the appointment of such a permanent commission as Mr. Lane suggests.

If ever hazers deserved expulsion those students at Annapolis deserve it who, after the class had pledged itself to abolish the practice, cruelly hazed members of the lowest class just to give amusement to two young girls of the sort Kipling describes in his last poem. They will be exposed by their classmates and expelled, and the two young women are disgraced.

Turkey appeals to the United States to use its influence to induce Italy to put a stop to the barbarities of its army in Tripoli; but what can our Government do? It must first investigate, for they are denied, and after investigation it will be too late to do any good, for by that time the war is likely to come to an end, at least in that phase. We fear the tales are too true.

Lord Rosebery and Edmund Gosse have lately been amusing their hearers by saying that we have too many books buried in libraries that are cemeteries, and that most of them are of no further use and should be burnt. We wonder if one in ten of the houses where an automobile is kept has a library of books that cost as much. We have too few books in our homes.

# Insurance

## A Square Deal.

RECENT insurance investigations have brought to light attempts by small accident insurance companies to defraud policyholders. It is especially gratifying to be able to record instances on the other side, where companies of their own initiative have investigated and paid policies without a claim being entered. A man by the name of Hatley insured with the Fidelity Mutual Life Insurance Company of Philadelphia, but discontinued his premiums and later died. His family found the policy, but knowing that nothing had been paid on it for several years, burned the document. The company heard of Hatley's death, notified the father of a non-forfeiture clause and enclosed a draft for $2,000.

A FURTHER element of uneasiness has been introduced into the industrial life of Germany by the proposed revision of the German insurance schemes. The burden on German industry under the existing scheme already amounts to approximately 800,000,000 marks per annum. Under the new scheme the classes included in the various schemes have been further extended and the additional cost is calculated at 135,000,000 marks, so that the daily burden will in future amount to 3,000,000 marks per working day. A number of chambers of commerce in their annual reports complain that the social schemes which have been extended without any reference to employers are approaching the limit of a bearable burden; that the expenditure which they entail is becoming so serious a matter in the cost of manufacture that it must tell against Germany in foreign markets.

AT the recent American Life Convention some interesting figures were brought forward about the use of alcohol in its relation to life insurance. When used daily alcohol handicaps the individual in the performance of his duties and renders him an easier victim to disease. Its prolonged use results in fatty degeneration or in catarrhal conditions of the respiratory tract. The full force of the situation is shown by the following table, giving the expectancy of life at different ages for the intemperate and general classes. A man of twenty who is a heavy drinker will, on the average, shorten his life by two-thirds.

| Age. | Intemperate. | General. |
|---|---|---|
| 20 | 15.5 | 44.2 |
| 30 | 13.8 | 36.5 |
| 40 | 11.6 | 28.8 |
| 50 | 10.8 | 21.2 |
| 60 | 8.9 | 14.3 |

THE City of New York has appropriated $400,000 for the establishment of a fire prevention bureau. This amount is to include also the appropriations for the support of the Bureau of Combustibles and the Fire Marshal's Bureau, which are merged under the new law with the Bureau of Fire Prevention. The budget committee decided that a definite appropriation covering an exact organization should not be made at the present time, because no plan of this work has been submitted to it. Fire Commissioner Johnson asked for $744,000.

THE Aetna Life Insurance Company of Hartford publish in their new agency edition of *The Aetna* the following table of automobile accident claims paid by their company between June, 1907, and December, 1910:

| | Number | Amount |
|---|---|---|
| Cranking | 404 | $41,483.81 |
| Collision | 119 | 94,735.26 |
| Thrown from car | 209 | 125,702.49 |
| Getting on or off car | 97 | 6,246.14 |
| Machinery | 70 | 4,498.68 |
| Thrown against car | 51 | 2,829.90 |
| Miscellaneous | 145 | 11,030.55 |

INCENDIARY lumber losses in Dubuque, Ia., during the past three months are reported as totaling more than a million dollars.

# Financial

## The City Bank's Action

In June last, the National City Bank of New York, the largest bank in the United States, organized a holding company for its securities, called the National City Company. This holding company's capital is $10,000,000, which was supplied by a 40 per cent. dividend on the capital of the bank. Some years ago the First National formed a similar subsidiary organization, called the First Security Company, and in the United States there are more than 200 corporations which may be classed with these two, all of them being associated with and controlled by banks. An investigation by the Department of Justice followed the incorporation of the City Bank's holding company, and Attorney-General Wickersham held that there was a violation of the law. This was not the opinion of Secretary McVeagh, to whom Mr. Wickersham's decision had been sent. These two members of the Cabinet disagreeing, the case, with all the papers, was referred to the President, who, it was said, would announce his decision in November.

It became known last week that the bank had decided to sell all of the shares of other national banks which it owned and which it had intended to deposit with the holding company. The value of these is said to be between $5,000,000 and $6,000,000, and the holding of them was probably the main ground of the Attorney-General's disapproval. It is believed that the shares will go into the hands of capitalists interested in the bank. It remains to be seen whether this action will prevent official condemnation of the holding company. Before forming the company, the bank had legal advice to the effect that its course would not be unlawful, and to the representatives of the Department of Justice it said that, if the Government should disapprove, it would give up the project. Among the shares it has been holding are those of many banks and trust companies, domestic and foreign. The largest single block appears to be the bank's interest in the 45,000 shares of National Bank of Commerce stock, which were bought not long ago by a syndicate for about $9,000,000.

It is undoubtedly true that the creation of this company, and the possession by the bank of stock in so many other banking institutions, have excited opposition to the Monetary Commission's proposed Reserve Association, and have been a formidable obstacle in the path of those who desire the adoption of the Aldrich plan or something like it. The City Bank's project suggested the resolution of the Democratic majority in the House for an inquiry as to a "Money Trust," and has been a text for many speeches and essays about an approaching domination of the nation's currency system by capitalists and moneyed interests associated with this great bank. We do not say that the assertions and suspicions of these critics or alarmists were well founded. We know of no evidence tending to show that the bank and those connected with it have sought control of banking or of the currency system. But their action and the extent of their holdings have excited prejudice and retarded progress toward a solution of our currency problem. They are to be commended now for responding to the Government's criticism and to expressions of popular disapproval by divesting the bank of those securities the possession of which caused suspicion and attack.

*

....In the two years and seven months of William Loeb, Jr.'s, service as Collector of the port of New York, $7,170,237 has been collected in fines, penalties, forfeitures and compromises, against a total of $926,162 in the preceding fifteen years, and forty-seven offenders have received prison sentences after conviction.

....Statistics recently published show that there are 1,279 traction or trolley companies in the United States, having 40,088 miles of track and 89,601 cars in service. Stocks and bonds outstanding amount to $4,682,106,217.

VOL. LXXI NEW YORK, THURSDAY, NOVEMBER 16, 1911 No. 3285

## Survey of the World

**The Elections**

We discuss the elections of November 7 editorially. In Massachusetts, the Democratic Governor, Eugene Noble Foss, was re-elected by 8,000 plurality. His vote was much smaller than a year ago, but his re-election rebukes the Lodge machine. The other offices contested in Massachusetts went to Republicans.——Rhode Island re-elected the Republican Governor, A. J. Pothier.——Kentucky went Democratic by 25,000, electing James B. McCreary Governor. Election Day was unmarred by the usual shooting in mountain districts.——Virginia did not elect a Governor this year, but the Democrats will have at least 85 out of the 100 seats in the House of Delegates.——The next Governor of Mississippi will be Earl Brewer, Democrat. The vote was light.——In New Mexico the Democratic candidate, W. C. McDonald, was elected Governor, and the other Democratic candidates for State offices were elected, tho the Legislature may send one Republican Senator to Washington.——Maryland elected a Republican Governor in Phillips Lee Goldsborough, but otherwise went Democratic. The defeated candidate for Governor was State Senator Gorman, a son of the late United States Senator. ——In Chicago, judicial contests were decided in a manner highly satisfactory to independent voters. In the State of Illinois the "drys" won more towns than the "wets," capturing Hardin and holding Jacksonville by a reduced majority. ——Salt Lake, Utah, elected Samuel C. Park, candidate for Mayor-Commissioner of the Citizens' Non Partisan organization, and the entire Citizens' ticket. This is the first election under Salt Lake's new commission form of government. —— In Sacramento, Cal., Beard, Democrat, was re-elected Mayor over Sutliff, Republican, by a vote of two to one. Stewart, Socialist, ran ahead of the Republican candidate. We refer editorially to Socialist gains in other cities.——Official returns of the vote of October 10 on California's constitutional amendments are as follows:

Amendment providing for initiative and referendum—For, 168,744; against, 52,093; majority, 116,651.

Amendment providing for general recall, including judiciary—For, 178,115, against, 53,755; majority, 124,360.

Amendment providing for woman suffrage—for, 125,037; against, 121,450; majority, 3,587.

——The second Congressional District of Kansas, normally Republican by 3,000, elected Joseph Taggart, a Democrat, by a majority of about 1,000. Not more than 50 per cent. of the normal vote was cast in any county. This is attributed to disaffected Republicans who were unwilling to vote for a Democrat. ——The Nebraska elections favored the Republican party, tho the only Congressional district to hold an election went Democratic, returning Stephens by 5,000. Champ Clark and W. J. Bryan took the stump for this candidate.——In Western Pennsylvania, Senator Oliver's faction triumphed in the election of the Republican county candidates at Pittsburgh. In Philadelphia, the Penrose machine failed to elect George H. Earle, Jr., Mayor, and also lost the City Solicitorship and the control of the City Councils. Rudolph Blankenburg, a veteran reformer, was elected Mayor over the non-resident banker candidate by a plurality of something over 4,000, in a total vote of 268,000. Factional grievances within the Republican organization assisted in the

result. In up State contests the Republicans were almost everywhere successful.——The results in New York, New Jersey, Ohio and elsewhere are commented upon editorially.——On November 6 it was announced that the Governor of Maine and his Council had decided that the special election held on September 11 had resulted in constitutional prohibition being reaffirmed. The official completed returns show the prohibition clause to have been upheld by 758 votes. The closeness of the vote and the inadequacy of the election laws are given by Governor Plaisted as reasons for calling a special session of the Legislature, to be held early in February. Another constitutional amendment will be submitted to the people, providing for local option and for stricter election laws.

**Trust Questions**

In Chicago, on the 13th, ten prominent officers of the meat packing firms (commonly called the Beef Trust) were placed on trial for criminal offenses under the Sherman act. Among the defendants are J. Ogden Armour, president of Armour & Co.; Louis F. Swift, president of Swift & Co.; Edward Morris, president of Morris & Co., and Edward Tilden, president of the National Packing Company. The extreme penalty is a fine of $5,000 and one year in jail. ——The Federal Circuit Court (Judges Lacombe, Noyes and Coxe), in New York, on the 8th, accepted the dissolution or reorganization plan proposed by the American Tobacco Company, or Tobacco Trust, with some modifications suggested by Attorney-General Wickersham. Others for which he asked were rejected, together with the plan supported by the independent manufacturers. The independents complained loudly, and in a mass meeting adopted resolutions asking President Taft to direct Mr. Wickersham to appeal to the Supreme Court for a review. Their counsel asserted that the control of the Trust's properties would not be changed, and that the Trust's strength would be increased, because it would be legalized. The Department of Justice has not decided whether it will ask for a review. The decision caused an upward movement in the prices of Steel Corporation shares and other similar securities.——The Civic Federation has addrest an inquiry to 20,000 representative men, asking for opinions as to the Sherman act and all phases of the Trust problem.——A committee of twelve men has been appointed by the Illinois Manufacturers' Association to draft a bill (for submission to Congress) which shall clearly set forth rules for the conduct of interstate business. Among the members of this committee are Richard Olney, James J. Hill, John Wanamaker, Rudolph Spreckels, Louis D. Brandeis, Samuel Untermyer and President Hadley, of Yale University.

**Interstate Commerce**

On November 9 the Court of Commerce granted a temporary injunction staying the order of the Interstate Commerce Commission affecting deep reduction in the thru freight rates from points east to points between the Missouri River and the Pacific Coast. The commission's order readjusted the rates under section 4 of the railroad act of 1910, known as the long and short haul clause, and would have taken effect on Wednesday. The temporary injunction is not returnable until January. The action of the Court of Commerce revives the talk current when that court was first established, and the opposition to it in certain quarters, on the ground that it is an indirect means for crippling the Interstate Commerce Commission. Already it is freely predicted that the abolition of the court will be agitated in Congress this winter. The Interstate Commerce Commissioners have been angered by the injunction, and an appeal to the Supreme Court seems certain.

**Various Items**

On Thursday, November 9, the garbage and ash collectors of the New York Street Cleaning Department struck for the abolition of night work. On Saturday the sweepers went out on a sympathetic strike. Commissioner Edwards, the head of New York's street cleaning department and a former football star at Princeton University, has announced his determination to resist the strikers' demands, emphasizing the fact

that the workmen are exceedingly well paid. Mayor Gaynor stands behind the commissioner. New York streets are in a sorry condition as the result of an accumulation of refuse. The wagons which go out at all are now protected by the police. On the East Side of New York strikers have attacked the collectors and their escorts, and one strike-breaker was killed on Friday, as was a small boy on Saturday. The negroes of the San Juan Hill district attacked Chief Inspector Schmittberger on Sunday, and women threw bricks, crockery and bottles into the street. The inspector was hit in the head by a broken bottle and gashed, but continued his tour and ended by clearing the streets. In the uptown Little Italy a bomb was thrown. Commissioner Edwards says he will not take back any of the strikers, and arbitration is refused. The health authorities say there is no immediate danger of disease.——More than twenty persons are reported to have been killed, and many injured, in a cyclone which swept Rock County, Wis., last Saturday, destroying millions of dollars' worth of property. The storm swept the State south of Milwaukee, and Cass and Vermilion counties, Ill.——The end of the Lorimer inquiry is approaching. The investigating committee will take a recess not later than November 24 and will reassemble in Washington December 5.

**Cuba and Other Islands**

A board of five officers of the navy or army was appointed at Washington, on the 10th, to inspect the wreck of the battleship "Maine," the members being Rear-Admiral Vreeland, Chief Constructor Watt, Colonel Black (of the Engineer Corps), Commander Hughes and Commander Strauss. None of these was connected with the Sampson board of 1898. It is expected that the new board, like the one appointed in 1898, will say the evidence points to the explosion of a submarine mine.——Great Britain, France and Germany have sent to Cuba's President a joint note relating to the claims of their citizens for property destroyed during the war for independence.——Cuba's revolutionary veterans still demand the removal from office of Spaniards and guerrillas who opposed them in the war, and one of Havana's newspapers, an independent journal, says days of blood and tears will come if the Government does not yield. In Congress a bill excluding Spanish guerrillas from office has been introduced. President Gomez asserts that the movement is one of no importance.——The two Villaverdes, editors of a paper in Havana, who were expelled from the island by the President, because they were "pernicious foreigners," have returned, with his permission.——Trebonieu St. Juste, formerly Hayti's consul-general in Jamaica, has issued there a manifesto, proclaiming his intention to revisit Hayti and overthrow the Leconte Government.——New oil fields have been discovered in the Philippine Province of Pangasinan.——Capitalists in Idaho will buy a large tract of land near Zambranga (Mindanao) for a plantation.

**Madero Is President of Mexico**

Madero took the oath of office on the 6th, in the presence of the members of Congress. The inauguration ceremony was brief and simple. At the conclusion of it, ex-President De la Barra left the city on a special train for Vera Cruz, where he sailed for Europe on the 11th. In the Mexican House the no re-election bill had been passed by a majority of 106. It forbids the re-election of any President, Vice-President or Governor of a State.——A man named Manuel Jimeno was arrested on the 8th in Chapultepec Park for carrying a bomb. He confest that he had intended to assassinate Madero, who is accustomed to walk in the park, and he also said that he had been hired to do this by José del Valle, an agent of Gen. Bernardo Reyes. Del Valle had left the capital for Texas three days earlier. Reyes's son had also gone to Texas, fearing imprisonment, he said, because the friends of his father were subjected to persecution. Revolutionary plots in several places have been discovered, and nearly all of them are ascribed to Reyes, altho there is little evidence to connect him with them. In Durango many prominent persons, bankers and landholders among them, have been arrested, and arms concealed by them have been found. In Guanajuato, one Pro-

Ojeda, leading several hundred men, proclaims his allegiance to Reyes. Wealthy landholders in Tabasco are said to be recruiting men for Reyes. The revolt in Juchitan (Oaxaca) appears to have been caused by local differences, and to have been led by a deposed mayor. Juchitan suffered great loss, and 200 men were killed. The leader, José Gomez, at first demanded permission to set up a separate republic in the south, but at the end of last week the Government was about to make a peace agreement with him. On the 6th, 200 of the soldiers of Zapata, the bandit general, were drawn into an ambush near Cuautla, and 40 of them were killed by the Federals. Two or three days later it was said that Zapata would soon surrender to Madero, accepting terms which an agent of the latter had offered.——It is reported that Madero has asked our Government to proceed against a Reyes junta in San Antonio, asserting that the friends and followers of Reyes there are fomenting a revolution for the overthrow of the Madero Government.

**South and Central America**

Passengers arriving at a French port last week from Venezuela, published a report that ex-President Castro had been assassinated by his own men, owing to his harsh treatment of them. The report has not been confirmed. Venezuela's Government has prolonged until March 31 the term of martial law in the city of Asuncion, where there have been indications of a revolt. Dr. Vasquez, who started from New York some weeks ago to lead a revolution against President Gomez, arrived at Trinidad on the 11th and issued there a manifesto in the interest of his project.——A small new island of volcanic origin appeared, on the 6th, in the sea between Trinidad and the Venezuelan coast. Smoke issued from two craters in it.——Peru has evacuated the custom house station at Pedrara, in disputed territory on the Colombian border, and it was at once occupied by Colombia. This station was captured from a Colombian garrison, last July, by Peruvian soldiers, 30 of whom were killed in a three days' battle.——The withdrawal of Peruvian officers from the Province of Tacna has caused a sense of relief in Chile.——In Honduras, the revolutionists have been beaten by Government troops under the command of Gen. Lee Christmas, the American who supported Bonilla in his successful revolt against President Davila, but half the army remains on guard near the frontier of Salvador.——At the celebration of the centennial of independence in Salvador, last week, when delegations from the four other republics were present, efforts were made to promote a Central American union, which is desired by Salvador's President, who says he would gladly give up his office to the elected President of such a combination.

**British Politics**

King George and Queen Mary sailed from Portsmouth November 11 on the P. and O. line's "Medina" with an escort of four cruisers to India, where the Durbar will be held at Delhi, on December 12. The royal party will return the last of January. His departure is viewed with some apprehension, because the tense political and industrial situation at home may make his presence very desirable at any moment, and because the fanaticism of the Hindu nationalists may endanger his life there. Doubtless, however, the two parliamentary parties have agreed to abstain from forcing a crisis during his absence, and arrangements have been made so that he will be in direct communication by wireless with the admiralty officers in Whitehall at all times. ——Premier Asquith has announced that he will introduce at the next session of Parliament a bill providing for universal manhood suffrage and doing away with the present system of a plurality vote to those who have property in more than one place. He refused to include women, but will give an opportunity for the bill to be amended to that effect in the House of Commons. The suffragets have announced their intention of renewing their militant tactics against the Government. A majority of the members of the House of Commons are pledged to the conciliation bill introduced in the last Parliament, which provides for the extension of the suffrage to a part of the women on property qualification, but it

will be difficult to combine such a compromise measure with the bill granting unrestricted suffrage to the men.——The first address of Winston Churchill in his capacity as First Lord of the Admiralty delivered at the Lord Mayor's banquet at Guildhall, has created a very favorable impression because of its frankness in discussing the relations with Germany:

"It would further be most foolish to deny the blunt truth that the naval competition of the two mighty empires lies at the root and forms the background of almost every difficulty which has baffled repeated earnest efforts to promote a really friendly feeling between the two countries.

"While the competition continues every element of distrust and unrest is armed and active, and one evil leads another in a long ugly concatenation."

He disposed of the rumors generally credited last year that Germany was surreptitiously increasing her naval program by giving full credit to the German Government for its fidelity to its published program. He concluded by the following remarks, which may be interpreted either as a threat to Germany or as the proffer of an agreement in regard to limitation of armament:

"Such is the state of affairs of the world today; that Germany's continued adherence to the program without increase would be a great and sensible relief to Europe. We should feel, notwithstanding the heaviness of the naval expenditure, that the high-water mark had been reached thruout the world. Men would breathe more freely, entire nations would be more trustful, and there would be a more genial climate. If on the other hand the already vast program should be swollen it would be a matter of extreme regret. Altho I am bound to say that Great Britain of all the states of the world would be the most able to bear the strain and the last to fail at the call of duty."

——Arthur J. Balfour resigned his position as leader of the Opposition in the House of Commons, and his place will be taken by Andrew Bonar Law. The selection of Mr. Law as his successor is due to a compromise between the diverging factions of the Unionist-Conservative party, whose natural leaders are Austen Chamberlain and Walter Hume Long. Lord Lansdowne, not being in the House of Commons, could not handle the discussions there. Mr. Law is not, like former leaders of the party, a man of aristocratic birth or of high scholarship, but has attained his eminence thru his success as an iron merchant. He was born in New Brunswick, Canada, September 16, 1853, and educated in his native province, with further schooling in Hamilton, Ont., and in Glasgow, Scotland, tho he has never attended a university. His father was the Rev. James Law, of New Brunswick, and his mother was a daughter of William Kidston, of Glasgow. He is an enthusiastic advocate of a protective tariff for Great Britain, and when he entered Parliament five years ago, he at once attracted attention by his knowledge of industrial conditions and his effective presentation of an argument. Two years ago Lord Lansdowne alluded to him as one of the "dreadnoughts" of the Unionist party. Mr. Balfour's resignation is in part due to his preference for a quiet and literary life rather than political activity, and also to the opposition which has recently developed against him in his own party. The Halsbury Club, formed in support of the privileges of the House of Lords, is supposed to have adopted as its secret motto B. M. G., meaning "Balfour must go." Mr. Balfour, in his farewell address, exprest so beautifully his reasons for retirement that some passages must be quoted:

"You may say I am not yet sixty-four, and that I ought to have, if health spares me, many years of active life before me. About that no man can say.

"Let me make a single observation. I desire to leave the position of heavy responsibility which I hold before I can be suspected of suffering from the most insidious of all diseases—a disease which comes upon those who, without losing their health or their intellect, nevertheless get somewhat petrified in the old courses which they have pursued; whose authority grows because they have been long in the public service or have been great men of science, or business, or whatever it may be, but who cannot deal with the great problems which, in this changing world, are perpetually arising with all the freshness and elasticity really desirable in those who have the conduct of great concerns.

"No man ever knows in himself when that moment has come. A man knows he is ill. A man may even know when his memory begins to fail, or some other obvious sign of decay is present on his vision. But the sort of malady of which I am speaking may attack people in the prime of life, in the prime of intellectual vigor, as long as that intellectual vigor is exercised on the old lines. But, nevertheless, although they may retain apparently all the powers both of brain and limb which they had in the prime of life, they are less capable of adapting themselves to the chang-

ing circumstances of life than those who are of less authority because younger, and yet more rapidly, also because younger.

"I am vain enough to hope that I have not reached that yet, but I should be miserable if I ran the margin fine, and nothing, I think, would be more terrible for me than to realize that, while people were looking to you more than ever owing to your lengthening experience or leadership, you have not got the keenness or alertness which must go with increasing years adequately to meet the demands made on it."

**The Aftermath of the Moroccan Dispute**

When Chancellor von Bethmann-Hollweg informed the Reichstag of the agreement concluded with France in regard to Morocco he was received with great hostility from all sides. His speech was interrupted by laughter and satiric remarks, and there was no applause when he finished. Speakers from the Conservative, Clerical, Liberal and Socialistic ranks denounced the terms of settlement and no one spoke in his defense. The Chancellor began by saying that the dispatch of the gunboat "Panther" to Agadir was necessary in order to force France to discuss the question involved, and that it had accomplished its purpose in bringing about an agreement which was more valuable than any discussion about arbitration or disarmament, since it served the true interests and progress of two great nations. It was not the intention of Germany to acquire any part of Morocco, but to secure increased guarantees of German economic interests in that country and territorial compensation elsewhere for the increase of French power. "We have given nothing in Morocco which has not already been given, and we have gained an enlargement of our colonial domain." In the case of the colonies one should look to the future as well as the present, and Germany had secured outlets upon the great rivers and opportunities for railroad extensions.

"We are not living in the Homeric age, when threats and boasting were thought necessary. Germany is strong enough to dispense with such shield-rattling, and will know how to draw the sword when the time comes. The Emperor steadily insisted on strict adherence to our program at all stages of the negotiations, in full consciousness that every action of a great Power may involve the fateful question of war or peace, and in full readiness to uphold the honor of the nation with the sword.

"Nobody can tell whether war some time will come, but my duty is so to act that war which is avoidable and not demanded by the honor of Germany must be avoided."

The Crown Prince Friedrich Wilhelm, who had motored from Danzig for the purpose of attending the debate, occupied a conspicuous seat in the royal box and openly applauded the attacks made upon the Chancellor, particularly when Herr von Heydebrand, the leader of the Conservatives, used such phrases as "Our peaceful professions are regarded abroad as a sign of weakness," "The German sword which alone can guarantee German prestige," and "We now know where the enemy is," in alluding to the opposition of England. The partisan position assumed by the Crown Prince has called forth general criticism from the press of various parties, but has made him the idol of the pan-Germanists. The Kaiser was very much displeased by the conduct of his son. He ordered his presence that evening at a dinner given at the royal palace in honor of the Chancellor, and forbade his further attendance upon the Reichstag. So the Crown Prince spent the afternoon cruising about with his wife over Berlin and Potsdam in a Zeppelin. The following dispatch to the semi-official Cologne *Gazette* doubtless presents the Kaiser's opinion:

"We believe it to be the right and duty of the heir to the throne to take an interest in politics. He cannot be reproached for forming his own opinion, even if it is not consonant with the imperial policy. We further do not desire that the Crown Prince be prevented from expressing his opinion in a fitting manner and place, not, however, in the way chosen in the Reichstag, the effect of which we consider extremely grave.

"It goes without question that the episode and the press comments thereupon were reported to the Emperor, and the absence of the Crown Prince at Friday's sitting was due to the Emperor, to whom Thursday's events and the considerations involved therein cannot be agreeable."

On the following day the Chancellor resumed his defense, declaring that Germany had not been ejected from Morocco because she had never been in it. He denounced Heydebrand's attack as an unwarranted electioneering maneuver and said:

"How can he reconcile this insult to his own Government delivered before the whole world with the preliminary disclaimer of a desire to upset the Government and with a sense of patriotism? I regret that words should be used

in this house regarding our relations with a foreign state which are unusual in a Parliament with a sense of responsibility. Such words of passion, going beyond all bounds, must harm the German Empire. A strong man does not need always to be carrying a sword in his mouth. I hope that I convinced you that in the relations with England I surrendered nothing of honor.

"To raise national passions to the boiling point for the sake of Utopian schemes of conquest and for party ends is to compromise that patriotism which is our most valuable possession."

The Socialist deputy, Frank, said that it appeared that the Chinese Parliament was more powerful than that of Germany, which was unable to accept or reject the Morocco treaty, but approved of the attack upon the Chancellor made by the Conservative leader. He said, in part:

"While Dr. von Heydebrand, the uncrowned king of Prussia, was speaking another as yet uncrowned king, the Crown Prince of Germany, was making a demonstration. It appears that it was by chance instead of by friendly compromise that we had no war with a neighboring country. This discovery lays upon us the duty of working with all our strength so that by the time the Crown Prince shall come to the throne the democratization of the Empire shall be complete and Germany will no longer be given into the hands of a single person."

——Dissatisfaction in France over the agreement is hardly less than that in Germany, but the result of the affair has been greatly to strengthen the Government and to weaken the anti-militarist movement by suggesting that there will be still greater need for a strong army in France after the death of Kaiser Wilhelm. Now that the German objections to the annexation of Morocco by France have been removed, the next point is to secure the consent of Spain. Secret treaties were made between France and Spain in 1902 and in 1904, but exactly what part of Morocco was conceded to Spain by these two treaties is not generally known, and it is a question of how far they are invalidated by the subsequent Algeciras Convention and the present Franco-German agreement. It is expected that Spain will secure Tangier, Tetuan, Larache and Alkazar.

**The Invasion of Tripoli**

There appears to be little change in the situation in North Africa. Reports from Constantinople that the Turks had recaptured Derna and even the city of Tripoli aroused some alarm, but proved to be unfounded, and there is no evidence that the Turks have gained any advance during the week. The United States cruiser "Chester" was sent to Tripoli to take off the American colony and the consul, John W. Wood, but found them in no danger, and Mr. Wood refused to leave his post, even for his month's vacation, so the "Chester" sailed back to Marseilles. The attacks of the Arabs and Turks on the Italian lines have been repelled with considerable loss. The fire of the Italian sharpshooters was directed by balloons, and the aeroplanes have not only been used for scouting to discover the post of the enemy, but have dropped bombs in the midst of their camps. The terrible vengeance taken by the Italians upon the Arabs inside the lines has at least had the good effect of suppressing all signs of internal insurgency. The Italians have not been able altogether to disprove the charges of cruelty and reckless shooting of the Arab population, but in their defense it is urged that care was taken to remove women and children from the oases and that male Arabs to the number of 2,200 were spared and transported to Italian islands. The provocation was undoubtedly great, for two companies of the Bersaglieri, numbering 400 men, lost 300 from the fire of the Arabs on the side of the city in their rear, and the slaughter of the Italian wounded. The Italian soldiers were infuriated by finding the bodies of their comrades mutilated in the most shocking manner. According to the report of the surgeons the Turks are cutting their bullets so as to make them expand on striking, contrary to the rules of warfare laid down by the Hague Tribunal. In reply to the protest made by the Porte against Italian atrocities the Powers have replied that they are unable to interfere, but will call the attention of the Italian Government to the charges.

**The Chinese Rebellion**

The power of the revolutionists continues to increase and the weakness of the Manchu rulers becomes daily more manifest. The only question now is whether the child Em-

peror shall be retained in nominal authority or whether a republic be at once established. It is even suggested that the country be divided; the country south of the Yang-tse River becoming a republic, Manchuria and Chi-li remaining under the rule of the Manchus, and the other provinces annexing themselves to the republic or the monarchy as they choose. Yuan Shi-kai is still regarded as holding the key to the situation. The Regent and the Assembly are trying to induce him to become Premier of the Empire, and the revolutionists are said to have asked him to become President of the republic. So far he has not shown a disposition to accept either position. He has been during the week at Han-kow or thereabouts negotiating with the leader of the revolutionists, Li Yuan-heng, who has his headquarters on the other side of the river at Wu-chang. Han-kow, or such part of it as has not been burned up, still remains in the hands of the imperialists, and from this point they are bombarding the city of Han-yang, just across the Han River, also the city of Wu-chang, across the Yang-tse River.——An equally prominent actor in the drama is General Chang Shao-Tsen, commander of the troops at Lan-chow, whose demand for a constitutional government in the name of the army met with prompt compliance from the Manchu rulers. They suspect his loyalty and fear that he will march on Peking. They have ordered him to come to Peking to act as an adviser and pacifier, but he refuses to leave his troops.——Chinese hatred of the Manchus has been increased by the murder of General Wu Lu-cheng, recently appointed Governor of the Shan-si province. About midnight, as he was asleep in his tent in the military encampment at Shi-kia-chuang, a party of forty Manchu soldiers rushed past the guard and shot him, then cut off his head and took it away with them. The excuse given for the assassination is that General Wu had been in secret negotiation with the rebels and was about to go over to them with all his troops. General Wu was a young man of great ability and promise, who had been educated in Japan.——The status of the revolution in foreign eyes has been materially raised by the announcement that Wu Ting-fang has declared his adhesion to it and has even assumed the position of Minister of Foreign Affairs under the provisional republic. Wu Ting-fang was twice Minister to the United States and was very popular in this country on account of his witty speeches as well as his diplomatic tact. In an interview given in his Shanghai home he exprest a personal preference for a constitutional monarchy, but said that the events of the past month show that a republic is feasible and more popular.——Many other cities have thrown off their allegiance to the Imperial Government during the week. At Canton, on the 9th, the dragon banner was lowered and the province of Kwang-tung declared independent. The Viceroy at Canton has taken refuge in Hong-Kong. Fu-chow was seized by revolutionists and the Manchus massacred. The Tatar general was beheaded and the Viceroy committed suicide. Amoy is in a state of anarchy, as the Imperial Government has lapsed and the revolutionists have not yet secured control. Nan-king is almost the only important city in the Yang-tse Valley that the revolutionists have failed to capture. The Viceroy was instructed from Peking to surrender the city peacefully in order to avoid useless bloodshed, but he committed suicide rather than comply, and the Tatar general in command of the Manchu troops, numbering 10,000, held the fortifications on the Purple Mountain against the attacks of several times their number of revolutionists. The latter were undisciplined and insufficiently supplied with ammunition, and could not hold the city which they had captured. The Manchu soldiers ranged the streets night and day, cutting off the heads of all men who did not wear cues and shooting at sight any person who wore a bit of white which could be construed as the rebel emblem. Women and children were stabbed and trampled upon. A thousand or more were massacred and 90,000 persons fled from the city in a single day, bearing such property as they could carry. The Manchus, having looted and killed until they were tired, set fire to the city in many places and destroyed a large part of it.

# The Value of Steel Common

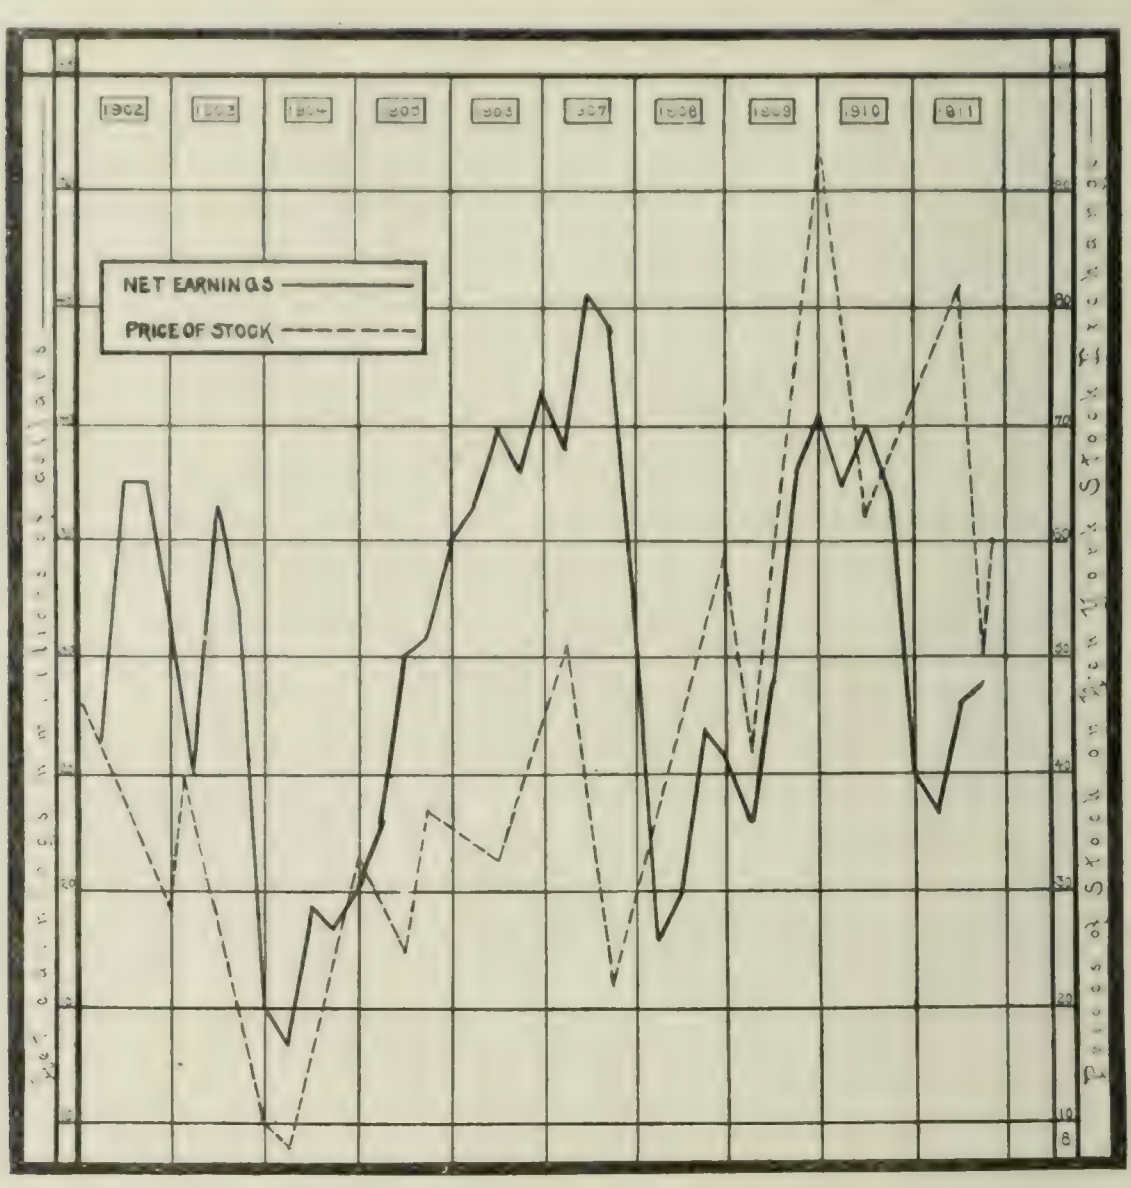
BY PIERPONT V. DAVIS

[The most interesting question in financial circles today is the actual intrinsic value of the common stock of the United States Steel Corporation. We have asked Mr. Davis to write an article showing the exact situation in this connection. As we have already told our readers, Mr. Davis is a Yale graduate, and has made a study of financial questions while associated with the banking house of Plympton, Gardiner & Co., of New York.—EDITOR.]

"The corporation was organized for business reasons, and purchased its various plants to promote such business and not to restrain trade or obtain a monopoly. In all its operations the company has scrupulously observed the law and recognized the just rights of its competitors and the consumers of its products. So far as its directors are aware, no complaint has ever been made against it by either of these interests. The directors are advised by its counsel that its existence is not in violation of the Sherman act as interpreted in the recent decisions of the Supreme Court. . . . We believe that the organization is legal, that its management is proper. Its properties are of immense intrinsic value, and the corporation is of benefit to the public interests."—Statement by J. P. Morgan and E. H. Gary.

"I hope the thousands of small stockholders of the corporation will not be stampeded into selling their stock at a loss because of the suit, for they must know it is one thing to bring a suit and an entirely different thing to win it."—Statement by James H. Reed, Chairman of the Board of Directors of the Carnegie Steel Company.

IT is the purpose of this article to set forth some of the facts which appear to justify the foregoing statements made by the men in control of the corporation. The suit undertaken by the Government against the United States Steel Corporation affects a very much larger number of people than the suits against the Standard Oil and American Tobacco companies. The bonds of the Steel Corporation have been bought largely by individual investors, by trust companies and national banks, and even by savings banks in certain States. Yale University has $260,000 of its funds in the securities of the corporation. The preferred and common stocks also have been very widely diffused. If the members of the families of these stockholders, investors and depositors be included, it seems conservative to estimate that several million people in this country and abroad are directly or indirectly interested in the result of the suit filed at Trenton on October 26.



That desirable state of affairs, which Judge Grosscup terms "the peopleization of the corporations," is being realized by the Steel Corporation. Organized in 1901, in 1902 it reported 42,000 stockholders; in 1906, 80,000; and in 1911, 120,000 owning $863,000,000 of stock. This rapid absorption of Steel stock by the public during the past ten years is the more remarkable when it is realized that the $316,000,000 Union Pacific share capital is owned by only 19,800 holders of record, and that the $413,000,000 Pennsylvania stock, notwithstanding its unbroken dividend record, running back to 1856, is distributed among 66,500 people.

The popularity of Steel for investment or speculation is due in no small degree to general confidence in the management. The corporation was the first great industrial organization to adopt a policy of full publicity. A business whose sales exceed $700,000,000 a year owes responsibility to the public as well as to the stockholders. This its officials have realized. Its quarterly statements of earnings and annual reports have enabled the investor to judge for himself the financial status of his property.

The profit sharing system, whereby employees have been enabled to subscribe for stock at prices under the prevailing market quotations, has swelled the number of stockholders materially. In 1904, for example, 32,500 shares of preferred stock were taken by the employees at $55 per share; in 1908, 25,000 shares at $87.50, and in 1910, 24,600 at $124 a share. Had a steel worker subscribed for one share each year since these offerings were first made in 1903, he would now possess nine shares, the average cost of which would be $95.83

per share, while the current market price is about $11 to

It is therefore apparent that, altho the United States Steel Corporation was the creation of America's most powerful banker, it is the man of moderate means who at present has relatively the greatest stake in its welfare. This being so, trend of the earning power of the corporation. An increase in earnings has been invariably followed by an increase in the market quotation, and a decline in earnings has been preceded by a decline in the stock. It is worthy of remark that in each period of business depression the low points touched by the stock

THE FLUCTUATION OF STEEL COMMON

**The dotted line gives the market price of the stock and the solid line the net earnings in each quarter. The effect of the panic of 1907 is here graphically shown.**

it will be of interest to consider how far the Trust policy of the Government, culminating in its challenge to the Steel Corporation, is responsible for the decline in the common stock from 82 in February of this year to 50 on October 27.

A glance at the accompanying diagram will show that the price of Steel common has followed in general the and by the earnings have been successively higher. The depression of 1903-04 compelled the suspension of the dividend on the common stock, and, as the dividend was not resumed until the autumn of 1906, and then only at the rate of 2 per cent. per annum, the surplus earnings in the very prosperous years 1905, 1906 and 1907 were reinvested in the property. It was this pol-

icy that made possible the spectacular rise of the stock in 1909 and the establishment of a 5 per cent. dividend rate in 1910. Altho the equity for the common stock, together with the rate of dividend, have been steadily increasing, justifying a rising price level, the diagram warrants the opinion that a decline in the price was due. Net earnings in the nine months ending September 30, 1911, aggregate only $81,177,000, compared with $115,152,000 for the same period in 1910. For the first quarter of 1911 the surplus after the quarterly 1¼ per cent. dividend on the common stock was only $32,000. A continuation of net earnings at that level would have meant a reduction of the 5 per cent. dividend. It is, therefore, wholly unreasonable to attribute the entire weakness in the stock to the apprehension which prevailed during the summer and fall regarding a possible suit for dissolution. The sudden drop from 58 to 50 was of course due to the announcement that the suit had finally been brought, but that loss has been recovered. Two years will probably elapse before a final decision can be handed down. Students of the situation, therefore, believe that the price of Steel common will be governed in the meantime by the demand for steel products rather than by legal briefs.

Few commodities suffer such wide fluctuations in demand as iron and steel. While the fact is well known, the causes are not. In 1907 the Steel Corporation earned 15½ per cent. on its stock; in 1908, 4 per cent. Yet the National Biscuit Company's profits in the latter year were greater by a million dollars than in 1907, and its dividend was raised from 5 per cent. to 6 per cent. Similarly, the American Telephone and Telegraph Company, the Massachusetts Gas Company, and many others, actually made more money after the panic than before.

The reasons for this anomaly have been set forth clearly by Prof. Edward S. Meade, of the Wharton School of Finance and Commerce, University of Pennsylvania. He says:

> Iron and steel products, aside from the limited amount needed for household purposes, are bought to make money from their use. Steel rails, structural shapes, plates, wire, merchant bars, are purchased by people who wish to turn these materials into some form of industrial plant—railroads, office buildings, cars and locomotives, ships, machinery of all kinds, appliances which in their turn are bought from the same motive of a desire for profit. In this respect, iron and steel differ radically in the conditions of their production and demand from flour and meat, and oil and sugar, which are bought because they minister directly to human wants. The purchase of iron and steel is primarily a question of trade than the price of the articles purchased.
>
> If railway earnings are increasing and railway securities are selling readily at high prices, the railway demand for iron and steel (which has been estimated at from 40 to 50 per cent. of the total demand for those products) is strong and increasing. Prices of rails and shapes may be high, but, unless there is some reason to believe that they will decline in the near future, the railways and locomotive and car builders place large orders. Price is a secondary consideration. What is wanted is immediaate delivery to furnish the rails and equipment for a rapidly growing and profitable traffic. On the other hand, when railway earnings are declining, as they are at present, when new issues of stocks and bonds are practically unsaleable, when 300,000 freight cars stand idle, railways and all industrial enterprises confine their purchases to current needs."[1]

Under the trade conditions of 1908, a reduction in the price of steel would be a matter of small consequence to the consumers. The demand thus stimulated would be unimportant. With a great deal more equipment than they could use, and with earnings shrinking so badly that only the strongest companies ventured to incur fresh capital obligations, the railways could not be induced to enter the market. When steel prices were cut in 1909, the tide had begun to turn; earnings were improving and confidence returning. It is a mistake, however, to assume that price cutting was the cause of the revival. Given the tendency to revival, price cutting in steel undoubtedly hastened the return of better times, but without other favoring conditions, indiscriminate price reductions only intensify the evil. To illustrate: In the four years preceding the panic of 1893, an average of 1,550,000 tons of steel rails were produced annually and sold at approximately $30 a ton. In the four years next succeeding, average prices of $23.75 brought

[1] Quarterly Journal of Economics, May 1909, pp. 441,

orders for only 1,137,000 tons. Lower prices did not and could not stimulate business until permanent improvement in conditions appeared. In 1900, the railways could afford to pay $32 a ton for 2,270,000 tons of rail, while in 1897 the price of $18.75 brought orders for a million tons less.[2]

These facts have a bearing on the present industrial situation. The Steel Corporation has followed the lead of the independent companies and very large concessions in prices have been made. Steel prices are now lower than at any time since the organization of the corporation. The average of eight leading products has fallen from $36.11 per ton last year to $31.56 per ton, which is $3.33 lower than at any previous time in the past decade.[3] If these reductions do not stimulate business more effectively than did the reductions in 1897, for example, it seems reasonable to believe that Steel common will sell still lower. If, on the other hand, the general situation bears more analogy with 1909, the decline in the price of Steel stocks and steel products ought shortly to be checked and better times prevail.

An investor might cheerfully hold his stock thru a period of hard times if he felt assured that his investment eventually would be profitable. He has seen hard times before, but a suit for dissolution is a painfully novel experience. To be sure, the Supreme Court of the United States has directed that there should be "a proper regard for the vast interests of private property which may have become vested in many persons as a result of the acquisition either by way of stock ownership or otherwise of interests in the stock or securities of the combination."[4] Nevertheless, dissolution contemplates the destruction of "merger value," in regard to which the report of Herbert Knox Smith says: "With respect to merger value, it is probably true that the various properties acquired by the Steel Corporation, taken together with the organization of this company as a going concern, *do have value in excess of the sum of their values as separate entities.* The co-ordination and integration made possible by the combination of such properties under a single control undoubtedly tend to reduce costs either thru economies or thru removing the necessities of paying profits to others." The "inter-company" orders of the Steel Corporation amount to from 500,000 to 800,000 tons, the profits on which business are entirely conserved in the consolidation. Just how seriously the profits of the corporation will be reduced if the Government wins the suit is problematical. But, as Mr. Reed has said: "It is one thing to bring a suit and another to win it."

There can be no question among fair-minded men that the corporation has tried to conduct its business lawfully. Its able counsel thinks its organization legal. The Government lawyers think differently. The International Harvester Company, another "Morgan interest," when threatened, voluntarily assented to dissolution. As the Steel Corporation refuses to do that, its management must be convinced that its case is not a weak one. In any event the position of the stockholders is stronger than at any time since the organization of the corporation. The overcapitalization in 1901 has been remedied to a very large degree. Before indicating to what extent, however, it seems fair to recite the circumstances which justified, to a certain extent, the overcapitalization. *The Financial Review of Reviews* (London) puts it as follows:

> "Admittedly, the trust was over-capitalized at the beginning. We are not disposed to blame the directors for that. We are not unmindful of the fact that, viewed from one particular standpoint, the organization of the trust was no ordinary company promoting affair, but a simple act of self-defense against Mr. Carnegie, and that in order to make the position tolerable, if not secure, the directors had to pay heavy toll."[5]

In 1900, few steel companies were completely "integrated," that is, "carried thru under one control with the accompanying advantages, the entire industrial process from ore to the finished product, linking up ore and coal mines, transportation, blast furnaces, steel works, roll-

[2] *Statistical Abstract of the United States*, 1909.

[5] "The Truth about the Steel Trust," October, 1910.

ing mills and finished manufacture."[6] The great steel companies simultaneously determined on "integration," which would mean a great increase and duplication of the steel plants of the country.

"Thus there was suddenly revealed to the industry what the trade press at the time called 'the impending struggle of the giants,' a contest between great concerns who under such circumstances might be forced to work out, in rigorous competition, the survival of the fittest. . . . The spark that lighted the train was the threat of the Carnegie Company to erect a great tube plant near Cleveland, thus invading the field of finished manufacture."[7]

Had the trade war been precipitated, a state of demoralization would have prevailed for a long time in the steel business, a vast amount of capital would have been destroyed. It is conceivable that a grave financial crisis might have been engendered. The crisis of 1884 was due to just such causes. President Hadley's well-known volume, 'Railroad Transportation," first published in 1885, thus describes that crisis:

"To the community, the present crisis is a lesson on the folly of reckless investment. Over-production, of which we hear so much, is a small matter compared with this. Mere over-production can be remedied in a few months. Over-investment means lasting over-production till the investment itself is worn out, or the business of the country slowly grows up to a higher point. Our present crisis is directly connected with ill-judged over-investment."[8]

Is it not conceivable that a similarly ill-judged over-investment in steel plants in 1900 might have produced the same effect as over-investment in railroads did in 1884? The penalty for the inflation of the stock was paid by the holders in 1903-1904, when the stock fell to 10 and lower. The penalty for a crisis would have been paid by every citizen in the country, and would have borne especially heavily on the workingman.

The Bureau of Corporations estimated the excess of the Steel Corporation's capitalization over the indicated investment in 1901 at $720,816,817. They found in 1910 the excess to have been reduced to $281,051,222. The Bureau adds: "It is apparent, therefore, that a large part of the water in the capitalization, as it may be called, has been eliminated." The process of elimination by years and its effect on the price of the stock is indicated below (the figures for "water" are taken from the Government's estimates):

| Calendar year. | Per cent. earned on common stock. | Mean price of common stock. | Water in the capitalization. |
|---|---|---|---|
| 1902 | 10.7 | 38. | $625,353,559 |
| 1903 | 5.0 | 25. | 635,989,021 |
| 1904 | 1 | 21. | 626,591,046 |
| 1905 | 8.5 | 31. | 567,158,314 |
| 1906 | 14.3 | 41. | 487,574,093 |
| 1907 | 15.6 | 36. | 395,399,210 |
| 1908 | 4.0 | 42. | 375,551,303 |
| 1909 | 10.6 | 68. | 330,855,512 |
| 1910 | 12.2 | 76. | 281,051,222 |
| 1911 (9 mos.) | 6.2 | 66. | ..... |

The corporation, it will be seen, earned practically the same percentage in 1902 and 1909, and paid 4 per cent. and 2¾ per cent. dividends respectively, yet the mean price of the stock is higher by 30 points. It is an interesting coincidence that approximately $300,000,000 of water was eliminated during that period.

If the Government figures are used, the common stockholder fares as follows:

| | |
|---|---|
| Total investment in tangible property | $1,186,982,038 |
| Bonds of U. S. Steel and Subsidiaries | 599,449,658 |
| Balance for stocks | 587,532,380 |
| Preferred stock | 360,281,100 |
| Surplus for common stock | $227,251,280 |

Equivalent to $44.70 for each $100 share.

This value of $44.70, which is generally regarded as unreasonably low, is based on a valuation of $134,000,000 on the iron ore properties. These are estimated to contain 1,200,000,000 tons of ore, which means that the Government places a value of about 8½ cents per ton upon it. The Steel Corporation sets a valuation over $600,000,000, or 50 cents a ton, on its deposits. Thus the "book value" of Steel common is about $150 a share.

"If these great deposits of ore were lying idle, or if shipments therefrom were small, as would be the case if they were under any other ownership than United States Steel, there might be some excuse for the Government's valuation. But for the last two years, the Steel Corporation has been shipping at the rate of nearly 45,000,000 tons of ore a year

from these mines. The gross value of the annual shipments of ore delivered at Pittsburgh would be nearly $100,000,000, or within $14,000,000 of the value of the entire deposits as valued by Commissioner Smith."

If $250,000,000 be taken as a very conservative estimate of the value of the ore properties, the *Wall Street Journal* computes the equity for the common stock, including increase in assets this year, at $71.48 per share. If this be so, the stockholder can face disintegration of the corporation with considerable confidence.

The independent steel companies are hopeful that the disintegration of the corporation will not be accomplished. The contrasts between the conditions prior to 1901 and since that time are concisely stated by Professor Meade:

"Before it took command of the steel industry, there were alternations of boom and depression; there were no fixed prices of steel; rebates and discriminations quite as serious as any ever practiced by the railroads were the regular order; the buyer canceled his contracts when the market turned against him, and held up the mills with long engagements, often at unprofitably low prices when the market began to improve. In place of a regime of anarchy the Steel Corporation has introduced the regime of law. To a condition where everything was uncertain, irregular, unstable has succeeded a period of calm and order, in which the only disturbing influences are in the lines in which the Steel Trust is not yet dominant. The course of iron and steel prices for the past fifteen years suplies an impressive argument in favor of the benevolent industrial despotism which the United States Steel Corporation has established."

*Wall Street Journal* October 31, 1911.

This record of fair dealing with competitors and customers alike encourages belief that the Steel Corporation will pass unscathed thru the trial which lies before it. If it cannot, the fault would seem to lie with the law, not with the organization and operations of the corporation.

In a letter full of sound thought, Colonel Higginson, of Boston, makes this appeal:

"We expect and require of our national officers and representatives fair and wise treatment of all men of whatever occupation as their equals in all respects; no abuse of character, no insinuations of evil conduct, but on the contrary full recognition of good purposes. And for the benefit of our nation we require a law carefully studied and clearly framed which will tell men what they may and may not do.

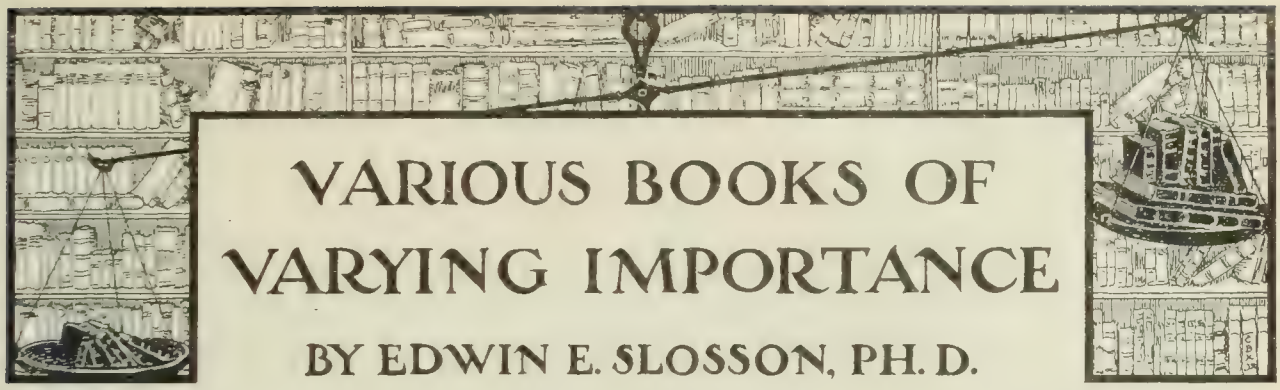
Again we point to the patience, charity and wisdom of President Lincoln in times of great trouble, and at this critical juncture we ask the same of our present Administration."

NEW YORK CITY.

# When Love Came By

BY LILLA B. N. WESTON

Love passed my way one rosy day—
  Why didn't Love come in?
I had a chair all waiting there,
Along with wine and goodly fare,
  And china rare and thin.



And all the night, serene and white,
  I waited by the door,
Lest Love, alas, might turn and pass
Along the sweet, dew-scented grass,
  As Love had passed before.

But when the dawn had come and gone,
  I saw it could not be:
I knew that tho I craved him so,
No matter where else Love might go,
  He would not visit me.

What is that song sublime and strong,
  That haunts me from within?
And what that word, long, long deferred,
That all my life I ne'er have heard,
  Because Love came not in?

And tho I knew all knowledge thru,
  And could aright all sin;
And could command all mysteries grand,
I could not somehow understand
  Why Love did not come in!

MILWAUKEE, WIS.

# VARIOUS BOOKS OF VARYING IMPORTANCE

## BY EDWIN E. SLOSSON, PH. D.

GONE are the good old days when a reviewer could take all the space he needed to expand his own ideas in just the way he wanted them and to display the extent of his learning on the subject—derived for the most part surreptitiously from the volume under consideration. The flood of fiction has been brought to an unprecedented hight this year by the fall freshet, but this does not present so serious a problem as the greater proportionate increase in the number of books that are worth while or that assume to be worth while. All one can do is to stand like a demonstrator at a blackboard and point out things, merely saying "See this!" and "Look here!" Perhaps after all a reviewer is never so useful as when he uses a pointer—if he takes care not to get in front of the blackboard.

William James being dead yet speaketh, not let us hope thru the mediums of the Society for Psychical Research, but by his posthumous publications. Rarely has there lived a philosopher who had so many personal friends among those he never met, or so many friendly antagonists. His system of metaphysics was left, as he said, uncompleted like an arch built only on one side. There are many who are now attempting to complete it, but there is Babel-like confusion among the builders as to how the work should be carried on. Consequently the world is lucky to get his only sketch of the structure in *Some Problems of Philosophy*,[1] bearing the pathetic sub-title, "A Beginning of an Introduction to Philosophy." Probably better than to use this space for a summary of the book, certainly better than for giving my opinion of it, will be the quotation of a paragraph, the paragraph containing the keynote of his philosophy, his latest definition of the pragmatic method of which he was the most prominent and most eloquent advocate:

"The pragmatic rule is that the meaning of a concept may always be found, if not in some sensible particular which it directly designates, then in some particular difference in the course of human experience which its being true will make. Test every concept by the question, What sensible difference to anybody will its truth make? and you are in the best possible position for understanding what it means and for discussing its importance. If, questioning whether a certain concept be true or false, you can think of absolutely nothing that would practically differ in the two cases, you may assume that the alternative is meaningless and that your concept is no distinct idea. If two concepts lead you to infer the same particular consequence, then you may assume that they embody the same meaning under different names. This rule applies to concepts of every order of complexity, from simple terms to propositions uniting many terms."

The second volume of Professor James's literary remains[2] will be more attractive to the general reader because it is less metaphysical and more personal, consisting chiefly of characterizations, let me say rather, warmly sympathetic appreciations of Agassiz, Emerson, Robert Gould Shaw, Francis Booth, Thomas Davidson, Frederic Myers, and Benjamin Paul Blood. Here also will be found his peace tract on "The Moral Equivalent of War," his article on "The Energies of Man," inciting us to a more strenuous life, and his confession of faith in spiritistic phenomena. In the last, arguing that a medium ought not to be altogether ignored because of cheating, he tells how he cheated when he was in charge of a lecture experiment in physi-

[2] Memories and Studies. By William James. New York: Longmans, Green & Co. $1.75.

logs for Professor Martin. The turtle's heart, whose pulsations were to be projected on the screen, stopped beating at the critical moment, but James kept the straw indicator in motion with his finger.

"'There is no worse lie than a truth misunderstood' is a maxim which I have heard ascribed to a former venerated president of Harvard. The heart's failure would have been misunderstood by the audience and given the lie to the lecturer. It was hard enough to make them understand the subject, anyhow; so that even now as I write in cold blood I am tempted to think that I acted quite correctly. I was acting for the *larger* truth, at any rate, however automatically; and my sense of this was probably what prevented the more pedantic and literal part of my conscience from checking the action of my sympathetic finger. To this day the memory of that critical emergency has made me feel charitable toward all mediums who make phenomena come in one way when they won't come easily in another. On the principles of the S. P. R., my conduct on that one occasion ought to discredit everything I ever do—everything, for example, I may write in this article—a manifestly unjust conclusion."

Prominent among the "friendly antagonists" to whom I alluded above is Dr. Paul Carus, who dedicates to the memory of William James the book[3] which he writes to refute him.

Pragmatism has come to be identified with pluralism, chiefly, it appears to me, because the two doctrines happened to inhabit the cranium of Professor James at the same time. Dr. Carus as the lifelong champion of monism in America was clearly entitled to take up the glove thrown down by Professor James, and he thrust skilfully at the weak points in his armor, for James was always careless about exposing himself to attack. "Rambling but witty, full of misconceptions but entertaining, and disposing of the problem with a joke—such is the style of the leader of the pragmatic movement" according to Dr. Carus. Probably the strongest point he makes is where he turns the pragmatic weapon against its user by arguing for abstractions, logic, consistency, monism and the like on the ground that they have proved their usefulness in the evolution of thought.

But there is another Richmond in the field. Dr. Carus will find also in President Jordan of Stanford University a redoubtable opponent of monism, tho the Chicago brand of the doctrine is probably not so offensive to him as that which emanates from Jena. Haeckel confidently assumes that nine-tenths of all scientific men must assent to his Monistic Confession of Faith, but it is more probable that in this country at least nine-tenths of them would agree better with the mode of thinking which Dr. Jordan develops in his *Stability of Truth*.[4] Dr. Jordan may be called a pragmatic pluralistic realist, altho being a large man and quick motioned it would perhaps not be safe to call him that to his face. He has a dislike for labels, quite surprising in a taxonomist, and he has a distrust of dogmas, those of Haeckel no less than those of Aquinas or Calvin. The six lectures of this little volume, given on the McNair foundation established "to prove the existence (so far as may be) of God from nature," form a unique contribution to apologetic literature. But it is more useful than the ordinary product of such lecture plants, for the chief danger of our time and country is not skepticism but credulity. We are being swamped by a noxious growth of new superstitions, many of them claiming the authority of science, and Dr. Jordan is particularly skilful at exposing their pretenses and in explaining the real method by which scientific truths are established. The book is written in a popular style and its points are enforced by an abundance of fresh and striking illustrations and quotations.

Professor Hibben's book of essays, *A Defense of Prejudice*,[5] is belied by its title in several respects. For one thing it is not written in the paradoxical style now so generally affected by essayists that it is something of a relief to get away from it. The author does not share the common fear of using truisms and platitudes and he is not averse to quoting Greek and German classics in support of

conventional views and virtues. But, as we are nowadays apt to forget, truisms are often true. The titular essay is not so shocking as it sounds, for 'prejudice' is construed to cover faith, hope, moral certainty and even confidence in the hearsay evidence which constitutes what the ordinary man knows of history and science; in short, all opinion not resting upon observed fact. In several of the essays he discusses educational problems of the day in a sane and thoughtful way, and in the "Gospel of Might" he criticises the immoralism of Nietzsche.

Another essay on the same subject as the last mentioned is *The Authority of Might and Right,*[6] by A. v. C. P. Hulzinga, who reaches the conclusion, to state it crudely, that right is the force of might and that right must make use of might in order to prevail. The same author directs another of his tracts for the times against *The American Philosophy Pragmatism.*[7] The word "American" in this title is not used as the reader would naturally infer, in a complimentary, but in a derogatory, sense. Mr. Huizinga devotes a large part of his small space to showing that this form of thought is the natural product of the American temperament and mode of life. Pragmatism is further discredited by being called the outgrowth of Ritschlianism which the author evidently dislikes as much as he does Americanism.

All sorts of questions in religion, politics, literature art and science, are discussed from various points of view by the Sunetoi, a club of Irish Intellectuals.[8] A club where opposing opinions are so ably presented and are received in a spirit of such true catholicity would be a credit to any country and a pleasure to attend; but the proceedings of thirty-seven meetings when spread upon paper become a little tedious, for the characters are but faintly dramatized and the poems are not enlivening.

Ancient philosophers devoted a great deal of attention to dreams. Ordinary people have always been interested in them. But modern scientists have for the most part fought shy of the subject. Recently, however, some investigators have taken up the study with much zeal, and have reached astonishing conclusions. One would put more confidence in Freud's method of psychanalysis were it not for the suspicion that in this case the kind of fish which are caught depends upon the kind of bait which is used. Havelock Ellis, who has been absorbed in the psychology of sex for many years, would naturally be expected to give prominence to this factor in dream life; but on the contrary we find him in *The World of Dreams*[9] emphatically disagreeing with Freud on that point. He agrees, however, that dreams are often symbolic and sometimes due to unfulfilled desires, but he does not attempt to unlock all doors with one key. The book is based chiefly upon the author's study of his own dreams for the past twenty years, supplemented by a wide reading of the ancient and modern literature of the subject. It is a volume that will interest the general reader as well as the professional psychologist.

Fifty small pages[10] suffice Professor Thorndike for exploding an immense amount of current superstition and misinformation concerning differences in mental ability due to sex and race and inheritance, and also to put in place of this exploded nonsense a great deal of what has actually been established by recent research in this field. These "Riverside Educational Monographs" are handy things to carry along on a railroad journey. You can read one of them in half an hour and think about it all day.

President Hyde's well known volume, "From Epicurus to Christ," appears in a new edition under a more expressive title, *The Five Great Philosophies of Life.*[11] Epicureanism, Stoicism, Platonism, and Aristotelianism are allowed to

speak for themselves in quotations from their ancient and modern exponents, and then the superiority of Christianity as a philosophy of life is eloquently urged. The author not only lays down the general principles of Christian ethics, but applies them to prevalent evils of the day in an outspoken and sensible manner.

"In this world, if you do not say a thing in an irritating way, you may just as well not say it at all, since nobody will trouble themselves about anything that does not trouble them."

This is the explanation that Bernard Shaw gives for the adoption of the peculiarly irritating style that has made him famous. He has carried this theory to the extreme in his latest volume of plays,[12] containing what he calls a tragedy, a comedy and a melodrama, but what are really discussions respectively of medical ethics, of marriage laws and of retributive conscience. They differ from the discussions of the prefaces, which occupy half the volume, in that they give the author an opportunity to present contradictory views in more rapid succession than when he is writing in the first person. In his statement proffered to the Royal Commission on the Censorship, here published, he announces that he is by profession a playwright, in practice since 1892, and goes on to say: "I am not an ordinary playwright in general practice. I am a specialist in immoral and heretical plays." But he hastens to relieve the shock to the reader's mind by defining immorality, quite in the manner of the late Professor Sumner, as "whatever is contrary to established manners and customs. Like all Shaw's work, these prefaces and plays are at the same time mirth-provoking, thought-provoking and temper-provoking.

GEORGE BERNARD SHAW

From a photograph taken in 1906 by A. L. Coburn, and reproduced in Dr. Henderson's study of Shaw

Whatever George Bernard Shaw may think of his biographer, the rest of the world will probably agree that Dr. Henderson has done a good job.[13] For one thing, he tells us a great deal about G. B. S.; for another, he does not attempt to outdazzle his subject by his own brilliancy. In both respects his book on Shaw is better than Chesterton's. The most interesting part of the volume is the quotations, which is as it should be. His attitude also is the proper one for a biographer, admiring but not over reverent, appreciative but not uncritical. What Shaw thought his biography should be may be seen from his letter to Dr. Henderson in 1905:

"I want you to do something that will be useful to yourself and to the world, and that

[12] THE DOCTOR'S DILEMMA, GETTING MARRIED AND THE SHEWING-UP OF BLANCO POSNET. By Bernard Shaw. New York: Brentano's. $1.50.

[13] GEORGE BERNARD SHAW: HIS LIFE AND WORKS. By Archibald Henderson. Cincinnati: Stewart & Kidd Co. $5.

is, to make me a mere peg on which to hang a study of the last quarter of the nineteenth century, especially as to the collectivist movement in politics, ethics and sociology; the Ibsen-Nietzschean movement in morals; the Wagnerian movement in music; and the anti-romantic movement (including what people call realism, materialism and impressionism) in literature and art."

Dr. Henderson did not adopt Shaw's suggestion and take twenty volumes for all this, but he has got more of it than could be expected into one big volume. And this record of his multifarious activities goes far to justify the author's opinion that "Probably no living man has touched modern life at so many points as has Bernard Shaw." The first half of the book has the greatest novelty and interest, for it deals with Shaw's work as a Fabian socialist and a critic of music, art and drama, in the days before he rose above the eastern horizon and became visible to the naked eye in this country. The book is exceptionally well illustrated with photographs, sketches and caricatures, and the frontispiece from a Lumière plate by Coburn gives Shaw in his true colors.

Two years ago a course of lectures was given at Columbia University in which each department had a spokesman to urge the importance and set forth the ideals of that particular science, philosophy or art. This was so well received both by students and public that a similar course was given last year, this time confined to the various literatures of the world.[14] It was not as a whole so interesting or novel as the former, chiefly because many of the speakers felt themselves bound to give too much biographical and bibliographical information. In book form this is not objectionable. It is useful for reference and may be skipped in reading. But the lecturers who achieved most success were those who cut loose from books and authors and talked about literature. This incongruity of style, the curious alternation of eloquence and encyclopedism, does not, however, detract from the value of the work, which is particularly desirable for small libraries, public or private, because it brings within a single volume an authoritative survey of the world's literature, beginning with the Babylonian tablets of 4000 B. C. mentioned by Professor Gottheil and ending with a peep into the future by Professor Trent.

Chemistry used to have more fascination for the layman than any other science except astronomy, but nowadays when chemistry can tell of more wonderful things than ever and when more people are educated to the point of appreciating them, it has decidedly declined in popular interest. That this public indifference is largely due to the inability or indisposition of chemists to handle a pen is shown by the eagerness with which magazine readers receive Professor Duncan's articles. In *Some Chemical Problems of Today*[15] he ranges from the structures of the atom to the formation of the solar system, always steering deftly in between the sensational and the prosaic. The chapter on needed inventions in the various manufactures is astonishingly wasteful of bright ideas. But Professor Duncan also tells how to utilize them by his system of industrial fellowships. It is interesting to see that one of the first of these to be established, the Master Bakers' Fellowship at the University of Kansas, has borne good fruit, and the holder has won his doctorate by the discovery of the secret of salt-rising bread, a yeastless bread, highly esteemed in the West, but which few housewives and no bakers have hitherto been able to make successfully. Now that the bacillus has been isolated and cultivated it can be turned out in unlimited quantity and unvarying quality.

# TRAVELING BY PROXY

## BY WARREN BARTON BLAKE

CLARENDON, in his famous "Life," says of his father that he lived "with great cheerfulness and content" at Dinton, Wilts; "and his wife, who was married to him above forty years, never was in London in her life: the wisdom and frugality of that time being such that few gentlemen made journeys to London, or any other expensive journeys, but upon important business, and their wives never: by which providence they enjoyed and improved their estates in the country, and kept good hospitality in their houses, brought up their children well, and were beloved by their neighbors."[1] What a change has come over the world since the days of Her Virgin Majesty, Queen Elizabeth! Not only does every one travel nowadays, but they live to write about it all afterward. Travel is not so perilous to-day as when Henry Clarendon visited France and Italy (that was before he married Mary Langford of Trowbridge — and "lived with great cheerfulness and content"); in the olden time few traveled but soldiers and merchants — and sailors like Admiral Seymour today[2]; and those few were almost invariably gentlefolk. Not a few of them were exiles, and of those self-exiled the greater number alleged some definite motive; thus Mr. Bates, who has made an interesting book and called it *Touring in 1600*,[3] tells us on his very first page that M. de Montaigne traveled when he "found himself feeling old and ill," and—amiable hypochondriac that he was!—"made up his mind to try the baths of Germany and Italy." Often enough, one may imagine, the "motive" was only a blind; let us take Montaigne's case for an example. "Compared with Montaigne at home, Montaigne abroad never got tired or fretful," writes Mr. Bates; "always in good spirits, always interested in everything, and ready for a talk with the first man he met." There is your ideal traveler, an ideal which the innkeepers and Cook's guides of real life too seldom see realized by their patrons.

Yet if there is no living Montaigne, there is at least one twentieth-century traveler who has a Montaigne's pleasure in movement and in the things to be seen on the old road and in the talk to be had out of those one meets on it. His name is Franck, and he is an American citizen of Hebrew birth, a graduate of the University of Michigan, a teacher of languages by profession, but a tramp by avocation. His first book won a high degree of praise and of success, and, tho I must confess to ignorance of its contents, I am curious to know if it can be better than *Four Months Afoot in Spain*.[4] One who tours Spain and presumes to make "copy" of his travels is competing with high bidders: notably one Borrow. It is safer, on the whole, to write a book that may depend for a great part of its interest on its pictures, as Mr. Edward Penfield has done in the work whose entire responsibility he shoulders, as author and artist, too.[5] But

[1] Clarendon, Lord. Quoted by Sir Henry Craik in his Life of Henry Earl of Clarendon (Macmillan, Eng. ed.).

[2] Mr. Algar Thorold's *Travels*. By Admiral of the Fleet The Right Hon. Sir Compton H. Seymour, G.C.B. Pp. xxv, 368. With Illustrations. New York: E. P. Dutton & Co. $3.50.

[3] Touring in 1600: A Study in the Development of Travel as a Means of Education. By L. J. Bates, Ph.D. Foundations from Contemporary Sources. Pp. xvi, 280. Boston: Houghton, Mifflin Co. $2. This is an admirable book of its kind, and the publishers have done well to issue it separately from the cumbrous volumes of the "Memoirs" from which it is taken. The quotations from Montaigne's Journey and other documents are carefully chosen and well translated. The whole makes a delightful addition to our literature.

[4] Four Months Afoot in Spain. By Harry A. Franck. Pp. xxv, 400. Illustrated. New York: The Century Co. $2.50. This record was written by Lane American who is fluent and humorous writer, who does not scruple to be personal or pedantic with regard to books or persons concerned.

[5] Spanish Cities. By Edward Penfield. Pp. 146. New York: Charles Scribner's Sons. $3.50.

Mr. Franck, with no illustrations to show us except rather conventional half tones, need fear nothing by comparison with those who have followed in Borrow's trans-peninsular foot-steps. No col porteur, he—but one whose feet itch for these books of ours; but New York, too, has its romantic appeal if one is clever enough to find it. I remember an article published in *Harper's Weekly* not long ago, wherein Mr. J. B. Yeats thinks it "not a paradox" that Shelley, living in

DEPARTURE OF A TOURIST
From a MS. in the British Museum; one of the illustrations for Bates's "Touring in 1600" (Houghton Mifflin Co.)

the highway (tho he does not disdain the third-class railway carriage); one whose financial abilities are, moreover, nowise below his other numerous talents. Does he not tell us that his four months in Spain, including steerage passage both ways across the Atlantic, cost him only $171.94—leaving him one cent for an evening paper on his return to New York, and five more wherewith to buy his subway ticket northward toward Hartley Hall? Most of us would shrink from some of the contacts which Mr. Franck's mode of travel entails; but he is right in saying, "To move thru a foreign country shut up in a moving room, carrying with one modern luxuries of home, is not travel; we call it so by courtesy."

It is for its romance, traditional or actual, that most of us go to Spain—either in fact or via the armchair and these days, would have preferred New York to Rome. Turning the pages of Mr. Kerfoot's *Broadway,* with its drawings by Lester G. Hornby, one is less inclined to call that suggestion into question.[6] Certainly these collaborators make a strong case for Manhattan! Mr. Hornby's New York is only less interesting than his Paris. And yet another book throws its glamor—historic this time, not artistic—over Broadway. Mr. Stephen Jenkins's book is not without minor inaccuracies, but it is much better in every way than its bombastic title suggests.[7] By all means let us travel at

[6] BROADWAY. *By J. B. Kerfoot.* Drawings by Lester G. Hornby. Pp. 180. Boston: Houghton-Mifflin Co. $2. Large paper edition, $10.

[7] THE GREATEST STREET IN THE WORLD. The Story of Broadway, Old and New, from the Bowling Green to Albany. *By Stephen Jenkins.* Pp. 509. 160 illustrations and 6 Maps. New York: G. P. Putnam's Sons. $3.50. The index is excellent: a proof of industry and a guarantee of a certain degree of thoroness.

home as well as abroad! So doing, we shall see, not New York alone, but the wonders of the Upper Yukon, the Canadian Rockies, the desert, the shifting panorama of the Great Lakes, and the Great Water.[8]

To advert, however, to Spain: let us not forget that there are American Spains as well as a European; that there is much to admire in Mexico, and that revolutions are not the only Latin-American production, Mr. Wallace Gillpatrick's book[9], and Miss Mary Barton's[10], bear eloquent witness. The former writer has been a resident of the Republic to our south during some six years; Miss Barton is an English visitor —a painter who finds much to interest

PATIO OF A POSADA
From Edward Penfield's "Spanish Sketches" (Scribner's)

[8] The Wilderness of the Upper Yukon. A Hunter's Explorations for Wild Sheep in Sub-Arctic Mountains. Pp. 221, 354. Illustrated. New York: Chas. Scribner's Sons. $3. This book by "a hunter interested in natural history" is full of interest and is attractive in its illustrations as well, some of the latter being in color.

The Wonders of the Colorado Desert. Southern California: Its Rivers and Its Mountains, Its Canyons and Its Springs, Its Life and Its History Pictured and Described. *By George Wharton James.* With upward of 300 Pen-and-Ink Sketches from Nature by Carl Lytel. Pp. 547. Boston: Little, Brown & Co. $2.50. A one-volume edition at one-half the price of the original work; a remarkably comprehensive and valuable account of a great territory, about which most of us are almost wholly ignorant.

A Guide Book to Colorado. *By Eugene Parsons.* With Maps and Illustrations. Pp. 390. Boston: Little, Brown & Co. $1.50. An account of the State, by counties, offering much historical and topographical information.

Old Indian Trails of the Canadian Rockies. *By Mary T. S. Schäffer.* With 100 Illustrations from Photographs and a Map. Pp. 360. New York: G. P. Putnam's Sons.

Highways and Byways of the Great Lakes. *Written and Illustrated by Clifton Johnson.* New York: The Macmillan Co. Pp. 322. $2. This latest addition to a popular series of pleasant accounts of our highways and byways is sure to reach a goodly number of readers who long, as it does, great variety in text and pictures.

The Log of the Lazy Way. *By John L. Mathews.* Illustrated from Photographs by the Author. Pp. 268. Boston: Small, Maynard & Co. $1.50. Mr. Mathews is known for his book on "The Conservation of Water." Here he describes his trip down the old Illinois and Michigan Canal, the Illinois River and the Mississippi to New Orleans, a somewhat unusual honeymoon!

Another waterway has a volume all to itself this season: The Navigable Rhine. *By Edwin F. Clapp.* Pp. 124. $1. This is the newest volume in the Houghton Mifflin Company's series of Hart, Schaffner & Marx Prize Essays in Economics, and hardly finds its place in the present list of volumes, but its importance for the student of the American waterways problem is not to be overlooked.

[9] The Man Who Likes Mexico. The Spirited Chronicle of Adventurous Wanderings in Mexican Highways and Byways. *By Wallace Gillpatrick.* Pp. 374. New York: The Century Co. $2. The illustrations from photographs are numerous and full of life. And so is this eulogy of certain sides of the Mexican nation and its citizens.

[10] Impressions of Mexico. With Brush and Pen. *By Mary Barton.* Pp. 164. New York: The Macmillan Co. $4.

her in the Mexican scene. But Mexico is not the whole of Latin America, and Brazil has not been the only Latin colonizer. Just as we receive from Senhor Cunha an account of the old Portugal[11], we receive from an English writer a book on *The United States of Brazil*[12]. But, alas! where is the space to consider in detail these volumes?

The Englishman is far from being the ideal traveler, like M. Montaigne and, with reservations, Mr. Franck; but Mr. Vernede, in his book of *The Fair Dominion*,[13] is less stridently cocky than most English travelers are. Perhaps that is because he is visiting an overseas Britain which he does as an intelligent and vivacious journalist. Mr. Vernède's name is not English, anyway; and, like Mr. Franck, he travels steerage. Other English travelers are Mr. Richard Bagot, who describes in a somewhat formidable volume his *Italian Year*, and Mr. Ellis Roberts, who makes a *Roman Pilgrimage*.[14] This is a more conventional field—and treated in almost as conventional a manner as Miss Short uses in her account of Scotland.[15] Mr.

Copyrighted, 1911 by The Century Co.

THE MEXICAN BLACKSMITH
From Wallace Gillpatrick's "The Man Who Likes Mexico"

[11] EIGHT CENTURIES OF PORTUGUESE MONARCHY. A Political Study. *By V. de Bragança Cunha.* Pp. 265. New York: James Pott & Co. $3.50. At this moment, above all, a book which, like this, attempts "to call up the soul of Portugal to those who see only its corpse" is sure of a reading. Unfortunately, tho the volume gives us an historical background, its account of recent developments adds nothing to common knowledge. There are illustrations—some of them Portuguese caricatures.

[12] THE UNITED STATES OF BRAZIL. With a Chapter on the Republic of Uruguay. *By Charles W. Domville-Fife.* Pp. 249. Illustrated. New York: James Pott & Co. $2.50.

[13] THE FAIR DOMINION. A Record of Canadian Impressions. *By R. E. Vernède.* With twelve illustrations in color from drawings by Cyrus Cuneo. Pp. 296. New York: James Pott & Co. $2.50. The author writes interestingly of his traveling companions; Quebec; the future of the French-Canadian; the Saguenay; Ste. Anne de Beaupré, known as the Lourdes of America, but, the reviewer thinks, rather more a religious Coney Island than anything else; Montreal; Toronto and Niagara; maskinongé fishing; Ontario, and "the West."

[14] MY ITALIAN YEAR. *By Richard Bagot.* Illustrated. Pp. 341. New York: James Pott & Co. $3.

A ROMAN PILGRIMAGE. *By R. Ellis Roberts.* Sixteen Illustrations in Color by William Pascoe, and 8 Other Illustrations. Pp. 274. New York: Frederick A. Stokes Co. $2.50.

[15] CHOSEN DAYS IN SCOTLAND. *By Josephine Helena Short.* Illustrated. Pp. 387. New York: Thos. Y. Crowell & Co. $2. An excellent example of the Chautauqua kind of travel-book.

EDINBURGH REVISITED. *By James Bone.* Seventy-five Drawings by Hanslip Fletcher. Pp. 203. Philadelphia: J. B. Lippincott Co. $5.

Bagot has, however, journeyed with some thoroness; and he, too, is concerned up to a certain point with present-day problems—with economic, political and military problems, and others, that he treats understandingly, and with some catholicity. Mr. Bumpus, on the other hand, another pilgrim to Italian shrines, frankly interests himself first, last and all the time with the cathedrals of that wonderful peninsula: of whose literature there is, seemingly, no end.[16]

But if most of the books about Italy deal with the past—with exceptions to the rule, it goes without saying[17]—most of the books about Germany strike quite another note. As the author of one of them says, "in these nervous days, when peaceful British householders retire to bed with the black possibility before them of waking up to find themselves overwhelmed by German airships, German dreadnoughts, German soldiers, and—worst of all—German policemen," there is a great number of books clogging the presses on the subject of Britain's future oppressors. Tho an Englishwoman, Mrs. I. A. R. Wylie, puts

MOUNT BRYCE FROM THOMPSON PASS

forth her volume on *The Germans* with no thought of fanning the flames of alarmism: rather to dispel some of the anti-German prejudices which obtain more strongly in her own land than in ours.[18] Without being an unhumorous

[16] *The Cathedrals of Central Italy.* By *T. Francis Bumpus.* With 8 Illustrations. Pp. xv, 300. New York: J. Pott & Co. $2. From Genoa to Rome. Mr. Bumpus tells the tale of cities describing their history, art, architecture, architecture (gothic, romanesque and renaissance), and the Italian examples of the Renaissance and Gothic styles.

*Florence and Her Treasures.* By *H. Abel Dunshea.* F.R.G.S. Pp. x, 238. With Maps and 16 Pictures by M. Knowles, and 32 Illustrations. Pp. 256. New York: The Macmillan Co. $1.75.

*Pisan Towns and Tales.* By Egerton C. Williams. Illustrated from Photographs. Pp. 313. Boston: Houghton Mifflin Co. $2.

*Italian Towns and Cities.* By *Lucretia Bigg* and *Grace M. Bigg.* Fully Illustrated. Pp. 295. New York: The Macmillan Co. $1.50 net.

[17] By example, *The New Europe: A Discussion of the Present Political and Social Conditions.* By *Frederic Coudert.* Pamphlet. 8vo. Reviewed in The Independent of October 25, 1915.

[18] *The Germans.* By *I. A. R. Wylie.* With Map. Illustrations. Pp. 361. Indianapolis: Bobbs-Merrill Co. $1.50 net. Here let me note the issue of another book

eulogist recognizing, on the contrary, the existence of "two types of Germans" (we had thought there were more than two), the Prussian—"swaggering bully"—and the South German—"fat sentimentalist"—Mrs. Wylie records the impressions of her "German year": that it is that of a certain snobbishness. No such fault may be found with the next book on our list, tho this too treats of a nation from the standpoint of a foreigner: this time a discriminating foreigner.

Mr. Dawbarn has had not a "French

A QUAY IN BRUGES
One of Douglas Snowden's illustrations for Holland's "Belgians at Home" (Little, Brown & Co.)

seems to have been pleasurable and instructive. Those are, at any rate, the adjectives that best qualify her book, with its remarkably well printed halftones. If the book has any serious fault

that reports upon an entire nation: THE BELGIANS AT HOME, by *Clive Holland*, with sixteen illustrations in color from drawings by Douglas Snowden, and from photographs by the author. Pp. 330. Boston: Little, Brown & Co. $3 50. Mr. Holland is himself "at home" in Belgium, and his book is far from superficial.

year," but a French decade. In that time he has come to understand the people of the country better than the "tripper" does; yet he has not been so assimilated as to lose his sense of national traits. Without striving to write smartly, after the fashion of Mr. Laurence Jerrold in *The Real France*,[19] the

[19] THE REAL FRANCE. *By Laurence Jerrold.* Pp. 288. New York: John Lane Co. $1.50.

author of *France and the French*[20] holds with Mr. Jerrold that "the French are not a frivolous people," and tells us of the modern development of this people; of their social, educational, moral and artistic tendencies (he is weakest in his discussions of painting and literature); of Paris and the provinces; of France in her foreign and colonial relations; of the press, the stage, the judiciary; of "discontent and its causes." Do you ask yourself why the French are so cautious in their hospitality? Or why there are so few advertisements in French newspapers? Or why Frenchmen have the reputation which is theirs abroad if French morals are no worse than English morals? You will find an answer in Mr. Dawbarn's book, a very mine of facts and suggestions—tho not in the least statistical. Its weakness is a certain want of cohesiveness. Yet it is worth ten times as much as most books in its class.

GERMAN SCHOOL GIRLS IN HOLIDAY COSTUME PLAYING GAMES
From Mrs. I. A. R. Wylie's "The Germans" (Bobbs Merrill Co.)

And if that class is made up of innumerable constituents, infinite is the only word to describe the quantity of books about Paris. In spite of them all, in spite, too, of all the sketches that have represented or misrepresented that city

[20] FRANCE AND THE FRENCH. By Charles Dawbarn. With 16 Illustrations. Pp. 322. New York: The Macmillan Co. $2.50

of cities there is always room for one more, provided it be one of the right sort. Age cannot wither—but no, for perhaps "custom" has staled, not the city, but the quotation. At least Mr. G. Duval's book, with its etchings and sketches by Mr. J. Gavin, is the kind of Paris book for which there is the same old welcome.[21] Its historical narratives are skilfully worked in, just as they are in the Paris street names. The accustomed *flaneur* no less than the maiden lady who plans to go to Paris on her wedding trip will take delight in these pages. Some of the chapters are, for that matter, not exclusively concerned with the capital: as that delightful one "Around Some Inns." Mr. Duval, with a pretty conceit that would have pleased the author of "Tom Jones," whose metaphor was a stage coach, calls the inn "the world in miniature." I like this author's digressions. They prove him as capable of appreciating Paris as of writing about the place: tho that is proved in half a dozen other ways. Travel is not all cathedrals and museums, and only fools and pharisees would have it so. The inns of Paris are a peculiarly alluring subject for the truly human writer, but even those of a poor country like Ireland have their charm. That vigorous dramatist, the late John M. Synge, whose book *The Aran Islands* has only lately been given an American edition,[22] says somewhere that he got more aid in dialog than any learning could have given him "from a chink in the floor of the old Wicklow house" where he was staying, hearing as he did what the servant girls in the kitchen below were saying. There was one traveler who put his travels to a purpose! And the best of his travels were those which did not take him out of his own land. Pierre Loti writes in "Madame Chrysanthème": "There will come a time when the earth will be a tiresome place to inherit, when it will have been made just the same from one end to the other, and one cannot even try traveling by way of diversion."

But that time is not yet.

NEW YORK CITY.

# Saint Peter

BY R. E. LEE GIBSON

Of all the first Apostles I love best
  The plain, blunt Peter. He was not, in sooth,
  Dower'd, as John was, with comeliness and youth,
Nor, as Paul was, with splendid talents blest,
And yet what ardor burned within his breast!
  A simple fisherman, untaught, uncouth,
  Groping his way half blindly toward the truth,
Ill was he fitted for that last great test,
Yet when the cock that warned him of his fall
  Crew in the morning, and he wept, even then,
  Poor, faltering soul, his error was forgiven,
And our dear Lord, who scrutinizes all,
And searches out the secret hearts of men,
  Placed in his hands the golden keys of Heaven.

ST. LOUIS, MO.

# THE YOUNGER CHOIR

## BY JAMES HERBERT MORSE

THERE is a growing power among the poets in these days which makes the task of browsing officially among the fifty or more new volumes which just now advance their claims to a place on the editorial desk, less saddening than it has been since the passing of the old choir. The breaking up of old molds is apparently in progressive accomplishment. The new molds are multiplying explosives hardly known to the fathers. Even Dr. Van Dyke touches the Whitmanesque product, tho gingerly. A most thoughtful volume of verse is the new collection of his poems,[1] reaching its hight in poetic values in the admirable ode delivered last year before the Harvard Chapter of Phi Beta Kappa. He lingers by choice in the old school,—and may the mold never be broken! His feeling for nature is only equaled by his feeling for the social man. From one to the other he escapes, now singing the joy of the wild, now harking back to the bracing stir of human activity. Not quite finding the exact picture word that expresses best the blossoming of beauty, the rare word that is always a poem in itself, the dynamic word that finds expansion in the mind, he is entirely successful in the search after the noble thought, the high purpose. He is decidedly the poet of hope, aspiration, confidence in the upward trend of the human march. His is a bracing nature that occasionally, from spent energy, reacts, and then he loves to sit on a river bank with Izaak Walton and drop a meditative line.

Mr. Henry Adams finds in *George Cabot Lodge*,[2] who died two years ago, at the age of thirty-eight, a child of heredity, the direction of the stream of it a little uncertain, but always running among tall hills. He was of a Boston family, or of several families, that had contributed much to New England history and distinction. In that age and society, and on those hills, "poetry," says Mr. Adams, "was a suppressed instinct." If it came out of the blood at all, it came as a sort of rebellion. After Emerson died, the springs of song seemed dried up. At any rate, they opened their sources only thru volcanic agencies. The "poet became everywhere a rebel against his surroundings," and the biographer cites some of the great rebels—Swinburne, Verlaine, Whitman. Such a rebel young Lodge became. He felt the sea as an echo or double of himself. In a sort of Wertherian mental atmosphere, a Byronic restlessness of mood, Mr. Adams finds the flower of his author's genius. The genius was certainly real. It blossomed in many superb poems: superb in conception, but for a long time vague to a painful degree. The poet was long in throwing off the crudenesses of a rich soil, from which his blossoms too often brought up unexpected traces of the Whitmanesque or Swinburnian odor. Witness, in the volumes now just published, *Poems and Dramas*,[3] the poems "Women" and "After Death." But the genius, after many almost hopeless struggles, cleared itself of uncertain meanings in words, of experimental failures in rhythm, of poetic offenses, and, in the drama called "Cain," produced a great, strong, passionate, tho unactable drama. Only the stage that saw Æschylus and Euripides would suit the play, and Time does

[1] [illegible] of Henry Van Dyke. New York: Chas. Scribner's Sons. $2.

[2] The Life of George Cabot Lodge. By Henry Adams. Boston: Houghton Mifflin Company. $1.25.

[3] Poems and Dramas. By George Cabot Lodge. 2 Vols. Boston: Houghton Mifflin Company. $2.50.

willingly pick up one of its early dates. The verse is strong, the rhythm of the first order, the development of the two leading characters, Cain and Eve, vigorous and consistent—the one the master spirit of all lustful action in the world, the father of anarchy, the liberty-lover, who would, if necessary, obtain perfect freedom for his moods by removing with dynamite all human moods disagreeing with his; the mother, the ideal condoner of all lapses among the sons of men. The tragedy of the murder is worked out with singleness of purpose, power, and shining art.

A very pretty booklet of songs and fancies is that by Olive Custance (Lady Alfred Douglas).[4] They are the dreams of a poet at the southwest window of a lady's boudoir, where wings are always white, and doves nestle, the hawk and kite being a distant terror.

Of quite a different make-up is Miss Bertha F. Gordon,[5] whose muse, of the true Northern spirit that once swept a continent and faced the northeasters where they glide away from the Rockies, early tempted her westward from her birthplace near the Atlantic. Sentiment without gush, feeling of the depths without loss of vision of the hights, a resolute religious uplift that takes account of the possible heaven in this life without surrendering its chance of a better world—these are the qualities that make her vigorous, musical and most promising verse.

John Vance Cheney faces the western sea,[6] and with a subtle charm of song that hovers about the picturesque, celebrates some of the old days at the Spanish town, San Diego. California has inspired many singers who have made lively ballads of her fiercer pioneer life. Mr. Cheney prefers the quieter, sleepier, fading beauty of an old civilization. He quires "in harmonious numbers" of padrès and missions and moonlight—a restful music, with no glint of steel and only a trifling bit of gambling. Love on horseback he leaves to Bret Harte, and passion in high boots to Joachim Miller. With Martha A. Kidder, the smooth level of an uneventful life is in evidence in uneventful *Æonian Echoes.*[7] A softer song still is that of Elizabeth Toldridge,[8] whose rhythm, somewhat stumbling, to be sure, takes note of the sweetness of mother-love, where modern sentiment rather than the chastening rod of the Plymouth dames seems paramount. Far more lively, piquant and stimulating are the *Lyrics and Sonnets*[9] of Louis How, who trips along gaily, not wholly among tombstones and church portals, by any means. In such poems as "The Shepherd's Song" and "Saltarello" one finds the lightness of the French *chanson.* Very charming are the sonnets, of which the second of the pair called "A New Man"—had we space to reprint it—would show the ease and grace, as well as the Heineish flavor of the sonnet, that has ceased to be solemn. Who, in this generation, has handled this form of verse more gracefully?

Anne Cleveland Cheney[10] is a poetess who sees thru books what she is quite strong enough to see with her own eyes. By such verses as "A Ride in the Night," "The Ringlet and the Rose," "To a Figure on an Old French Fan," the reader is taken among the best of the singers. Tho they suggest the two Brownings, they have a hint of the path rightfully the poet's own. Keen critical power also lies underneath the culture she has derived from the poet's corner in old libraries. The bit of blank verse, "To R. L. S.," is worth studying in this vein. With something of a strain after novel phrases that sound prettily but hardly bear analysis, Mr. Joyce Kilmer[11] has fineness of poetical expression, musical at once and dainty. He excels rather in that elaborate exaltation of woman's beauty where the lips are always rubies and the eyes stars, while the

heart and brain have little to do with the prosaic realities of life. He seems not yet to know that the theatrical girl of the Sunday papers is not "the perfect woman nobly planned, to warn, to comfort and command." Some later day he will do better than worry over the fact that King Midas

> "could never slake
> His thirst, nor ease the ache
> Of his hot lips at your love plant mouth"

The most difficult of all measures to make readable is the old Alexandrine hexameter, in which Helen Gray Cone[12] sets the admirable poem which she calls "The Third Day at Gettysburg." Her free and entirely successful use of the measure is in even line with Clough's, and Arnold's, and Longfellow's, so delicately varied is it in its pauses, its overrunning lines, its choice quantities. All the fine qualities that place her poems among the best of these not highly gifted days, are here shown. There is

UP BROADWAY FROM HERALD SQUARE
A drawing by Lester G. Hornby for Mr. Kerfoot's "Broadway" (Houghton Mifflin Co.)

[12] SONNETS OF THE LIGHT. *By Helen Gray Cone.* Boston: Richard G. Badger. $1

beauty of sky and of field in the old battle-ground; group and scene vividly drawn, and dramatic action poetically suggested:

Drawing rein at the station of Longstreet,
Eagerly springs from the saddle George Pickett the soldier intrepid,
Face fire-red with his hope and his haste, and the lion-shaggy
Mane of his cavalier locks tossed with the rush of his riding.
Charge! do we charge!" So he stands.

Who has done it better? Such a poem, too, as her "Abraham Lincoln" would do honor to Phi Beta Kappa Day at Harvard.

"Trasimene," in Miss Helen Coale Crew's *Ægean Echoes*,[13] is a fine specimen, too long to quote here, of her dramatic power as well as of her mastery of a classic theme. Here is one of her short poems, and who could do it better? How charmingly modern they are—these two saints!

"What drew you from the shelves?
What great philosophies, what subtle poems,
That feed our better selves?
None; from my oven I drew
Three loaves of light and wholesome bread.
These feed the hungry too.

"What thoughts were yours today?
To right the wronged, to succor the distressed,
Hast planned a way?
No; but before 'twas light
I washed the clothes; I had no time for thought
See, they are white!

'But tell me of your deeds.
Surely you've followed some great enterprise
Where progress leads?
Not I, poor fool;
But four bright little faces, clean and kissed,
I sent to school."

Miss Gertrude Litchfield, working among the French Canadians,[14] who have come down to the States in such swarms during these last years, has caught and very daintily reproduces in charming verse some of their struggles with the English language. How well she does it may be seen in the following:

"Oh, I go swing, an' I swing high,
I'm t'inkin' shu I'll touch de sky,
But I fin' out I can't do dat.
For ev'ry tam I come right back;
To swing some more, I will not try
'Get out!' I say.
'Oh, now go 'way
An' don' touch me,
For can't you see
Dat I'm letun' de ole cat die?"

"Rosie, she sit in hammock close by
Wid her Henri,—dey don' swing high,
Dey're too busee for talk too moche;
I never see the lak of soche;
He's kissin' it right on de sly
But she don' say,
'Oh, now go 'way
An' don' touch me!'
For can't you see—
She's not letting de ole cat die!"

That the great problems of today are the problems of all times is the groundwork of George Sterling's verse[15]—what lessons the stars have, and the flowers, and the sea, bearing on man's relation to the invisible creating spirit. With a feeling not wholly irreverent, but with moods paraphrasing the moods of Job, he adds a chapter to the song of that much tried and persistently trustful man of woes. Such poems as "The Evanescent" and such sonnets as the second of the series "On the Sea's Voice" evidence a mastery of the best forms of meditative poetry.

Two volumes of verse, the one *Song Surf*,[16] published in 1900-1905; the other, *The Immortal Lure*,[17] containing four dramatic pieces of real power, form the contribution of Cale Young Rice to the poet's shelf. Mr. Rice has already an established reputation for passionate song with coloring of the Orient. A sure knowledge of the requirements of his art, a sure grasp of his theme, and a way of his own that asks no model, he has. He is versatile, virile, deeply passionate in his dramatic writings. These four studies—for they are but studies—give promise of something of value in the tragic drama.

Paul Nixon gives in a somewhat modernized form some of Martial's wittiest epigrams,[18] done into spicy English rhymes. They are good reading for odd

[18] A Roman Wit. Epigrams of Martial. Rendered into English by *Paul Nixon.* Boston and New York: Houghton, Mifflin Company. $1.

moments when one feels savage enough to want to laugh. Frederick Bliss Luquiens retells in English blank verse of good quality three of the twelve *Lays of Marie de France,*[19] which takes us back to the twelfth century and leave us in the faery land of Breton legend. Students of old French will be interested in the freedoms taken in the paraphrase.

Prof. Jefferson Bolton Fletcher,[20] in *The Overture and Other Poems,* creates a world of his own out of Petrarch and Dante, combined with the modern sensational journals of New York; out of divorce trials, the unrest of women, the unsettling of faiths. It is a thoroly modern world in its feeling and standpoint, and yet treated on Dantesque lines, with dramatic passion and power. In his study of the Italian masters he has won skill in the poetic art without losing sight of the market, whose sounds begin to confuse the tongues of men in the universities. Behind the scholar and thinker is the seer. Even of the "eternal feminine" he finds himself able to take a sane view.

A weird play out of the weird North is *The Woman and the Fiddler,*[21] by Arne Norrevang, translated by Mrs. Herman Sandby. We have created for us a sort of Walpurgis Night, in a twilight land where the sun is unwilling to rise high. The three acts of the play are but three scenes; the theme a young girl's love for two youths between whom she is unable to make a choice, and is led by the weird Fiddler of the crags into the mists of the mountains, where she vanishes, and the Fiddler vanishes also. One need not go far to find the moral of all this. The translation brings out the good points of the Scandinavian author.

A very sane, cheerful and happy spirit sings its way thru the handsome volume of verse under the title of *America the Beautiful, and Other Poems,*[22] by Katherine Lee Bates. The author is not one who seeks a measure or abuses the tune. The measure arrests her. Her thought is always happily garmented. She sings of others, not of herself. She is a lover of bright things, of high things. Never churchy, yet she never strikes a false note in the moralities. A lover of national themes who has learned to treat them sanely. Evidently not seeking the word which shall carry the song above the heads of the masses. She doesn't waste time in "kicking out the geese," to use Tennyson's phrase.

There is plenty of imagination in Mr. Henry Bryan Binns's *The Wanderers and Other Poems,*[23] but with an overplus of fancy that introduces an element of disorder. All the figures of poetical rhetoric dance thru the lines. Of poems nearly free from such overstraining may be mentioned "The Building of the City" —an imaginary city it is, of the heart and brain, which hands have not touched, a city which rises in the dreams of youth, the great architect. The picture is fairly conceived.

In Sara Teasdale's *Helen of Troy and Other Poems*[24] we have work of the classical atmosphere interfused with modern feeling. The twentieth century plays with the Greek poets, with Helen of Troy and Sappho, with Dante's Beatrice—humanizing these ladies of an old time. Of the shorter poems, wholly modern in feeling, chaste and dainty, "Pierrot" is perhaps the daintiest, which one would like to quote.

One of the prettiest songs in William Hervey Woods's *The Anteroom and Other Poems*[25] is "When Amy Went." It has swing and music, and a haunting refrain, not wholly new. Few of the verses of the author quite escape the tendency to moralize on the contrast of youth and age, of bloom and decay. The flowers blossom only to die. A specimen, and perhaps the best, of those that do escape the inevitable dark down to the last stanza, is "The Trackwalker"—a novel theme treated realistically, and yet with dramatic touches—a fine poem.

# The Increase of Divorce

BY WILLIAM B. BAILEY, Ph.D.

Assistant Professor of Political Economy in Yale University

THE accompanying chart shows the number of divorces granted in this country per annum from 1867 to 1906. In the first year of the table there were 9,937 divorces and in the last year 72,062. During the forty years covered about 1,250,000 divorces were granted. Altho it must be borne in mind that the population of the country has also increased remarkably during this period, the increase in population has not been sufficiently rapid to account for the increase in divorces. In 1870 there were 28 divorces per 1,000 of population, while in 1900 there were 73. Perhaps a more accurate unit of measurement could be obtained by substituting married population for total population. On this basis the number of divorces per 100,000 married population in 1870 was 81 and in 1900 was 200.

A careful study of the chart will bring out the fact that in periods of commercial depression the increase in divorces is less than in periods of prosperity. The reduction of the family income seems then to knit the family more closely together.

It can be stated in general terms that the divorce rate in this country increases as one goes westward. The rates in the North Atlantic and South Atlantic divisions in 1906 were respectively 41 and 43, while in the Western division the rate was 168. Bearing in mind that the average annual number of divorces for the five-year period of which 1900 was the median year was for the United States as a whole 200 per 100,000 married population, it may be interesting to know that in Washington the rate was 513, in Montana 497, in Colorado 409, while in New Jersey and New York it was 60 and in Delaware 43.

New Haven, Conn.

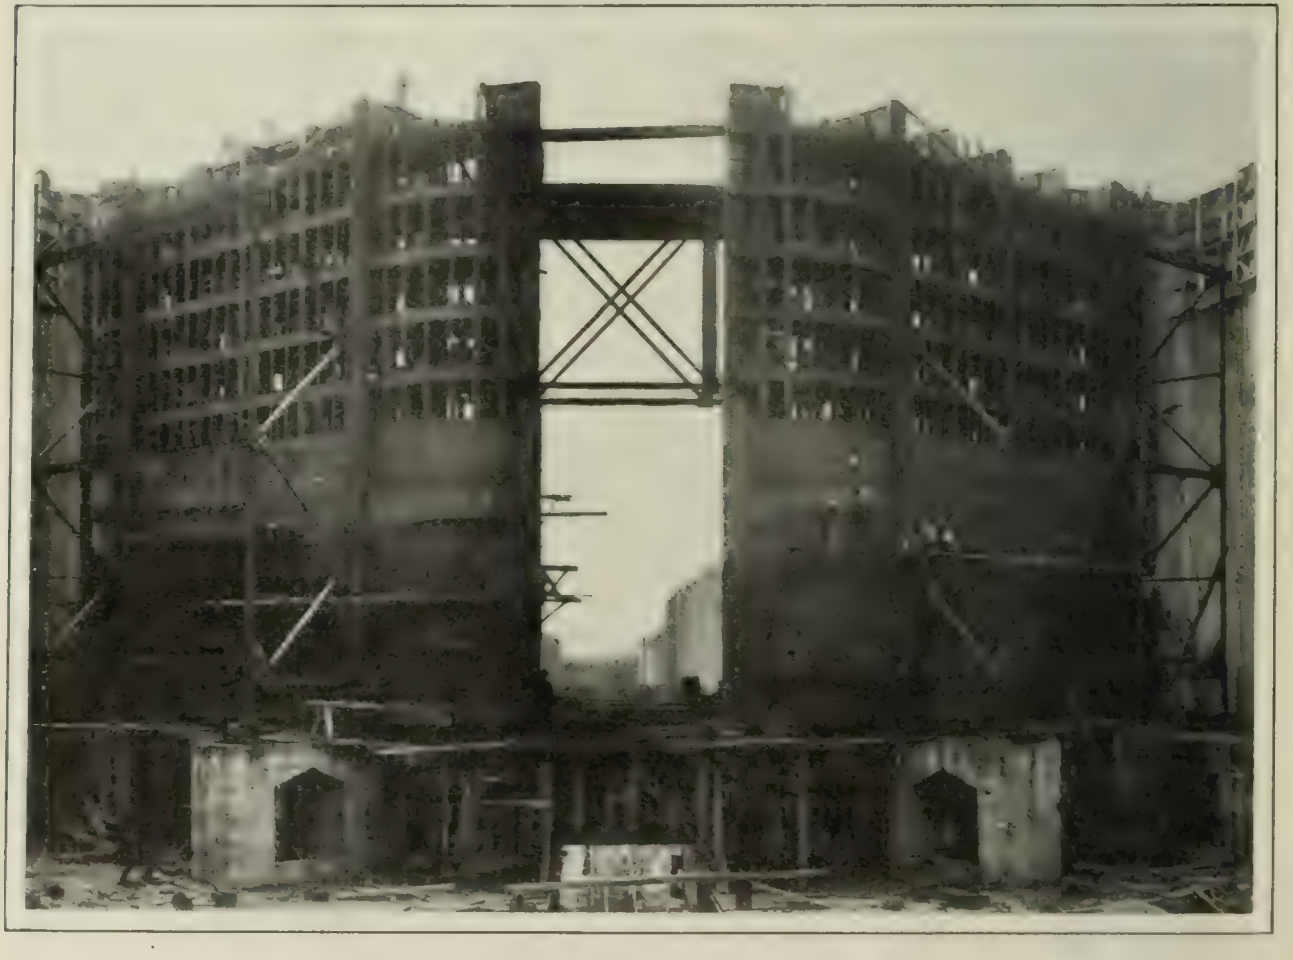
# Panama Canal Tolls

BY BERNARD N. BAKER

[Mr. Baker is president of the newly formed Atlantic and Pacific Transport Company of Baltimore, Md., capitalized at $15,000,000, that will construct fifteen ships for coast to coast traffic. It is estimated that fifty new ships will be built by various companies to ply on the Panama route. The question of tolls is an important one. An immediate decision is necessary to allow the shipping companies to make their contracts. The article by Mr. Baker gives the views of an exceptionally well informed authority on the subject. Mr. Baker was formerly president of the Baltimore Trust and Guarantee Company, and was for many years president of the Atlantic Transport Company. He is a trustee of Johns Hopkins University and has been interested in many commercial enterprises.—EDITOR.]

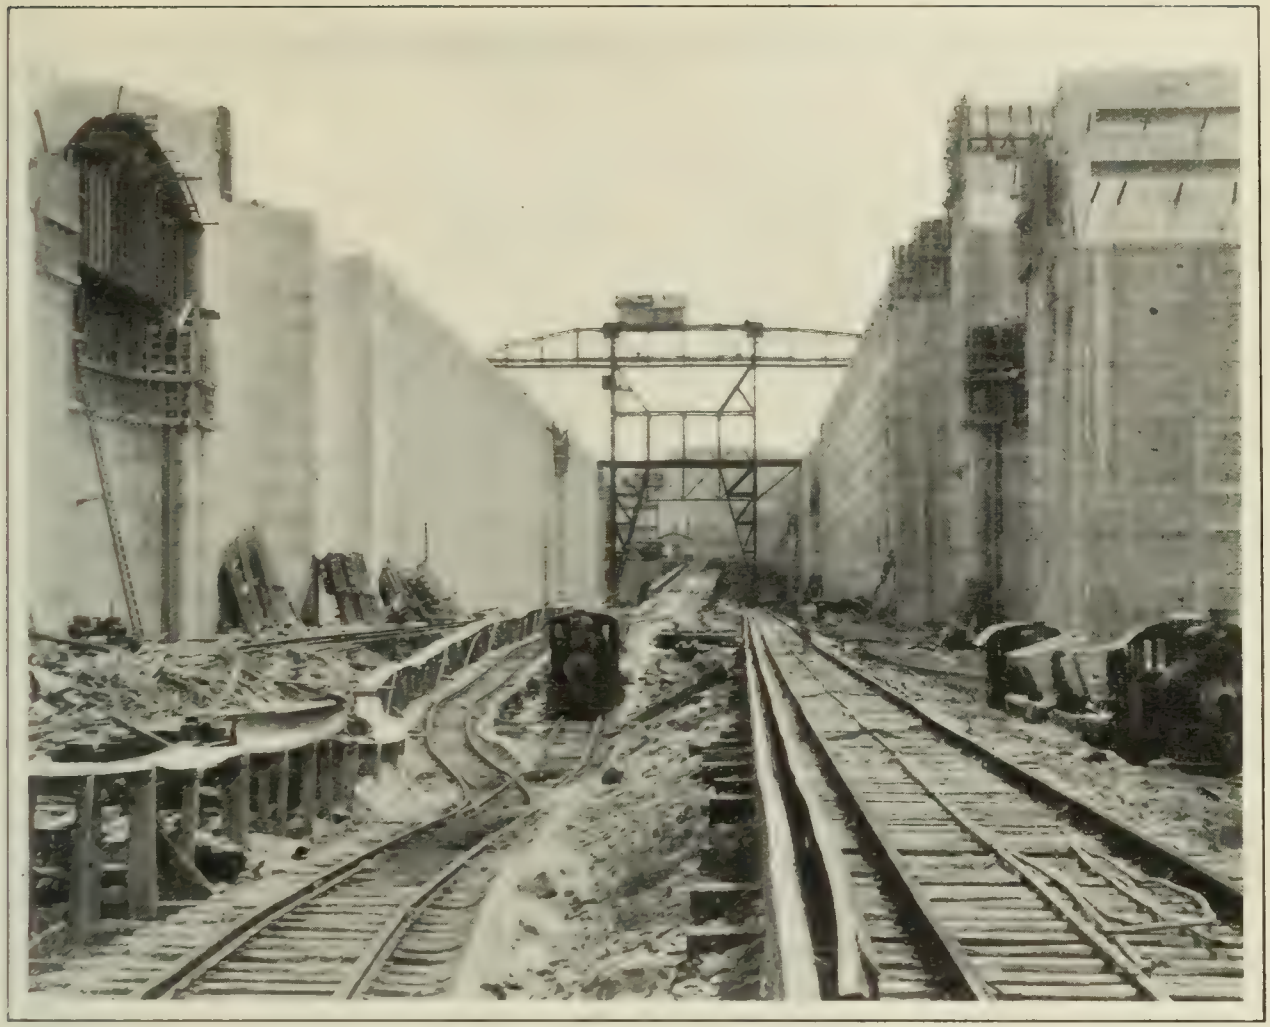
ON the 7th of June last Colonel George W. Goethals, chairman and chief engineer of the Isthmian Canal Commission, stated to the Committee on Interstate and Foreign Commerce in the House of Representatives: "As far as we can predict or foresee, we have every hope of being able to put a ship thru the Canal in the latter part of 1913." This has been taken by the public as a declaration that the Canal will be in full operation within the next two years, but the men who are building it are not going to take any unnecessary risks. In the same testimony Colonel Goethals said: "On January 1, 1915, according to the existing law, the President of the United States is to ask for the assembling of the fleets of the world in Hampton Roads. After certain official ceremonies have been gone thru with, that fleet is then to pass thru the Panama Canal on its way to San Francisco. If anything happened so that fleet were delayed in going thru, the Panama Canal will be damned, and to guard against that contingency I want that year for tuning up all the machinery and for perfecting the organization. I stated when I was here last winter before this committee that the shipping interests of the world required eighteen months' notice at least of what tolls are going to be charged in order that they might make their contracts."

This, in a few words, gives the official understanding of the condition of the Canal and presents the big problem that is to be solved by business and by commerce. The question of tolls is a new one for the American public and there is not a clear idea of exactly what it means. It is well, therefore, that the average reader bear clearly in mind one or two fundamental facts. First is the character of the measurement of the ship. The usual plan with us is the net tonnage basis; that is, counting a ton for every 100 cubic feet of the ship. The method used in the Suez Canal and in certain European quarters is the Danube measurement, which counts a net ton for every 65 cubic feet of the ship. So you see that the difference in these measurements is a matter of 35 per cent.



The importance of it comes in when we realize by a look into the future that there is to be such a competition between the Panama Canal and the Suez Canal that the result will be a practical revolution in the commerce of the world. The rates of the Suez Canal have been 7.25 francs per ton, and the statement is made that this will be reduced after the first of next January to 6 francs per ton. Chairman Adamson, of our Committee on Interstate and Foreign Commerce, has recently declared "that the understanding was, by the original order of the board of managers, that the rates should ultimately go down to 5 francs." This would mean that the Suez Canal would adopt a toll equivalent to $1 per ton, but it should be remembered again that this ton would be the Danube measurement of 65 cubic feet.

What shall be charged per ton for the traffic thru the Panama Canal? President Taft a few days ago said: "Of course, we have invested $400,000,000, and we ought, if we can, to put the Canal, as soon as we can, on a reasonable paying basis, but it is better a great deal that we should get our benefit from the Canal indirectly than that we should impose tolls which would limit its usefulness."



Colonel Goethals, who is our best

authority, in his testimony before the Congressional committee, mentioned a rate of from 50 cents to $1.50 and quotes Prof. Emory R. Johnson as making a proposition to fix the toll rate at $1. President Taft has recently appointed Professor Johnson, who is professor of transportation and commerce at the University of Pennsylvania and who was on the first Isthmian Canal Commission, to make a new investigation and to collect information on which the question of tolls might be settled. In arriving at his former conclusion of $1 per ton, Professor Johnson took the commerce from Japan, New Zealand and Australia, as a dividing line between either the Suez Canal or the Panama route, and he found the $1 rate would rather favor Panama. The problem is one for legislation and administration, and the wise solution of it is to get a correct judgment of the volume of traffic available and to put the tax at such figure that will yield a good revenue to the Canal without being a burden on commerce or without restricting future development. My own opinion is that Congress will fix a toll of $1 per ton and that this ton will be per 100 cubic feet measurement. In this event, if the Suez tolls are reduced to 5 francs, the Panama Canal will have an advantage of 35 per cent.

In the matter of the coastwise trade there should be free tolls. Our present laws forbid any foreign ships from engaging in this trade; that is to say, no boat under a foreign flag may take a cargo from one American port to another American port. In this, distance counts not at all. A cargo from New York to Seattle is just as much coastwise traffic as from New York to Boston. It is difficult to see, therefore, how the Canal can affect the character of this trade or how any critic can find ground for complaint that the United States would be discriminating by placing a toll on foreign trade and by relieving its coastwise commerce from any charge whatever. A moment's reflection must show that where there is no competition there can be no discrimination. Under

GATUN UPPER LOCKS—LOOKING NORTH
Construction of the upper guard gates in the east chamber, August 5, 1911

PEDRO MIGUEL LOCKS OF THE PANAMA CANAL
East chamber, looking north, July 15, 1911

our laws there is no possible competition from another country in our coastwise trade. The Panama Canal will connect the two oceans; it will not permit any foreign ship to carry an ounce of freight between the American ports.

Bearing these facts in mind, the reader may more readily understand the recent statement of the President in his speech at St. Paul when he said: "The question is whether, if we remit the tolls, we are in a sense discriminating against any other country that has no right and no power to enter upon that trade. It may be that it will be held that the rule can apply to them as to others; if so, there is nothing to prevent our voting back to the coastwise vessels the tolls which they would be required to pay. I say this because it seems to me of the utmost importance that we should make that Canal a means of affecting beneficially to the great public interest the trade between the two coasts."

I have made several visits to the Canal Zone and have devoted a great deal of time to the study of the facts and conditions of the trade that is to pass thru the Canal. The possibilities are so enormous that they almost stagger the imagination.

Within the trade radius of the Canal Zone there are 14,000,000 people who have an annual commerce of $135,000,000, of which the United States gets $18,000,000 of imports and $9,000,000 in exports; that is to say, this trade, which belongs to us by proximity, goes, in the main, to more remote markets. The reason is that the Americans have not provided facilities, and this is one of the duties that will be uppermost when the new Canal is finished.

Great dependence is placed upon the increase in coastwise trade. The transcontinental freight movement will be about 4,200,000 tons when the Canal opens. The steamships claim they can

cut the rail rates into one-half or one-third and make large profits, while saving to the consumer many millions of dollars annually.

But even larger opportunities are found in the South. South America is close to us. The meridian of Washington passes thru Panama and down the west coast of Chili. In other words, our great Atlantic and Gulf shipping ports, on the opening of the Panama Canal, will have a route as straight as the eagle flies to the west coast of South America and one much shorter than those of our competitors.

The growth of Latin America has doubled in twenty years, from a total trade of $1,647,139,093 in 1890 to $3,301,932,150 in 1910.

The trade of the United States with Latin America grew 26.4 in the five years from 1905 to 1910, while our trade with the rest of the world was increasing only 8.1 per cent. Still, this is only one-fifth of our foreign trade and only one-fourth of the trade of Latin America with the rest of the world. In other words, our exports to them were only 24 per cent. of what they bought and our purchases from them only 31.4 per cent. of what they sold.

If we go back of that we find that our trade with Latin America grew 128 per cent. in the ten years from 1897 to 1907, and even now our share is disgracefully small, and most of the trade goes to England, Germany and Japan.

The opening of the Panama Canal gives us close access to a rich field for commerce where we will have advantages over our competitors, England, Germany and Japan. Our foreign trade has been carried in foreign bottoms. Commodities sent out by us are not marketed by us nor are they underwritten or financed by us. They reach foreign consumers thru middlemen with many burdens of commission and taxation; the prices enhance, and the quality and efficiency of the product is not explained or defended by our representatives. We are spending annually $300,000,000 in paying foreigners to carry our products.

The opening of the Suez Canal developed the European shipping trade enormously. A similar reduction in mileage will take place on the opening of the Panama Canal, and the era of development of our own ships should begin. When we have enough ships to build we can build them as cheaply as any other nation.

Our coastwise lines, while principally occupied with the exchanges between our Eastern and Western coasts, will be a beginning in fostering this South American trade. This line will come into touch with the South American trade thru the terminal facilities for transshipment of freight provided by the Government at both terminals of the Canal. Here freight will be deposited by foreign vessels which will take up freight for Europe or the East, while the ships of this line will take up freight destined for our own ports or the reverse. There will be a great diversity of freight and the frequency of communications will stimulate the trade both ways. We will, therefore, be sharing in the Latin-American trade and our trade with the Orient and even with other countries will be stimulated. Indeed, with this facility of transshipment in small packages our merchandise may find its way more rapidly to very distant ports. Then, too, there is bound to be a wonderful increase in passenger service, and we shall be sending more of our people to South America and bringing more South Americans to the United States, all of which means a new relationship and a firmer extension of business.

BALTIMORE, MD.

# The Old Ballad Folk

by Sydney Reid

THE ballad folk—the old, old ballad folk—what a different world we get into when we go among them.

The houses and shops and factories, and sights, scenes and people of our every-day life vanish, and we find ourselves in a land of walled and moated castles and fierce armored knights, and more or less gentle ladies.

Ah, what woes they have! What woes! And so unnecessary! Their troubles are almost entirely their own fault. Such carelessness, such recklessness, such wrongheadedness, I never heard of before in all my life.

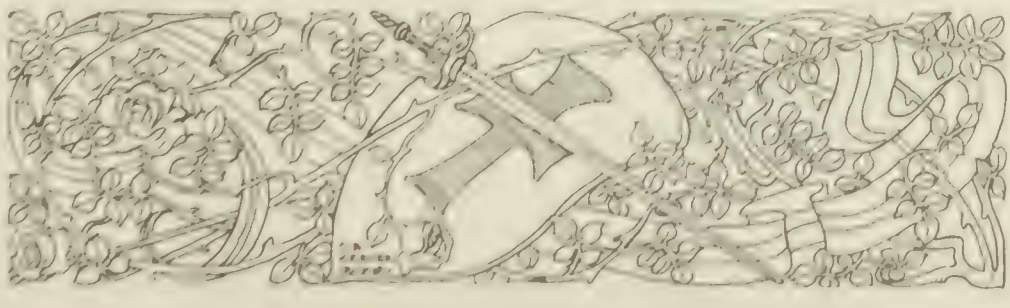
There, for instance, are the characters in "Kempion." The old king is no sooner a widower than he marries again. The minstrel says concerning the king's pretty daughter:

"Her father marries the worst woman
That ever lived in Christendom,"

and further, "A powerful wicked witch was she."

The old gentleman took no precautions, made no inquiries as to character. Ill consequences immediately fell upon his daughter, for the stepmother met her and said:

"I wierd ye to be a fiery snake
And borrowed shall ye never be
Unless that Kempion, the king's own son,
Come to the crag and thrice kiss thee."



Now that was silly, was it not? Any woman in her senses ought to know that turning the pretty princess into a fiery serpent would be sure to give rise to unpleasant comment about the court, and that this would react on her who caused the transformation.

Stepmothers do things better in these days.

Be that as it may, the princess became a fiery snake and swam seas and climbed up Eastmere crags:

"And aye she cried on Kempion
Gin he would but come to her hand;
Now word has gone to Kempion
That Siccan a beast was in the land."

"Siccan a beast," inquiring for most men, would cause embarrassment, and many would be tempted to deny that they enjoyed the honor of the Serpent's acquaintance.

Prince Kempion seems to have felt a sort of mild wonder, but he determined to call on the Serpent and demand an explanation. To that end he built a boat—being a king's son he naturally had no boat ready built and was unable to hire one.

Up to this time the transformed princess had behaved in a reasonable manner, so far as one can judge from the ballad, but she no sooner sees Kempion come sailing than she goes wild:

"The worm leapt out, the worm leapt down,
She plaited nine times round stock and stone"

She nearly upset the boat several times, and Kempion, tho a young man of steady nerves, took up his crossbow, and told her that if she didn't keep away he would send a bolt thru her head. She answered with spirit:

"Out o' my slythe I winna rise,
Nor quit my den for awe o' thee,
Till Kempion, the King's own son
Come to the crag and thrice kiss me."

This must have seemed like a very extraordinary demand on the part of a fiery serpent, but it didn't daunt Kempion. One would think that she would at least be still while being kissed, but:

"He's louted him o'er the Eastmere crags
And he has given that beast a kiss.
In she swang and out she cam
And aye her speech was a wicked hiss."

In fact she acted in such a manner as to make her "borrowing" (rescue) just as hard as possible. Nevertheless, Kempion persisted, and kissing her three times, turned her again into a beautiful young woman. Then he lent her a cloak, and they went home to attend to the stepmother of whom it is said:

"Her hair shall grow rough, her teeth grow lang,
And aye upon four feet maun she gang."

This was poetic justice. She became a dog, and we may be certain that people who knew her history saw to it that she felt the full force of the change in her condition.

Quite equal in rashness to the wicked stepmother whose exhibition of spite brought her to such a bad end, was the young man with whom Allison Gross fell in love. He tells the story himself, in the ballad, so we must make allowances for his prejudices. He says that Allison Gross, who he describes as "the ugliest witch in the North Countrie," fell in love with him and called him to her bower, where he sat upon her knee. She "kaimed" his hair with a silver "kaim," while promising him a silk shirt trimmed with pearls, a red robe and a golden cup if he would love her. He answered

"Awa', awa', ye ugly witch,
Haud far awa' and lat me be.
I never will be your leman sae true,
And I wish I were out o' your company."

This is almost unbelievable—a gentleman sitting on a lady's lap, having his hair "kaimed" with a silver "kaim," a silver basin being also used in the operation, using such language.

Why, it takes our breath away to contemplate his rashness, not to speak of the breach of good manners.

And so causeless. Allison Gross had been very kind. She was a witch. Well and good—what of it? All the ladies are more or less bewitching. We love them none the less for that.

Allison behaved with great moderation under the circumstances. She only changed the impertinent youth into a snake. It's a wonder she didn't pull his hair. Her method of proceeding to effect the transformation is interesting. As soon as he insulted her she blew on a grass-green horn, and swore by the moon and stars to make him sorry:

"Then out she's taen a silver wand,
And she's turned her three times round and roun
She's muttered sic words that my strength it failed
And I feel down senseless on the ground."

Let any man at the present day try the experiment of treating a lady as Allison Gross was treated, and he may depend on it that she will "mutter sic words" that his strength will fail. The young man escaped more easily than he deserved, for the Queen of Scotland came along, and observing that he was a snake, naturally stroked his back, and that turned him into a man again.

Lord Thomas and fair Ellinor, in the ballad named after them, are seen bringing calamities on themselves by exhibiting the same utter lack of discretion. They were in love, but it became necessary for Lord Thomas to marry another, and fair Ellinor went to the wedding and criticised the bride to her face:

"Is this your bride?" fair Ellinor said,
'Methinks she looks wonderful brown.
Thou might'st have had as fair a woman
As ever trod on the ground."

This was hardly likely to be pleasing to the subject of discussion, but Lord Thomas, by his reply, made a bad matter worse:

"'Despise her not, fair Ellen,' he said,
'Despise her not unto me;
For better I love thy little finger
Than all her whole bodie.'"

Is it any wonder that the brown bride drew her knife upon fair Ellinor? The latter was slain, Sir Thomas cut off the bride's head, and then killed himself.

And all this happened for want of a little ordinary diplomacy.

"The Douglas Tragedy" is another striking instance of the rashness of these ballad folk. The Douglas daughter and Lord William are in love, and instead of trying to get married in an ordinary manner, they must needs elope. The seven Douglas sons and the father pursue them and the lady holds Lord William's horse while he attends to her family, with such success that he kills all her brothers and is killing her father, when she exclaims:

"O haud your hand, Lord William," she said,
"Your strokes they are wondrous sair.
The lovers I might get mony a ane,
A father I canna get mair."

This was a good economical suggestion, but came a little late. They rode away, but

"Lord William was dead lang ere midnight,
Lady Margaret lang ere day.
May all true lovers that go thegether
Have mair gude luck than they."

Their ill fortune followed them even after death, for we are informed

"Lord William was buried in Mary's kirk,
Lady Margaret in Mary's quire;
And out o' her grave grew a bonny red rose,
And out o' the knight's a briar."

These twined and twined till they could not go any higher. That was common enough among the ballad folk, but something happened to one of them that was not common:

"Till bye there cam the black Douglas,
And wow, but he was rough
He pued the briar out by the roots,
And threw it in Mary's Loch."

"The Banks o' Yarrow" shows ballad folk acting in their accustomed manner, as if there was no such thing as common sense in the whole wide world. There is a wedding and, on the evening after, the groom and bride's father and brothers drink and quarrel. They go out on the banks of Yarrow and fight, and the bridegroom, being a good man with his hands, produces a scarcity of brothers-in-law. Someone stabs him in the back at last, and the father tells the bride what has happened, assuring her that he will get her a new and better bridegroom as soon as he goes to market town.

Instead of taking the news good-humoredly, the bride grows angry:

"O haud your tongue, father," she says,
"For worse ye mak my sorrow;
A better lord could never be
Than him that lies on Yarrow."
She kissed his lips, she kaimed his hair,
As oft she'd done before o,
And there wi grief her heart did break
Upon the banks o' Yarrow."

Barbara Allen—"Bobberee," she is called in some communities where they still sing about her—is another instance of ballad folk unreasonableness. She quarrelled with her lover, and he set about dying of love:

"All in the merry month of May,
When green leaves they were springin',
This young man on his death bed lay
For the love of Barbara Allen.

He sent his man unto her then
To the town where she was dwellin'.
'You must come to my master dear,
If your name be Barbara Allen.'"

She goes quietly enough, but in place of trying to comfort or cure, she makes the young man worse by reproaching him for having slighted her when he and some boon companions were drinking toasts to young ladies of their acquaintance. She may have been misinformed, or he may have refrained from mentioning her name from motives of delicacy. At any rate, she is deadly hard. One version makes her walk in the room, look at him, and remark grimly, "Young man, I think you're dyin'," and walk out again. A longer version reports him as saying:

"'Oh, it's I'm sick and very, very sick,
And it's a' for Barbara Allen.'"

To which she unfeelingly responds:

"'O better for me ye's never be,
Tho your heart's blood were a-spillin'"

She departed, her lover dies, and the bell began to toll:

"She hadna gone a mile but twa
When she heard the deid-bell knellin',
And every jow that the deid-bell gied
It cried 'Woe to Barbara Allen.'"

That was the way that the bell might have been expected to feel about it, but the effect on Barbara is surely surprising. The "jow" of the "deid-bell" somehow woke her remorse, and when she arrived home she said:

"'O mother, mother, mak my bed
And mak it soft and narrow,
Since my love died for me today,
I'll die for him tomorrow.'"

One good turn deserves another. A thing to be noticed is the carefulness concerning the death-bed. All these ballad folk were very particular about the sort of bed on which they died, when they died in bed at all. Had the bed been made broad and hard, it is quite probable that Barbara would have refused to die.

There was the Earl of Mar's daughter, too, who met in the forest a seeming dove which was really a French prince. They were married and had seven sons, who flew to the grandmother in France. Always the Earl of Mar's daughter rejected the suitors presented by her father, saying, "I'm content to live alane with my dove Coo-'my-Doo." The Earl of Mar swore to kill the dove, but "Coo-'my-Doo" immediately winged his way to France, where he had twenty-four strong men transformed into storks, the seven sons into swans, and himself into a goshawk. So changed they returned to the Earl of Mar's castle and carried off his daughter.

Quite as regardless of her father's feelings was the "Fair Flower of Northumberland." She listens to the flattering tongue of a Scotch knight prisoner, and, stealing her father's ring, gold, and horses, elopes with him. When they are over the border the canny Scot discloses that he is a married man, and, taking the gold, ring, and horses, informs her that she can *walk* home. The ballad fails to inform us what her father said on her return.

Young Hynd Horn left his love for seven years, and returned just as she was being married to a venerable gentleman. He put on a beggar's cloak (which naturally made him a welcome guest), and dropped a ring in the bride's cup. She knew him, they eloped, and Hynd Horn was far happier than he deserved.

Lord Lovell quite as lightly deserted his sweetheart, Lady Nancy Bell, in order to roam about the world. He told her neither where he was going nor when he would return; "a year, or two, or three at the most," were his words. He returned when a year and a day had gone by, but was too late—the lady had just died of love. Then he suddenly understood his own conduct, and did the decent thing by dying, too, and they were buried together, and the usual rose and briar twined and twined.

These Ballad Land Folk were not any more fond of ill consequences than we are. They were quick enough to lament and repent when they got into trouble, but they either couldn't or wouldn't look ahead. Thus Fair Rosamond enjoyed herself hugely till Queen Ellinor caught her in the maze, and presented the alternative of poison or dagger. Then Rosamond suddenly took a great distaste for all the finery she had acquired. Rosamond had never considered consequences, neither had the Queen. When the King discovered the fate of his charming toy, he was annoyed, and imprisoned the Queen for twenty-six years.

Nor did Sir William consider consequences when he ill treated the damsel so that she died. She haunted him, coming to his bedside at midnight with sword or dagger, and scaring him stiff—also utterly preventing him from marrying, for how could he possibly have explained the threatening apparition?

In the dim recesses of Ballad Land there's a vast deal about Robin Hood and his merry men which never saw the light of modern publication—just as in Mallory's "Life of King Arthur" there is an enormous amount of glorious material which has never been worked over by a Tennyson or a Hawker.

I have always had a prejudice against the Sheriff of Nottingham, and one of the things which I discovered in the dim recesses of which I have spoken, confirms and intensifies that feeling. The Sheriff captured Will Stukely of Robin's band, and was actually going to hang him—the donkey could have had no conception of modern comic opera requirements.

Will was bound and riding in a cart to the place of execution, when he addressed the Sheriff:

"Give me a sword in my hand,
And let me be unbound.
And with thee and thy men I'll fight,
Till I lie dead on the ground."

Now here was a fair offer, and one surely pleasant to the spectators. A good fight is always more exciting than a hanging. But the Sheriff of Nottingham was no gentleman, he hadn't a drop of sporting blood in his veins, and he did not care a farthing how much he disappointed the audience. He peremptorily refused Will Stukely's modest request:

"But this desire he would not grant,
His wishes were in vain,
For the Sheriff swore he hanged should be,
And not by the sword be slain."

Ah, but the Sheriff did not reckon on Little John and other stout fellows appearing and releasing Will Stukely, and giving the officer and his men a good jacketting.

But that was what happened, and I am sure it must have pleased the people.

Brooklyn, New York.

# The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

## Last Week's Elections

ELECTIONS midway between Presidential years are affected mainly by national issues because the members of a new national House are chosen. Last year the tariff caused a House revolution. In off-year elections, like those of last week, national questions are not primarily influential, as a rule, but voters are thinking of local issues, and there is room for an exhibition of independence at the polls. At such elections may be seen much housecleaning in municipalities, with revolts against ring rule in States as well as in cities. Here and there the leading national issue may be forced to the front, and in certain States the effect of the voting upon the fortunes of candidates for the Presidential nominations in the coming year must be taken into account.

Prominence was given to the tariff issue this year, in Massachusetts, Rhode Island and Kentucky, but local questions overshadowed it elsewhere, except in three or four scattered Congressional districts where vacancies were filled. Elections in which tariff arguments had much weight do not indicate any considerable change in public sentiment as to this issue since last November. Governor Foss's plurality in Massachusetts has been reduced, but this loss is probably due mainly to criticism of his course in office. Figures from Congressional districts point to more emphatic disapproval of the revision of 1909 rather than to a more favorable view of it. For the second time since the Civil War, Maryland elects a Republican Governor, but the Legislature is Democratic, and the defeat of the Democratic candidate for Governor may be ascribed to condemnation of a political machine with which he was associated, disapproval of his course in the State Senate, and the recent disclosure of primary frauds in Baltimore. The voters of Maryland should be commended for rejecting, by a large majority, a proposed constitutional amendment for the disfranchisement of negroes. Democratic harmony and strong partisan interest in national issues have restored Kentucky to the Democratic party.

Notable changes are to be seen in many municipalities. In Philadelphia, popular revolt against the alliance of public officers with a ring of greedy contractors has given the office of Mayor to Rudolph Blankenburg, for many years past an earnest and vigorous leader of reformers in his city. His opponent was supported by United States Senator Penrose and the Republican organization. Philadelphia is fortunate in the election of Mr. Blankenburg, being greatly in need of reform in its municipal affairs. San Francisco's Labor Union party, offensively odoriferous by reason of Mayor Schmitz and other representatives, has been overthrown by a coalition of its foes. In Cincinnati, Henry T. Hunt, Democrat, is to be Mayor. As official prosecutor he recently attacked Boss Cox, the Republican leader, in the courts. His opponent at the polls was the candidate of the organization with which Cox's name is still associated, altho the latter says he has retired.

Six years ago, in a speech at Akron, Mr. Taft, then Secretary of War, sharply denounced the Cox machine, "a local despotism," saying that "the power secured by the boss and his assistants had undoubtedly been used for their pecu-

niary benefit." One week before the recent election, however, he said in a letter to a local Republican leader:

"I expect to be in Cincinnati on election day, and, unless my registration is defective, I shall cast my vote for the Republican municipal ticket, because I believe the candidates thereon to be competent and worthy. I shall vote the Republican ticket because I think the conditions under which I made my Akron speech have substantially changed."

Whereupon certain independent Republicans sent him a letter, assuring him that he had been misinformed:

"On the contrary, the same political leaders whom you denounced then [in the speech at Akron] are still in control of the organization, and our city is still the victim of their greed and selfishness. The fight for decent government in Cincinnati is won, unless the issues are clouded by such misrepresentations as were made to you."

Mr. Taft voted for the Republican nominees. They were defeated. The President is sharply criticised for supporting candidates alleged to be those of a ring which he denounced six years ago. If it be true that the same objectionable men and influences continue to control the Republican organization in Cincinnati, he was misled and will suffer some loss of political prestige. There is a conflict of testimony about the facts, as to which we are not at present sufficiently informed.

The general drift of voting in Ohio cities deserves consideration, as it may be that both Presidential candidates will be found in that State. This drift is clearly Democratic or Socialistic. Columbus and Cleveland, as well as Cincinnati, elected Democratic Mayors, altho they have been regarded as Republican towns. In eleven other cities, with Canton (Mr. McKinley's home) and Lima at the head of the list, Socialist Mayors were chosen.

By no means the least interesting and significant of the revolts was the one against Tammany and the rule of the Tammany Boss, Charles F. Murphy, in the city and State of New York. With the present Democratic Governor, Mr. Dix, was elected a Democratic majority in the Assembly, where the Democrats have 85 members and the Republicans 63. In the coming year, however, there will be 101 Republicans and only 48 Democrats. It is commonly understood that Mr. Dix owed his nomination to Murphy. The latter, a Governor of his selection having taken office, set out to control the Legislature and to extend his power thruout the State. And soon the government seemed to be in his hands, altho not all of his projects were successful. A considerable element in the party was offended by the futile candidacy of Sheehan for the national Senate, the passage of an objectionable election law, and persistent attempts to enact a new charter for the great city. And so the Democratic majority has been displaced by a much larger Republican one. In the city, which will have more Republican than Democratic Assemblymen, Tammany and Murphy lost control of the Board of Aldermen and elected their county officers and judges by only a small margin. In certain adjoining counties (Brooklyn included) their nominees for the bench were defeated, owing partly to evidence tending to show that one of them had paid from $10,000 to $30,000 for his place on the ticket.

The national Democratic party, which has profited by the course of its House majority, has suffered on account of the greed and unwisdom of Tammany. It may not gain anything by the reverses of Tammany's Boss. Last week's vote for Assemblymen may show a Republican majority of 100,000 in this great State, whose delegation to the national convention Murphy still hopes to control.

Governor Wilson, a candidate for the Democratic Presidential nomination, has lost the support of the New Jersey Legislature, in which a Democratic majority of 21 has been displaced by a Republican majority of 15. The change was due chiefly to the influence of certain influential Democrats who opposed his advanced or "progressive" views. While it does not tend to promote his nomination, it may not be charged against him.

We come to what many regard as the most important result of the voting—the remarkable gains made by the Socialist party. Eleven cities in Ohio (Canton, Lima, Lorain, Fostoria, Toronto, Mt. Vernon, Barberton, Cuyahoga Falls, Salem, St. Mary's and Martin's Ferry) elected Socialist Mayors, and only a handful of votes excluded Conneaut from this list. Four of Columbus's nine-

teen Councilmen are Socialists. In Schenectady, N. Y. (population, 72,000), the Rev. Dr. George R. Lunn, Socialist, will be the new Mayor. His party elected a majority of the Councilmen and nearly all the other city officers, also sending H. M. Merrill to the State Assembly. There will be one Socialist in the Rhode Island Legislature. Socialist Mayors were chosen in Newcastle, Pa.; Crookston, Minn., and five small cities of Utah. Socialist party growth was 42 per cent. in New York City, 100 per cent. in Buffalo and Pittsburgh, 600 per cent. in Bridgeport, Conn.

Not all who voted the Socialist ticket last week are Socialists. In some places men of one or the other of the old parties supported a Socialist candidate to accomplish some political purpose. This was the course of many conservative or anti-Vardaman Democrats in Mississippi. Independent voters dissatisfied with the management of municipalities by the old parties turn to the Socialist ticket without accepting fundamental Socialist doctrines or knowing what these are. But, with due allowance for all such additions, the real Socialist voting strength shows much growth. Those who regard this growth with disquietude should see that, so far as public utilities are concerned, it emphasizes the need of just and strict official regulation, if government ownership and operation are to be prevented.

## Bishop Candler's Wail

Bishop Warren A. Candler, of the Southern Methodist Church, is a man of ability and distinction. One of his brothers has been a judge of the Supreme Court of Georgia, and another brother, a man of large wealth, has been very generous in his aid to Southern Methodist institutions. Bishop Candler loves the South, the old South, especially loves Georgia, and is very jealous of any intimation that his section of the country fails in any respect.

But if the South is the most fertile and hopeful section of the country, why is it that immigration avoids it? This question the Bishop answers in an interview.

The trouble is not chiefly because the railroads have failed to advertise the resources of the South, altho this is true; nor is the race problem responsible for the failure to attract Germans, Italians and Hungarians. The reason, he tells us, is chiefly this:

"There are certain groups of Southerners who have injured the South at the North and in Europe by a mischievous mendicancy.

"These are they who have been ready to run to Northern millionaires for money to endow our colleges and even for money to cure the alleged diseases of some of our people. Thereby they have advertised the South as a section teeming with ignorance, stinginess, mortal diseases and degenerates who were made degenerates by their ailments."

We fear the Bishop has not quite diagnosed the disease, whether physical or educational. If he had happened to be in touch with philanthropic fields hereabouts he would have learned that what he calls mendicancy is not confined to his own section. The West floods us with its "mendicant" appeals quite as much as does the South. Of the millions Dr. Pearson has given in response to such appeals comparatively little has gone South. Mr. Carnegie's gifts and Mr. Rockefeller's have benefited the North more than the South. That the South needs money for schools and hospitals is true, but it has asked these men for them no more than has the North and West; and what is true of these men is true also of a multitude of other givers.

Says Bishop Candler:

"Our people are able and willing to solve their own educational problems. We do not need to beg any man to pay our school bills or to teach us how to conduct our educational institutions. A superserviceable 'Southern association' may as well dissolve or direct its missionary efforts to some other section.

"Much ado has been made about the hookworm in the South and Rockefeller has seen fit to give a large sum to be used in purging Southern people of alleged lazy bugs.

"It is enough to say that any and all of our people are quite able to pay their own doctors' bills. We are able to treat our own patients and we would be still more able to care for them if our section were not so constantly advertised to its hurt by our mendicant theorists and reformers.

"What the South needs very much is to be let alone."

It is well for the South that it has other representatives than Bishop Candler. He has been one of the governing board of Vanderbilt University, the chief educational institution of his Church in the South. Its endowment, its leadership and its name are due to the appeals made for it at the North. Vanderbilt Uni-

versity has not impoverished Tennessee or the South. Dozens of institutions in the South have sought and received aid from Northern philanthropy. There has been need of such aid; and to ask for it is no mean mendicancy. If the South is so well able and willing to solve its own educational problems, why has it not done so? Why is it yet so far in the rear? The reason is, both a lack of means and a lack of willingness. The people have not yet been trained to support education on the scale accepted in other older and younger States. It is extraordinary that Bishop Candler should boast of both ability and willingness when in so large sections the school term is scarce half what it is elsewhere, and the teachers are so pitifully paid.

Physicians have lately discovered that the hookworm disease explains certain prevalent physical infirmities. If a rich man gives money to investigate the disease with a view to a remedy, we should think that anybody ought to be pleased. If the Bishop's advice were to be followed the unfortunate conditions which every one knows to exist, whether hookworm or illiteracy, would too long remain uncorrected. The man who shuts his eyes, who declares that all is well, is no true friend of his section. It is due to the earnest men who have seen the ignorance and the backwardness and have raised their voices and begged for help that conditions are rapidly improving; and the public sentiment of the South is demanding the education of all white and black, and the improvement of conditions of labor and agriculture. Such improvement will bring the best sort of immigrants, such as are going to Texas and Florida.

## Darkness That Can Be Felt

THE Presbyterian Synod of California reckons among its members many men of fine scholarship and undoubted ability. But they are so far in the minority that they could not prevent the synod from stultifying itself completely at the annual meeting just held in Southern California. By a vote of 110 to 81, the mediæval majority requested the resignation of Prof. Thomas F. Day, of San Francisco Theological Seminary. The resolution contains a proviso instructing the directors of the seminary to remove him from his position by the 1st of January if he does not resign.

Professor Day holds the chair of Old Testament Literature. Last year the same synod by vote determined what ought to be taught regarding the Old Testament. These were some of the conclusions reached—not by an application of brains and scholarship, to be sure, but by a show of hands: That Moses wrote the whole of the Pentateuch; that the entire book of Isaiah is the work of one writer; that the book of Daniel is "veritable history," written before it came to pass; that the Genesis account of the creation, of Paradise, and of the fall of man is "historically true"! These and numerous similar inherited tenets, which most well-regulated Sunday schools even have left behind, were among the things which this synod expected Professor Day to teach. There was also brought up against him at the recent synod the charge that he held to the "kinetic theory of Christ." It means that he was taken to task for believing that Jesus was subject to human limitations; that he "grew in wisdom and stature, and in favor with God and men."

Because he has trained his mind to be the servant of the truth as revealed by facts and not by synodal majorities, Professor Day will probably have to go, for the newly elected directors are determined to carry out the will of the synod. Those who look upon ignorance as one of the chief sources of evil, who hold veracity in thought as well as in act a condition of true progress, must be saddened by this act of California Presbyterianism.

The future usefulness of the seminary is practically ruined if the will of the synod prevails. On the one hand, what young man of ambition and intelligence will want to go to a theological school whose faculty is forced to ignore the generally accepted gains of a century of Christian scholarship and scientific progress? On the other, who can respect the mental equipment of a man who will be willing to accept a chair of the Old Testament on terms that prove him to be either ignorant or intellectually dishonest? In either case he and the institution he represents must prove a drag to the Christian progress of our time.

But this is an issue that affects not merely one chair in the seminary. A glance at the charges brought against Professor Day shows that not a single theological discipline escapes the throttling hand of the synod. No one can interpret the New Testament rightly unless he is free to illuminate and expound its teaching in the light of the accepted results of Old Testament historical criticism. Nor is it clear how one who must torture his utterances on the origin of the earth and of man into literal agreement with the first chapters of Genesis can in any discipline properly instruct a generation that from the kindergarten to the university is trained to think in terms of development.

If the little seminary at San Anselmo would find freedom and greatness, let it follow in the footsteps of Union Theological Seminary, by breaking away from the strangle-hold of an antediluvian synod. The latter's action has aroused deep feeling among California Presbyterians who stand for light and progress. It is retired ministers of the denomination in Southern California, who have an *ex officio* seat in the synod, that are chiefly responsible for this outbreak. If so, we have here the unedifying spectacle of good men who cannot endure the light of rational progress putting out with pious precaution the eyes of the new ministerial generation. Since among twenty blind a single one-eyed man is a king, as Erasmus said, we hope the seminary and its intelligent supporters will find means of effective resistance.

A similar case occured not long ago in Canada. The directors of the Montreal Wesleyan Theological College dismissed Professor Workman on the charge that he denied the Bible story of the fall of man, and a court has given him $3,500 damages on the ground that their action was illegal.

## Social Efficiency

We should hate to believe that all of the preachers of industrial efficiency are as blame as some of them make themselves out to be. They profess to think it passing strange that a determined opposition to their program has sprung up among the wage earners, who are to be made so much better off by adopting the methods of Messrs. Taylor, Brandeis & Company. What perversity is it, we are asked, that everlastingly holds back the dearly beloved workingman from enjoyment of the fat heritage which the employer would so glady make over to him?

More than once THE INDEPENDENT has pointed out precisely what is the matter with the program of "efficiency." Taking the figures of Messrs. Taylor, Brandeis and the rest at their face value, they show that while the wage worker does receive an appreciable advance out of his increased production by the new methods, the employer gets from three to ten times as large an advance as the wage earner does. This does not appeal to the wage earner as a square deal, and he sees that the inevitable effect of it, in the long run, must be to widen enormously the already wide gulf between the economic condition of the wages class and that of the employing class. Naturally, therefore, it excites his suspicion that, before the experiment is finished, "efficiency" will be used as a new club to hammer him into subjection, precisely as the piece-price system has been. Workingmen understand well enough that the piece-price system would be a fair and satisfactory scheme under a co-operative organization of industry, and probably not many of them find it difficult to see that the much talked of "efficiency" methods would be an asset to a socialistic commonwealth. If the efficiency preachers sincerely want to know what the real reaction of the workingman to their propositions is, let them experiment a little further. Let them find out what would happen if they offered to supplement the wages contract with a proviso that the additional product created by "efficiency" methods should be divided in the proportion of two-thirds to the worker and one-third to the employer.

Not to put too fine a point on it, the "efficiency" program, as it has been presented so far, is an obvious case of saving at the spigot and wasting at the bung. It ignores the vast field of *social* efficiency, by comparison with which individual efficiency is a small matter. By "social efficiency," as the term is here

[illegible] we do not mean anything so ideal [illegible] "social service" in the ethical sense, or philanthropy, or theoretical justice. We mean a practical social efficiency that is measurable in hard cash, a social efficiency that spells dividends to stockholders.

The labor and capital of the world are producing today from one-third to one-half of what they ought to produce under effective co-operation and good management. The existing industrial organization, as all can see, is working as wastefully as a locomotive out of repair. The labor force is deliberately following a policy of resistance, friction, wastefulness and sabotage because it does not feel that it is having its rightful opportunity or getting its rightful share of product. The capitalist employing class, mightily well satisfied with its own "business brains," and fully convinced that it is richer than other men are because it is endowed with superior "ability" (as the learned Mr. Mallock expresses it), has been trying for something over a hundred years now to solve this bothersome problem of "the relations of labor and capital." And what has it accomplished? Would even Mr. Mallock have the hardihood to claim that it has accomplished anything whatever in this particular line of effort? Is the outlook for a harmonious organization of the forces of labor and capital thruout the industrial world any brighter today than it was when Adam Smith wrote "The Wealth of Nations"?

Industrial efficiency of the individual worker will be an excellent thing when the world is ready for it. But what we want just now is a Brandeis or a Taylor to tell us why we go on wasting at the bung.

## Crumbs for Women

Mrs. Ida Husted Harper gave our readers two weeks ago important information as to woman suffrage in the six States that have adopted it. But there are many more States which have given a grudging partial suffrage, and on the extent of these crumbs from the rich masculine table Mrs. Harper supplies further information, which we give here.

Beginning with Michigan in 1875, there was a tendency on the part of legislatures to confer some form of school suffrage on women, and this has continued until in about half of the States they have a school vote of some kind. In certain places it is for trustees, in others for appropriations, but nowhere have they as much of a voice in school affairs as men have. In some States they must be mothers of children of school age, in others heads of families, and in others taxpayers. They must register the same as if they were going to vote an entire ticket, and on election day they must go to the general polls; so the school vote cast by women must not be regarded as conclusive evidence of the number who would exercise the full suffrage.

In 1887 Kansas again came to the front by granting to women municipal suffrage, which its Legislature had constitutional power to do, and they have exercised it ever since then, to the distinct advantage of the city governments, according to the general belief. There has been, however, much legislative juggling to prevent their having a vote on officials who are connected with the administration of the liquor prohibition laws, and they are prevented from voting on judge and marshal of the City Court, justices of the peace and constables, while the police judge, city marshal and chief of police are appointed, except in the small places. Liquor sellers, when indicted, simply take an appeal to a higher court over which women have no jurisdiction. A constitutional amendment to give women the complete franchise was submitted to the voters in 1894, but was defeated largely because of the peculiar political condition—the Republicans trying to regain the State from the control of the Populists and both parties willing to sacrifice anything that seemed to stand in the way. An amendment has now been once more submitted, to be voted on in November, 1912, and as there is really a strong public sentiment in favor of it, the prospect is good for its winning unless political exigencies again call for a sacrifice of the women.

In examining the patchwork of women's civil, legal and political rights and privileges in the United States, one shall

find that in Montana, since 1887, women taxpayers can vote on questions of special taxation, also for school trustees; since 1894 in Iowa all women can vote on issuing bonds or increasing the tax levy; since 1898 in Minnesota for library trustees (in addition to school officers since 1875). In 1901 the Legislature of New York gave to taxpaying women of towns and villages a vote upon propositions for special taxation, and in 1910 the law was amended to include the issuing of bonds. After four acts of the Legislature and three decisions of the highest courts, consuming twenty years of time, the right was secured for women of the towns and villages who have children of school age or are assessed for over $50 to vote at district school meetings! Even with this small privilege women have carried many elections, and always for the improvement of the schools and villages. The charters of seven or eight third-class cities have conferred school suffrage on women, and possibly a dozen have given the taxpayer's franchise.

In 1908, Michigan, thru a new Constitution, gave taxpaying women a vote on all questions of special taxation and the granting of franchises. This was in response to a petition from 275,000 of the leading women for the full suffrage. Most of the fragmentary voting privileges enumerated above have been given by legislatures merely to get rid of the importunities of the women for a chance to obtain the complete franchise. These crumbs are about all the actual suffrage a legislature has power to give. That of Michigan in 1893 conferred the municipal franchise on women, just as that of Kansas had done, and the Supreme Court at once declared that it had exceeded its constitutional power. This would probably be the decision in most of the States. The women do not want to be enfranchised in this piecemeal fashion; they have almost entirely ceased asking for it, and it is a case—to quote the "antis"—of having "the suffrage thrust upon them."

It must be remembered that in no State can the Legislature confer the complete franchise on women. That can be done only thru amending the constitution by taking the word "male" out of its qualifications for voting, and this requires the consent of a majority of the electors.

## The Retirement of Mr. Balfour

MR. BALFOUR is not sixty-five years old, and yet he retires, he says, because of his age. He is not out of health; he feels no loss of his mental powers; but he greatly dreads the possibility that he may not be conscious of the gradual loss of eager initiative, and he fears that the time may come when his leadership may be supported by the reputation of his past rather than by the vigor of his present. Therefore this unexpected retirement.

Very naturally the British public is slow to believe that this tells the whole reason. They suspect that he is nettled by the opposition he has had to meet of late in his own party, when Lord Halsbury, over eighty years old, led the faction which bitterly resented Balfour's submission to the will of the House of Commons. We do not question that Mr. Balfour and the Conservative majority that followed him were prudent and wise. If they had resisted it would have done no good, for some hundreds of peers would have been created to swamp the House of Lords, and that would have vastly weakened the honor in which lords are held in Great Britain. He yielded because he had to; but he left the House of Lords yet a choice and distinguished social institution. To have resisted would have made it a public laughing stock, which Conservatives like Mr. Balfour would not like, but which Liberals and Laborites and the Irish contingent would have seen with complacency.

Mr. Balfour is a consummate politician, a master of party management, a born leader, and yet we venture to think his heart's love is not in that business. He would much rather be the leisurely student of philosophy and the defender of religious faith. We warrant that he would pride himself more on being president of the British Association than on being Premier. Even just now he has turned from the battle fray to write in *The Hibbert Journal* a criticism of the French philosopher Bergson, whom he admires, but can by no means follow.

The great question of protective tariffs which has been forced on the Conservative party by Joseph Chamberlain appears to have only a mild interest to him. For a long time England doubted whether he believed in the new doctrine, which is now to be more vigorously prest by his successor as leader of the party. He will not retire from Parliament, but he will attend its sessions only occasionally, and will leave to others the sure privilege of accepting defeat over home rule for Ireland and disestablishment in Wales.

It is not clear to us that the reason given by Mr. Balfour for withdrawal is a valid one. A man should do a man's fighting work as long as strength is retained. At the same time when he reaches the years that men call old age his resignation should be in the hands of his associates, and he should candidly and honestly accept their suggestions that his period of best service is past, and he should seek such suggestions. A man can never judge of his own mental decay. Many a man has held on to a pulpit or a teacher's chair or the control of business when he ought to have resigned, and it is no wrong to force him to resign. The unwillingness to resign is a sign of incompetency.

Mr. Balfour's successor as leader of the minority party, Andrew Bonar Law, is almost unknown to this country. He is a Canadian, only a few years in Parliament, and has never held office in a Government. He is a very effective speaker and a powerful advocate of the policies for which Joseph and Austin Chamberlain have labored. He will fight the progressive policies for which British Liberalism stands, and will fail; for he is on the wrong side, and the people are henceforth to rule in their own interests and not in the interests of vested privilege. The next five years will show lively times in British politics.

## Our Opportunity in Panama

THE Canal Zone is the critical point in world commerce and 1912 is the critical time to make use of it. This little ribbon of land which ties together two great continents and two great oceans has been the object of aspiration by the great maritime Powers for four centuries, and blood and money in untold measure have been lavished for its acquisition. At last, by our usual combination of good luck and good management, it has come into our possession and we shall have to decide within the next two years what shall be done with it. It is a unique piece of real estate, the cross roads of the two great trade routes. All land traffic north and south in this hemisphere must cross it. All sea traffic east and west in this hemisphere must pass thru it or go around by Magellan Strait. The two terminal ports of the Canal Zone, appropriately named after the discoverers of the Atlantic and the Pacific shores of the Isthmus, Cristobal and Balboa, will be the places where the ships of all nations must meet and where they can most conveniently exchange commodities. The great artificial lake, Gatun, thru which they must pass, will be a landlocked fresh-water harbor, more than twice the size of the District of Columbia. There will be a perpetual demand for dockage and storage facilities, for coal and oil, for tools, machinery and repairs, for food, ice and all manner of supplies.

Now whatever of this sort may be needed by the shipping passing thru the canal or using its ports our Government is in a position to supply better and cheaper than any other agency. It has the plant, the experience, the organization and the force. There are 3,000 buildings in our possession on the Zone. There are thoroly equipped machine shops, bakeries, laundries and cold storage depots. Uncle Sam, in his capacity as an innkeeper, runs 53 eating houses of various grades, from a high class and expensive hotel for tourists to kitchens for West Indian negroes. In these establishments were served last year about 4,000,000 meals at prices as reasonable as those charged in the States, notwithstanding the expense of transporting and handling food in the tropics. In his capacity as shopkeeper Uncle Sam supplies the wants of some 60,000 men, women and children of various races and most diverse tastes. Household and personal articles, from neckties and hair tonic to shoes and furniture, are bought at the lowest prices in this country and Europe and sold on the

Zone at cost plus running expenses of the commissary.

The question now to be brought before Congress is whether we shall allow all these advantages to lapse or shall utilize them to secure as much return as possible on our investment in the Isthmus. Shall we sell off our 267 square miles of land to town site boomers and real estate speculators? Shall we allow our shops and houses to decay and auction off our machinery for scrap iron? Shall we allow the harbor facilities to pass into private hands to their great profit and perhaps to the detriment of the purposes for which the canal was constructed? Or shall we continue the present efficient organization for the purpose of aiding our own shipping and deriving a revenue from the interoceanic traffic?

The answer will depend upon whether we regard the canal as a philanthropic or a business enterprise. Is the $400,000,000 which we will have put into it to be considered a ship subsidy for the benefit of the shipping interests of Great Britain, Germany and other foreign countries? If so, it was certainly an unwarranted waste of money because these lines are already sufficiently subsidized and not at all in danger of being crushed by American competition. But if, on the other hand, the money was expended for the purpose of promoting our own shipping, of reducing transcontinental rates and of enabling one fleet to police both oceans, then it is our manifest duty to see that the tolls are so fixed and our position upon the Isthmus so utilized as to secure these aims as far as may be.

The matter is in our own hands. We need consult no other Power. The Suez Canal is internationalized by treaty. The Panama Canal is our own exclusive property. We have simply dug a ditch at our own expense thru what is virtually our own land, for the Hay-Bunau-Varilla treaty of 1903 gives us "in perpetuity the use, occupation and control" of the Canal Zone, with sovereign "rights, power and authority." We were not obliged to undertake it. We need not open it in 1915 unless we want to. We can close the gates of it at any time that it becomes inconvenient or unprofitable for us to keep them open. The Suez Canal is owned by financiers of many lands and it pays them well. The stockholders of the Panama Canal are every American citizen and no other. Each one of us has nearly $4 invested in the enterprise. It is our business to see that we get our money back with a reasonable profit before we indulge our benevolent instincts by giving gratuities to our business rivals.

For these reasons and many others we heartily approve of the recommendations made by the Isthmian Canal Commission in its recent report:

> "The revenues of the canal should go to pay not only the operating expenses but to repay the capital invested. Every legitimate means for increasing the revenue should therefore be adopted."

**Mr. Carnegie's Latest Gift**

Mr. Carnegie has done well and generously to capitalize his charities. He has established the Carnegie Corporation of New York and given it $25,000,000. Its charter is a very liberal one and allows it "to promote the advancement and diffusion of knowledge," which leaves much liberty to the trustees. Hitherto Mr. Carnegie has done his beneficent work individually, but now the business of establishing libraries and aiding institutions of learning will be taken up by the new corporation. It is well for a man like Mr. Carnegie, who has passed his seventy-fifth birthday, and who wants life's passion of service to be fruitful after his death, to provide for it in such a permanent way. His largest previous gifts have been $50,935,000 for libraries, $22,000,000 for the Carnegie Institution at Washington, the same amount for the Institute at Pittsburgh which bears his name, $21,000,000 for teaching funds, $20,000,000 for colleges in the United States and Canada, $10,000,000 for Scottish universities, the same amount as an endowment for international peace, $7,250,000 for hero funds, $6,800,000 for colleges in England, and a multitude of other gifts which bring the total up to over $200,000,000, a larger sum than was ever given for public purposes by any other man. Even so we are not sure that he will, like Dr. D. K. Pearsons, achieve his ideal which he set before the world years ago to die poor. As it is, the world cheerfully forgives him for being rich.

**Commission Government**

Salt Lake City and Sacramento adopted the commission form of municipal government last week, and the press dispatches said that Chelsea, Mass., by a majority of 230, rejected it after using it two years. There had been a commission, or a board of control, in Chelsea, and at the election two new plans were before the voters. The first called for a mayor and four other members of a municipal council—virtually another commission. The second, which was adopted, provides for a mayor and nine aldermen, four at large and one from each of the five wards; for a school committee composed of the mayor and two representatives of each ward, and for the initiative, referendum and recall. Those who ask why Chelsea laid aside commission government may find an answer in the following explanation by a Boston newspaper:

"The Jewish vote was responsible for carrying the day for Plan 2. The Jews wanted that plan because they felt that if the commission form with its small number of members should be adopted they would get but poor show at direct representation, whereas if the other plan should prevail they undoubtedly would be able to elect one alderman and two school committeemen from Ward 2."

**A Union of Baptists**

Some twenty years ago an effort was made to unite the Free Baptists with the Congregationalists. The representatives of the two bodies agreed, but it was too early. Now the Free Baptists have to all intents and purposes united with the larger Baptist body. This is achieved by the simple process of consolidating their mission boards, thus illustrating the fact that mission work is the essential work of a Church. The questions which had separated the two bodies have ceased to be debated. Close communion is not the shibboleth it was. Baptists do not now fence the communion table as they did. The Baptist Foreign Mission Society has taken over the Free Baptist Mission in Bengal; and the Baptist Home Mission Society has accepted the care of Free Baptist educational work for the negroes; and the Free Baptist weekly, *The Morning Star*, has been merged in *The Watchman*, of Boston. We have had federation of Churches, and that is admirable, but a closer union such as we here have an example of is better still. We have too many denominations, and some of them could best serve God by combining their forces by consolidation. We would have more unions such as this and such as the Presbyterian family of Churches has been showing us.

**The Church Supports the War**

The truth of the story cabled to this country that the Pope had given approval to the war with Turkey has been denied by Catholic papers in this country; but the support given to the war by the Church as a whole is made much of in contrast to the effort of the Socialists to organize a strike against the war. The Rome correspondent of the Catholic *Standard and Times*, of Philadelphia, says:

"The Catholic bodies have given unstinted support to the expedition to Tripoli, while the Masons—the rogues—try by a manifesto to throw dust in the eyes of Italy as to their attitude of friendship for the Turks. . . .

"One of the time-honored accusations of the irreligious sects of Italy—including, of course, the shifty-eyed Masons—was that the Catholics of the country lacked earnest patriotism. And now all look to them in gratitude, for they broke the power of the general strike. they are preparing expeditions for those whom the Turks may maim in the coming battles, and their press wishes this to be a triumph of the standard of the Cross over that of Mahomet.

"Cardinal Maffi, Archbishop of Pisa; Cardinal Ferrari, Archbishop of Milan; the Archbishop of Salerno, the Bishop of Cremona and numerous prelates and societies have publicly pronounced in favor of governmental action. . . . All classes, with the exception of the coolly lying Masons, are burning with enthusiasm for the enterprise. 'Mothers,' cried a Dominican preacher from a pulpit in Perugia the other day, 'ought to bless the day they suckled those soldiers we have sent to the war.'"

**Bookkeeping of Virtue and Vice**

China is not without its popular books of ethics—indeed, the religion of Confucius and Loo-tse is mainly ethics. But there are popular Chinese books that tell us the relative values of virtues and vices, so that a man can reckon up exactly at night his merits and demerits of the day. We give a few items as gathered by the Rev. J. W. Crofoot and printed in *The Chinese Recorder*. To rebel against parents or to think them

partial toward brothers is chargeable with 1,000 demerits, and infanticide has as many. To hate a brother because of property has 500 demerits, and so has arson. To utter counterfeit money gives 200 discredits; to open a gambling place, 100; to complain of the weather, 50; to sacrifice to parents without honoring them, 50, but to the gods only 20; to talk too much or to complain of poverty, each 10; to throw away written paper, 5; to borrow and not return, 5; to hate Buddhist or Tanist priests, 5; to turn leaves of a book with dirty hand, 3; to worry about the future, or to read classics in bed, or to revile a beggar, or to feel disgust because food is bad, 1 each. We commend this method of cultivating virtue to our Occidental readers. Each one can make out for himself a scale of merits and demerits for his virtues and vices. It might be a healthy amusement for a company of young people or old. One book tells of a man who laid up 3,000 merits and then 3,000 more. To add to these 10,000 was difficult, but he did it by remitting the taxes of the people in his district. How he made account to his superiors we are not told. There are prizes in such a contest for merits: a certain number will make a man an earthly fairy, and five times as many a heavenly fairy.

**Yuan Shi-Kai's Opinion of Missionaries**

When the Boxer movement started in 1900, Yuan Shi-Kai exerted his authority as Governor of the Province of Shantung to check the outbreak and to protect foreigners from violence. Now that he has become the ruling power in the Empire it is important to note his favorable opinion of missionary activities, as exprest in an official letter addrest at that time to the representatives of the American and English Baptist and Presbyterian missions within his jurisdiction:

"You, Reverend Sirs, have been preaching in China many years, and without exception exhort men concerning righteousness. Your church customs are strict and correct, and all your converts can well observe them. In establishing your customs you have been careful to see that Chinese law was observed. How, then can it be said that there is disloyalty? To meet this sort of calumny I have instructed that proclamations be put out. I purpose hereafter to have lasting peace. Church interests may then prosper, and your idea of preaching righteousness I can promote.

"Enclosed please find copy of proclamation and of orders to my subordinates, for which I ask your forbearing consideration.

"The present overturning is of a most extraordinary character. It forced you, Reverend Sirs, by land and water to go long journeys, and subjected you to alarms and dangers, causing me many qualms of conscience. Everywhere it is now quiet. The missionaries of France, Germany, and other nations have returned to the interior to preach as formerly. If you, Reverend Sirs, wish to return to the interior, I would beg you first give me word, that I may most certainly order the military everywhere to carefully guard and escort you."

On leaving Boston for Rome to receive the red hat of the Cardinalate and to hold "high and holy converse with him who for me is next to God Himself on earth," Archbishop O'Connell gives his benediction to the clergy and people of his diocese. He tells them of "the overwhelming honor which has been given him," and that "never before has this fair and powerful city received such world-wide distinction as in her enrollment among the principalities which govern three hundred millions of souls the world over." This act of Pope Pius X has made Boston known "even in the smallest hamlet of the farthest East." The new Cardinal then calls on Boston to "rouse herself to the full sense of her sublime Catholic duty," and he prays that he may return "ready for more and better work for the Church and for our own beloved country." Boston is a Catholic city and is governed, ecclesiastically, by one of the ablest of the Church's prelates.

If ever a public officer deserved impeachment Governor Blease, of South Carolina, deserves it. A negro was arrested for assault. The sheriff feared a lynching and appealed to the Governor for troops. The Governor's answer was to keep in touch with the situation and let him know in the morning. When morning came the sheriff reported that the negro had been lynched. In an address on Saturday Governor Blease said that the event was just as he expected and wished, and that, rather than send troops, he would have resigned his office and gone to lead the mob. And he is

Governor and sworn to execute the laws. We are glad to know that articles of impeachment are likely to be brought, for his attitude is displeasing to many citizens.

We wish there were ten such righteous men as Martin I. J. Griffin, the Catholic historian, who died in Philadelphia last week. It was his square literary honesty that marked him. It was not his business to add polish to the glory of good deeds nor to conceal facts of less praise. If a claim was made for the American Church which was not true he hastened to contradict it, for he wanted the facts told just as they are. He did not regard history as a record of lies agreed upon. He was a magazine of the real facts and a terror to willing purveyors of what they would wish believed.

In two States, New York and New Jersey, the Democrats lost their legislatures in the late election, and Governor Dix and Governor Wilson will be left high and dry except as the Republicans are willing to help them in their advanced measures. Very properly both of them appeal for this help, and they ought to get it, whatever effect this may have on the political ambitions of one of them. Party lines ought not to be drawn tight in these days when local policies are involved.

Champ Clark did hurt enough at the time of the Canadian election, and he has since repeated his indiscretion when he declares that he does not care who hears him say that nine-tenths of the people of the United States desire the annexation of Canada. There is this amount of truth in it, that any sensible man would wish that the two great countries were one, but that does not mean that they would do one thing to press such a union against the wish of Canadians.

There is many a monument to Abraham Lincoln, but none to his wife. It is proposed to honor her name in a building for the Sayre College for girls in Lexington, Ky., to be called the Mary Todd Lincoln Building. There is no more suitable place for such a monument than her Kentucky home, and nothing more fitting than a worthy building for a college that seeks to give the best education to young women. We trust that the plan will find many generous friends.

The age of miracles has come again. We see Persia a republic and virtually ruled by an American Mordecai, named Schuster, who bids Great Britain halt on the Persian Gulf and drives back from the North the Russian invaders. We see old and slow China waking from senile torpidity and in a few days overturning an ancient dynasty and proclaiming a republic. And at our own doors passes the shadow of the navies of the air, and Schenectady elects a Socialist Mayor who is a clergyman.

Mr. Taft owes it to the American people to take care of himself during the period of his administration. His perambulations involve a good many dangerous exposures, and the event which happily did not happen in California, the attempt to blow him up with dynamite, compels us to do a lot of thinking as to the possible consequences. We have no ill will for Mr. Sherman, but we do not desire to see him President of the United States.

After all, Maine retains prohibition by a majority of 758, which is dangerously small. Governor Plaisted is evidently disappointed, and he will call a special session of the Legislature in February to propose another amendment to the constitution which will allow cities to provide saloons and country towns to exclude them. The cities want liquor, and they want the revenue from license.

When the other consuls fled for their lives from Tripoli our American consul, Mr. Wood, remained to attend to his duties. No wonder the Italian Government thanks him, and his own country applauds him.

By a good majority Maryland has, greatly to her honor, refused to adopt the amendment intended to disfranchise negroes. We trust that is the last we shall hear of the movement there.

# Insurance

## The True Theory of Life Insurance

A SAVINGS bank is intended for the savings of people of moderate means. The management of the funds is carefully looked after by law, and savings bank trustees are supposed to administer the funds not for profit to themselves, but as a philanthropic duty, so that the depositors may receive a fair interest return upon their savings and be as free as possible from risk of loss.

Likewise, a life insurance company should be administered with utmost conservatism. Its funds should not be used for speculation and it is the duty of the trustees to protect the policyholders' interests in every possible way. It is on this theory that the New York State law of 1906 limiting the amount of new business that any one mutual company should write in one year to $150,000,000 was enacted. The object of this law was to prevent companies operating in this State from striving for mere size at any cost. It was realized that a life insurance company should strive for strength rather than size. Other laws were enacted at the same time, limiting the proportionate amount a company could spend for the procuring of new insurance, the scale of commissions to be paid to agents, and so on.

The law limiting the amount of new insurance that any one company should write in any one year to $150,000,000 was excellent in theory, but a little too drastic in practice. The mad rush for size at any cost of a few years ago was undoubtedly an evil; the companies, in striving for size, were too lenient in the selection of their risks and paid far too high commissions and bonuses to their agents. When the great New York insurance companies realized that, under this law, they could only write a limited amount of insurance each year, they naturally began to scrutinize their risks more carefully and to work for strength rather than size. In this way these new laws had an excellent effect, as the steady decrease in expenses and the corresponding increase of dividends to policyholders attests.

Last year, however, the Legislature somewhat modified the severity of this law by allowing a company which should write $150,000,000 of new business in a year at an expense less than that allowed by law for the writing of that amount, to spend the difference between the actual and the legal expense limit in the procuring of additional insurance. The practical result of this modification is to allow a company to write twenty or thirty millions more business in one year without encouraging it to excessive expense. This allows the great companies a reasonable and healthy growth.

A life insurance company should aim more to protect the many of moderate means than the few of large means. As a means of preventing poverty and a method by which families deprived by death of the breadwinner may not become objects of charity and a burden upon the State, nothing has ever been devised in civilization which equals the power for good of a well-managed life insurance company. Life insurance is not, primarily, an investment; it is a protection, an anchor to windward. With modern policy forms, however, with endowment and dividend features in them, the element of investment enters somewhat into the business, and policies, after having been maintained for a while, have cash surrender and loan values, and the tendency of many policyholders to place more and more importance on these features is economically unwise.

To sum up, a life insurance company, on one hand, should consider the funds of the public entrusted to its care as a sacred trust, and should try to give the maximum amount of protection consistent with absolute safety for the minimum cost, and on the other hand, the individual policyholder should take out his policy with the unselfish intention of protecting his family, and not with an eye to juggling with future surrender or loan values in business investments, or withdrawing them for the purchase of luxuries.

# Financial

## The Crops

THE Government's crop report for November, issued on the 8th, gives a final estimate for corn and several other products, the figures for corn showing an increase of 17,000,000 bushels since the October report. Below are the November estimates, with the harvest record in 1910:

| | Indicated 1911 | Harvest 1910 |
|---|---|---|
| Corn | 2,776,301,000 | 3,125,713,000 |
| Wheat | 655,516,000 | 695,443,000 |
| Oats | 873,041,000 | 1,120,765,000 |
| Rye | 30,077,000 | 33,039,000 |
| Barley | 145,951,000 | 162,227,000 |
| Buckwheat | 17,951,000 | 17,239,000 |
| Flaxseed | 21,692,000 | 14,116,000 |
| Potatoes | 281,735,000 | 338,811,000 |
| Tobacco, lbs. | 700,663,000 | 984,349,000 |

The yield of corn per acre was only 23.9 bushels, against 27.4 in 1910, and a ten years' average of 26. The yield of potatoes was 80.6 bushels, which may be compared with last year's 94.4 and a ten years' average of 92.8.

A report from the Census Bureau shows that up to November 1 the number of bales of new cotton ginned was 9,968,172. This exceeds by nearly 1,800,000 bales the quantity ginned up to the same date in any previous year, and indicates, of course, a very large crop. In 1910, 63½ per cent. of the crop had been ginned on November 1. If the proportion holds good this year the crop is nearly 15,700,000 bales. Percentages for earlier years would indicate even a larger yield, or more than 16,000,000. But it is admitted that this year's conditions have been exceptional, owing to the very early maturity of the plants.

## Trust Shares Rising

A SHARP upward movement in the market for securities was caused, last week, mainly by the Circuit Court's approval of the Tobacco Trust dissolution or reorganization plan. An advance of about 1 point for active stocks on Monday was followed, on Wednesday, by a decline of about 2 points. On Wednesday evening the court's decision became known, and it was unexpectedly favorable to the corporations affected. On Thursday, therefore, prices on the Stock Exchange advanced rapidly, Steel (408,000 shares), showing a gain of 5¼. There was a further advance on Friday, but part of it was lost. Sales of representative stocks for the week, with net gains, are shown below:

| | Sales. | Net change. |
|---|---|---|
| U. S. Steel | 1,230,000 | +4⅜ |
| Reading | 738,800 | +5⅛ |
| Union Pacific | 491,500 | +3⅞ |
| Lehigh Valley | 120,200 | +8¼ |
| Am. Smelting | 105,000 | +3⅝ |
| Amalg. Copper | 88,800 | +4⅜ |
| St. Paul | 64,500 | +3½ |
| North. Pac. | 54,300 | +2½ |
| Atchison | 45,800 | +1⅜ |
| Gt. North. | 31,200 | +1⅝ |
| Int. Harvester | 20,400 | +1¼ |
| Pennsylvania | 15,500 | +1⅛ |
| Balt. & Ohio | 14,500 | +3 |
| Nat. Biscuit | 10,100 | +8 |
| Nat. Lead | 8,400 | +3¼ |
| Gen. Electric | 4,200 | +2⅝ |

Closing prices were from 1 to 2 points below the week's highest figures. The effect of the decision was most noticeable in Steel shares and those of other great manufacturing combinations. It was shown by the decision, traders and investors said, that the interests of stockholders would be protected by the courts and that the Steel Corporation would suffer little loss, if any, even if it should be found guilty of violating the Sherman act. On the other hand, those to whom the decision was unsatisfactory saw in the quick response and upward course of prices confirmation of their opinion that the accepted plan would not restore competition among the parts of the Trust or serve the interests of independent manufacturers.

....A recent census report shows that the value of the live stock in the United States last year was $4,895,000,000, the increase since 1900 having been 59 per cent.

....The Russian Government's receipts in 1910 from the liquor monopoly sales were $386,803,556, and after expenses were taken out there was a net revenue of $288,964,660.

The Independent

VOL. LXXI NEW YORK, THURSDAY, NOVEMBER 23, 1911 No. 3286

# Survey of the World

**An Indictment of Mr. Taft**

Medill McCormick, of Chicago, vice-chairman of the National Progressive League (organized in the interests of Senator La Follette's Presidential aspirations), has issued a statement giving his reasons against the renomination of Mr. Taft. The statement is issued in consequence of repeated inquiry for the reasons of progressive opposition to the renomination, and it is worth remembering that Mr. McCormick was one of Mr. Taft's partisans in 1908. His statement is condensed:

"During the first special session of Congress, many were surprised at the President's attitude, and bitterly disappointed when finally he signed the Tariff bill.

"Later, they were startled by his praise of Senator Aldrich, whom they held responsible for the Tariff law which violated the pledges of the party. They were shocked by the Winona speech.

"But, even then, like others, I felt that the President had made the mistake of a man who, altho he long had been in public life, as little experienced in political leadership. We all felt that he would profit by the lesson derived from his costly blunder, and that he would realize that he was being gravely deceived by men about him, some in his Cabinet, some in Congress, and some influential in the business world.

"When the Ballinger-Pinchot controversy resulted in the dismissal of Glavis and Pinchot, and culminated in the discovery that the so-called Wickersham report had been antedated by director of the President, like a good many other Progressives, I began to doubt Mr. Taft's qualifications.

"And, finally, there came the Administration Railroad bill, its amendment and the consequences resulting therefrom. Nobody will deny that it was drawn in a series of executive caucuses. Senator Cummins was called to Washington to attend these caucuses, but, after the first, he was never invited to return. Railroad presidents were called to the White House, and joined the President and Attorney-General in the consideration of the measure. The bill which was originally considered when Senator Cummins was called to Washington was amazingly different from the measure which emerged from the Attorney-General's office after the conferences with the railroad presidents. The bill finally drafted legalized pooling and a controlling ownership of stock by one line in another competing with it; in short, its purpose was to permit the elimination of competition in the railroad world. In the House and in the Senate, the Progressives, with the great body of public opinion behind them, succeeded in so amending it that in its final form its likeness to the Administration bill could be recognized only by the retention of the Commerce Court clause.

"For their legislative intrepidity, for their presumption in amending the executive bill, the President, in so far as he could, proceeded to punish the Progressives. Now, we are told, he would put postmasters under civil service, but he was not ashamed to use the patronage to coerce Republicans who dared to differ with him as to the character of a single bill. Parenthetically, he has never withdrawn the patronage from the standpatters who voted against his reciprocity bill.

"But, be that as it may, as Senator Cummins has pointed out, in every one of the problems which have confronted this Administration the President has sided with those who are opposed to the legitimate demands of the people: not that he is not a well-meaning President, but because he is unable to understand the needs of the times and the aspirations of the American public. He is unable to appreciate his own inconsistencies, and would legalize transportation Trusts while he pronounces the miasmic Sherman law adequate legislation for industrial Trusts. It needs no supplementary legislation, he says. That view will not appeal to many. The most conscientious business man is not competent to determine what constitutes 'reasonable' or 'unreasonable' restraint.

"Personally, I believe in reciprocity with Canada, but none of us was able to reconcile jamming thru the Reciprocity bill, with little or no investigation by the Tariff Board, while the President postponed revision of other long-discussed, well-understood and outrageous schedules for a report from the board."

——The platform adopted at the Cleveland meeting of the committee representing the progressive Republicans of Ohio, last week, is to be the basis for the

formation of progressive Republican leagues thruout the State between now and January 1, when a State conference will be held at Columbus. Support is pledged to no candidate for President or Governor. Members of the committee which drafted the resolutions oppose the renomination of Mr. Taft, but there is no reference to that fact. A downward revision of the tariff is demanded, and the protective principle extolled; the initiative and referendum are favored; the short ballot is commended; legislation to remedy trust evils is called for; also a State corporation commission, the direct election of Senators, direct nominations, a continuance of the conservation policy, and an income tax. The abolition of offices and commissions created for "lame ducks" is one of the reforms demanded. A hint of agitation to abolish the Circuit Court or to provide that constitutional questions be taken directly to the Supreme Court is given in the plank on judicial reform.

**The Railroads**

The majority opinion of the Commerce Court, handed down November 14, in the transcontinental rate cases, holds that the long and short haul provision of the Interstate Commerce Act is constitutional. Judge Archibald concurs in the issuance of a temporary injunction of the orders of the Interstate Commerce Commission, but holds the long and short haul provision to be invalid. ——A temporary injunction against the enforcement of the Missouri Railroad and Warehouse Commission's order reducing rates on the transportation of iron and steel within the State has been granted by the United States Circuit Court, sitting at Kansas City, Mo. The decision was rendered by Judges William C. Hook, Smith McPherson and A. S. Van Valkenburg. Judge Hook has been named as a possible successor to the late Judge Harmon, of the United States Supreme Court.——Thirteen indictments for rebating were filed, November 16, by the Federal Grand Jury at New York, against railroad men and shippers of that city and Chicago. The investigation had been going on with unequaled secrecy during many weeks. The railroads concerned are the Baltimore & Ohio and Lehigh Valley railroad companies. The transactions occurred between July 1, 1910, and October 1, 1911. ——On Saturday the Interstate Commerce Commission established a new rate of 55 cents on all through traffic on shipments from the Atlantic seaboard to Missouri River points. This is a compromise between the original 60 cent rate and the temporary rate of 51 cents fixed by the commission in 1909. In making this decision the commission takes the view that the railroads are of necessity paying their employees more than formerly and undergo greater expense in operation, and so are entitled to the better rate. The order goes into effect December 30, 1911, for a period of two years.

**Labor**

To the delegates of the thirty-first annual convention of the American Federation of Labor, sitting at Atlanta, Ga., Samuel Gompers submitted his report as president on November 13. Mr. Gompers predicted great changes in American methods of government, particularly with regard to political parties. He gave to the referendum, initiative and recall the unqualified endorsement of organized labor, and declared that a real, representative democracy had never been known in the United States, because of the general absence of those provisions. Mr. Taft's "semi-deification of judges" and "sanctimonious cant about 'mob rule,'" as exprest in his message vetoing the Arizona Statehood bill, Mr. Gompers denounced as "mere drivel." The president of the Federation of Labor declares also for the passage of "anti-injunction bills," the restriction of immigration, the further restriction of convict labor, legislation to relieve civil service employees from the executive orders prohibiting them to petition Congress, uniform laws for the protection of life and health in factories, a Department of Labor in the Federal Government, and employers' liability and workingmen's compensation acts in all the States. Mr. Gompers attacks the so-called "efficiency system" as applied to labor. He reviews the McNamara case, and expresses his faith in the innocence of the men now on trial at Los Angeles for dynamiting outrages, and denounces in unmeasured terms their removal from Indiana to California. The

membership of his organization, Mr. Gompers states, exceeds all previous figures, and, according to the secretary's report, the treasury shows a balance of nearly $200,000 on hand. Nearly $5,000,000 was disbursed last year in strike funds.——The strike of the New York scavengers has been broken by the determined resistance of Street Cleaning Commissioner Edwards, backed by the Mayor. Strikebreakers and civil service list men were engaged daily, until the full number of wagons were out by Thursday of last week. At some of the stables the former employees begged for their old jobs. Threats of a teamsters' strike were made, but the executive council of the teamsters' locals failed to take action beyond voting an assessment of $1 a week to support the striking street cleaners. Former employees who quit work under intimidation or who so allege, were to be tried on Monday of this week on the charge of absence without leave. The strike cost the city in a week's time, about $150,000. This does not include the cost of feeding policemen on strike duty, and damage to harness, carts and horses of the department.

**The Panama Canal**

Bernard N. Baker, of Baltimore, set out some time ago to form an independent steamship company for service between our Atlantic and Pacific ports by way of the Canal. His new corporation, the Atlantic and Pacific Transport Company, was to have a capital of $15,000,000, and fifteen ships were to be built for it. By the Post Office Department this company (if it should be the only qualified bidder, and no other is in sight) was to be paid for carrying the mails. The Department's advertisement required that proof of the bidder's ability to do the work should be submitted on or before November 25. Mr. Baker told the President last week that he must fail to meet the requirements, and that his failure was due to the powerful opposition, as he believed, of the transcontinental railroad companies and the banking institutions in alliance with them. Subscriptions promised had been withheld, he said; bankers who at first had been willing to assist him had changed their attitude, and even shipbuilding companies which at first had exprest a desire to build the ships, had afterward declined to do the work. The reasons given in some instances, together with other evidence, had convinced him that railroad interests had caused the opposition. Several of the bankers named by Mr. Baker have since denied his assertions concerning them, one or two saying that he had not approached them. In reply to his attack it is said that he seeks an excuse for the failure of an impracticable project. Prominent railroad men say his story is an absurd one. He will testify before the Senate Committee on Interstate Commerce.——Secretary Stimson says the new route must not be throttled by the railroads, as the old one was. He would have the Interstate Commerce Commission empowered to regulate the rates for transportation by way of the isthmus. Speaking at Kansas City, last week, he favored Government aid for the American ships using the Canal, arguing that the Hay-Pauncefote treaty, forbidding discrimination, would not be violated if the tolls paid by our ships in the coastwise trade should be returned from the Treasury. There are indications that failure to establish an independent steamship line would cause much support to be given in Congress to plans for a line to be owned by the Government. ——The fort at the Pacific terminus will be named Fort Grant. Forts near the Atlantic terminus will bear the names of General Sherman, General Randolph and Ferdinand de Lesseps. Owing, it is said, to our Government's plans for fortifying the Canal, the British Government will enlarge and improve the defenses of Jamaica.

**Arrest of General Reyes**

General Bernardo Reyes was arrested in San Antonio on the 18th, immediately after his indictment by a Federal grand jury at Laredo for being engaged in fitting out a military expedition against the Madero Government in Mexico. Sixteen other persons were indicted with him, the complaint having been made and the evidence furnished by agents of our Department of Justice. Some years ago, Reyes was Minister of War in the Diaz Cabinet and was known as "the idol of the army." After his re-

ITALIAN SOLDIERS SHOOTING ARAB PRISONERS IN THE DESERT NEAR TRIPOLI

These copyright photographs are by Brown Bros., New York.

ARABS DRAGGED FROM THEIR HOMES IN THE OASIS INTO THE CITY

The photographs and affidavits of the correspondents leave no room for doubt that the Italian soldiery, after the Arab rising in their war on October 23, slaughtered in cold blood unarmed men, women and children

turn from Europe to Mexico, at the time of Madero's triumph, he publicly supported Madero's candidacy and promised to enter the latter's Cabinet as War Minister. A few weeks later he changed his mind and became a candidate for the presidency. Just before the election he left the capital in disguise and sailed from Vera Cruz to New Orleans. For about six weeks he has been a resident of San Antonio, where there was a Reyes junta, as also in El Paso. From the latter place large quantities of arms and ammunition were smuggled across the boundary. On the 18th there were other arrests in northern Mexico, with captures of arms. For some days there had been indications of a new and formidable revolution. The removal of American troops from the border, where about 5,000 were still in camp, had been suspended. Reyes was released on bail, and his arrest, it was thought, would not prevent an uprising, plans for which had been completed. It was said that the army might not be loyal to Madero, whom the soldiers dislike. Many army officers have resigned. Madero has lost the support of many of his revolutionist soldiers, who have turned against him because the lands of the rich have not been given to them. Reyes asserts that he is innocent and that his arrest was due to the hostility and unjust accusations of Madero.——Policemen and others in Vera Cruz have been arrested for plotting to take possession of the city in behalf of Reyes.—In Torreon and neighboring villages 10,000 workmen are on strike for higher wages and shorter hours. Nine men were killed in a riot at Torreon on the 15th, and foreigners have been leaving the city. There are new strikes in other parts of the country, and it is charged that they were fomented by Reyes.——Zapata refused to lay down his arms because Madero, while willing to pardon his men for rebellion, would not pardon those who were guilty of murder and robbery. Therefore Madero gave orders that the army should subdue him.——Jose Gomez, leader of the bloody revolt in Juchitan, has been in conference with Madero as to terms for surrender.——In Sonora, last week, three Americans were killed by the Yaqui Indians, who are in rebellion.——In Tabasco, one Valenzuela, a millionaire, formerly Governor of the State, is openly promoting a revolt in behalf of Reyes.——Dr. Gomez, a Maderist, who was recently removed from the Cabinet, and who was a candidate for the Vice-Presidency, has published at the capital a letter in which he outlines a plan for getting rid of Madero. He would have the recent election annulled for illegality.——At the end of last week many American residents were leaving the country, believing that a new revolution was at hand.

**Fighting in Venezuela**

It is now known that Cipriano Castro, the deposed President of Venezuela, has for some time past been on his estate at Cucuta, in Colombia, near the Venezuelan boundary. Venezuela's Government has been complaining because the Colombian Government refused to arrest him. President Gomez stationed 3,000 soldiers on the frontier, to resist any hostile movement he and his followers should make. Venezuela's consul in London was informed by cable on the 18th that Castro, at the head of a considerable force, had invaded Venezuela and had suffered a disastrous defeat. The battle was fought, it is said, near San Cristobal, which is about 50 miles from Cucuta. This report is denied in dispatches from Willemstad. There is much unrest in Venezuela. General Hernandez, leader of the Nationalist party, has resigned from the Federal Council, saying that Gomez has not kept his promises and has been giving monopolies to foreigners. It is said that he is interested in a revolutionary movement with General Telleria, formerly president of the Senate, and Dr. Vasquez, formerly Speaker of the House, who recently left New York for Venezuela, with the avowed purpose of starting a revolt.

**The Morocco Affair**

Now that Germany and France have come to an agreement in regard to Morocco, much of the secret history of the affair is coming to light. What is most startling, perhaps,

are the statements made by three different members of Parliament in public speeches that England was on the verge of war with Germany last September, and that plans had been definitely completed for the landing of 150,000 English troops on the Continent in aid of France. But if Captain Faber, Unionist member of Parliament, is correct, England was by no means prepared to enter upon such a struggle. He says that the British fleet was widely scattered and that the Government did not know where the German fleet was at the time, so there was danger of an attack upon the three fleets while separated. He also said that the admiral in charge of one part of the fleet, fearing an immediate attack, sent to the officer commanding the land forces to ask if the fleet would be safe under cover of the guns of the fort. A reply came back that it was far from safe, for if the land forts fired their guns they would hit the British fleet instead of firing over it. The dispatch of the troops to France would have left England without any protection against an invader except the navy and the irregular and foreign soldiers. ——The discussion of the Franco-German agreement in the Chamber of Deputies has brought to light the secret treaty made with Spain in 1904, according to which Spain was accorded a large part of the northern portion of Morocco, extending from Melilla, on the Mediterranean, to Larache, on the Atlantic, and including Tangier. The Spanish gold coast was also to be extended northward to the boundary of Morocco proper, not far south from Agadir. The French Minister of Foreign Affairs, M. De Selves, when questioned in the Chamber of Deputies, declared that France had made no protest against the Spanish occupation a few months ago of Larache and Alkazar. Later, however, M. De Selves confessed that he had made a mistake, and that his predecessor in the Foreign Office, M. Cruppi, had protested against the Spanish occupation, but the permanent officials in the office had neglected to inform the new Ministry of what had been done previously to his appointment; surely a very astonishing condition of affairs in a department which is supposed to have a continuous policy.

**Shuster in Persia**

President Taft, at the request of the Persian Government, designated W. Morgan Shuster as a competent person to reorganize and manage the finances of that country. Mr. Shuster arrived at Teheran May 18, with three American assistants, and a month later was invested by the Persian parliament with plenary powers in fiscal affairs. He organized a body of guards or gendarmerie for the protection of the treasury and the collection of taxes, and appointed as their chief Major Stokes, of the British army. This appointment was opposed by Russia as an invasion of the Russian sphere of influence, and the British Government also refused to consent to his serving in that capacity. The Russian representatives in Persia also interfered with the collection of taxes from rich Persians who claimed Russian protection, and when the deposed Shah, who had been exiled to Russia, crossed the Caspian and attempted to overthrow the constitutional Government, the Cossacks were actively employed in supporting the movement. After the invasion the Government ordered the confiscation of the estates of Shua-es-Sultaneh, brother of the ex-Shah. Treasury guards took possession of the property and refused to surrender it to the two Russian consular officers who arrived some hours later and demanded that the matter be settled by the Russian Bank at Teheran. The Russian Government claims that the guards pointed their guns at the consular officers and therefore demands an apology from Persia and the withdrawal of the guards. The Persian Government replied courteously with an offer to investigate, but this was not acceptable to Russia. Now it is reported that Russia insists upon the dismissal of Shuster and that troops have been despatched from the Caucasus to occupy the provinces of Gilan and Mazanderan, in Northern Persia. Great Britain will, of course, keep pace with Russian aggression, and two regiments of troops from India have been landed at Bushire, on the Persian Gulf, and occupied Shiraz. In 1907 Russia and Great Britain agreed without consulting Persia upon a division of that country into "spheres of influence," the Russian including the northern part of Persia and the British the southern, with

a neutral strip between, which, however, seems destined also to fall under British control. [For the terms of the agreement and a map showing the partition of Persia, see THE INDEPENDENT, October 10, 1907.] Mr. Shuster, in a long letter to the London *Times* of November 9 and 10, charges both Great Britain and Russia with thwarting his efforts, and gives many instances of their interference. His final paragraph will serve as an example of his plain-spoken and undiplomatic language:

"The internal difficulties of Persia are great enough to tax her resources to the uttermost limit; they alone will retard her progress for many years. If to them we are to add flagrant bullying by outsiders, varied by 'finger-on-the-nose' diplomacy, the situation is very bad.

"If money is to be obtained for permanent improvements, it must be taken on impossible political terms; if railroads are to be built, they must be conterminous with our old friends 'the spheres of influence'; if rifles are to be bought, they must be paid for to a rich and friendly foreign Government at just three times their market price; if officers of experience are to be taken into the Persian service to hasten progress, they must come from a minor Power, or prove themselves to have been of the spineless, nerveless type of which the tools of foreign interests are produced; even if they are from a minor Power, there must not be so many of them taken as to indicate a serious attempt at reform.

"Surely in these days of humanitarian principles and international comity the land of Cyrus has fallen upon evil times. However, even the ragged misery of the beggar and his indifference to fate does not justify us in giving him a gratuitous kick."

The Swedish Government has declined Mr. Shuster's request for twenty experts to assist him in the treasury, owing to the objections of Russia and Great Britain, and he is now trying to get some Americans to enter the service. Premier Asquith and Foreign Secretary Sir Edward Grey have made it plain to Parliament that they stand with Russia in opposing the American Treasurer-General, and the London *Times* no doubt speaks officially when it replies to his letter in the following terms:

"It may be admitted at once that both Russia and Great Britain do interfere in Persian affairs, and that they interfere in a way which would be improper were Persia a really independent country in the full meaning of the word. Mr. Shuster's letter is thruout based on the assumption that Persia is such a country. As a matter of fact and largely thru the fault of the Persians themselves, Russia and Great Britain exercise a control over Persia akin to that exercised over a minor by his guardians. Facts cannot be got out of the way by the simple process of ignoring them. People who think differently and try to act on their view are apt to get into difficulties; and that, we imagine, is the cause of many of Mr. Shuster's troubles. He has set about his task of reorganizing Persian finance with the greatest energy and determination. He believes that Russia and Great Britain have no legal right to the authority they exercise in Persia, and that the existence of Russian and British 'spheres,' not having been recognized by Persia, has therefore no validity; he assumes, wrongly in our view, that his work would be the easier if this authority and these 'spheres' did not exist; and he has therefore made up his mind to ignore them, with the inevitable result of the friction which we all deplore."

**Premier Yuan Shi-Kai**

On November 13 Yuan Shi-Kai, called to the post of Prime Minister by both the Regent and the National Assembly, entered Peking, from which he had fled in disgrace on the death of the Emperor and Empress Dowager three years ago. He wore the yellow jacket and was surrounded by a half dozen soldiers bearing naked two-handed swords, and was followed by 2,000 of his troops. His reception at the palace is reported to have been a pathetic scene, as both the Regent and the Empress Dowager wept and beseeched him to assume control of affairs as the only salvation for the empire. Yuan ignored the Regent, who is father to the child Emperor, but promised the Empress Dowager to do what he could. After consulting with the former Ministers and such members of the National Assembly as remain at the capital he consented to take the office, and gave out a list of twenty names as presidents and vice-presidents of the ten boards forming the Government. As head of the Board of Foreign Affairs he nominated Liang Tun-yen, a graduate of Yale, class of 1882, who was given the degree of doctor of laws from that university at the last commencement. When Yuan was dismissed from the vice-presidency of the Board of Foreign Affairs in 1908, Liang was given the place. The proposed ministry is mostly composed of Chinese, and among the Manchus represented there is none of the nobility. Both imperialists and republicans are included, and it is not probable that such a compromise cabinet can be got to

gether. Few of those selected have accepted, and some, among them Liang, have declined. It is understood that the policy of the new Premier will be to hold such provinces as are still loyal to the Throne, especially Chi-li and Ho-nan, and endeavor to win back the others by peaceful negotiations. He has sent General Lan, a constitutionalist, to Wu-chang, the rebel capital, to win back the leader of the insurrection, General Li Yuan-hung. But General Li, Wu Ting-fang and the other Southern republicans are not disposed to accept any compromise designed to save the dynasty. Dr. Wu, former Minister to the United States and now nominally Minister of Foreign Affairs in the republican cabinet, has telegraphed from Shanghai earnest appeals to Yuan and the Prince Regent for the abdication of the Emperor. It is likely in any case that the court will soon retire to Je-hol, the summer home of the imperial family, north of the Great Wall in Mongolia. Hsi Liang, ex-Viceroy of Manchuria, has been appointed general at Je-hol, and the road from Peking, 145 miles, is strongly guarded by loyal troops.—— The Imperial Government is hard prest for funds, altho the Empress Dowager and Emperor have made heavy contributions from their private purse. The wages of the troops are in arrears and their loyalty is on that account precarious. Payments have been suspended on the Boxer indemnity, and the Chinese students in this country, who were being supported by that portion of the indemnity returned by the United States, are unable to pay their expenses.——Manchuria, the original home of the ruling dynasty, has declared its independence of the Imperial Government, and Mukden, Kirin and Tsitsikhar have organized local administrations. The Province of Shan-tung, of which Canton is the capital, has declared itself an independent republic and elected as president its former Viceroy, Sun Pao-chi. The Provincial Assembly of Chi-li has petitioned for the establishment of a republic.

**The Struggle for Nanking**

The storm center of China is now Nanking, which the revolutionists are doing their utmost to capture. This city is likely to prove the turning point, for if the Manchus hold it the Imperial Government will be greatly strengthened, while if it is lost to them, a republic at least for the southern provinces is practically assured. The city is important, not merely by reason of its position, commanding the entrance to the Yang-tse River, but because it stands as the symbol of empire for the southern provinces. The name Nanking means "Southern Capital," as Peking does "Northern Capital," and in former centuries when the Chinese ruled China it was the center of art, learning and manufacture. The Tai-ping rebels, after having gained a foothold at Wu-chang, moved down the river and captured Nanking, making it their capital for more than ten years, 1853-1864. The present insurrectionary movement, which resembles so strongly the Tai-ping, is trying to follow the same course; but here, for the first time, the revolution has met with stubborn resistance. The Manchu Viceroy, General Chang Jen-Chun, refused to give way to the insurgents, even tho he was advised to do so by the Peking Government. He not only held his intrenchments on Purple Mountain against their attacks, but sent his soldiers thru the city streets and far out into the country, beheading every Chinese they found who had cut off his cue or otherwise appeared to sympathize with revolution. He has under his command about 11,000 men, of whom 7,000 are trained in the modern manner. He is well supplied with money and ammunition. The republicans have about the same number in the vicinity, not so well drilled and organized, but under the command of young men educated in the colleges and military schools of Japan, Europe and America. The fleet of thirteen gunboats, formerly commanded by Admiral Sah, is in their hands, and can be used in the engagement. The revolutionary headquarters are at Ching-kiang, a commercial port a few miles down the river, and the terminus of the railroad from Shanghai. The British managers of the railroad, altho desirous of maintaining strict neutrality, have consented to convey the republican soldiers to Ching-kiang as ordinary passengers, paying their own fare. All the foreigners have withdrawn from Nanking except a few Red Cross nurses.

# Conflicting Interests in Morocco

BY ALBERT EDWARDS

[This article is sent us direct by an American writer now at Tangier, Morocco. It gives a valuable summary of an interesting series of events by an observer who has been right on the disputed ground. The writer is the author of "Panama," an important review of our work on the canal, just published by the Macmillan Company.—EDITOR.]

EARLY this summer a French army corps entered Fez. It did not seem very important to us at home. It was a long way off and did not involve us in any direct way. Very few of us realized that it was the virtual violation of a treaty to which we were a party. But this episode, insignificant as it seemed to us, has plunged Europe into the most threatening crisis since the great war of 1870. Englishmen immediately lost interest in the question of changing their Constitution. The Government paid immense premiums for the speedy delivery of coal at its naval stations. Lloyd George stopped baiting the Lords and in a public meeting spoke openly of war. And the stir the affair made in the British Isles was even exceeded on the Continent. For several weeks the world's peace was in danger from moment to moment. Confidence is not yet restored.

Now, European governments are no more anxious to go to war than we are. Evidently the issues involved were serious. It was not so much Morocco—altho this country is infinitely richer than is generally supposed—which caused the crisis as the fact that at last France had thrown aside the veil and announced the intention, which she had always denied, in spite of overwhelming circumstantial evidence, of absorbing Morocco. It was not so much the bare incident, altho in itself it meant the repudiation of solemn promises, as what the incident implied.

The French policy in North Africa dates from Napoleon I. He started to Egypt with the avowed intention of turning the Mediterranean into a French lake. He failed, but such has always been the goal of French ambition. In 1830 they occupied the coast at Algeria. The colony has steadily grown inland, until today it includes 342,500 square miles. In 1881 they absorbed Tunisia, 50,000 square miles more. And no one who has followed French diplomacy has had any doubt that they hoped to add Morocco to their North African empire. Ministry has followed ministry in Paris, but no internal political eruptions have in any way affected the policy of the Foreign Office in regard to Morocco.

French army officers under their disguises as scientists or tourists have crossed and recrossed Morocco taking notes. French agents have offered fabulous sums to *bona fide* explorers of other nationalities for information which might interest the military authorities. War maps based on such material are on file in the army headquarters. French consuls have granted "protection" to thousands of natives, thus spreading an immense spy system over the empire. and French officers on leave and unofficially were with the army of the pretender, Ben Hamad. All this has been the gossip of Tangier for years. The responsible French officials issue formal denials. But once in a while a secret agent blunders and is caught in the act.

But more formidable than this underground intrigue have been the open attacks on the independence of the empire by French financiers. One of the "sights" at Fez, over which every returned traveler moralizes, is a storeroom filled with useless but woefully expensive toys. There are grand pianos which no one knows how to tune or play. There are motor boats for which there is no water, automobiles for which there are no roads nor mechanicians. For such baubles the ex-Sultan, Mulai Abdul-Aziz, was persuaded to plunge hopelessly in debt. And when, in 1907, the French occupied the rich Shawia province, nominally to preserve order in the name of the Sultan, they sent in a bill to the Moorish Government which completed the bankruptcy. "The French Loan," as the commission to liquidate the national debt is called, has stripped the country of its last shred of real independence.

The Moors, less prepared for modern

MAP OF THE KONGO AND KAMERUN

According to the agreement recently signed at Berlin, Germany withdraws all objections to the establishment of a French protectorate over Morocco in consideration of the cessation of a part of French Kongo adjacent to the German Kamerun. The map shows in black the territory acquired by Germany, which is of importance not so much from its area as because it establishes German trading ports on Corisco Bay and on the Kongo and Ubangi Rivers. Germany is negotiating for the acquisition of Spanish Guinea now encircled by German territory. Germany has ceded to France in exchange the triangle of land near Lake Chad between the Logone and Shari Rivers, commonly known as "the duck's beak." The smaller map shows the extent of the French African empire in comparison with the area of France.

warfare than the Algerians, could have offered no resistance to a frank invasion, and Morocco would be today in name as well as fact a French protectorate if it had not been for Germany's determined resistance. And that resistance seems at last to have been broken.

The development of Germany since 1870 has been spectacular. The Gründerzeit, as they call the decade after the Franco-Prussian War, was a period of immense industrial and financial activity, a "boom," in which cities were rebuilt, factories opened, a hundred and one new industries started. Typical of the whole period was the upbuilding of the military organization.

The German army has generally been considered the strongest in the world. But more than one shrewd observer has challenged the validity of this development. More and more one hears the question raised as to whether Germany could really fight. There is always the possibility of over-development. The military organization of the empire has

certainly come close to this point, if it has not passed it. The cost of army and navy has heavily strained the nation even in peace. War is many times more expensive, and not only in the direct cost of maintaining the men in the field, but also in the disorganization to industry which would result from calling the men to the colors. If the trade unions can get two-thirds or half of the men in a factory to quit work, it is a successful strike. If the German army were brought up to its nominal war footing it would approximate a general strike. Hundreds of industries would be paralyzed.

As in the army, so in every other branch of activity there are critics who say that Germany is overdeveloped. As you enter the harbor here at Tangier the first thing you see is an ugly cube rising above the picturesque flat roofs of the Moorish city. Painted across its side, you can read the letters two miles from the dock, "Deutsche Oriental Bank." You will find a German bank in almost every city from here to Manila. South and Central America are full of them. This looks like financial prosperity in Germany. But who owns the money with which these banks do business? Much of it is French. One of the directors of the Crédit Lyonnaise, the great French bank, is reported to have said that he could close half these German banks in twenty-four hours. Undoubtedly an exaggeration. But there is no doubt that half a dozen French bankers could get together and tighten up the financial situation on the other side of the Rhine to such an extent that the Imperial Government would be unable to negotiate an internal loan. In fact, it looks very much as if this was what has happened in the present crisis.

Germany is a nation with very little available surplus. The peasant, if he has a good year, puts the surplus into increasing his acreage. The great steel manufacturer puts his year's profit and probably some borrowed French money into an enlarged factory. And the Government sinks every available penny in naval construction and army expenses. Such a national policy can result only in immense success or abject failure. A serious industrial crisis, a prolonged period of "overproduction," would probably shake down all the edifice of achievement which the Germans have been building this last half century. And the only cure for "overproduction" is a widening market, a constant conquest of new industrial fields.

Germany is probably less ambitious for territorial expansion than any Power in Europe. England, having grabbed most of the earth and the fulness thereof long ago, is hardly to be compared in this respect. Italy, Austria, Russia, Spain, and above all, France, are keen on extending their political limits. Germany, less interested in this sort of adventure, is, and must be, eager for new markets. The Mohammedan countries are the most promising markets of our epoch. They are producers of foodstuffs and raw material and buyers of manufactured goods. There is, for instance, no prospect that the Ottoman Empire will become a competitor of the industrial nations for a century at least. But her purchasing power grows apace.

The German welt-politik of recent years has consisted in trying to secure a favored commercial position, or at least an equality of opportunity, in the Mohammedan countries, especially in Turkey and Persia. And so the Protestant Kaiser has had to pose as the protector of Islam against all Christian aggression. Germany has, for instance, always refused to join the rest of Christendom in protesting against the massacres of Armenians. So Germany's interest in preventing the absorption of Morocco by France is evident.

First, Germany cannot afford to have any market closed to her. The French colonial policy has always been exclusive in the extreme. And Morocco offers a commercial plum which no manufacturing nation can despise. It is about the size of Texas. Tangier is only three hours from Gibraltar. It is the only place where the exceedingly rich soil of North Africa is abundantly watered. At present its chief exports are raw hides. But almost every form of metal is found there. Germany is especially interested in the valuable copper deposits of the Sus Province. The purchasing power of the Moors is already great, and it will grow by leaps with the introduction of

railroads and a more stable government. And this rich country France is undoubtedly planning to close to other nations, just as she has, in spite of her promises of fair treatment, closed Algeria, Tunisia and Indo-China.

The second reason for Germany's intervention in Morocco is that, unless she can protect the independence of this Mohammedan empire, her prestige as a defender of Islam will suffer in the Levant—her whole welt-politik will be compromised. This consideration, while perhaps not very impressive to the American, is felt to be of crucial importance by the Germans. If the French or English diplomats at Constantinople could supplant the Germans, who are now supreme, it would undoubtedly wreck the railroad projects by which Germany is hoping to open the Levantine markets. Certainly nations have gone to war on smaller issues.

Germany has threatened war for seven years. When in 1904 England and France drew up a secret understanding, the *entente cordiale* by which France promised to give England a free hand in Egypt, and England promised the same liberty of action in Morocco, Germany precipitated the diplomatic congress at Algeciras. Her main contention was that no deal of such far-reaching importance could be arranged between any two European Powers without the consent of the other nations interested.

The *entente cordiale,* which has since become practically an offensive and defensive alliance, was then in its infancy, and France, not quite sure of her own strength and uncertain of England's support, was forced to back down. She publicly renounced her intention of absorbing Morocco, pledged herself to all the European Powers and America to respect the independence of the Moorish Empire, and in all commercial matters to preserve strict neutrality and equal opportunity. The act of Algeciras is as binding under international law as any diplomatic convention could be.

Very few people who have been close to Moroccan affairs believed in France's sincerity in this covenant. The congress recognized that Spain and France were actually more deeply interested in Morocco than other nations, and entrusted them with "police powers" to help the Sultan maintain his authority and the public peace. The French immediately went beyond the powers granted by the act. And England, apparently considering her private agreement with France as more important than her public convention with all the Powers, has supported France thruout.

Space does not permit a detailed account of the various intrigues and covert acts by which the French have violated, sometimes the letter, always the spirit, of her agreement with the rest of the world. Two crucial incidents will suffice. At Casablanca, the biggest of the Atlantic ports, the natives objected to the digging up of a graveyard for some railroad construction. There was a riot and half a dozen Europeans were killed. France exercised her "police power" by bombarding the city. Of course, very few of the people killed by this bombardment had had any connection with the murder of the Europeans. France then landed an army and occupied the whole district of the Shawia. The occupation which began in 1907 was to be temporary—only to restore order—but the French troops have not yet been withdrawn. These extensive military operations were all charged up to the Moorish Government and threw it into bankruptcy and the hands of the French money lenders.

For a while the French were content with this advance, especially as Germany was protesting. It is extremely regrettable that the voice of our Government was not heard at that time. But early this summer the French, having securely nailed down the Shawia, made a new move and precipitated the present crisis.

The refusal of some of the Southern Berber tribes to pay taxes was magnified into a revolution. It was reported that the rebels were marching on Fez, that the life of the Sultan was threatened and European residents were in danger. The French troops were at once started toward the capital. They occupied Fez with very little trouble, and then, altho their presence there certainly guaranteed the safety of the Sultan and the Europeans, launched out on a campaign against the alleged rebels, a campaign which has been bloody in the extreme. And there is no more probability of this

"relief expedition" evacuating the newly conquered territory than there is of their leaving the Shawia. They are in fact erecting permanent military stations. The act of Algeciras is now a matter of ancient history. Morocco is no longer an independent nation.

As a protest against this violation of treaty, Germany despatched a battleship to Agadir, another port on the Atlantic coast, and again the war clouds hung heavily over Europe. It is very hard to guess what goes on behind the closed doors of diplomacy. Some of the facts of the case seem, however, pretty well established. Responsible members of the English Government publicly promised to support France in case of war. French banks called their German loans, thereby playing havoc with the Berlin exchange.

"If Germany does not fight now," an experienced diplomat said privately, "it is because she cannot find the money. It would be better policy for her to risk a doubtful war than to allow France to swallow Morocco in the face of German protest. If Germany backs down, she becomes a second-rate Power. There will never be a European war if this crisis blows over. It will mean that the big banking houses rule the world."

Most students of the situation would, I believe, agree with this statement. Germany certainly has her back to the wall. Apparently she has had to give in. Her welt-politik has received a frightful blow. She was not even able to restrain her own ally, Italy, from trying to drive the Turks out of Tripoli. In fact, this deflection within the Triple Alliance, certainly encouraged, probably inspired, by the Anglo-French combine, did more than anything else to break the back of the German resistance. At the very best she will come out of the crisis severely humiliated. Her inability to protect Islam is patent. The boast that nothing can happen in Europe without the Kaiser's consent is a pricked bubble.

But the negotiations are not yet over. Germany still hangs on doggedly for certain commercial concessions. She insists on guarantees that all manufacturing nations shall be on an equal footing in the opening up of this new and rich market. She is asking that the spirit of the Algeciras act shall be preserved, even if its letters must be changed. France was given authority by the assembled Powers to exercise "police" control in Morocco to aid the Sultan in maintaining the independence of the empire. She used that authority to destroy that independence. At least, the Germans insist, France should give serious and binding assurance of a less selfishly exclusive policy in regard to trade than she has shown in Algeria and Tunisia.

It matters little to the United States what flag flies over the Kasbah at Fez. But we should be as much interested in the maintenance of our rights to trade as is Germany. Certainly in this aspect of the present crisis America should stand beside Germany. We are for the open door in Asia; why not in Africa? Our stake in the country is already considerable. In 1910 Morocco sent us half a million dollars' worth of raw material. There are no definite figures on imports, but the volume of American goods sold was estimated at $250,000. But the present-day figures are insignificant compared to future probabilities. Great railroads are to be built. If the competition is fair we can furnish the rails, probably the locomotives. Innumerable bridges are to be erected. We can get all the structural iron contracts if there is a square deal. The plans are already drawn up for extensive harbor improvements. They entail immense orders for cement. The great concrete work our men are doing in Panama especially fits us for such work. Shall the warehouses now being planned be roofed with French or American corrugated iron? Shall the cleaning of Morocco and the Moors be done with Parisian or American soap? There is not an industrial town in the United States which might not find a market for its wares over here. The country needs everything, from windmills to knitting needles, from harvesters to shoes.

Whether or not the United States is to have a fair share in the profits of this rich development depends entirely on the attitude of our State Department. If our Government is farsighted it will line up with Germany in insisting that the open door promised by the French at Algeciras shall stay open. There can be no doubt that, in spite of that promise,

the French have been closing it. One example is furnished by the trade in olive oil. Much of it comes to us in a raw state. But the French have large oil refineries in Marseilles. "Why," they ask, "should the Yankee reap the profit of this industry?"

Tangier is talking this week of what happened to our American consular agent in Mogador. He has built up quite a trade in crude oil which he sells on the New York market. The Moorish custom officials there, as everywhere, have a French "adviser," and the American exporter found himself discriminated against. The matter is now under diplomatic consideration. The Moorish Government is ready to pay back the small sum illegally extracted, but is unwilling to take the public action demanded which would prevent such discrimination in the future; forsooth, it might offend the French.

This little incident is typical, and in the cafés and clubs every one is discussing whether or not our Government will back up its consul in demanding the full benefit of our formal treaty rights. Here a little and there a little, the French are discouraging any commerce but their own. The issue at stake, which the Germans understand very clearly, seems to be ignored by the State Department. It is whether or not we and the other nations are going to get the square deal which the French promised us at Algeciras. Since we signed that treaty our State Department has been asleep on the Morocco question. Little by little the discrimination has become bolder.

Our consular staff here is doing its best to protect American interests. It would be a less thankless task for them if they were assured that the public at home understood the situation and were interested in the outcome. If we are willing to give up our rights in Morocco, we might as well recall our representatives at once. There will not be enough American commerce to warrant the expense of a consulate. But if we want our share of trade, if we want to have our treaties respected, the State Department should take emphatic action at once. We would find not only Germany with us over this issue of an open door, but every nation in Europe with the exception of France and England. We could have our way.

TANGIER, MOROCCO.

# The Outsider

BY MELLA RUSSELL McCALLUM

THEY wanted the prettiest china,
But they didn't ask for mine.
'Twas for the minister's party;
They wanted everything fine.

They wanted the nicest silver.
Mine's sterling, every bit;
It lies all yellow and tarnished,
For why should I brighten it?

They wanted the lightest biscuit.
The hand and the heart of me aches,
When I think of my roomy oven,
And the wonderful way it bakes.

They wanted all the good people.
That cut me most, like a knife.
You see 'twas the minister's party,
And I'm the saloon-keeper's wife.

From behind my kitchen curtain,
I could see them laughing. Say,
There are roads in this world lots harder
Than their "straight and narrow way."

I know how they hold me. But tell me,
Is it sinful to keep the vows
That I made that sweet June evening,
As I stood in my father's house?

Oh, well, they're there and I'm here,
And it's no use to sit and whine.
Still—they wanted the prettiest china,
And they didn't ask for mine.

WALKERVILLE, ONT.

# The Place of Journalism in University Education

BY EDWIN E. SLOSSON, Ph.D.

[The bequest by the late Joseph Pulitzer of $2,000,000 for a school of journalism has aroused general interest in the possibilities of the kind of training discussed in the following article. The author, now literary editor of THE INDEPENDENT, was for many years a professor in a Western State university and has taught classes in journalism in several institutions.—EDITOR.]

WHEN the question of introducing journalism comes up for consideration in any faculty, it meets with such objections as the following: Can the university afford to take on a new course? Are we not attempting to carry too many different studies now? Is there room on the campus for another side-show tent? Is journalism a profession? If so, can it be taught in a university? If so, is there a wide demand among the students for such professional training? The discussion of these and numerous similar questions occupies so much time and absorbs so much energy as to be the parliamentary equivalent of a motion to lay upon the table the original proposal.

This delay and confusion are caused by putting the question in the wrong form. Instead of asking if any university can afford to introduce journalism, it should be, can any university nowadays afford to get along without it? Or, in other words, has not the power of the press become so great a factor in modern life that a university which does not use it is in danger of losing its leadership? Has the American university that influence over public thought to which it is entitled by the high ideals, the wide learning and the personal ability of its members? If not, is it not for lack of precisely that element which journalism supplies? When I visit a university I am reminded of a power house where a magnificent engine is installed, the big flywheel revolving swiftly with an impressive display of energy, but not doing the work to be expected of it because the belting is weak and slack, so that the power does not get to the machinery without loss and delay.

It is always rash to attempt to express one's thought in the form of a definition, but one ought not to shrink from it, for the reader is entitled to it. Let me give, then, a definition that I have used for many years and that seems to cover the ground and to stand criticism as well as any:

*Journalism is the art of timely and effective presentation in print.*

The word "timely" is perhaps superfluous. It is necessarily involved in the word "effective" and it is implied in the term defined. If we curtail "journalism" we get to the root of it, jour, a good old English word as well as a French, meaning "day." This reminds us that journalistic writing is produced at a certain time for a specific and immediate effect. This differentiates it from the larger body of literature in general where the element of timeliness is eliminated, or subordinated. The journalist is writing for his contemporaries, not for posterity. He may, of course, accomplish more than his aim and be read by generations born long after the issues he discusses have been dead. A considerable part of the permanent literature of the world, and some of the best of it, from Addison's essays to Kipling's poems, is, or rather was, journalism.

It is not desirable to introduce into the definition the word "periodical" or its equivalent, because the manner of publication depends less upon the character of the work than upon such accidents as the whims of the editor or the financial state of the author. Fugitive pamphlets on polemical topics are distinctly journalistic even tho they may not have appeared in any newspaper or

magazine, while most of the fiction and many of the descriptive and travel articles published in periodicals are not, strictly speaking, journalistic. A large and increasing proportion of books are journalistic, not merely those dealing with pending questions in politics and religion but some of a purely informational character such as the numerous volumes now appearing on aviation and the Panama Canal. An article on Tripoli published a year ago would probably have not been journalistic. Published now it is, even tho it has been dug out of a forgotten pigeon hole in the editorial desk for the occasion.

I have used the awkward expression "presentation in print" because it is necessary to allow for and to make emphatic the fact that there are other ways of conveying ideas and inciting to action than by the use of words. Modern journalism has surpassed the limitations of language and is daily adopting new and more direct methods of expression. A picture, diagram or a map will give at a glance what pages could not say. The use of co-ordinate curves and graphs is now being taught in our schools and is gradually becoming the common language of statistics. Even a mathematical mind cannot grasp the real meaning of a column of figures, representing say the fluctuations of stocks or the monthly death rate, until he has plotted them in a curve. Graphical symbolism, both hortatory and informational, is becoming so important as to demand recognition as a distinct art. A campaign may be condensed into a cartoon. In the devising of ingenious modes of graphical presentation the French and Japanese are ahead of us. Typographical effects which correspond to the gestures and vocal emphasis of the orator, are now used chiefly in the freer pages of the advertising section, but much can be done in this line even in the most conventional fields. Professor Moulton, of the University of Chicago, has made the Bible more clear and impressive to the average reader by merely using a new arrangement of type for the old version.

Perhaps there is a science of journalism, or will be after the art has been practised long enough, but now we are concerned only with the art, which is a way of doing things to accomplish a purpose. The primary object of journalism is to incite thought and correct the judgment with a view to action. Like oratory it aims to instruct, persuade, convince, stimulate, guide, and control. Even in its purely informational function, the reportorial branch of the art, the object is to provide the necessary knowledge of what has happened at the moment, when, if ever, something may be done about it and when the information will tend to influence conduct. Journalism is essentially dynamic. Science, history, belles-lettres and the fine arts are chiefly static. Yesterday's daily is dead; it is history and not very good history at that, for it is necessarily somewhat confused, inaccurate and lacking in logic and proportion. The more alive the journal, the shorter its life. If its arguments and information are designed to be most effective at one specific moment in the course of events they will be inappropriate and more or less ineffective at another. The genuine orator adapts his message closely to the audience and to the time. Many of the speeches in the *Congressional Record* are not true oratory because they were written before or after the particular stage of the discussion where they appear and have no relation to it. Last month when the Chinese rebellion broke out the reader wanted a detailed map of the city of Wu-chang. He had never wanted one before. He probably will never want one again. But it was essential to his comprehension of the events narrated in the despatch. He did not get it. The Paris *Temps* was the only paper I have seen which gave it on time. That was good journalism. Our American papers mostly bluffed and dodged by giving a street scene in Canton, a portrait of the child Emperor, a general map of China, or something of the kind: all very well but not just what was wanted. It must be confessed that the editorials and news stories that have appeared in our papers and magazines during the past few weeks on the rebellion have not shown a profound insight into Chinese politics or even an intimate knowledge of Chinese geography. Now there were Chinese students in all our universities, professors of Chinese and

Far Eastern conditions in some of them, and plenty of books and maps on China in the libraries. But these sources were for the most part quite unavailable for newspaper use. The managing editor knew that if he set at the task of writing up the situation one of his office staff, who had never heard of the Manchus until he had looked them up in Vol. XI of the encyclopedia, he would be more likely to get a prompt and useful editorial than if he had telegraphed to the senior sinologist of America for an article. This is merely a trivial example of the unfortunate lack of connection between the sanctum and the campus. It really did not matter to the American reader what was going on in Wu-chang and vicinity unless he had relatives among the missionaries or investments in the steel works, but in more important and immediate affairs, where the opinions of the mass of readers make a difference in the course of events, the failure to have available the expert knowledge of the universities is a serious loss. The university is presumed to be a repository of all sorts of remote and recondite information such as ordinary people, even when editors, cannot be expected to keep in their heads or on their shelves. The difficulty is to get it out when it is wanted. And the university needs journalism as much as journalism needs the university.

Now, if I am anywhere near right in defining the method and motive of journalism it obviously should occupy the same position in modern education that oratory did in the ancient. It should be a fundamental factor in the system. Oratory is the oldest of the liberal arts, first formulated and taught by the Greeks, further developed in Roman education, continued in the disputations of the medieval universities, and so on down to our own universities, where it occupies a humble position, being less often obligatory than swimming, and ranking in popularity among the student activities somewhere between basket ball and tennis. It undoubtedly does not get the attention it deserves in modern education, but it would be vain to try to raise it to its former high estate. It has lost its unique importance thru the invention of printing and it will never regain it, or at least not unless some development of the phonograph or telephone should give to the human voice a wider range. For the eye has largely replaced the ear. Many people read more words in a day than they hear and some write more than they speak. Demosthenes and Cicero, if they were living now, could not reach enough people by the voice alone to exert a dominant influence in America, not even if they spent all their time on the platforms of Chautauquas and special trains. If a politician or preacher is called upon to speak to an audience of three or four thousand people he regards it as an important opportunity and exerts himself to make a good impression, yet when he is asked to contribute to a magazine he reaches ten or a hundred times that number of readers. There are many men in America whose words are read daily, weekly or monthly by more than a million persons. That is to say, the possible scope of a man's immediate and personal influence has been multiplied by the press about a thousand times.

It does not matter so much that our universities have neglected oratory, but in being slow to recognize the importance of its modern substitute, journalism, they are missing a great opportunity for influence. Not only that, but the lack of it has had an injurious effect upon the studies they do teach. The *trivium* of the seven liberal arts, *Grammatica, Rhetorica* or *Dialectica,* were in the old days largely concerned with spoken language, therefore with the discussion of topics of current interest and practical importance. But their modern equivalents, say, Literature, Composition and Logic, are not commonly utilized during the college in either oratorical or journalistic practice. Authorship is taught rather as a fine art than as an applied art, aloof from life and wanting in the sense of immediacy. If by his study of poetics the student learns how to write poetry, which is improbable, it is not apt to be journalistic poetry, such as Milton, Dryden and Tennyson often wrote. Our graduates have been taught the art of acquisition but not the art of exposition. They can load but not fire, at least not so as to be sure of hitting the bull's eye of a moving target. There

is this important difference between speaking and writing: no one, unless he is crazy, talks without having an audience. But there are plenty of men and women, otherwise sane, who go on writing all their lives, and even publishing, if they have money enough, without a single reader except the one who corrects the proof. Even the most egotistic and unobservant public speaker will notice when his audience goes to sleep or walks out, but the author can never tell what pages his readers skip. There is thus no immediate and automatic check on dullness and obscurity. This accounts, I believe, for the fact that academical theses are apt to be hard reading and uninteresting even for those who are interested in the subject. The ancient sophist lost his income if his pupils could not win cases in the agora or failed to convince that the worse was the better reason. The income of the medieval school man depended upon his ability to train scholars to maintain a dogma against all comers. But no such test of success applies to the modern professor of rhetoric and logic, unless indeed he is coaching the team for an intercollegiate debate.

It is not necessary to settle or even to discuss whether journalism is, or may become, one of the learned professions. Even tho training for it should in time come to be as specialized and technical as for law or medicine, still most of the writing for the press will continue to be done by those who have not made it their exclusive career. Some acquaintance with the art of writing for an immediate purpose should be as common as a knowledge of parliamentary law. It is indeed not worth while to establish a school to teach how to correct proof or to construct headlines of twenty letters containing a verb. Such technique of the various crafts of the printing house may properly be taught, but that is a minor matter. The instruction given to literary aspirants in some courses on authorship, to use a typewriter, enclose stamps and never roll the manuscript, is on a par with the advice to applicants for a position as office boy, to black your boots, comb your hair and not to whistle or chew gum, all very desirable things to know, yet after all not so important as some other things less often taught. The census of 1900 discovered some 30,000 journalists in the United States, and since the census takers were instructed to "distinguish a journalist, editor or reporter from an author or other literary person who does not follow journalism as a distinct profession," it is to be presumed that they were endowed with this remarkable power of discrimination. But outside these narrow lines there are a large number of persons who could profit by training in the journalistic art of collecting material and utilizing it to the best advantage at the moment; especially the 6,000 authors and scientists, the 112,000 clergymen, the 114,000 lawyers, the 4,000 librarians, the 440,000 teachers, and the 7,000 university professors. That is, there are now more professed journalists in the United States than there are dentists, civil engineers, architects, veterinary surgeons, dairymen or trained nurses, yet many universities feel it necessary to provide a specialized training for these occupations. Certainly the men and women who make a business of writing need education as much.

A start has already been made toward meeting this demand. The following universities and doubtless others that I have not heard of, are giving more or less clearly differentiated courses in journalism: Missouri, New York, Illinois, Wisconsin, Michigan, Kansas, Indiana, Minnesota, Nebraska, Miami, Oregon, Washington, Ohio, Iowa State College and Massachusetts Agricultural College. And now Columbia University has a million dollars with which to found a School of Journalism and seven years in which to prove it a success. If at the end of that time Columbia has not made good, the second million goes to Harvard instead. Mr. Pulitzer, in expounding his plan,* shows that he has no doubt of its practicality, tho he betrays some skepticism as to the ability of any university to carry it out as he would have it done. In refuting the common objections that the newspaper man is "born, not made," and that the trade may be best learned in the shop he says:

*The School of Journalism in Columbia University. *North American Review*, May, 1904; republished by Columbia University.

"The only position that occurs to me which a man in our republic can successfully fill by the simple fact of birth is that of an idiot. Is there any other position for which a man does not demand and receive training—training at home, training in schools and colleges, training by master craftsmen, or training thru bitter experience—thru the burns that make the child dread the fire, thru blunders costly to the aspirant?

"This last is the process by which the profession of journalism at present obtains its recruits. It works by natural selection and the survival of the fittest, and its failures are strewn along the wayside.

"The 'born editor' who has succeeded greatly without special preparation is simply a man with unusual ability and aptitude for his chosen profession, with great power of concentration and sustained effort. He is one who loves his work and puts his whole heart and mind into it. He is in the strictest sense an educated man, but he has merely substituted *self*-education for education by others, making up for any deficiencies in his training by the unreserved sacrifice of strength, energy and pleasure. Even in his case might it not be an advantage to have a system of instruction that would give him the same results at a saving of much time and labor?

"The 'shop' idea is the one that used to prevail in the law and in medicine. Legal studies began by copying bills of cost for the country lawyer; medical training by sweeping out a doctor's office. Now it is recognized that better results are obtained by starting with a systematic equipment in a professional school. The lawyer learns nothing at college except the theory of the law, its principles and some precedents. When he receives his diploma he is quite unprepared to practise. Nor does the doctor learn to practise at the medical school. He learns only principles, theories, rules, the experience of others—the foundation of his profession. After leaving college he must work in the hospitals to acquire the art of practically applying his knowledge.

"In journalism at present the newspaper offices are the hospitals, but the students come to them knowing nothing of principles or theories. The newspaper hospital is extremely accommodating. It furnishes the patients for its young men to practise on, puts dissecting knives into the hands of beginners who do not know an artery from a vermiform appendix and pays them for the blunders by which they gradually teach themselves their profession. We may sympathize with the students in their industrious efforts at self-education, but may we not also sympathize with the unfortunate editor who has to work with such incompetent instruments?"

This is sound educational psychology. The success of the extension of school training into new fields goes far to establish the theorem that *anything that can be learned can be taught.* This is merely to say that proper methods and guidance and inspiration can reduce the waste of time and material in acquiring the necessary competency. It is because of this discovery of the possibility of educating for anything that young men are coming to assume positions of responsibility formerly reserved to their elders. We are learning how to endow youth with the experience of age, yes, with the experience of the ages. We can really put old heads on young shoulders.

Professor Bergson, in his address at University College, London, two weeks ago, expounded the theory that the progress of the world depended upon man's power to condense duration by summarizing the past in the present application of it. This idea of telescoping time is, to Bergson's mind, not merely a daring metaphor but quite a literal truth. It is at any rate what we try to do in the educative process. Just as the embryo recapitulates within a few months the evolutionary stages of a million years, so the college student within a few years gains knowledge, methods and ideals which have required centuries of human labor to develop.

The journalist, more than other men, needs to have his individual energy reinforced by this control of the power of the past, which is most easily attained by systematic education. But the methods of journalistic training when they have been worked out will, I believe, be found applicable and useful in other departments of the university and to many students not intending to enter the profession. I would even go further and suggest in conclusion that the editing and publishing of periodicals, which is already recognized as a legitimate function of a university, may be extended to include a journal of a more general and popular character, not as a student paper, or a laboratory exercise, or a model or a competitor of existing periodicals, but for the purpose of providing news and comment of a different character than privately owned papers seem able to supply.

New York City.

# Japanese Scenery

BY FREDERIC STARR

[Our readers will be interested in this article written by Professor Starr, of the University of Chicago. The author has been connected with several different colleges and museums. In 1904 he went to Japan on behalf of the St. Louis Exposition to secure a group of the Ainu, the aboriginal population of Japan, for which he was awarded a grand prize. He has also traveled extensively in Mexico and the Kongo, and is at the present moment again on his way to Japan.—EDITOR.]

TOURISTS are prone to indulge in superlative praise of Japanese scenery. Even experienced travelers who know Europe and America are often extreme in their appreciation. One lady friend, who has seen much, considers it the loveliest land in the world. Against such a chorus of approval only a bold man can venture dissent, and one who does dissent must seriously seek for the explanation of this all but unanimous outburst of praise. If the scenery of Japan is *not* the finest, why is there so general assent to the proposition? Frankly I admit that for me Japanese scenery falls far short of its reputation. Why, then, do most people so much admire it? Probably because the Japanese themselves so greatly admire it. Nowhere else does any people so profoundly, so passionately, enjoy, appreciate, adore their landscape. Crowds of men, women, children, daily visit the famous places of Japan to enjoy the view. The beautiful places of the empire are known by name to all; they are topics of conversation; they are themes for poems; they have been represented in drawings and prints a thousand times; associations, historical and sentimental, are connected with them. Thus even the tourist, the globe-trotter, ignorant of history and tradition, callous to art and poetry—even he catches something of the permeating spirit and sees things, not with the coldly critical eye of the judge, but with the warm affection of the patriotic native.

Not that we wish to underrate the actual charms of Japan. There are many scenes of beauty in the Island Empire. Japanese landscapes are for the most part "pretty" rather than grand or impressive. There are many pretty hills—grass-sheeted, tree-clad, rock-sloped; there are many pretty valleys with river torrents; there are many pretty cascades, silver threads or gauzy veils against the mountain side; there are quantities of hot springs and placid lakes. There is no Niagara, however, nor Colorado Cañon, nor Yellowstone Park. There *is* one grand scenic feature—yes; Fuji is grand. It does not equal Orizaba, but it is far more impressive and striking than Popocatepetl; tho only rising to an altitude of 12,390 feet above the sea level, while Popocatepetl has 17,000 feet, Japan's snowcapped volcano rises almost directly from the ocean's border, while the Mexican monster protrudes from a plateau which is already a mile above the sea. Fuji excepted, the terms picturesque and romantic are those most suitable and applicable to Japanese landscape.

The passion of the Japanese for scenic beauty is a curiously interesting trait. In its beginning, it was due in part to China, and Japan's ideals of landscape beauty have been affected by Chinese standards. With us of the West appreciation of the beauty of natural scenery appears to be of recent growth. Many ingenious essays have been written to demonstrate the fact; without admitting all the essayists have claimed, we may admit that, until recently, we have been strangely unappreciative and unresponsive. We have had eyes that saw not, and hearts that resisted the appeal of beauty. Landscape appreciation was one quality—there are others—in which the Oriental far surpassed us at the time when East and West came into touch.

Much of the Japanese landscape

charm is due to the harmonious combination of art with nature. The famous view is that of some shrine, temple or palace in its setting; even in the wildest mountain scenery the searching eye comes upon a lonely dwelling, a temple half hidden by trees or almost engulfed in some gorge or cañon; a *torii* at the base of a ridge, or a line of *torii* leading up the slope to a temple lost among the pines. Never does the construction obtrude; it is not built to be seen, but fits into the landscape as naturally as the scenic elements themselves. Even in the case of advertising horrors, the effect is less bad than among ourselves. It is true that the Japanese landscape is sadly marred by the commercial advertiser; but the Japanese art sense avoids our solid billboard style, blotting out great sections of the view. Generally, their announcements are made by figures, designs and characters cut out completely and separately displayed; they mar, but blot out little, and after some weathering fit naturally into their surroundings. In fact, at times one may almost fancy them as materializations of the chirography of old Kobo Daishi projected outward into space.

Much of the Japanese love for scenery is associational. The noted view is the spot where some hero lived or died, where some notable event was acted; it is a spot hallowed by memory. Not only the bare scene, but the scene in a definite season, state; condition or association, is that which gives esthetic satisfaction. This is well exemplified in the "eight beauties of Omi." These eight famous views are located on Lake Biwa, named from the resemblance of its outline to the form of the musical instrument, *biwa*, a kind of lute. The eight beauties are "the autumn moon seen from Ishiyama, the evening snow on Hiroyama, the sunset glow at Seta, the evening bell at Miidera, the boats sailing back from Yabasa, a bright sky with a breeze at Awazu, rain by night at Karasaki, and wild geese alighting at Katata." This is not mere landscape; season, time, sound, condition, association, all enter into the sentiment. In these eight scenes the art element, the human touch, is curiously absent; only in the evening bell and the returning boats are we reminded of man. The mere list of names is poetical—moving the fancy and stirring the emotion. Actual experience of the eight beauties demands repeated visits at different times and seasons. The

THE HASHIDATE FROM MT. NARAI

eight beauties of Omi" are suggested from China, there are eight older beauties of Liao Liang."

A constant element in Japanese enjoyment of scenery is the presence of the quaint or fanciful. An odd feature catches the eye and tickles the fancy. Some queer association is recalled by the point of view or circumstance. Fuji is grand, the grandest landscape feature of Japan. It rises, beautifully symmetrical, from the coast plain to a hight of more than 12,000 feet; it is eternally snow-capped. It is lovely from the Bay of Yokohama when the newly risen sun tints the snowcap with rose and floods the lower slopes with purples. It is the sacred mountain, and pilgrimage to its summit is at once excuse for picnic sport and pious duty. But not one distant view, beautiful tho it be, nor summit pilgrimage, satisfies the Japanese taste for beauty or sense of propriety. He who will *do* Fuji *must go around it.* Only then, when he has seen it from every point of the whole 360° around, can he claim to know the mountain. One of the most popular of the works of the great artist Hokusai is his book of prints, "One Hundred Views of Fuji." Some of the hundred are fine distant views, sharply silhouetted against the sky; others are partial views from near or far where but a bit of a single slope is recognizable; some show groups of pilgrims; one shows the great cone as if seen between the sprawling legs of a busied workman. Surprise, unexpected connection, quaint association—these are to the Japanese the very essence of these pictures; they are the very essence of the pleasure in the views themselves.

FUJI SEEN THRU THE PINES

There are three views which the Japanese consider pre-eminently beautiful. The *Sankei* (three views) are *Matsushima, Miyajima* and *Ama-no Hashidate.* The names are known to all; pictures of them are everywhere to be seen. Thousands and thousands of Japanese have seen all three, tho they are widely separated. Miyajima has probably been most visited; Matsushima comes next in visitors; relatively few see Ama-no-Hashidate.

Matsushima lies furthest north, not far from the fine old town, Sendai. Less than an hour's ride by rail brings the visitor from that little capital to Matsushima station, where jinrickshas wait to take him to the village on the shore. While a good dinner of fresh sea food is preparing, one looks down from the little hotel, perched high upon the cliff, and views the bay, studded with islets of rock, some absolutely bare, but most of them bearing pine trees, whose gnarled and twisted trunks and sprawling, spreading branches are studies in grotesque. 'Tis they that give the name Matsushima, "pine islands." A stiff breeze is blowing; the sun shines brightly on the dancing waves; the sky and water vie with each other in a color contest, both flecked with white. The islands range from bare rocks rising a few feet above the waves to hills 300 feet in hight. Between Matsushima and Shiogama, the usual trip made by the visitor, there are eighty-eight islands; outside that course are hundreds more. Small sailing boats take the visitor out between these islands, the material of which is a soft rock, that readily wears under wave action into all sorts of quaint and irregular forms—sharp cliffs, undercuts, caverns, arches. Most have fanciful names, suggested by their shape or relations. One

peculiarity, which I have never seen mentioned, is that there are often pairs, two of almost exactly the same form together, one smaller than the other; thus there are two almost as square as dry goods boxes and there are two which suggest the neck and head of some great sea-bird raised from the water.

Miyajima, "the temple island," is most easily accessible of the *Sankei*. It is near the city of Hiroshima and is often approached from there. Small steamers make the run between mainland and island in a few minutes. A rocky island, wooded and gullied, it was formerly tabooed to death and woman. It is enormously popular. Teahouses and little hotels abound; scores of small shops sell curios and local souvenirs. There are lovely pools of clearest water connected by tumbling brooks in the gullies, the sides of which and the hill slopes are grown with maples and cherry trees. In autumn the slopes are splendid in crimsons, reds and purples, and in the spring time clouded with white bloom. Tame deer approach the strolling visitor without timidity. At the water's edge, built on piles out over the shallow sea, is the famous Shinto temple, painted in red and white, low, wide-stretched, rambling. Out in the sea before it is a noble *torii*—the characteristic gateway of approach to Shinto temples. The view should be seen from the open water looking toward the island. The *torii* standing boldly in the sea, the temple beyond it, and the tree-clad mountain island as a background, make a lovely combination. Of all the *Sankei* it is the favorite of the artist. We saw it at its worst. The lowest ebb not only left the temple out of water and the foul-smelling mud and slime all exposed, but even the *torii* rose from mud; worse yet, as it was undergoing renovation, it was completely enclosed in an ugly scaffolding of bambus. Even so, however, the visit was worth while.

CARVED ROCKS AND PINE-CLAD ISLANDS, MATSUSHIMA

LOOKING WEST FROM THE SHORE OF MIYAJIMA ON THE INLAND SEA

For one hundred who see Miyajima and ten who visit Matsushima, perhaps one person goes to Ama-no-Hashidate. Yet of the three, it is perhaps the most remarkable and notable. Any one may in the ordinary course of life happen to be near the sacred "temple island"; many in going to and fro reach Sendai and may run out to the "pine islands"; but who will see the "heaven-bridge" must journey there on purpose. One may go by rail to Maizuru, on the west coast, and then by little steamer to Miyazu, whose jinrick-shas take him to the little inn, *Araki-ya*, close by the heaven-

bridge, for the night. It is a lovely spot, with the waves lapping the shore just below. In the early morning of a dull and rainy day we went by boat and jinricksha to the outlook cliff; climbing some hundreds of feet, we finally looked down upon the striking and curious scene. The promontory on which we stood had an almost vertical front; from its base stretched out straight, long and narrow, a spit of sand almost two miles long and less than 200 feet in width. It stretched out into the bay, almost to the other shore. It was grown with great pines, knotted and gnarled, twisted and irregular. It quite cuts off an inner from an outer bay, only some 200 yards from the extreme top of the spit remaining open. Often when the water on one side is lashed to fury by the winds, that on the other side is calm and placid. The quaint conceits, so common to the Japanese, are exemplified in connection with this one of the *Sankei;* there is a proper way to view this landscape. The visitor should stand with his back to the view; then leaning forward, he looks between his legs; he must bend far enough over to see the very top line of the hills across the bay sharply against the sky. No one who has not viewed it thus has really seen Ama-no-Hashidate! Ah, well, we have seen it.

Scenes of mist and cloud greatly delight the Japanese. We love to see things in a full glare of daylight, with photographic nakedness of detail. One evening we stood with a Japanese friend on the veranda of the great Temple of Asakusa, just after the doors were closed. It was a dreary night, damp and misty. He stood delighted, looking toward the city. Strain our eyes as we might, we could see nothing, save here and there a dim light struggling against the gloom; not a line of building or landscape was visible. His feeling of delight was too great to be restrained and he cried, "How fine! how beautiful!" We were new then and looked at him a little doubting his seriousness. We know better now; of course he was in earnest. And it *was* beautiful; of course. Fuji bare and naked in a blaze of sunshine is beautiful; Fuji with its summit wrapped in cloud and mist is *more* beautiful; Fuji blotted out by fog until but a hint or line is left is *most* beautiful. It is for the same reason that, while all love the cherry blossom, the poet best loves the plum. And that plum is loveliest when its brown branches are sprinkled with tight-closed buds, and only here and there a hint of whiteness, not when it is a snowy mass of opened flowers. Artistically and psychically much may be said in favor of the Japanese attitude and point of view. Contrast the bare truthfulness of the photograph with the dainty suggestiveness of a fine sketch; which is most enjoyed by the true artist? What landscape most ministers to the love of nature: one that presents all, leaving naught to the imagination and art construction of the beholder, or that where his delight depends upon his personal participation in the supply of details?

CHICAGO, ILL.

# In Dear Disguise

BY MARGARET ROOT GARVIN

WHEN Sorrow hastened to my door,
Where many griefs had gone before!
It entered where my heart lay prone,
Too deep despairing to make moan;
When, lo! a loving voice, apart,
Was saying:—"Dear, how brave thou art!"
For very pride, for very shame—
A craven, called by hero's name—
From my faint heart some valor came!

"The way is lonely and is long,"
I hear Love say, "but thou art strong!"
Then, as some weakling might be made
True knight, by touch of accolade,
I rise, with strength that is not mine,
To merit Love's belief divine:
We are not brave, nor strong, nor wise,
Save as beheld by Love's blind eyes,
Yet play the rôle, in dear disguise!

WHITESBORO, N. Y.

# The Bee Man

BY GEORGE ABADIE

THE dog never said a word, but advanced straight at the visitor, walking briskly with grave, intent expression, ears half cocked, tail straight and rigid. He looked as if he had a painful duty to perform and was going to get it over quickly. But the visitor never in his life had found a dog that would bite him; so he stood quite still and spoke pleasantly. The dog relaxed none of his gravity. He approached within touching distance and conducted an examination that for thoroness might well be a model for Uncle Samuel in his relations with newly arrived immigrants.

Evidently the visitor carried credentials of which he was unaware, for as the inspection proceeded the sternness of the inspector unbent, and he finished by smiling broadly at the visitor, jumping upon him, and hailing him as a friend and brother. He grew so exuberant at last that it became necessary to box his ears.

Even at that the remnant of his first suspicion seemed to remain. Wherever the visitor moved the dog went, watching. And the reason was that he was in charge of the entire place, and felt the full weight of his responsibility.

The Bee Man's cottage stood on the crest of a hill that sloped sharply all the way down to one of the most beautiful lakes in the world, half a mile distant. Three miles across, the land of the opposite shore sloped sharply up to a height of about eight hundred feet, and above these hills each evening the wonderful spectacle of the sunset was displayed—generally exquisite and changing its details every minute.

The Bee Man, when at home, enjoyed a prospect that extended in some directions for twenty or thirty miles. Apples, pears, plums, peaches and grapes were ripening all about. The corn had been discouraged by the drouth, but the alfalfa had already yielded three mowings and was getting ready for another. In front were bright flowers, at the side a vegetable garden full of rich gifts: corn, potatoes, tomatoes, parsnips, radishes, cabbages, cauliflowers, pumpkins, squashes—all sorts of good things. If the Bee Man went out in a boat, threw in his fishing line with its spoon hook,

held his mouth correctly, and refrained from using improper language, he was likely to catch a splendid lake trout, or salmon trout, weighing anywhere from two to fourteen pounds. If he had patience he might even catch two or three or half a dozen of these, and sell his surplus for good cash at the big hotel.

His cottage was immediately above the horse trough, where travelers stopped for water, the post office was only a few minutes' walk removed, and there the very best of society was to be encountered, and in the rear the justice of the peace, who had all the laws of the land at his fingers' ends, and who was also postmaster, general adviser, G. A. R. hero, and dignitary of the church, had his office. All the great newspapers arrived every day, and the senate sat every afternoon on the stoop of the harnessmaker's shop next door to the post office, discussing and settling the affairs of the world with high decorum and complete finality.

And the Bee Man, having keen interest in life, and having made over three tons of honey last year—his flocks and herds roaming everywhere and collecting toll from all the neighbors—surely his is a happy life. What more could mortal want?

But where was the Bee Man? The visitor moved about his yard and garden, everywhere followed and watched by the dog. He called, he whistled, he gave Indian whoops, and only silence responded. At last he followed a path down to the orchard, passed a fence, and lo! scores of beehives under the trees, and among them a stout figure moving busily, crowned by a broad-brimmed straw hat, over which a black veil was draped and tucked in about the neck.

The Bee Man himself.

"Hello," said he, "didn't the dog bite you?"

"Not yet," said the visitor.

"That's queer," said the Bee Man, disappointedly. "He generally bites a stranger in the feet or ankles."

"I never met a dog that would bite me. But did you know that there's a warrant out for you?"

"Warrant?"

"Yes. Receiving stolen goods. Some of your bees have been arrested. Quackenbush made the complaint. Other neighbors say that your bees go on their land and steal all they can carry away. If any man dares defend his property he gets stung."

"If anybody made complaint against my bees for larceny, what do you think I'd do. I'd sue him for services rendered. That's what. They wouldn't have any fruit if it wasn't for my bees. My bees work in the apple, and cherry, and peach, pear and plum trees in the blossom time. They work all day long carrying the pollen from blossom to blossom, fertilizing. Why, everyone except city folks knows what the bees do for the farmers and fruit growers. Why, my bees make their fruit crops, that's what they do—and we don't charge them a cent."

"But they don't ask you to do it."

"Well, now, that's where you're mistaken. They come here just before the blossom time and ask me if I won't take and set hives in their orchards so the bees will get to work and give their fruit a good start. And I do it, just to be neighborly.'

"That's all right, but nobody likes to get stung, and they say you will have to muzzle your bees. There's a new State law that makes you either muzzle your bees or keep them chained up at home."

"A lot of good a muzzle would do. Do you suppose they sting with their heads? There isn't any need of being stung. All you have got to do is to get out of their way."

"Why don't you invent stingless bees?"

"We did. Yes, sir; there was a man who did that. He invented a stingless bee and then went around demonstrating. Well, sir, he was upon the platform demonstrating those bees, showing they had no stings, telling what good honeymakers they were, when they went for him. They grabbed him all around the face. He jumped down and scooted for the bushes, and when he got away from those bees his face was all blood. Those bees didn't sting, but they bit. That was enough for the stingless bees."

"Well, the sting doesn't amount to much, anyway."

"Doesn't, hey? One sting will kill a

THE BEE MAN MADE THREE TONS OF HONEY

man if it is in the right place. Not so long ago there was a man killed by one sting. Stung in the jugular vein. Two or three people are killed every year by bee stings. Bees can kill horses—that's how much their stings amount to. They killed a horse near here not so long ago. I guess a bee must have stung him, for he got wild and kicked the side of his stall out. He ran out of the stable then, and a mob of bees went for his head and stung him so he died."

"Then the bee keeper ought to have paid for him."

"No, sir. They ought to have the right screens on the stable, so's the bees couldn't get in."

"But the bees had no business to fly over the fence. That's trespass—and no right to sting the horse—that's assault and battery."

"Oh, no; no, indeed. Bees can go anywhere."

"Farmers are compelled to keep their cattle and hogs in."

"Yes, but bees is different. That's the law. Cattle and hogs is domestic, but bees is wild. They go where they like. They always were free."

"But you must be responsible for the damage your bees do."

"No sir! That's all settled. Bees is free. There was a case of a man in New York that kept his bees on top of a tenement house, right in the heart of the city. Those bees had to make honey, and they weren't enough flowers, so they went to a candy factory and helped themselves from what they found there.

"A lot of girls worked in that candy factory, and in the summer time they had to keep the windows open, and the bees came in. The girls thought the bees was fun at first, but finally one got stung. Then the candy man went to the bee man and told him his bees were a nuisance, and he must go away from the city, and the bee man got mad and said it wasn't so. His bees weren't a nuisance, and he wouldn't move. Then they went to court, and the court heard all about it, and decided that the bees weren't a nuisance, and the bee man needn't move. So the candy man had to move his factory—that's all the satisfaction he got."

"That was an outrage. If I'd been on the bench I'd have given that bee man

a year in prison and a big fine besides."

"No sir, you couldn't do it. Bees is free."

"Maybe they are but they mustn't be nuisances."

"Bees aren't nuisances. Maybe they're pests, but they aren't nuisances. My bees don't sting anybody unless they get them mad. Neighbors could make me put up a nine foot fence around my place if they wanted to, so's to make the bees fly high over the wagons—that's the law—but they don't want to. My bees don't annoy nobody, and they make the fruit crop."

Up in the new honey house behind the cottage there were chairs and a table and a whole library of bee literature, with the bee magazines and papers. The Bee Man knew his subject and was up to date. He simply overflowed with information, which, when tested by the books, proved accurate.

He has sixty-five hives altogether, some of eight frames and some of fourteen frames. A frame is a large pane of glass bound in wood. On each side of the glass is the design of the hexagonal cells. The frame is hung vertically, and must be plumb and true, or the worker bees raise a row about it. They are fussy and very particular. If a frame is hung out of plumb, the workers pull it straight, and fasten it in the right position by means of wax. The frames hang side by side in the interior of the hive. The cell design on the glass is a suggestion. The worker bees get busy and build up the cells on both sides of the glass, and when the cells are ready they are filled with honey, and capped over with wax, sealing them up.

According to the Bee Man, bees know a great deal more than "folks." But even with all their knowledge they need watching, and occasional assistance. For instance, frames are set apart for brood, and the queen is politely requested to use these frames for her eggs. Generally she does as requested, but occasionally she is absent-minded or contrary and lays eggs in honey cells. The tendency of bees when left to their own devices is to have the brood cells in the center with honey cells all around them, but this makes it inconvenient to extract the honey, therefore the queen is restricted so that she must use the brood frames and no others.

The importance of a good queen is thus described by Doolittle, a celebrated authority:

"Upon no other one thing does the honey part of the apiary depend so much as it does upon the queen. Give me a good queen—one which can be brought up to the highest production of eggs just when we want them—and I will show you a honey crop, if the flowers do not fail to secrete nectar. But with a poor queen—one that you must coax for her eggs to little or no purpose at the right time—the flowers often bloom in vain, even when the honey secretion is the greatest."

The Bee Man's stock is Italian, which he agrees with most American authorities in thinking the best. Their native place was a small district of northern Italy and Switzerland. They were well known to Virgil and Aristotle, but did not secure widespread reputation until discovered by Captain Balderstein, of Napoleon Bonaparte's army. He spread their fame, and now they are favorites thruout the world, being great honey makers and gentle—as bees go.

The average life of a worker during the honey season is only from thirty-six to forty-two days, and the ranks, therefore, must be profusely recruited if the strength of the hive is to be kept up. A good queen lays 3,000 eggs per day, and 75 per cent. of these hatch out. Two-thirds are workers—imperfect females. The queen is a perfect female, and the drones are males. When first hatched the worker egg yields a small straight worm which has a voracious appetite and grows till its body has to curve to accommodate itself to the cell. Nurses feed it with great assiduity and apparent solicitude. At the end of five days it ceases to eat. Then in thirty-six hours it spins itself a cocoon from the middle part of the under lip. The cocoon sticks to the interior of the cell. In three days the worm turns into a nymph or pupa. There is a perfect insect in the cocoon on the 20th or 21st day after laying the egg. This insect cuts its way out, and some authorities say that the nurses that fed her in her infancy give her assistance and food, lick her clean, and seem to give her instructions. Others deny this, and declare that the nurses which were so solicitous in feeding her when in the

infant state are now brutal, step on her head forcing her back into the cell from which she is trying to emerge, and seem perfectly callous, if not hostile.

Whatever be the truth about this, most of the workers escape from their cells and get to work. Their first job is to help the nurses feed the infants with honey. A few days later they go to the fields and gather honey and bee bread.

Many poets have written about the enviable lot of the bee, and one of Bliss Carmen's most charming poems is "A More Ancient Mariner." This represents the bee as a Bold Buccaneer, sailing about making love to all the buds and despoiling them of their sweets. "He" wickedly, jovially swaggers thru the summer, loved by all the flowers that he ruins, and in winter feasts high, residing at ease in his castle.

This is good poetry but very poor fact, seeing that the roving bee is a female, driven by a very demon of industry. She works both night and day. If you go with a light to the hive at midnight you will see her as busy as ever "evaporating" the honey—getting the water out of it by drawing it up into her sack and then discharging it again. She does not sleep at all.

It is the drones that have the nearest approach to an easy time found in a beehive. All that they do is to attend to the queen and eat honey. They join in the "cleaning flights," when the bees, in the interest of hive sanitation, all go for an airing, but they don't visit flowers except accidentally, and they do no real work at all.

From time immemorial the drone has been held up to public scorn as a loafer. But he does not deserve it. He has not the apparatus for gathering honey or pollen. He can't work. He can't even guard the hive, for he has no sting. And as for having an easy time, if he could speak or write he would testify to the contrary. If flowers fail to secrete nectar, there is a slaughter of drones. Almost anything serves as an excuse for slaughtering drones, and as soon as the honey season is over all the drones are slaughtered. Good drones are as necessary as good queens, yet they are entirely without honor in their own country.

As to the queen, she is only an absolute monarch in the sense that she reigns alone. She will not tolerate any other queen in the hive. If she meets another in the hive, there is a duel to the death. Queens are armed with stings, but use them only on rival queens.

The bees, if left to themselves, are likely not to act quickly enough to take full advantage of what the blossoms are offering, so the bee master helps them. An infant worker can be developed into a queen by transferring it from a worker's to a larger "queen's cell." The nurses then feed it on "royal jelly," a predigested food made by the nurses for the occasion—and the food does the rest.

Meanwhile the news that a new queen is coming spreads all thru the hive. The old queen hears it or feels it—knows it somehow—and flies about in a royal rage, screaming—"piping"—and searching for her rival. If she could get at her she would cut thru the cell in which she lives and stab her to death. But the bees know that and put a guard to restrain her. If necessary, the guard kills her. Under any circumstances, the bee master kills her by pinching her head as soon as the new queen is ready to perform her duties.

So the lot of the bee is not so very enviable, after all. The hive is full of plots, conspiracies, jealousies, wars and murders. The colony is always ready to turn on the queen and execute her if she fails to serve them well. The drones are slaughtered as a matter of course when honey gathering ceases, even tho there may be a great surplus stored up.

The worker's lot is one of grinding toil, more severe than any known to humanity. She is a slim Amazon, whose one soft spot, apparently, is for the brood. She's a fanatic for neatness and order in the hive. She tidies up frantically, and when she feels that she is dying, her last effort is expended in making her way out, so that she may not cause trouble. She is certainly not selfish, but a martyr to duty as she understands it.

Yonkers, N. Y.

# "Why?"

BY REV. CHARLES M. SHELDON

THERE are some puzzling things in our boasted civilization which continue to remain more or less mysterious to the average man and woman. It is not altogether a pleasant frame of mind for one to be continually asking the little question, "Why?" as he goes about his day's work. Nevertheless, the object of this little article is to ask this question in a number of instances which are more or less constantly obtruding themselves upon the writer's attention. If any readers of THE INDEPENDENT can answer any of these questions, it would be a source of relief to the mind of more than one individual who has been disturbed by what may seem to be little things, but which nevertheless are a part of the day's program.

For instance, to begin with, why should the Church perpetuate century after century the curious and hopeless custom of maintaining its ministry on a pay system which has no regular advancement? Thousands of ministers in this country who began their service several years ago in churches which paid a salary of $1,500 are receiving exactly the same compensation today. In the course of these years, the ministers have at least in some cases doubled their efficiency as preachers, pastors and organizers. They have in hundreds of cases seen their churches grow in the same ratio. I have in my mind, as I write, at least twenty-five churches where the membership has doubled and even trebled in ten years' time; but the minister is still receiving the same salary with which he started. This failure to compensate for effort expended is not true of any other profession in the world. I think now of two young men who started their life careers at the same time, twenty years ago. One is a surgeon and physician and the other is a minister. The minister has seen his church grow from 100 members to 500. He is an efficient, capable and at times a brilliant man. He loves his church people and they love him. His salary when he began was $1,600. It is now $2,000. The people who love him and whom he serves have actually given him $400 advance thru a period of twenty years of hard and unselfish work. There are in this church at least twenty-five men who own automobiles, any one of whom could out of his own pocket pay the entire salary and never miss it.

The other young man had a hard struggle for the first three years to make his way. It is estimated that he is now worth at least $50,000, and he performs operations which bring him in $250 or $300 apiece. It is not unusual for him to make $1,000 a week. He is no brighter mentally than the minister and he is not any more useful to the community. The same thing is true immediately when we enter the world of business. The preacher, of all men in the world today, has little hope, as he looks forward to the rainy day. He can grow old and poor with the high cost of living confronting him and people do not seem to care. Why?

The average citizen turns to his daily paper and sees that the Government has hit the trusts another blow. Before he starts up to the grocery store to order the dinner for the day, he congratulates his wife and himself over the vigorous measures that are being taken. When he asks the grocer the price of a certain commodity which is controlled by a trust, he finds that it has gone up a cent or a cent and a half higher per pound or quart. He wants to know "Why?" and the grocer does not know. It has simply gone up; that is all. Meanwhile the Government is fining the trust, and—glorious fact—the trust is found guilty and obliged to pay its fine. "At last," the average citizen says, "justice is done; the guilty are being punished. The iniquitous trust is being overhauled by a stern and justice-loving Government." The fine of one million dollars or more is turned into the United States Treasury. At last the people have come to their own!

But when the man's grocery bill comes in he notes the little fact that several items have increased their price per

pound or package. He pays the grocery bill like an honest man—he always does—and then he does some arithmetic. He computes an interesting sum which figures out the interesting fact that the guilty trust which paid its fine cheerfully to the Government has made that much out of the people by raising the price a cent or two. Then the man goes home to his wife at night and says, "Did you know I had been fined one million dollars by the Government for breaking the law?" His wife says, "Why, no, John; I did not know it." "Well," he says, "I have, and I am paying it like an honest man." The average citizen, when he goes to bed, says to himself, "Why?" What is the use of anti-trust laws which affect to break the trusts if they can quietly raise the prices of the articles and pay those fines by proxy? Also there was an item in the paper yesterday telling about a man who stole some chickens. They put him in jail. Why do they not put men in jail who steal one million dollars from the Government? It is a strange civilization.

The average citizen once in a while is sick or his wife needs the care of a physician. The physician is called in and the husband anxiously wants to know what is the matter. The physician writes a prescription and says to the man, "Take that to the drug store and get it filled out." The plain citizen does so and he receives a bottle or a box which costs from 40 to 60 cents. He may not use more than a fraction of the pills in the box or the liquid in the bottle, but it costs him 60 cents just the same. He wants to know "Why?" Meeting a man who understands doctors' prescriptions and knows how to interpret them out of dead languages, this man says: "You go to the drug store and buy these articles out of bulk without any prescription and see what happens." The average citizen does so and finds he can get identically the same material for 10 cents for which he has to pay 60 cents on a doctor's prescription. "Why?" Are the doctors in league with the drug stores? Can any one blame the average citizen for asking the question? It is simply a fact all over this country that drugs which in the actual compounding cost exactly 5 cents are retailed out thru doctors' prescriptions at 40 cents. The man's wife becomes seriously ill. He is obliged to call in another doctor for consultation. He does so. The doctor comes into the house, looks at his wife a few minutes, asks a few questions, and goes away. The man afterward calls up this consulting doctor to know what is the matter with his wife and what his counsel is concerning her treatment. This doctor says he has no counsel to offer and does not know what course should be pursued. In a few days the man gets a bill for $25 service. Suppose a man should come to your house to see you about a job you had to do in the yard. You point out the job to him and he looks at it, asks a few questions, and says he thinks he cannot do it, and goes away. Afterward he sends in a bill for working on this job. The average citizen wants to know "Why?" the consulting doctor who has been in the house a few minutes and rendered no decision and offered no advice worth taking, considers himself entitled to such payment.

The cost of sickness for poor people and for any kind of people when it comes to the administration of medicine is simply enormous. It is beyond reason, and there ought to be some explanation given to those who ask this question thru the dimness and vagueness of their misery and bewilderment.

An American girl goes out to service. She is a good cook and housekeeper. She is clean, attractive, and has been thru the high school. It is the work of a skilled woman to look after the kitchen of an American household. It is not unskilled labor, but the highest kind of skilled labor. This girl measures up to this standard. She cooks the meals, purchases the food, looks after the household in general; but the moment she steps into this house she is a "hired girl." At once there close around her all the walls of social stigma. In nine cases out of ten she is confined in the cheapest and most uncomfortable room in the house. It has no bath. She is well paid for her service, we will grant, but she is an outcast from society because she works in the kitchen. When the girl leaves the woman of the house is driven into the kitchen to do the work; does society put its stigma on her? She sits in the same pew at

church, she moves in the same circle of women acquaintances. She is respected and honored and loved by a large circle of society just the same, but if, disguised, she were to go to work as a "hired girl," her social standing would all be gone. The average citizen would like to know "Why?"

The liquor business in this country is one of the most powerful and influential organizations in the world. It does more damage than any other one organization in the entire universe. It casts its blight over thousands of otherwise happy homes. It wrecks and ruins and annihilates. It is an enemy of good politics, it is a disturber of the common peace, it is hell on earth to the multitude. But the United States Government protects this monstrous thing. A law is passed by a State declaring this business to be criminal and treating it like a criminal. It sends the man who makes this poison and sells it to jail, just as it sends horse thieves to jail, and this law is upheld by the highest law in the land as constitutional. What does the Government do? It allows this traffic to come into the prohibition States at will. It permits the coming of this poison across the borders. If a drove of diseased cattle attempted to cross the border from Missouri into Kansas, driven by some money-loving owner, the authority of the State could keep them back; but Kansas is powerless to forbid the entrance into its borders of carloads and trainloads of whisky, which it has declared in its laws to be poison to the people. And also, why do the authorities in power never say anything about the liquor business? What President of the United States in all its history has ever spoken out in a message to Congress about this danger to the republic? Can any one cite a sentence in any public message to Congress by any President of the United States which touches on the liquor question, except possibly in the attitude of the Government toward liquor in *foreign* possessions? If there is any sentence anywhere in any official message by any President of the United States which has ever said anything about the liquor business, I would like to see it. Why are those in the seats of the mighty so silent about this business? And why does the Government trample on the rights of States in refusing to pass an interstate commerce law which will protect the people from an iniquity which they have declared to be criminal?

It is nearly 2,000 years now since the birth of the Prince of Peace, and almost the only great nations in all the world that are working day and night to increase their armaments are Christian nations. The United States, Great Britain, Germany, may be classed as leading Protestant, at least nominally, Christian countries, and these are the three countries which are straining every nerve to build greater ships, bigger guns, thicker armor, and more deadly explosives. Where are the real causes of the war spirit to be found? Are they to be found with the editors of some rabid newspapers, with a naval clique in Washington or London or Berlin, with a little handful of professional soldiers, with the firms that make a living by building warships and guns, with the powder manufacturers and the explosive inventors? Why does this war activity go on so feverishly? Who is behind it? The average man, who usually walks thru his own peaceful world and sees no more need of a battleship than he does of a herd of white elephants to help him in his day's work, is bewildered. He wants to know, and he is going to ask "Why?" a good many times, and continue to ask it until he gets some kind of an answer.

The life of the average man is hard enough without having these questions come into his daily life so often. The struggle for bread and butter on the part of the common people tasks their powers to such an extent that it is a great pity that they should be obliged to stumble over this little word "Why?" so often. Life should be made up more of exclamations of delight and satisfaction and hope and anticipation, than of question marks concerning injustice and wrong and crookedness. Always to be putting this question "Why?" in front of one's breakfast or dinner takes away one's appetite. Nevertheless, tomorrow morning, hundreds of thousands of plain citizens will wake up, grab their daily paper, look it over between bites, lay it down and start to work asking this everlasting question about a score of things in addition to those here mentioned.

TOPEKA, KAN.

# Literature

## Mother

One of the finest outputs of sincere experimenting with life is the realization which finally comes of the beauty, the dignity, and the worth-whileness of the common lot when it is taken with unconscious courage and good cheer. It is that realization which brings around many a restless young man or woman who started with contempt for the humdrum fate of his father and mother to something like a passion of defense of it as the fullest and richest, by and large, which comes to the human being. To understand how completely the hard and ugly outward things of life may be reduced to unimportance by the inward joys which natural human life may bring is one of the great revelations. Everything which helps a self-torturing world to this revelation is precious.

Because it does this in a remarkable degree Kathleen Norris's little book, *Mother,** has an importance quite exceptional in fiction. A sweet and natural story, charmingly told, it is—but it is more. The title is the theme. The eldest of seven children, the heroine, has thru all her girlhood revolted against the limitations and ugliness which poverty imposes on all the members of a large household. Finally, in an entirely natural way, she becomes a favored inmate in a house where everything is done that wealth intelligently managed can do to make living both beautiful and automatic. She loves it all—the luxury, the travel, the opportunity, the associations. In contrast her old life seems increasingly pitiful. She resents her beloved mother's lot; is irritated at the thought of what her mother and sisters are missing. Then her heart is awakened. Back in her own home, in the helter-skelter of three meals a day, to be prepared with the help of one poor maid, in the rush and tumble of children to be fed and clothed, to be sent to school and to be kept happy and well—she, for the first time, has a vision of the inner life of her home.

Very simply, very directly, Mrs. Norris shows the mystery of love which makes their poor home infinitely richer in the quality of its feeling and experience than the lovely gilded shell with which it is contrasted. There is no insistence that it is so—no explanation. But you *know* it—you know there is no comparison. In one case you have *life*, hard, laboring life, but rich in its fruition and inward satisfaction, firm as the rock and high as the heavens. In the other you have the intricate, colorful, magnificent machinery which men and women devise to escape life, and which you know to be machinery.

It is Mrs. Norris's joyous conviction of the worth-whileness of this mother of hers—the full-hearted pride and reverence for her that makes the story at once so tender and so powerful. In the beautiful dedication, which I take it is to her father and mother, one finds the key to her inspiration. It is given to few, who as the years go on feel increasing love for a father or mother long dead, to express that love in a tribute so perfect as *Mother*.

Ida M. Tarbell.

* *Mother*. By Kathleen Norris. New York: The Macmillan Co. $1.

## The Art of Flying

Many books on this subject are now appearing, but they are mostly of an ephemeral nature, because the art of aerial navigation is advancing so rapidly that what is said about it today will be out of date in a few months. Dr. Zahm has avoided this difficulty, and produced a book of permanent value by keeping to the historical and scientific aspects of the subject.† It is a double book, which might well have been issued in two volumes. The last part contains a somewhat technical discussion of the properties of the atmosphere and its currents. The general reader will be more interested in the preceding parts, containing

† Aerial Navigation. A Popular Treatise on the Growth of Its Conception, Experimental Methods, Present Progress, Future Possibilities. By Albert Francis Zahm. New York: D. Appleton & Co. $2.

a detailed history of the development of balloons and aeroplanes from the time of Icarus's legendary flight and Leonardo Da Vinci's sketches to the triumphs of Zeppelin and the Wrights. All of the machines of importance and some of un importance are described and pictured.

Turner's *Romance of Aeronautics*[2] is also intended for the general reader. The material is heterogeneous, but curious and interesting, and must have required wide reading for its collection. Altho an Englishman, the author gives full credit to the Wright brothers and quotes much from their original papers of 1901 and 1903, which were not very enthusiastically received at the time, but are now recognized as marking a new era of human achievement. Mr. Turner not only carries the history of ballooning and aviation well into the present year, but dips into the future far as the human eye can see, using Kipling and Wells to aid his vision.

Professor Ennis[3] likewise considers the possibilities of aerial warfare, but turns from the vision with a shudder and ends his book with a strong plea for universal peace. He is less concerned with the history and romance of aeronautics than with its practicalities, and he hits the happy medium between the strictly technical and the merely readable. The volume is briefer than the two preceding, but for a man who really wants to understand the principles and problems of modern aeroplane and balloon construction it is the best book of the bunch. The explanatory diagrams are admirably apt and clear.

The inventor or constructor will, however, find none of the above so useful to him as Mr. Kennedy's *Aeroplane Construction*,[4] for this gives the mathematics of his work, particularly the calculation of the curves of the planes and propellers, and the determination of the center of gravity. Besides the necessary formulæ for figuring them out, the volume contains a table of the actual dimensions of the types in vogue.

[2] THE ROMANCE OF AERONAUTICS. *By Charles C. Turner.* With 52 diagrams and illustrations. Philadelphia: J. B. Lippincott Co. $1.50.

[3] FLYING MACHINES TODAY. *By William Duane Ennis.* With 122 diagrams and illustrations. New York: D. Van Nostrand Co. $1.50.

[4] THE PRINCIPLES OF AEROPLANE CONSTRUCTION. *By Rankin Kennedy.* With calculations, formulæ and 51 illustrations. New York: D. Van Nostrand Co. $1.50.

## Stedman's Essays

IT would not be easy to find any book so packed with the story of the men of letters whose center was New York, as was the two-volume biography of Edmund Clarence Stedman, published a year ago. The struggle of a youth born to be a poet, possessed by the poetic spirit to an intense degree, and finally attaining, as thru fire, the full mastery of the art, is made vivid in the correspondence of a life-time. What is at the bottom of the art, and what it means to be an artist in verse, the critic made known in many volumes of letters, essays, and criticisms. A small part only of the miscellaneous mass of his work is ever likely to be republished. A small volume of selections from the best of it is now on the editor's table. *Genius and Other Essays*,[1] samples them all. Here is some of his fairest work. "Genius," giving title to the book, is a stalwart defense, first of all of the old claim—as old as the prophets of Israel and the seers of Greece, that to the highest poetic mood there must be a contributing factor not in the will of man, nor in his intellectual faculty at all, but from the outside. Holmes writes to Whittier in 1878 concerning a certain poem written by the doctor and pleasing to the Quaker: "I wrote the poem rather as a duty than a pleasure, yet here and there I found myself taken off my feet by that sudden influx of a tide that comes from we know not whence, but which makes being, and especially internal vision, so intense and real." It was some such idea as this that Stedman had expanded, and defended his expansion.

His is a bold claim for poetry, as far-reaching as that old assumption of divine origin for the great heroes of the ancient world, for the plenary inspiration of kings still in the flesh. Stedman's defense carries with it much learning. He is not content with assigning to the choice poet a choice ancestry, a fortuitous gathering of the streams from sources wide apart and not to be wholly traced until we can thaw out the glaciers in the upper hills of Time. He

[1] GENIUS AND OTHER ESSAYS. *By Edmund Clarence Stedman.* Edited by Laura Stedman and George M. Gould, M.D. New York: Moffat, Yard & Co. $1.50.

will have a flow of power, select, peculiar, that comes to us as the dream angels come to children. Perhaps it was with this thought in his mind that in another essay he grouped as a "Belt of Asteroids," some dozens of poets who were favored once only, or at most twice, with the fanning of angelic wings. In this high claim for genius he is delightfully enthusiastic, but he is more humanly satisfying, when, in his riper years, he labored with keener powers to guide the lovers of song to Bryant, Landor, the two Stoddards, to Keats and Blake. The book is a fine illustration of Stedman's love for the noble art.

**The Historic Christ in the Faith of Today.** By William Alexander Grist. New York: Fleming H. Revell Company. $2.50.

At the beginning of his book Mr. Grist declares that there can be no authentic biography of Jesus. The materials necessary for its preparation do not exist, for the Gospels, our chief and almost only sources, are first and foremost dogmatic writings. The author does not put himself in the "limited number of men intellectually equipt for dealing with the recondite problems arising out of the synoptical and Johannine literature," but contents himself with presenting a conception of the life of Christ to which he has "been guided by an honest, earnest impressionism." The method of approach, therefore, is from the ideal to the historic, and the latter is interpreted in the light of the former. This does not mean that Mr. Grist is not familiar with the historic and literary problems that are entangled with his subject. He recognizes the "difficulties, uncertainties and discrepancies in the Gospels"; but holds that, when these are cleared away, the old impression of the life of Jesus is not materially changed. However, in spite of the acknowledged meagerness and confusion of materials, the many unsolved problems, and the necessity of much conjecture and fragmentary treatment, Mr. Grist obtains a chronological and tolerably complete history of the ministry of Jesus, drawing upon all four Gospels for the picture. The theory that John's Gospel corrects the other three is accepted, altho we are warned against placing much reliance upon its chronology, because it is "dominated thruout by a theological plan." On this hypothesis the author has no hesitation in pronouncing the raising of Lazarus historical, but "to enable us to think of the story as historical" he takes it from the closing weeks of Christ's life and places it in the middle period of his ministry. He accounts for its omission from the Synoptic narratives on the ground that at this time Peter (to whom the Synoptic tradition goes back) was still away on the Galilean mission, and so did not witness the miracle. The general effect of the book, if not its aim, is of a mediating nature. Much is granted to the critics on the basis of the demands of literary and historical investigation and strict scientific construction, and then practically all is saved for the "faith of today" on the basis of religious impressionism and inherent possibility. According to our author, Professor Burkitt is "one of the frankest and most fair-minded of critics," but his conclusion that the fourth Gospel is "not history of matters of fact, but a Christian philosophy cast in an historical form" is to be regarded as the expression of an attitude of mind and a mental atmosphere properly characterized as "poisonous skepticism." Such statements are hard to reconcile, but they indicate the spirit of the book and the public to which it must appeal. The work is characterized by a directness of style and a freshness of exposition that make it unusually interesting, and its frank presentation of various views reveals the aspects of the subject most under discussion today.

**American Socialism of the Present Day.** By Jessie W. Hughan. New York: John Lane Co. $1.25

**The Superstition Called Socialism.** By G. W. de Tunzelmann. Philadelphia: J. B. Lippincott Co. $1.50.

These books supplement each other. One gives an account of the status today of Socialist parties and groups in the United States and the other gives similar information for England. But the tone and style of the books are quite dissimilar. Tho Miss Hughan is avowedly in sympathy with Socialism she has gone

to work in a dispassionate way to reveal the guiding principles of American Socialists, their divergences of view on some points, their tactics and discipline, the weakness of some of their methods and the vagueness of some of their hopes. The book all thru is dignified and scholarly. Mr. de Tunzelmann, on the contrary, having been hired to deliver the lectures against Socialism from which the book is manufactured, displays his animus on every page. He indulges in personal attacks so readily and joyously as to destroy the value of his work for American readers, to whom the people he assaults are not known even by name. It is only irritating to be told that opponents "were not possessed of a small modicum of intelligence" or that they "were distinctly weak in intellect, albeit not sufficiently so to warrant their seclusion in asylums as idiots or imbeciles." If the anti-socialist societies in England, subsidized and petted as they are by the aristocracy, are driven to use such un-aristocratic weapons they must surely be in desperate straits. Tho a student may read the American work with satisfaction undampened by such douches of billingsgate he may well be bewildered over the diversity of view it reveals among leading Socialists, a diversity more pronounced if English Socialists are included in the survey. Tho bewildering, however, this diversity is a sign of life. Socialism is disclosed as a growing, changing body of doctrine, not a fossilized creed. If it is to adapt itself to changing political and economic conditions, it must still grow and become yet more flexible and adaptable than it has so far shown itself.

## Literary Notes

....A present-day study of *The Unification of the Churches* (Revell; 50 cents) is given in a little booklet by D. W. Fisher, D. D. The causes, advantages and disadvantages of disunion are presented, and the need and possibilities of union are briefly discussed.

....William E. McLennan has published a revised edition of his little volume entitled *In His Footsteps* (Eaton & Mains; 75 cents). He calls it A Record of Travel to and in the land of Christ with an attempt to mark the Lord's journeyings in chronological order from His birth to His ascension. The chronology of Stevens and Burton's Harmony has been largely followed. The large number of illustrations and maps are helpful.

....Harper & Brothers are the publishers of a dainty giftbook made up of sketches of a dozen *Women of the Bible* ($1) from the pens of as many different eminent scholars and divines. The illustrations are good, but hardly oriental.

....Students of Church history will be interested in Clark D. Lamberton's *Themes from St. John's Gospel in Early Roman Catacomb Paintings* (Princeton Univ. Press). A large number of illustrations accompany a very elaborate treatment of the subject in the text.

....A mystery well concealed and stirring events growing out of it make *I Fasten a Bracelet*, by David Potter (Lippincott, $1.25) an unusually interesting tale. The bracelet is of iron and locked upon the heroine's wrist in no sentimental fashion as a pledge of her obedience.

....The genial personality of John Drew endeared the play *Smith* to his large public. The play has been made over into a novel that in some respects recalls Zangwill's "Merely Mary Ann," but the hero of *Smith*, by David Gray, is much the finer fellow, the heroine of each is a self-respecting servant girl. (Duffield, $1.20.)

....Rev. Dr. W. J. Dawson's essays in *The Book of Courage* (Revell; $1.25) are written in his best style, full of sympathy and a deep understanding of the springs of hopefulness and joy even in defeat. The pages are scattered with literary allusions and well chosen incidents which enrich and carry forward the author's thought and enthusiasm for the highest and best in life.

....The interest that has been aroused in Europe by what has been called "the American philosophy" is shown by the offer of a prize of $400 by the Catholic Institute of Parigi, Italy, for an essay on "The Value of Pragmatism as a Religious Doctrine." The instructions to contestants are "Define the different forms of pragmatism, distinguish the elements of it which concern religion and evaluate them." The Italian Academy of Moral and Political Sciences also offers a prize of the same value for the best essay submitted in 1912 on "Pragmatism; Its Origins, Principal Forms, Meaning and Value."

....Few writers have the ability to put history into a popular and attractive form without sacrificing accuracy and proportion. The recent working over of great masses of material makes such a task especially difficult

in the case of the history of the Hebrew religion. Prof. Alfred Loisy has performed in an admirable way this exacting work. *The Religion of Israel* (Putnam; $1.50) in the Crown Theological Library is a translation of Loisy's "La Religion d'Israël," and brings to English readers the ripe fruitage of that scholar's work in this important field. The balance of the book is all that could be desired, and the easy, graceful style of the original is well preserved in the English version.

....We discussed at some length in our Education Number the first volume of Professor Monroe's *Cyclopedia of Education* (Macmillan, $5) and we can here only mention the publication of the second volume, which we must reserve for criticism later. It covers the section Chu-Fus and therefore contains the very important subjects of "colleges," "commercial education" and "football." Doubtless the next volume will begin with an article on "fussing," a vital topic in co-educational colleges.

....A number of delightful essays and sketches are used in making up Mr. George S. Merriam's composite portrait of *The Man of Today* (Houghton; $1.25). It is man at his best in the various walks of life that the author depicts. Reminiscent appreciations of Phillips Brooks, Edward Everett Hale and Emerson are combined with sketches of some characters less known to the public; and pleasant, suggestive rambles among the common things of everyday life. The tone of the essays is bright and cheerful, and every page has a flavor of idealism tempered by a wealth of experience.

....The new *Schaft-Herzog Encyclopedia of Religious Knowledge* now reaches its eleventh volume, and one more will complete this great work. We find it carefully edited, and its American editors have faithfully and intelligently added to the German originals of the longer articles what is needed for English-speaking readers, besides adding a multitude of smaller titles. The present volume covers such subjects as Spinoza, Sun Worship, Sunday, Sunday Schools, Song of Solomon, Symbolism (Creeds), Talmud (with a double page of the Talmud, Hebrew and translation), Theism, Theology, Theological Seminaries, Tithes and Total Abstinence. We repeat our commendation of this encyclopedia for ministerial and other libraries. (Funk & Wagnalls Co., New York. $5.)

We have received a "Bulletin of the University of South Carolina," in the form of a pamphlet of forty-three pages entitled "Participle and Infinitive in *-ing*" by Associate Prof. Reed Smith. This university is doing a good deal of "extension work" in its various departments, by means of lectures, correspondence courses, and the quarterly bulletins. The above-named pamphlet treats in a fairly complete and entirely lucid way the intricacies of this limited field of English syntax, which presents more intricacies than any other class of English constructions, except the future tense phrases. In both of these fields of syntax the complexities have arisen from the fact that the forms now in use have their origin in widely different Anglo-Saxon forms or constructions, which with certain changes in function have become closely associated in modern English. The historical facts in regard to the verbal *-ing* forms are stated by the author, as well as the unlike ways in which modern grammarians have dealt with these forms, some preferring the name "gerund" for those verbals in *ing* which retain in a marked degree their verbal characteristics, while others reject this term as needless to the nomenclature of English grammar. The present-day combinations of noun, adjective and verb functions in these verbals in *-ing* are illustrated and stated and exercises for class use have been compiled from various literary sources. The pamphlet will be of use to teachers of English in secondary schools.

....An occasional contributor to THE INDEPENDENT, Mr. André Tridon, writes to the editor of the Chicago *Evening Post* a letter that the linotype man has disfigured almost as the *Post* linotyper in "Queed," who made the author of "unanswerable" editorials refer to a "procession of fleas" (instead of a succession of pleas) going up to the Bavarian Diet. "Arnold Bennett may be an interesting novelist," one reads, "but why should he expatriate on foreign literature?" The letter-writer is indignant at Mr. Bennett's naming Richardson as "father" of the "French realistic school."

> "Richardson, however, was not known in France until Abbé Prevost, famous since 1731 as the realistic author of 'Manon,' revealed him to his countrymen. On the other hand, Richardson, whose 'Pamela' did not appear until 1741, confessed to having been inspired by Marivaux's realistic 'Life of Marianne,' published in 1731."

The question of the relations of Marivaux, Richardson, Prevost and Rousseau is interesting to every student of comparative literature—and to a good many plain novel readers. In spite of its exaggerations, the late Joseph Texte's "Jean-Jacques Rousseau et les Origines du Cosmopolitisme littéraire" remains the most suggestive work in this field.

There has lately been published a volume by Prof. Paul Stapfer which has something to say of Richardson from the French standpoint; but this work on *Humour et Humoristes* (Paris: Fischbacher; 3 francs 50) is much less concerned with Richardson than

ann Fielding. That is as it should be. And M. Stapfer writes that there is nothing in all the work of Fielding, "which passes for indelicate, so shocking to our moral sense as the improbable story of which the author of 'Pamela' pretended to make a subject of edification." But tho the Honorary Dean of the Faculty of Letters of Bordeaux writes of Fielding (whom he finds, not a "barren rascal," but "an ancestor"), and of Jean-Paul, as also of Mme. de Noailles ("Une Précieuse d'aujourd'hui"), the most interesting of his subjects is Anatole France, who joins humor to "attcristc." For M. France is one of the few writers among our contemporaries who is worth a re-reading (that is, if he is worth a first reading). This mordant, yet smiling philosopher differs from most "documented" moderns in the quality of his erudition. Most workers in the modern novel—and Zola may stand for the type—documented themselves as to a determined subject: locomotives or stock-brokerage or the stock-yards of Chicago, as the sad case may be.

"It is not so that our author proceeds. His documents are never spoils lately acquired for the sake of passing exploitation; they form part of an old deposit, amassed from the time of school studies down. Consistently maintained since then, always on hand, whence the writer derives his materials with that serenity . . . which is given to all true masters of their stores by the tranquil pride of long possession."

To his classical erudition is joined a wonderful store of language-lore, a knowledge of the Middle Ages, including all the hagiography, and, out of what we call modern learning, an ease in physical and psychological science such as some specialists even lack. But that is not all. This is only the scholastic equipment of this disciple of Renan. Anatole France is humorist as well as Hellene, hagiographer and Hegelian. Read M. Stapfer if you question the wonder of all this. Read the "Histoire Contemporaine," his "Jardin d'Epicure," his "Thaïs" and his "Livre de mon Ami," if you will; that will be even better. But, in spite of his learning, in spite of his solvent humor, is Anatole France, when all is said and done, only a sterile modern?

....M. France is not one of the moderns considered in Victor Giraud's volume of *Maîtres de l'Heure* that lies open on our desk (Paris: Hachette; 3 francs 50), but that must be because the essay on his works is deferred until the publication of the second volume that is promised. Two authors recently deceased, Brunetière and de Vogüé, one who wrote his best long since (M. Bourget), and two of whom we do not weary (MM. Loti and Faguet) furnish the matter of M. Giraud's book: that is a painstaking if not an inspired labor. Readers of the *Revue des Deux Mondes* will recognize these scholarly essays: of a type in which the French genius is rich indeed.

## Pebbles

A TRAVELING man stopped to watch a small colored boy who stood on one foot, inclined his woolly head far to one side, and pounded vigorously on his skull with the palm of his right hand.

"Hello, boy," grinned the drummer, whose memory was carried back to his own boyhood days by the familiar action, "what are you doing?"

"Got wattah in mah eah," replied the boy.

"Oh, ho," laughed the drummer, "I know just how that is. Many a time I have felt just like that after being in swimming."

"Swimmin' nuffin'," the boy exclaimed; "ah been eatin' watahmilyun."—*Youngstown Telegram.*

JACK AND JILL.

*A Poem by Edgar Allan Poe*

It was down by the dark tarn of Aiden,
At Aiden far under the hill,
That this thing occurred to a maiden
Who went by the brief name of Jill,
By the mystic prænomen of Jill.

She was sent up the hill by her mother
Along with a youngster named Jack.
He may have been cousin or brother—
(One guess is as good as another)—
The dead years these details now smother,
And that's a misfortune, alack!

They went up the hill to fetch water.
Jack stumbled and dented his crown;
And Jill, with a terrible clatter,
Accompanied the young fellow down,
Came shuddering, thuddering down—
Came blithering, slithering down.

It was there by the dark tarn of Aiden,
Of Aiden far under the hill,
That these things occurred to a maiden
Who went by the brief name of Jill,
By the boiled-down and terse designation,
The mystic prænomen of Jill.

—*Puck.*

By a happy coincidence, we have lately found, among a quantity of poems submitted long ago to THE INDEPENDENT, and accepted, tho never published, a manuscript of William Wordsworth, dealing with this same fable. This would seem the time to make it public:

I travell'd among unknown men
Before I came to where
A maid did quit her daisied glen
A pail uphill to bear.

Jill was her name, in sun and shower,
Her lover's name was Jack;
To her he lisp'd: "A lovlier flower
I never breath'd, alack!

"Here, give the pail," he did command.
And she (and she alone)
A vision of delight did stand
Hardby a mossy stone.

But as they trod the downward path,
Forgetting all in laughter,
Love tripp'd Jack up; the aftermath—
Poor Jill came tumbling after

# The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

## Mr. Roosevelt and the Trusts

DURING the sessions, in August last, of the House committee which was making an inquiry concerning the Steel Corporation, there were indications of an attempt to show that the panic of 1907 had been deliberately caused, or manufactured, so to speak, by groups of Eastern capitalists in order that they might profit by it. Questions to witnesses and comments upon their statements showed that certain members of the Democratic majority either accepted this theory or expected to establish it by the testimony. It was in that part of the inquiry which related to the purchase of the Tennessee Coal and Iron Company by the Steel Corporation that the search for this explanation of the panic was most clearly seen—an explanation which might point to a conspiracy designed to compel a sale of this Southern company by the embarrassed speculators who controlled its capital stock. One of the witnesses was the late John W. Gates, whose plans had been upset by the sale, and who was not a friend of the purchasers. Another was Mr. Roosevelt, who, as President, had virtually approved the purchase. He repeated the arguments which had been addressed to him by Judge Gary and Mr. Frick, and asserted that by his action "the panic was stopped," on or about November 4, 1907, a few days after the beginning of it. While we could not admit that the panic was "stopped" at that time by him or any other person, it seemed to us that he had been moved by a sense of duty, and that his action had served the public interest.

There was an attempt in the committee to show that he had been deceived or misled. In the somewhat remarkable petition or bill of complaint filed by the Government in its recent suit against the Steel Corporation, it is asserted that Mr. Roosevelt was misled. It is understood that Mr. Dickinson, of Tennessee, a prominent Democrat who was employed by the Government to conduct this prosecution, was assisted by the committee and the records of its inquiry. Some have thought they saw in the allegations and arguments of the filed petition much that reminded them of the committee's views and of its attitude toward the Corporation. This formal allegation by the Department of Justice—and virtually by President Taft—that President Roosevelt was deceived, has caused the latter to publish a very interesting and important contribution to the current discussion about Trusts.

At the beginning, Mr. Roosevelt denies repeatedly and emphatically that he was misled by the representatives of the Steel Corporation. They told him the truth, he says, and any assertion to the contrary is not true. Moreover, the Corporation did not acquire a monopoly of the Southern iron ores, but has now less than 20 per cent. of them and "perhaps not over 16 per cent." He goes on to show that the Corporation's share of the entire iron and steel output, which was nearly 66 per cent. in 1901, had declined to 58 per cent. in 1906; that the shrinking continued until the share was only about 54¼ per cent. in 1910; and that less than 2 per cent. was contributed to this by the Tennessee Coal and Iron Company. That is to say, the independent manufacturers have been gaining thruout the entire life of the Corporation, the acquisition of the Tennessee Company "did not change the situation," and "during the decade the Steel Corpo-

ration has steadily lost in monopolistic character." From which it may be inferred that the Government's prosecution of the Corporation is not approved by Mr. Roosevelt.

Nor is it approved by James R. Garfield, formerly Mr. Roosevelt's Secretary of the Interior, who, in a letter which the ex-President publishes, speaks of this decrease of the share of output, commends the Corporation, expresses his belief that "we" were not "deceived by Judge Gary," says he thinks "this is a case that shows clearly the difference between destructive litigation and constructive legislation," and adds the following:

"The position now taken by the Government is absolutely destructive of legitimate business, because they outline no rule of conduct for business of any magnitude. It is absurd to say that the courts can lay down such rules. The most the courts can do is to find as legal or illegal the transactions brought before them. Hence, after years of tedious litigation there would be no clear-cut rule for future action."

Mr. Garfield was a delegate at the recent La Follette Conference, which he attended immediately after a visit to Mr. Roosevelt. That Conference said: "We seek constructive legislation, not destructive litigation."

Turning from the Steel Corporation, Mr. Roosevelt takes up the Trust problem. Having shown how he set out to enforce the Sherman act during his term of office, he remarks that he realized the inadequacy of that statute, but failed to convince Congress and the public that something additional was needed:

"Sincere zealots who believed that all combinations could be destroyed and the old-time conditions of unregulated competition restored, insincere politicians who knew better but made believe that they thought whatever their constituents wished them to think, crafty reactionaries who wished to see on the statute books laws which they believed unenforceable, and the almost solid 'Wall Street crowd' or representatives of 'big business,' who at that time opposed with equal violence both wise and necessary and unwise and improper regulation of business—all fought against the adoption of a sane, effective, and far-reaching policy."

It is hopeless, he continues, to attempt a solution of the problem by a succession of lawsuits. If a great corporation is guilty of nothing but its size, something is lost by breaking it up into small concerns which will be largely under the same control; if it is guilty of unjust practices, as the Tobacco Trust is, something more drastic is needed. But the Tobacco Trust escapes by "a settlement in which the representatives of the Government seem inclined to concur":

"The decision of the Circuit Court, if allowed to stand, means that the Tobacco Trust has merely been obliged to change its clothes, that none of the real offenders have received any real punishment. Surely, miscarriage of justice is not too strong a term to apply to such a result when considered in connection with what the Supreme Court said of this Trust."

Absolute disbandment in such a case is needed, he says, followed by "strict Government supervision." Many who believe they are Progressives, he thinks, represent with respect to this matter only a kind of "sincere rural toryism," holding that by means of the Sherman act business can be restored to the competitive conditions of the middle of the last century:

"Any such effort is foredoomed to end in failure, and, if successful, would be mischievous to the last degree. Business cannot be successfully conducted in accordance with the practices and theories of sixty years ago unless we abolish steam, electricity, big cities, and, in short, not only all modern business and modern industrial conditions, but all the modern conditions of our civilization. The effort to restore competition as it was sixty years ago, and to trust for justice solely to this proposed restoration of competition, is just as foolish as if we should go back to the flintlocks of Washington's Continentals as a substitute for modern weapons of precision.

"The effort to prohibit all combinations, good or bad, is bound to fail, and ought to fail; when made, it merely means that some of the worst combinations are not checked and that honest business is checked. Our purpose should be, not to strangle business as an incident of strangling combinations, but to regulate big corporations in thorogoing and effective fashion, so as to help legitimate business as an incident to thoroly and completely safeguarding the interests of the people as a whole."

The deliberate lawbreaker should not be placed on a par with "the man eager to obey the law, who desires to find out what the law is, and then to live up to it." In a corporation, great size is not a crime, altho it suggests strict executive supervision. Good weapons wherewith to fight in the great field of international industrial competition should not be taken away from the nation. Mr. Roose-

velt would have us enter upon a course of supervision, control and regulation of great corporations, by means of an executive body like the Interstate Commerce Commission. This commission should prescribe terms for a reassembling of the parts of a Trust dissolved for unjust practices:

"We need to formulate immediately and definitely a policy which, in dealing with big corporations that behave themselves and which contain no menace save what is necessarily potential in any corporation which is of great size and very well managed, shall aim not at their destruction but at their regulation and supervision, so that the Government shall control them in such fashion as amply to safeguard the interests of the whole public, including producers, consumers and wage-workers. This control should, if necessary, be pushed in extreme cases to the point of exercising control over monopoly prices, and it should be exercised by a board of commission."

We have given at some length the substance of Mr. Roosevelt's statement, because we believe that his policy is a good one and that his explanation and defense of it will have much weight with the public. For a long time THE INDEPENDENT'S exprest opinion has been that there should be an executive commission, empowered to supervise and regulate great corporations (railroads excluded) engaged in interstate business. This work cannot be done by the courts. Evidence as to this is seen in the unsatisfactory settlement of the Tobacco Trust case, accepted by judges who had been the authors of a Trust decision memorable for its strict and severe interpretation of the statute, but who had not, at the end of the litigation, the power to order certain restrictions and limitations proposed by the Attorney-General.

The competitive conditions of many years ago cannot be restored. Even Mr. Wickersham, while insisting upon "absolute competition," admits that "we cannot return to our swaddling clothes."

Unfortunately, it appears that no remedial legislation at the approaching session of Congress can be expected. Mr. Taft will suggest Federal incorporation, which would involve some measure of supervision like that which a commission would exercise. But it is predicted that the Democratic House will pass Mr. Henry's bill, which forbids use of the "rule of reason" in decisions under the Sherman act, and so defines combination offenses that not even Judge Lacombe's two friendly drivers of express wagons could escape conviction. Possibly the situation may be improved by the broad inquiry which the Civic Federation has undertaken.

Some see in Mr. Roosevelt's statement evidence that he seeks a nomination for the Presidency. This is the opinion of the chairman of the Democratic National Committee. We find no sufficient ground for it at present. The publication of the statement, with its criticism of the Government's course, is explained by the ex-President's former relation to enforcement of the Sherman act, the widespread public interest in the Trust problem, and the reference to himself in the Government's petition in the Steel Trust suit. He resents what is said about him in that curious appeal to the court, and he remembers that Mr. Taft was in his Cabinet when, with his approval, the Tennessee Coal and Iron Company was bought. It is no secret, we presume, that Mr. Taft's recent course, political and otherwise, has not been wholly satisfactory to him, and that the warm friendship which once drew these two men together has suffered a chill.

## An American Defender of Persian Liberty

THE sight of Morgan Shuster standing up for the rights of Persia to self-government, and single-handed fighting the aggression of Russia on the one hand and of England on the other is enough to make the heart of an American swell with pride and to revive memories of the days, before the Boer War, when it went without saying that the United States was the friend of every people struggling to maintain its independence. It reminds us that there was a time in the history of our country when we really believed that "resistance to tyrants is obedience to God," and were not afraid to say so in the face of all Europe. But the days have gone by when such men as Kosciusko, and Kossuth, and Garibaldi, and Gambetta were sure of sympathy and applause from this side the Atlantic. We have lost our abso

lute faith in the ultimate triumph of democracy all the world round. We are become distrustful of our own ability at self-government, and consequently we are skeptical of the ability of others. At any display of republican enthusiasm we shake our heads and sigh, like old ladies when they hear of a young couple plunging into matrimony. We watch the relentless absorption of Finland by Russia with cold indifference. We view the efforts of the Chinese to establish a republic with incredulous amusement. We allowed the monarchical Powers of Europe to force a king upon free Norway without a word of remonstrance. We refused the right hand of fellowship to the Portuguese republic. When the Turkish people marched to Constantinople and overthrew the Sultan and put a parliament in his place, we Americans seemed to regard it with the disdain and faint disgust of a fashionable lady who sees her costume imitated by a shopgirl. And when the Persian people marched to Teheran and overthrew the Shah and put a parliament in his place, we felt that this was really reducing the thing to an absurdity.

But the collapse of the monarchy was so complete that even Russia did not have the face to stand by the Shah. The deposed Shah, however, was afforded domicile in Russia, and the Persian Government granted him a big pension on the promise of Russia "to take efficacious measures" to prevent political agitation against Persia on his part. How Russia kept the promise may be seen by the sequel. Last July Mohammed Ali, the ex-Shah, sailed from a Russian port on a Russian vessel with his suite and a consignment of guns and cannon, and landed in Persia within the Russian "sphere of influence" for the reconquest of his throne, "a filibuster in full swing," as Mr. Shuster says. In justice to Russia it should be said that he wore a false beard and that his armament was labeled "mineral water." If we consider that the Russian Government has no secret police in its employ, we may regard the escape as excusable.

The Russian representatives in Persia openly rejoiced over the arrival of Mohammed Ali, referred to him as Shah in their official letters, and gave him as much help as they could, even to the extent of employing the Cossacks against the patriots who resisted the invasion. Nevertheless the ex-Shah received little support from the Persian people and was overwhelmingly defeated.

The ex-Shah's brother, Shua-es-Sultaneh, had engineered the counter-revolution from the inside and raised an insurrection on his landing. Naturally, after the suppression of the movement, the Persian Government declared his estates forfeited and Shuster's treasury guards were sent to take possession. But here Russia again intervenes and threatens to send troops to occupy the northern provinces of Persia. Apparently Mr. Shuster's firm stand has had no better effect than to precipitate matters and to force the two Powers to carry out, sooner than they would have wished, their long laid scheme for the partition of the country. At any rate, he has made them show their hands and drop their hypocritical pretenses of protecting the neutrality and independence of Persia. Henceforth perfidious Albion and ruthless Russia will have to work in the open. Mr. Shuster has claimed and secured six columns in the London *Times* in which to plead the cause of Persia and he handles the subject without gloves. It is "shirt-sleeves diplomacy," for sure, this time. He shows clearly that Great Britain has backed Russia in opposing his efforts to establish order and reform the finances and proves that there is no more excuse for the despatch of sepoys to southern Persia than for the despatch of Cossacks to northern Persia. His exposé of this treasonable conspiracy forces the *Times* to acknowledge that "Russia and Great Britain exercise a control over Persia akin to that exercised over a minor by his guardians." Further quotations will be found in our "Survey of the World."

Mr. Shuster, during his brief regime as Treasurer-General, has, in spite of obstacles and interference, done wonders in the way of reorganization. He has checked the graft of officials, collected taxes from the rich and powerful, stopped the squandering of public funds, brought the payment of Government salaries up to date and afforded protection to commerce; things never before done

in Persia in the memory of living men. He has proved that the regeneration of Persia and the revival of its former prosperity are not impossible if only the country could have a fair chance. But it is not likely to get it. Already the two blades of Atropos's shears are closing together over the unhappy land and soon the thread of its national existence will be severed. The handwriting upon the wall reads: *Peres,* the kingdom, shall be divided and given to the Russians and English.

But even tho that prophecy should be fulfilled in our time we shall always be glad that this ancient realm found an American citizen in her latter days who did his best to defend her interests and to proclaim to the world the injustice done her by the stronger nations which should have protected her liberties and encouraged her aspirations for good government.

## Our Complaint Against Russia

With certain justice we look upon Russia as a half-civilized country. Its institutions are not liberal, and liberality is of the essence of civilization.

Against countries that are but half-civilized we draw indictments, and we make complaints for their treatment of their own citizens and of ours—always with a shrinking question to ourselves whether we are not also half-civilized. The abnormal number of unpunished murders in this country raises the question. The number of murderous strikes elsewhere raises the question whether any country is more than half-civilized.

One of the evidences that Russia is but half-civilized is the fact that she does not treat Jews as she does other citizens. She does not give them equal rights. She will not let them travel freely. She shuts them up in certain districts, or "pales," in which only they can reside. It is very unjust, very wrong, as bad as it would be if she should, as we do, lay disabilities on negroes, refuse to allow them to live except in certain parts of the town, the poorer parts, or to exercise equal rights of voting. But Russia does not have many negroes, and does have some million or more Jews. Russia does not like Jews, does not like their religion. They are not Christians; if they will become Christians they may live and trade and travel as they will.

Of course we in this country, who are not inclined to this particular Russian sort of social and political sin, are quick to damn this sin of theirs, and we hold meetings to condemn it. American Jews, of course, sympathize with the brethren of their religion, and are anxious to do what they can to get conditions changed in Russia. But what can they do, and what can the rest of us do? How can we interfere with the behavior of the government of another country? Would we like to have them interfere with us? What right have we?

We have this special right. Russia refuses to allow American citizens, who are Jews, to visit Russia, where perhaps they have relatives, or business interests, and to travel where they will. The American passport will not protect them. It is an indignity to our great nation, an indignity under which other nations also suffer. We can send soldiers to protect the rights of our citizens in China, but in Russia we do no such thing. Our Jewish citizens who would go to Russia would be insulted and put in a Russian prison, and we have done nothing about it. It is a very bad case, and what ought we to do? Mr. Schiff and a host of rabbis and Jewish citizens say: Break the treaties with Russia; treat her as the uncivilized country she is; have no trading with her; and they ask us to join them in this reprisal.

Let us hear what Russia replies to our demand, for we have again and again asked Russia to make no discrimination against American Jews. She replies that she will give American citizens all the rights she gives her own, and she can give no more. She does not let Russian Jews travel freely, and why should she let foreign Jews do it? This sounds fair, and it sends us back to the old complaint that she treats her own Jews unfairly; and there we are estopped, for how can we intermeddle with her internal policy? We can only present outside public sentiment, which she may ultimately feel.

Let us consider this with the utmost impartiality. Russia excludes foreign Jews; we exclude foreign people. A

Russian comes here with his wife and children. We let the man in with his children, but not his wife; she has an eye-trouble called trachoma, and we exclude all people that have trachoma. It is probably a very bad rule, and we ought to send them to a hospital; but we say that trachoma is catching, is bad for our people, and we will exclude them all—cruel as it may be. We defend it by repeating that trachomatous people are dangerous, and we don't want them. But Russia retorts that she thinks Jews even more dangerous, socially, commercially, and politically, and she does not want them. All we can do is to deny it, but it is her opinion.

We *can* say that trachoma is a matter of health, and sanitary rules must be enforced. Then Russia will reply, But you exclude Russian citizens on the ground that they are anarchists. So we do. Their health is good, too good, and they talk too much. We don't like them, think they are dangerous to our institutions, and we deport them when they come here. So the Russians declare and believe, wrongly, of course, that Jews are dangerous, and they don't want any more of them.

We reply that we do not exclude a people in bulk, but only individual Russians whom we select as dangerous for a reason given. We think anarchists criminals, or likely to be so, and we hunt them out one by one most properly, and exclude them, but not a class or religion or race as a whole. Oh yes, you do, replies Russia. Have you not a law which excludes all Chinese laborers? If they sneak in across the Canadian or Mexican border do you not catch them and send them back? Are you any better than we? What can we say? We can make no answer. Russia does not like Jews, treats them exceptionally, shuts them out; we do not like Chinese, treat those exceptionally who are here, and drive them back when they come. Can the pot call the kettle black?

We suppose it can. It always does. So can we call Russia unjust, for she is unjust, as we are. Only we like our injustice and do not like Russia's, and so we will complain, and we have the right to, even if inconsistently.

What more can we do about it beyond complaining? Nations have gone to war for a less offense than the injustice Russia does to our American Jews; but we will not; we ought not to. We fail to see that to denounce the old treaty or to stop all commercial relations would do any good. It might do more hurt than good. We may and should complain as loudly as we can, denounce Russian conduct, but not the treaty, and try to persuade Russia to give privileges to American Jews which she does not give to Russian Jews. We shall succeed at last. The Russian Duma is with us, for it wants Russian Jews also relieved from certain oppressive laws. Outside pressure is a good way, if a slow way, to induce a half-civilized nation to treat its own people and other people right. Perhaps the United States will itself one day attain civilization. We are very hopeful for America and Russia.

## Educational Snobbery

PRESIDENT BUTLER, of Columbia University, has struck an important question of educational danger in his complaint of the abuse of the degree of Doctor of Philosophy. He says in his annual report:

"During the last twenty-five years there has developed among the colleges and schools of the United States a deplorable form of educational snobbery, which insists that a candidate for appointment to a teaching position shall have gained the privilege of writing the letters Ph. D. after his name. This fact has given to the degree of Doctor of Philosophy a commercial value which it ought not to have and it has sent to Columbia University and to all American universities no inconsiderable number of students whose chief aim is not graduate work or training in the methods of research, but simply the acquisition of a higher degree. Like the candidate for admission to the bar of England, who must eat so many dinners at one of the designated inns of the court, the candidate for the degree of doctor of philosophy who approaches his work from this very practical point of view regards himself as entitled to receive the degree when he has been in residence so many terms or has attended so many courses or has gained a given number of points or has paid a designated minimum fee.

"As a matter of fact few persons are less well equipped to make good secondary school and college teachers than the most recent possessors of the degree of Doctor of Philosophy."

This is sharp language, and the complaint is a just one. But the remedy is

in the hands of the institutions themselves and their faculties. They should sift their men, and give the degree of Ph. D. only to those who show attainment and initiative up to the high mark which the degree should imply. A few years ago the doctorate of philosophy was given pretty freely as an honorary degree. Now no decent university gives it, or should give it, except for post-graduate attainment which has proved fitness for research, while colleges should never give it to their graduates. It should be kept a purely university degree.

But there is another degree, that of A. M., which it is proper to give to the class of students described by President Butler. Not many years ago it was given in course to any graduate on his third year after graduation. Now it is more and more given only on two years' special post-graduate study, properly in residence at a university, and to those who desire to carry on their studies further with a view to teaching, but who do not plan to go into special research. This degree of Master of Arts is coming to be regarded as that which may be properly sought by those who intend to be teachers and not investigators. This class will make better teachers than will the doctors of philosophy whose heart is, or should be, in something else than teaching. Let Columbia University tell the young men whom its president has in mind that it will gladly give them the teacher's degree, that of A. M., but not of Ph. D., which does not belong to them.

## Medical Misunderstanding

ORDINARILY the annual address at the Academy of Medicine does not attract much public attention, but this year's oration by Dr. James Ewing, professor of pathology at Cornell University Medical College, has obtained wide notice. Dr. Ewing took for his subject "The Relations of the Public to Physicians," and deprecated the suspicions often entertained and not infrequently exprest with regard to the medical profession by those who have the ear of the public. There is no doubt that the development of sanitary science and of the great principles for the prevention of disease have done much to put the public under a heavy debt to the medical profession. It is the one profession that has not only gone deliberately about decreasing the necessity for its own services by striving to lessen the amount of ills from which mankind may suffer, but has actually in recent years devoted its best energies to waking up the public mind to the fact that with proper precautions most of the disease of the world could be eradicated. It has been planning and working for private and public prophylaxis of disease quite regardless of the fact that its success in this will minimize its own importance or at least greatly lessen its own earning power.

Under these circumstances Professor Ewing rightly complains of the misunderstanding of the public, especially as exprest in the important avenues of publicity. American newspaper treatment of medical subjects is a standing joke. Only sensational medical items, as a rule, are exploited, and the brilliant work of great medical scientists is often misunderstood when not entirely neglected. As Professor Ewing well said:

> "The efforts of the daily press to furnish information on medical subjects consist of sensationalism, personalities, wonder-tales, absurdities."

Indeed he might have said worse than that. The medical mistakes that find their way into the newspaper press of this country are so ludicrous as to be a disgrace to our journalism. Apparently cub reporters are entrusted with the assignments on medical subjects, and they often get all mixed up on the meanings of things, get their terms wrong, spell them wrong, apply them wrong, and yet the "stuff" gets into the paper the next day. The poor cub reporter has had no training and can do no better. A great newspaper, however, has a responsibility to its readers. It has often been pointed out that there should be some one trained in medical subjects to whom such articles when they are supposed to be of any importance should be submitted in order that he may eliminate the obviously ridiculous and obliterate the sublimer exhibitions of ignorance. The "Journal" of the American Medical Association has in recent years occasionally collected the ludicrous blunders on medical subjects

from American newspapers—and some of them have occurred in the reputable press of large cities—and it makes the most amusing kind of a joke column for physicians. There would be no bitterness in the laugh over it but for the amazing exhibition of ignorance and neglect of an important subject that it implies.

Another phase of newspaper influence in medicine is the publication of medical advertisements. A certain number of reputable newspapers of the country have eliminated medical advertisements from their columns altogether. All of them would do it if they were honest with themselves and their readers. It would not take more than a week of even a cub reporter's time to show the managing editor of any newspaper—but of course he probably knows it already—that the medical advertisements he is publishing, usually at double the rates of the "ads" in neighboring columns because he is sharing the graft, are mere fakes. We have come to recognize the responsibility of a newspaper for its "ads" in the recent times, and surely here there is reason for improvement if the public mind is not to be led into the acceptation of all sorts of absurd reflections on the medical profession that these advertisements openly state or surely imply.

While Professor Ewing has good ground for his complaint with regard to the attitude of the public, especially as represented in our newspapers, there are certain reasons for that attitude that physicians must realize. The medical profession is not entirely without responsibility in the matter. Unfortunately, the public has been led over and over again into the belief that great, new, wondrous remedies were found, yet after a time they proved either to be quite useless or of only very minor value. Such sensations have been exploited in the newspapers only because important members of the medical profession have exprest their confidence in them and sometimes have published long articles or taken parts in discussions with regard to them. We need recall for the moment only such fiascos as Koch's tuberculin, or the use of the X rays for cancer, the mutilating cures for prostatic hypertrophy, the excitement over the therapeutics of the tissue products, to illustrate what we mean. Nearly every year there is some new marvelous development in the therapeutics of tuberculosis announced. Of course with so many sufferers by the disease such announcements make good stuff for newspaper editors, and it is not hard to find reputable members of the medical profession who will tell all about them. New cancer cures are only scarcely less frequent than new discoveries of the cause of cancer. Needless to say, in spite of these "discoveries," we are as far as ever from knowing either cure or cause. We have had some twenty-five serums announced. One is a success, four are still on trial. Even 606, after its splurge, is now on the wane.

Of course, in this medicine only shares the fate of other sciences in recent years. Science has made too many claims during the past half century, and as many of these claims have been unsubstantiated, it is no wonder that a distinguished French critic some years ago suggested "the bankruptcy of science." We have had explanations of the universe and solutions of its problems and easy explanations of all our social difficulties offered by science. As Sir William Ramsay said not long since, the distinction between twentieth century and nineteenth century science is that a generation ago scientists thought they knew it all and now they are beginning to realize that they are only on the threshold of knowledge. Physicians have been in this same way overconfident of their powers in the matter of disease and have made claims, and when these have failed, naturally there has been distrust created on the part of the public, and this is to be found particularly in the minds of writers, editors, literary men who are brought more closely in touch with such exaggerated claims and their inevitable disappointments.

Of course, the really great workers in the medical profession do not intend to deceive. Sometimes there are extraneous reasons, as in the case of Koch, which force their hands and compel them, as did the German Emperor, who wanted a great announcement to come from that International Medical Con-

gress in Berlin, to anticipate their conclusions. When the medical profession shall be careful, however, not to commit themselves to claims before the public, and in the due sense of their medical ethics shall keep the discussion of supposedly important discoveries among themselves until there is definite assurance of their value, there will be less reason for this distrust and much less exhibition of it. The fine spirit of noble professionalism that dictated the codes of ethics in the older times, under which so many modern physicians chafe, was the best possible safeguard against many of the evils that have led to this attitude of mind that Professor Ewing discussed. Physicians are doing a fine work. Unfortunately, there are many among them not animated by the best spirit of their own codes; and it is because of these, unfortunately, that some of the public distrust manifests itself. Professor Ewing's calling attention to the subject will doubtless clarify the situation and emphasize what is best in the professional spirit.

**John Wanamaker**

John Wanamaker is not only a private citizen; he is a public asset. He is the pattern and example of our merchants, but he has also been Postmaster General, and has interested himself in all that interests the people. At the end of fifty years of business life the merchants, his competitors, have presented him with a massive loving cup as a memorial of their admiration. At the luncheon, when it was presented, they lauded his honesty and his fairness in business. He deserves all the praise given him, and that, too, for his progressive views, as well as for his business enterprise and integrity. The reforms which he urged when Postmaster General are not yet all reached, but we are coming to them. In his response he said:

"We should have had the parcels post, postal savings, and cheaper telegraph rates twenty years ago. It looks as if we are expecting these business blessings to be dropped upon us from an aeroplane in the skies. Let the people have what they want.

"I am also clearly of the opinion that the Government of the United States owes it to the business interests and the family life of all the States to take possession of all the telegraph companies under the act of 1854, when it sold to what is now the Western Union the first line established in the United States. The people have a right to a protected service that only the Government can give and to the use of wires without delays that special interests now secure at times, and lower rates are now necessary if possible.

"The use of the existing Government buildings and offices thruout the United States would give splendid facilities at far less expense when organized for a service that easily equal the present behind-the-times telegraph service. The rates under the Government could possibly be cut in half, and twenty words instead of ten could be sent without any appreciable added cost. I do not believe in confiscation of vested rights, and I do believe that without loss the Government that can build the Panama Canal at a cost of $400,000,000 for the limited interests it serves can find the money to purchase at a just valuation the telegraph lines, especially when the Postal Savings are in full operation and a portion of the large sums deposited with the Treasury could be applied to ministering to the content, convenience, and comfort of vast numbers, to whom it is a hardship to pay the rates now charged for long distance messages. The telephone companies must lower rates, or some Postmaster General will take them under control."

This long quotation we could not abridge. It shows that the man of seventy-three is no more conservative than he was when a member of Benjamin Harrison's cabinet.

**College Presidencies**

During the week two notable events have occurred in the educational world: one the announcement of the election of Prof. J. M. T. Finney, head of the Johns Hopkins Dispensary, as president of Princeton University, in succession to Woodrow Wilson. The remarkable thing is that a physician has been called to preside over a university which has no medical department. But he is called, as Dr. Billings was called to preside over the Astor Library, because of his notable executive power. He graduated at Princeton in 1884. The other event is the published resignation of President George Harris, of Amherst College. It was in the decline of Andover Seminary, following the theological attack upon it, that three of its ablest professors left it: George E. Moore to take a chair of Oriental languages in Harvard University, William J. Tucker to become president of Dartmouth College, and George

Harris to be president of Amherst College. Both presidents have had a distinguished success. Dr. Harris reached Amherst at a critical time in its history, and his courteous and persuasive administration restored confidence, healed differences, and gave opportunity for improved standards of education. The number of students has greatly increased, while the endowment has been more than doubled, new buildings erected, and a larger corps of instructors secured while giving them a larger salary. We have never known the college in a better condition, the credit for which is largely due to the wise and genial administration of President Harris.

**The Boxer Students.** There are in our colleges and schools three hundred Chinese young men, who have been brought here and are supported by the Boxer money which was assigned to this country for losses received, and relinquished by us as excessive damages. They are of the pick of the country, and one of these days will be among the highest officers there. But because of the revolution they are stranded here, as there is no money in the Chinese treasury for their support. We sincerely trust that none of them will be allowed to suffer, but that the institutions where they are will provide for them until after quiet is restored, when beyond doubt anything given to them will be repaid. It is a sacred duty which we owe to these youth, and we will have rich reward in the good will these young men will feel for us in the next fifty years. It may be that Congress will make an appropriation for them. It would be money well spent. We now owe a special good will to China when it is attempting to establish a republic after our example.

**The Federation of Labor** In his address to the Labor Federation, President Gompers counts fifteen Congressmen who are members of labor unions; and now he can add President Taft, admitted when he laid a corner-stone the other day. He gave considerable space to the case of Mr. McNamara, and declares faith in his innocence. Herein he is perhaps more trustful than most people. We don't know that the accused is guilty, but it is clear beyond doubt that some people well on the inside are responsible for an extraordinary succession of dynamite outrages. President Gompers gives a list of labor's demands. First is the initiative, referendum and recall—very good except the recall of judges—let them be impeached when guilty. These follow the demand for an anti-injunction act—very questionable; restriction of immigration—no; also of convict labor—no, again; withdrawal of executive order for bidding civil service employees to petition Congress—yes; a department of labor in the Government—perhaps so; employers' liability and workingmen's compensation acts thruout the States—yes, if fairly drawn; arraignment of so-called scientific management or efficiency systems—no. It is stated that the number of members is now 1,750,000, of whom 200,000 were added last year. The treasury has $200,000 in hand, and the unions spent nearly $5,000,000 last year in aid of strikes. We do not learn how much the profit was.

**Chicago and Molière** The Drama Players of Chicago have lately come to New York City. The critics of the daily newspapers have treated them none too well. New York critics pride themselves upon taking down out-of-town visitors, yet the work of the Drama Players, without having polish enough to do justice to a Northwestern University professor's version of Molière, deserve great credit for the seriousness and honesty of their intentions. Furthermore, they exhibit a certain capacity for team-play that is not a little reassuring. Team-play—"*ensemble* work" is the critics' jargon for this—is what the American theater chiefly lacks. We wish the company from Chicago the success that should come with years, effort and education: education of players and playgoers alike. In seeing Mr. Donald Robertson and his colleagues present an English rendering of the "Femmes Savantes," this thought has come to us: So long as France takes

unaffected pleasure in Molière's plays, so long can Frenchmen afford to laugh at talk of their decadence. Monsieur Poquelin—Molière was his stage name—clothed in dramatic garb sound common sense. The world can never have too much of Monsieur Poquelin.

**A New Play by Sophocles**

It is well worth notice that there will be published in the early summer another collection of the papyri found in Oxyrhynchus. Of these the main interest attaches itself to half of a lost play of Sophocles. This follows previous extraordinary discoveries, both early Christian and classical, of which latter the most remarkable were plays by Menander and Bacchylides, and Aristotle's "Constitution of Athens." It was the custom to produce tragedies in sets of three, and at the end to relieve the long tension of the audience with a satyric drama or farce. This is the first one by Sophocles that is known. It is called the "Ichneutæ," or "Trackers." Apollo has lost his cattle, which the precocious infant Hermes has stolen and hid in the cave where the baby god of theft and music is being nursed. Apollo tells Silenus that his satyrs must find them, and they follow the tracks to the cave. But there they are affrighted by strange sounds unheard before, those of the lyre invented by Hermes, and they return and report to Silenus. He reproaches them for their cowardice, and himself goes to the cave and knocks. The child's nurse, a nymph, lets him in, and tells him about the child born to Zeus, and his abnormal growth, and his invention of the lyre, but stoutly denies that he had stolen the cattle. Silenus does not believe her, for there are fragments of hide in the lyre, and then the telltale tracks. Here the fragment breaks off, but doubtless the last half told how the cattle were found and Hermes appeased Apollo with the gift of the lyre. The grotesque figures of Silenus and the tracking satyrs, made to look like dogs on the scent, added to the humor of the story. This will be a very welcome addition to our store of Greek dramatic literature.

**Alcoholic Consumption**

The United States consumes more beer than any other country in the world, 1,851,300,000 gallons in 1910, or over 20 gallons for every man, woman and child in the country. Next come Germany with 1,703,500,000 gallons, and Great Britain and Ireland with 1,397,300,000 gallons; but Great Britain consumes 31½ and Germany 26½ gallons per capita, while Belgium reaches 55 gallons per capita. Of wine, however, we drink very little, only two-thirds of a gallon each, while France drinks 39 gallons per capita. Of distilled spirits we consumed 133,500,000 gallons in 1910, or nearly a gallon and a half each, a half more than Great Britain, and about the same as Germany, Belgium and Russia, and somewhat less than France and Austria and Holland. The enormous consumption of intoxicating liquors in this country, where healthy water is everywhere to be had, indicates that the temperance organizations have a hard task before them, which have set for themselves the mark of a saloonless country in 1920.

President Taft shows himself as correct historically as he is religiously, when he tells us that the public men of today are growing to be very much more careful not to disturb the religious sensibilities of the people. He thinks this was not so marked in the earlier history of our political life. During the Civil War we had half a dozen men in Congress of unusual strength of character and influence, but who indulged in language that would not now be tolerated in that body. Mr. Taft himself is an ideal President when we consider his habit of church attendance, and his enthusiastic support of Young Men's Christian Association work and all other organized effort for reform. He tells us that every Sunday he considers "an hour spent in considering the parables and the simple story of Jesus well worth the while."

It is rather cruel in Dr. Nansen to attempt, in a lecture on Norsemen in America, to shatter our faith in the pretty story, resting on the epic of "Eric the

Red," that the Norsemen discovered a beautiful land on this continent a thousand years ago, a veritable Vineland, or Wineland, fair as the Fortunate Isles, and which we can set down in Martha's Vineyard, or where Professor Horsford found it, on the Massachusetts coast. Dr. Nansen says the Norsemen did pass over to the Labrador coast from their southern settlements in Greenland, but the beautiful story of "Wineland the Good" is but a legend like that of Atlantis. We may recall that we are told in "Rhodora" that it was not the vine, but the more humble northern bearberry, that the story tells of.

In 1925 the Southern prophets tell us there will be left not one State in the Union which has a negro majority of inhabitants. Louisiana and Florida had a negro majority, but the last census gives each of them a white majority by some hundreds of thousands. South Carolina and Mississippi still have a majority of negroes, but their increase is not nearly so great as that of the whites, in part from poorer sanitary conditions, and in part because of the large migration to the North. During the last decade the white increase in South Carolina was 21.8 per cent., and the negro increase only 6.8 per cent. It is time that we hear less of the danger of negro domination.

In view of the fact that the two cities of New York and Boston were chosen for the honor of the Cardinalate it is interesting to observe what they gave for the Catholic foreign mission board, the Propagation of the Faith. New York gave $100,727, which is more than any other of the dioceses in the world which represent large cities. Next comes Boston with $29,191. This figure represents only receipts at the central council at Lyons, while Boston's total gifts for foreign missions was nearly $54,000. All Italy gave but $53,982; all Spain but $35,722, and all Austria but $11,548. No other American diocese gave as much as $10,000.

It has been made clear that the commission plan which Mr. Roosevelt now proposes for the control of corporations in general is nothing other than what he proposed four years ago for the railroads. President Butler, of Columbia University, has independently, in an able address, presented arguments for this solution, which is one which THE INDEPENDENT has for a good while supported as the best available way to keep the giant trusts from using their power in a giant's way.

It was a curious address of welcome which Mayor Gaynor, of this city, gave to the convention of women's clubs last week. He discovered that most of them believed in woman's suffrage, and so he argued against it, and told them that less than 2 per cent. of the women want it, and that it would be likely to break up the unity of man and woman in the family. Exactly how it would reduce unity for the two, man and woman, to think and act together he did not explain.

It has been reported that in case of danger the baby Emperor of China would flee to the American Legation. He would be welcome, and we should be glad to have him brought to this country to be educated as one of the Chinese students supported by the restoration of the Boxer money. Possibly we might one of these days make an American citizen of him.

Some of the Western Catholic papers are quite frank in their expression of surprise and regret that Archbishop Ireland was omitted in the late distribution of honors at Rome. One of the most influential of them says:

"Every one in America today, Protestant and Catholic, asks why Archbishop Ireland is not numbered among the new Cardinals."

It is an odd misprint by which, in Volume X of the "Catholic Encyclopædia," Julian the Apostate appears as "Julian the Apostle." Even so we have seen the title of *The Star in the West*, formerly issued in Cincinnati, reversed at the head of the page as *"Rats in the West."*

We have seen complaints that State universities are "godless." The fact that a large class in Bible study has lately been organized for the faculty of the University of Wisconsin does not support this charge.

# Insurance

## Improvement in Fire Loss

THE spring of the present year was one of the most disastrous that fire insurance companies have ever experienced in this country. It has been the hope of these companies to offset by a favorable fall and winter the heavy losses of the spring. The months of August, September and October have shown a decided improvement. Last month stands out particularly in contrast to October, 1910, which was a month of exceptionally heavy loss, equaling in itself the total loss in the last three months. The complete figures from January to October for the last two years follow:

| | 1910. | 1911. |
|---|---|---|
| January | $15,175,400 | $21,922,450 |
| February | 15,489,350 | 16,415,000 |
| March | 18,465,550 | 31,569,800 |
| April | 18,091,800 | 17,670,550 |
| May | 18,823,200 | 21,422,000 |
| June | 13,183,600 | 20,691,950 |
| July | 26,847,900 | 25,301,150 |
| August | 21,570,550 | 12,662,650 |
| September | 11,700,000 | 11,333,250 |
| October | 37,188,300 | 13,945,000 |
| Total for 10 months | $196,535,650 | $192,933,800 |

LOUIS S. AMONSON, president of the People's National Fire Insurance Company of Philadelphia, finds that profitable property seldom burns. Also when the individual is going to lose money by fire he exercises a degree of care which makes the start of a fire difficult, if not impossible; but if, thru over-insurance or unprofitable business conditions, he is placed in a condition where a fire means profit, the fire usually comes along. Mr. Amonson believes that the local agent, the man on the spot, is the essential medium for keeping the moral hazard down, by the ceaseless overlooking of the insured. He is convinced that if the local underwriters will satisfy themselves that under no possible conditions will the insured profit from a fire, moral hazard losses will disappear.

VICE-PRESIDENT HALEY FISKE, of the Metropolitan Life Insurance Company, states there are 22,720,000 industrial policies in force in the United States, for $3,100,000,000. He believes the chief problem of the future is the reduction in the cost of industrial insurance. The initial expense is necessarily heavy, but after the business has become larger, the expense ratio to income should decrease. Mr. Fiske states that the Metropolitan has reduced its expense ratio 8 per cent. in the last ten years. The future of industrial insurance is bright. The free nursing systems and sanitariums are comparatively new features in insurance, and ones that will with efficient management prove of great benefit to the community.

THE General Accident, Fire and Life Assurance Corporation, Limited, have issued a quarter century memento giving a history of the company's start and progress. The home office is at Perth, Scotland, but the company has been writing insurance in the United States since 1899. The original capital was $25,000 and the first year's income $12,500. The company at the end of 1910 showed an income of over $7,000,000 and total assets of $10,000,000. The policies of the company are printed in eleven languages. While in 1886 the number of officials was ten, at the end of 1910 the number had grown to 1,000 and the agents' force totaled 30,000.

THE Continental Insurance Company of New York has issued a booklet giving a summary of the important New York State laws affecting fire insurance. The chief points that a broker or agent should know are conveniently presented. A copy will be sent to any reader of THE INDEPENDENT upon request.

ACCORDING to the statistics of the health department, New York City now has a population of 5,000,400, an increase of 233,500 since the Federal census. The city is growing at the rate of about 187,000 a year.

# Financial

## Responsibility of Directors

Following the disastrous financing of what was called the Shipyard Trust, nine years ago, by the Trust Company of the Republic, a shareholder of the company sued the company's directors to recover damages for losses due to the loans made. A lower court held that they were responsible. Eleven of them paid the judgments against them, which ranged between $200,000 and $400,000. Two appealed, and now the Appellate Division of the New York Supreme Court gives them a new trial, by a decision which is sharply criticised. The court says that directors not on the executive committee are not supposed to have knowledge of the details of the business management of the corporation; that they rely upon this committee, and the corporation's officers; that business men of New York, being probably the busiest men in the world, owe their first duty to their large business enterprises; that some of them are directors of many companies, and could not "accept such a trust" if they were required to supervise the detail management of each one; and that the answer to the contention that for this reason they should not accept is that the corporations "cannot afford to lose them":

"One of the best assets of a corporation is the advice and assistance of men of business exprience and of large business connections upon its board. Their advice and assistance are of inestimable value in all emergencies and in determining the policies of the corporation and in counsel upon the more important questions that arise. Any construction of the law that would make it impossible for such men to accept positions upon various boards of directors would seriously impair both the effectiveness and the stability of corporations, and in fact would be little less than calamitous."

It appears, however, that one of the two directors who is to have a new trial (he is a member of forty-seven boards) had not attended the meetings and had accepted the office with an understanding that he should not be required to attend them. Moreover, the transaction to which the suit related was "one of the important questions that arise"; in fact, the most important question that ever came before that trust company's board. The statute was designed to prevent the use of names alone on boards of direction, names which sometimes serve to inspire confidence in the minds of shareholders, depositors and other patrons. The reasonable responsibility of directors should not be impaired.

*

....The Parker apple orchard in Kansas, 1,200 acres and 96,000 trees, has been sold for about $500,000 to a company which will spend $100,000 in improvements.

....There are now 72,783 holders of shares of Pennsylvania Railroad stock, and almost half of them are women. For some time past the number has been increasing at the rate of about 1,000 a month.

....A Massachusetts syndicate, it is said, will expend $6,000,000 in developing 80,000 horse power of electrical force at Kootenai Falls, Mont., for transmission and sale to mining camps and cities in Idaho, Montana and Washington.

....Twenty-three British companies or firms prominent in the iron and steel industry have signed a circular in which they agree to grant a rebate of four shillings per ton, payable four months after delivery, to consumers of steel who will agree to buy from no other manufacturer.

....Interests identified with the Union Trust Company have acquired a large majority of the stock of the Plaza Bank, and stockholders of that bank have become owners of Union Trust shares. It is expected that ultimately the business of the bank will be combined with the uptown business of the Trust Company. The Plaza Bank, organized in 1891, announces the removal of its offices from Fifty-eighth street and Fifth avenue (occupied for twenty years) to Sixtieth street and Fifth avenue, where there are better facilities for its growing business. With a capital of $100,000, it has a surplus of $475,000, and its deposits exceed $5,000,000. W. McMaster Mills has been president for the last fifteen years.

VOL. LXXI NEW YORK, THURSDAY, NOVEMBER 30, 1911 No. 3287

## Survey of the World

**The Republican Nomination for President**

Delegates to the Republican National Convention next summer, from States which do not legally require primaries, will almost certainly be selected in the old-fashioned way. The application of the direct primary to the choice of delegates has been advocated by Senator Cummins and other progressives. Their project will be defeated by the fact of the extra expense involved, it is said at Washington, and there is no doubt that President Taft's friends on the National Committee oppose it.——Senator La Follette's Western tour of speechmaking has been postponed until after the convening of Congress. The itinerary includes Oklahoma, Missouri, Kansas, Nebraska, the Dakotas, Iowa, Minnesota, Illinois, Michigan, Indiana and Ohio. A prepared speech delivered at Cleveland, Ohio, will mark the opening of the trip.——Friends of ex-President Roosevelt in Nebraska are planning to give simultaneously dinners in fifty or more towns in the State, at which Mr. Roosevelt will be asked to speak over the long-distance telephone. This is part of a campaign to boom the former President as a candidate for the Republican nomination for President in 1912. In a Philadelphia newspaper of November 27, however, the statement is made that "not more than three days ago Colonel Roosevelt explained himself to the *North American* exactly as he had done a year ago," that is to the effect that he

"will not support any man for the nomination in 1912, neither Mr. Taft nor any one else. He never gave Mr. Taft any pledge or offer of support nor did Mr. Taft ever have such an impression. As to himself, Colonel Roosevelt is not a candidate."

**New York City**

The New York City budget for 1912 has been cut $8,151,193.38 by the Board of Aldermen, reducing it to only $6,980,416.79 more than the 1911 amount. The Board of Estimate called for a 1912 appropriation of $189,210,950.33.——William J. Cummins, chief promoter of the Carnegie Trust Company during its last months of life, was sentenced, November 24, to serve from four years and eight months to eight years and eight months in State's prison. Charles H. Hyde, former City Chamberlain of New York and a protégé of Mayor Gaynor, will be placed on trial January 2, 1912. He was an intimate friend of Cummins, and is charged with bribery. He resigned his office when indicted.——On the order of President Taft, the transfer of Charles W. Morse, the convicted New York banker, from the Atlanta penitentiary to the United States Army Hospital at Fort McPherson, Georgia, was made on Sunday. It was ordered because of the prisoner's poor health, upon which was based an application to commute the sentence. This application was denied.——William Willett, Jr., defeated candidate for the Supreme Court of New York; Joe Cassidy, former borough president and Democratic boss of the Borough of Queens, and Louis T. Walter, Cassidy's right-hand man, were arrested, November 21, on the charge of "corruptly conspiring" to bring about the nomination of Willett for the Supreme Court justiceship of the Second Judicial District. On Monday the three defendants pleaded "not guilty" and were released on bail of $5,000 each for appearance Tuesday, December 5.

**Various Items** Papers have been filed at Jackson, Miss., in a suit brought by the Commonwealth, alleging misuse of public moneys in the hands of James K. Vardaman, Senator-elect and ex-Governor. The suit is filed by Judge L. Brame, and is brought on behalf of Attorney-General Hudson. The Mississippi Bank and Trust Company and its receivers also are named as respondents. The object is to compel an accounting with respect to the contingent fund, the Spanish-American war fund, and other public moneys alleged to have been received by Major Vardaman during his term of office as Governor, 1904-1908, and also to recover interest on certain bonds of the State, sold in 1906, and antedated. It is also alleged that he made overcharges in connection with visits to various State institutions, and other delinquencies are averred, such as that the State moneys were mixed with his private funds during his term of office. Charges of misuse and careless accounting of the public moneys were made many times by Vardaman's opponents in the recent bitter Senatorial fight, and generally were met with scant comment by the ex-Governor.——Fred D. Warren, the Socialist editor of Girard, Kan., who was pardoned by the President on the occasion of his conviction for using the mails improperly, was lately indicted a second time by the Federal grand jury at Fort Scott. The charge is circulating improper matter relating to conditions in the United States Penitentiary at Leavenworth in his paper, the *Appeal to Reason*. He gave bond and was released. ——Three more sworn jurors were added to the McNamara panel, November 24, making eight in all. Six more jurors are to be chosen, for there are to be fourteen jurors, two of whom will be alternates to serve in the event of illness of regular jurors. Two of these have been permitted to go home on account of a death in the family of one, serious illness in that of the second.——Differences between the Chicago, Rock Island & Pacific Railroad and their employees, represented by a committee of the International Union, remain unsettled, altho conferences have been held, and a strike of the 8,000 shopmen employed by the company is threatened.——Railway extension and development in Washington and Oregon will be resumed early next year by the Northern Pacific and Great Northern, Chicago, Milwaukee & Puget Sound railroads. The Northern Pacific has already started a $2,000,000 enterprise at Centralia and Pasco, and is taking bids on its projected 40-mile water-grade entrance into Tacoma via Tenino and Point Defiance.——The State of Pennsylvania has received $1,300,000 in settlement of the Capitol equity cases, for "erroneous charges." The payments were made last winter, and the architect of the new Capitol, Mr. Huston, and John H. Sanderson, contractor, figured in the payments.——With the re-election, without contest, of President Samuel Gompers, and all the other officers, and the selection of Rochester, N. Y., as the meeting place for 1912, the American Federation of Labor concluded the two weeks' session of the thirty-first convention at Atlanta, Ga., November 25.——By a unanimous vote of twenty-one Cardinals assembled in secret consistory at the Vatican, in Rome, November 27, Archbishop John M. Farley, of New York; Archbishop William H. O'Connell, of Boston, and Monsignor Diomede Falconio, late Papal Delegate to the United States, were admitted to membership in the Sacred College.

**Canada's Growth** While the United States views with more or less concern the swamping of the "old stock," Canada is lamenting the fact that she has 7,000,000 inhabitants instead of the 8,000,000 she had hoped the census would reveal. Canada is fortunate, however, in that her incoming population is a pretty well sifted one: numbers are not all. In ten years the Dominion has shown an increase, thru births and immigration, of a little over 1,750,000. It is therefore not a relatively slow growth in population that Canadians are lamenting, so much as it is

"the significant fact that, in this new land, where vast areas of fertile soil have never been tilled, the increase of the rural popu-

lation is not keeping pace with that of the urban, and in most of the Provinces is actually declining."

It need surprise no one to learn, says the Toronto *Globe*, that there are in Ontario today fewer cultivators by 100,000 than in 1901. The Province of Quebec shows an increase of 351,799, but Montreal is responsible for more than half of the gain. This is the more remarkable if we take into account the far-famed fecundity of the habitant. The French-Canadian emigration is, to a great extent, the key to the problem of the Canadian census. The sons of the habitants cross the line into Maine, New Hampshire and Vermont, and penetrate New England. They enter other States as well. Meantime we are exchanging for the French-Canadians farmers of our own, lured into the Canadian Northwest by accounts of that country's fertility and rapid development. It has been the dream of French-Canadian statesmen to turn northwest the stream now flowing south. Thus would the East colonize the West. Perhaps it would be better for Canada and better for the United States, too, if some system could be evolved by which each nation would do its own colonizing. But economic processes and the movement of populations are not easily controlled.

**Assassination of President Caceres**

Ramon Caceres, President of Santo Domingo since 1905, was assassinated on the 19th in a street of the capital. He had just been making a call at the house of Señor Leonte Vasquez. After the first shots he sought refuge in the stable of the American Legation, to which he was followed by the assassins, who shot him again. Half an hour later he died in the Legation. The leader of the assassins, Luis Tejera, who has a brother in the Cabinet, and whose father was one of the four signers of the fiscal agreement with the United States, was captured and promptly put to death, together with General Pientel, an accessory. Their motive is said to be unknown. Tejera had refused office. Two of our cruisers were at once sent to Santo Domingo, but no disorders followed the death of Caceres. Congress will elect his successor this week.——Yielding to the demands of the Veterans' Association, the Cuban Government consents to the appointment of a joint commission, representing the veterans and President Gomez, which shall provide for the removal of all officeholders who bore arms against Cuba in the wars for independence.——Great Britain, France and Germany ask Cuba to submit to arbitration the claims of their subjects for property destroyed during these wars.——Governor Colton, of Porto Rico, in his annual report, points to commercial progress, due largely, he says, to the removal of tariff barriers between the island and the States. In the past year, foreign trade was increased by 15 per cent., and was four times as great as in 1901. The net revenue showed a gain of 13 per cent., and $500,000 was added to the cash balance in the treasury. There has been an increased production of sugar, cigars and fruit.——President Leconte, of Hayti, has discovered fraudulent acts of his predecessor in connection with the repairing of gunboats. For example, $20,000 was taken for repairs on a gunboat worth less than $5,000, which is still useless.——The Royal Bank of Canada (which has fifteen branches in Cuba, three in Porto Rico, and four in other parts of the West Indies), is about to establish two branches in Santo Domingo.——The records of the Manila Observatory show an unprecedented rainfall in Luzon during the latter part of July, when there were three typhoons. In the first of these, 88 inches of rain fell in three days, and 32 inches on the first day. The fine military road in Baguio has been almost wholly destroyed.——A rich vein of copper ore has been found in the Philippines, at Masbate, and a company has been formed in Manila to mine iron ore in Mindoro.

**The Situation in Mexico**

The revolutionary movement in the interest of General Reyes was marked, last week, by only a little fighting. A small party of Reyistas captured the barracks in Tepic. Candido Procel, at the head of about 300, was defeated in Querétaro, and forty of his men are pris-

oners. A Reyes plot was discovered at Cananea, where several men were arrested. Obeying the orders of Madero, who says that bandits and revolutionists must be suppressed with an "iron hand," two Reyistas captured by Federal scouts near Juarez, and four near Casas Grandes, were tried and at once put to death. The Government has 12,000 soldiers in northern Mexico, and is about to send 13,000 more. It is said that our officers have proof that at least 5,000 rifles and 300,000 rounds of ammunition have been carried across the boundary in the last six weeks. Three copies of a proclamation, bearing the printed signature of Reyes, have been found in Laredo. Reyes says he had no knowledge of them. In this proclamation he proposes to take the Presidency, urges the army to turn against Madero, and makes many promises of benefits to be conferred by legislation and otherwise. He is accused in the indictment found at Laredo of buying 1,000 rifles and 100 horses for an invading force. His trial will take place in April.——The State of Oaxaca has declared by vote of its legislature, ratified by its Governor, that it no longer recognizes the authority of the Madero Government. This action was taken at the suggestion of the Governor, Benito Juarez, because Madero, after the recent local rebellion at Juchitán, was willing to treat with the rebel leader, José Gomez, and would not permit the Federal troops to assist the forces of the State.——It has been agreed that Mexico shall pay China $1,350,000, on account of the 320 Chinamen killed during the revolution. ——Madero rejects the petition of Torreon strikers, asking him to recommend legislation for an eight-hour day. He says that present economic conditions do not permit this.——Zapata has not been subdued, but 800 of his men were beaten, last week, in battle.——Our Government has given orders that every effort to enforce the neutrality laws on the border shall be made. A newspaper at the Mexican capital asserted, last week, that in this there was discrimination against Reyes, because Madero and his followers, during the recent revolution, were given a free hand. Replying to this, Ambassador Wilson denies that there has been any discrimination, or that our Government desired the overthrow of Diaz. He points out that in the Madero revolution we had not acquired the experience in guarding the frontier which has since been gained, had not learned how expensive and disastrous to both countries such revolutions are, and were hampered because the sympathies of the large Mexican population on both sides of the line were overwhelmingly with Madero. It is shown at Washington that the cost of the movement of our troops to the border has been about $2,500,000, and that our trade with Mexico suffered a loss of nearly $10,000,000 during the revolution.

**Panama**

At the close of the bankers' convention, in New Orleans, on the 25th, four ships sailed for the Panama Canal, bearing 250 bankers, with their families. These tourists will remain two days in the Canal Zone.—— Testifying before a committee of Congress, in Washington, last week, Bernard N. Baker, promoter of the proposed company to build fifteen ships for coast to coast traffic, by way of the canal, said he could cite no overt act to prove a conspiracy against his project on the part of New York bankers and the transcontinental railroads. Senator Newlands says that if an independent line of steamships cannot be established, the Government should have a line of its own.—— Following Nicaragua's negotiation of a temporary loan of $1,500,000 in New York (which will be increased to $15,000,000 if the Senate ratifies the pending loan treaty) Clifford D. Ham, now surveyor of customs at Manila, has been appointed a general collector of customs in Nicaragua, with headquarters at the capital.——The revolutionists in Honduras are supporters of Policarpo Bonilla.

**South America**

Conflicting reports about Castro in Venezuela have been published. Dispatches to Mexican papers from Caracas, on the 21st, said that on the 19th he had won a victory in battle with the Government's troops. But the Government, on the 20th, in an official statement, asserted that peace prevailed thruout the country. There had been signs, it added, of

activity among expatriated revolutionists on the Colombian frontier, where troops had been stationed to restrain them.—— A revolution was begun in Paraguay on the 22d. The leader of the rebels is Gondra, who was forced by Colonel Jara, in January last, to withdraw from the Presidency. Jara afterward became dictator, but was soon deprived of power. Dr. Rojas was then made Provisional President. He now has the support of Jara. Gondra has two small ships, which he bought in Europe.—— Señor Ospina, Colombia's Minister at Washington, in a note to Secretary Knox, renews his country's demand for a settlement of the Panama controversy by arbitration. He remarks that London and New York financiers offer to place Colombia's currency on a gold basis, but that public opinion compels rejection of the American offer, on account of this controversy. Colombia's consul-general at New York has published a pamphlet, entitled "I Took the Isthmus," in which he severely criticises ex-President Roosevelt and reviews the history of Panama's secession.——Chili has paid to our Government, at Washington, $966,000, the sum awarded by arbitration in settlement of the Alsop claim. It is reported that Chili's new battleship will be built by the Fore River Company at its yards in Massachusetts.——Four young women from Uruguay, teachers in their own country, are students at Cornell University's Agricultural School, to which they were sent by their Government.

W. MORGAN SHUSTER

Mr. Shuster was nominated by President Taft last spring at the request of the Persian Government to serve as Treasurer-General, and his energetic reforms and bold attempts to check the aggressions of Great Britain and Russia have brought down upon him the hostility of both countries

**A Suffraget Demonstration**

As soon as Premier Asquith had made it plain that the Government would not include the women in its bill for the general enfranchisement of the men he was notified that militant tactics would again be resorted to. A call was issued for a march upon the Parliament Buildings at 8 o'clock on the evening of the 21st. At that hour 1,800 police were called out to guard the entrances to the House of Commons, and these broke up the procession as it approached and dispersed it in small groups. But it soon developed that the procession was only a ruse intended to absorb the attention of the police while tactics of a new kind were carried out. Women in twos and threes or alone made their way thru the crowds and smashed windows on all sides. They carried stones concealed in muffs or handbags and threw them from the sidewalks, from taxicabs or from the tops of busses. Some used hammers as more reliable than missiles. The Treasury Building, the Scottish Office, the National Liberal Club, the Westminster Palace Hotel, the War Office and newspaper offices and shops along the Strand lost much window glass, and there was scarcely a building on the left side of Parliament street, as far as Trafalgar Square, that did not suffer from the raid. The amount of damage is estimated at $5,000. The arrests made numbered 213, more than in any previous demonstration. The Downing street police sta-

tion was so crowded that the policemen accommodated their captives in their clubroom and library, where the prisoners sang popular songs to the accompaniment of a harmonica played by a policeman. In the morning they were given sentences varying from a light fine to two months in jail. —— Mr. Lloyd George, Chancellor of the Exchequer, has publicly repudiated the policy of his chief and has started a campaign for a woman suffrage amendment by a strong speech at the Bath Liberal Federation.

**Persia Apologizes**

The ultimatum of Russia that the Persian Government repudiate the action of Treasurer-General Shuster in seizing the property of Shua-es-Sultaneh, withdraw the treasury guards and apologize for the affront to the Russian consular officers, demanded a favorable reply within forty-eight hours. This could not have been complied with even if it had been in accordance with Persian inclinations, for the cabinet and the Regent had resigned and nobody could be found who would take office under these conditions, for the Persian Parliament was in hearty sympathy with Shuster. An appeal was made to the Powers against Russia's threat, but the circular note asking for an investigation or a chance to submit the case to The Hague court brought no help from any quarter, so the Persian Government was forced to ask the advice of Great Britain and promise to act upon it. The advice was to yield to the Russian ultimatum, and accordingly this was done. A new ministry was organized, and the first act of the Foreign Minister was to visit the Russian embassy in state uniform and proffer an apology for all offenses. The treasury guards were withdrawn from the property and the Cossacks took possession. Notwithstanding this complete submission the Russian Government did not countermand the orders for the occupation of the northern provinces. Russian troops were landed from transports at Enzeli and will occupy Resht, the capital of the Province of Gilan, sixteen miles inland. The property over which the dispute arose was the palace of Shua-es-Sultaneh in Teheran, which, on account of his complicity with the attempt of his brother, the ex-Shah, to regain the throne, was declared confiscate by the Government. The contents of the palace were valued at $200,000, and Mr. Shuster, learning that the women were daily carrying off the plate, put five of his gendarmes, under command of Mr. Cairns, one of his American aids, in charge of the property. Colonel Merrill, the American commander of the treasury guards, instructed them not to interfere with any member of the family, but simply to take an inventory of the goods. Mr. Shuster wrote to the chief eunuch, assuring him that the ladies would not be disturbed, and sent the brother of one of Shua-es-Sultaneh's wives, who was in Mr. Shuster's service, to give assurances to the same effect. But the mother of Shua-es-Sultaneh telegraphed to the Empress Marie of Russia that the harem had been violated, and the Czar took up the matter personally and overruled the Russian Minister at Teheran, who had at first been disposed to disapprove of the action of the Russian consul-general in driving out the treasury guards with his Cossacks. The response of Great Britain to the appeal of Persia shows the determination of the British Government to support the Russian policy even to the extent of military occupation. Kier Hardie, the Labor leader, will question the Foreign Office in Parliament on its Persian policy.

**The Invasion of Tripoli**

Very little has been heard of the war in Africa during the week, probably for two reasons; first, because some of the correspondents left in disgust at the Italian massacres and those who remain can get nothing thru uncensored, and, second, because very little of importance is happening there. Sharpshooting and cannonading on the outskirts of the city have been continued with occasional fierce charges by Arabs and Turks. The heavy tropical rains have washed out the ramparts and filled up the trenches of the Italian fortifications, thus causing considerable suffering and impeding military operations. The high winds have often prevented scouting by aeroplane. Derna, Bangazi, Tobruk and Homs are similar-

ly engaged in defending themselves against the besiegers encircling them on the desert side. A French correspondent on the Turkish side reports that order and discipline prevail in the ranks, that the Arabs and Turks act together without dissension and that all ranks are inspired

THE INVASION OF TRIPOLI
Italian soldiers rejoice over the capture of the principal gun in the Sultania fort

with a fanatical courage and endurance. Obviously the Italians, tho never defeated, are far from victorious. It would be impossible for them to accomplish the subjugation of the interior when they have all they can do holding the seacoast towns under the guns of the fleet. The natives, however, can continue a desultory warfare for years, as they can live on the products of the oases, and ammunition can doubtless be smuggled in from some direction. The Italian people, inflamed with patriotism, are not in a mood to count the cost, but the expenses of the war are mounting up rapidly and must soon put an intolerable strain upon the finances of the kingdom, which in the best of times has a narrow margin. The Government has ordered the mobilization of 25,000 more men for service in Africa and appropriated $65,000,000 to defray the expense of the war until the end of the month. The anti-military protests of the Socialists met with no response from the people. In the municipal council at Rome Mayor Nathan rebuked the Socialist members in a patriotic speech and the session broke up in disorder, the peace men being beaten and hooted by the crowd. It is generally believed that Italy will be forced soon to abandon her exprest intention of confining the war to Africa and will by a naval demonstration in the Aegean Sea, or the closing of the Dardanelles, endeavor to force Turkey to a prompt capitulation.

*

**The Chinese Rebellion**

The contest between imperialists and republicans seems to have been a drawn game this week. Neither side has made any perceptible progress and the situation

has not become clearer. The nominal power of Yuan Shi Kai is greater than ever, but he seems unable to accomplish anything. An imperial decree relieves him of the obligation of daily audiences with the Emperor and of consulting with the Regent or anybody else before deciding upon a course of action. He was at first reported to be determined upon mobilizing the troops and making a campaign against the rebels in the southern provinces, but he seems to have changed his mind. Tang Shao-yi, a Yale graduate and stanch adherent of Yuan thru all his varied fortunes, is credited with having induced him to consent to await the decision of a general conference of delegates from all the provinces. The revolutionists are willing to hold such a conference at Wu-chang or Shanghai, but not at Peking. They claim the possession of eight out of the eighteen provinces of China and the sympathy of fourteen. General Li Yuan-hung, in his letter to Yuan Shi-kai, urges him to abandon the cause of the Manchus as hopeless. He reminds Yuan that less than three years ago they dismist and tried to have him secretly murdered and warns him that he will be treated with the same treachery again if he succeeds in maintaining them in power, quoting the proverb "When the rabbits are all caught the dogs are cooked." The Governor of the province of Shan-tung, now declared a republic, telegraphed Yuan that the abdication of the throne was the only way to save the country from ruin. Yuan replied: "Don't worry about the throne. Watch the Germans." In 1897 Germany seized the port of Kiao-Chow, in Shan-tung, as reprisal for the murder of two missionaries, and Yuan evidently fears that they will take advantage of the present confusion to extend their territory. Representatives of Yuan and of Li Yuan-hung met in the Russian consulate in Han-kow and arranged an armistice.——The child emperor on November 26, by the mouth of the Regent, made public confession of the unwisdom of his administration to the spirits of his ancestors, and took the oath to maintain the nineteen principles of constitutionalism recommended by the reformers.——Fighting has continued with varying fortunes between the imperialists holding Han-kow and the revolutionists in Han-yang, on the other side of the Han River. The foreign concessions in Han-kow along the bank of the Yang-tse have been in danger from the fires and bombardment. General Chang holds out for the imperial cause at Nanking, occupying Purple Mountain, which is 1,400 feet high and two miles northeast of the city wall. The revolutionists, however, are said to have captured the fort on Tiger Hill, which also dominates the city. The walls of Nanking, having a circuit of twenty-two miles, cannot be adequately manned by Chang's force, and altho they are forty to eighty feet in hight, they could not long stand against a bombardment from the rebel gunboats and siege guns.——The first massacre of foreigners occurred at Sian-fu in the province of Shen-si. The rebel general issued a proclamation ordering the destruction of all the Manchus, but not to harm the foreigners or merchants. The Chinese students and soldiers attacked the Manchu quarter and on the second day captured it and massacred men, women and children with horrible atrocities. Later a mob taking advantage of the disorder looted the shops of the city and burned the school of the Scandinavian Mission, killing Mrs. Beckman, five foreign children and many of the Chinese girls in the school, who, because they had feet of natural size, were mistaken for Manchu women. The post office at Sian-fu was also raided and a German in the postal service was killed. The rest of the missionaries were able to make their escape, but were attacked and wounded by bandits on their way to Tien-tsin. The rebel authorities at Sian-fu beheaded a number of the rioters, and the Imperial Government has exprest its regrets for the occurrence. ——Many cases of piracy on the rivers are reported, and bands of brigands, professing to be revolutionists, have entered various towns and levied toll on the inhabitants.——Dr. Sun Yat-sen, for many years the agent of the revolutionary cause in foreign lands, has left Marseilles for Shanghai. He takes with him General Homer Lea, the American author of "The Valor of Ignorance," who is expected to take charge of the organization of the revolutionary army. Dr. Sun has been for some days in London and Paris negotiating for loans and arms.

# Wanted—A National Business Court

BY GEORGE W. PERKINS

[We are glad to give to our readers this statement by Mr. Perkins. The article was prepared under his supervision, and has been revised and approved by him. Mr. Perkins was until recently a partner in the banking house of J. P. Morgan & Co., but resigned to give himself more time to the study of the question of uniting the interests of capital and labor.—EDITOR.]

THIS is the era of great business combinations, because it is the era of steam and electricity, instant communication, and swift and economical transportation. Electricity more than aught else has been the creator of our modern corporations. In the day of the stage coach no one could transact a large business. There were no stenographers, no typewriting machines, no telegraphs, telephones, express trains, or ocean greyhounds. Today a merchant anywhere in civilization can, in the morning, quote a price on his wares to any other point in civilization, and have his answer by night.

Ruthless competition by ox team could never be very serious, but ruthless competition by electricity spells bankruptcy. Competition means the success of one, the failure of another, cruelly low wages at one time, with the public paying the bills at another time. It means uncertainty always.

Competition, it is often said, prevents monopoly, and the claim is made that monopoly fleeces the public always. Real business competition under present conditions would be too destructive. Private monopoly complete and unrestrained would also be intolerable. Therefore, to my mind, there must be co-operation. I mean a system of doing business by which all parties interested will enjoy the benefits of the business—and I believe we have reached the stage of development in this country where we can safely undertake the organization of our business fabric along these lines.

The millennium has not yet arrived, but no thoughtful man will deny that there has been a great awakening of the business conscience in recent years. The old motto, "Honesty is the best policy," in place of being a more or less beautiful sentiment, is coming to be more of a practical reality. To be honest now means not technically, legally honest, but broadly, humanely honest—honest in thought, in purpose, in act. Man is still selfish. I believe that with the awakening of the business conscience is coming what might be called an enlightened selfishness, by which I mean a realization that for one's own best pecuniary interests the methods of the past cannot be the methods of the future; that as we are living in a "get together" age we must do business on a "live and let live" basis, and that one's own selfish interest makes business on a co-operative basis more profitable in the long run.

But just as surely as you cannot have competition unless it competes, so just as surely you can only have co-operation that co-operates. I mean by this, co-operation in any given line of business will fail unless it is co-operation between labor and capital, between capital and consumer, between company and government. The great educational system of this country, fostered by the State and wealthy individuals, has made tremendous strides in the last quarter of a century in developing the independent thinker among the masses, with the result that the question between capital and labor today is not so much the amount of wage a man should be paid as it is whether that wage is a fair proportion of the earnings of the business. The closer the world is drawn together and the better people know each other, the better they understand each other and the more impossible it is to adopt and pursue secretive methods—to obtain for any one branch of a business unfair and improper profit. Swift intercommunication has sounded the death knell of secretive methods. More and more is public opinion demanding full, open and honest accounting from business concerns, and those far-sighted ones which adopted such methods a few years ago are having less trouble with the public and their labor than others, because what the profits of

GEORGE W. PERKINS.

the business are and what percentage labor is receiving in wages is known to all.

Practical experience in recent years in certain large industrial companies has shown that a fair wage, supplemented by a profit-sharing plan, will go a very long way toward promoting harmony between capital and labor. By profit-sharing I do not mean bonuses or gratuities, but rather a definite statement made to an organiza-

tion at the beginning of the year as to what is expected of it, and that, if such expectations are realized, certain extra compensation will be paid, and paid not in cash that can be immediately spent, but put in some security that represents an investment in the business. Most profit-sharing plans have failed because they did not make a partner of the worker.

Broadly speaking, I think that an industrial company should be organized in the following manner: The brain workers and hand workers should be paid their regular compensation for earning the interest on the bonded debt and dividends on preferred stock. If by successful management they earn more than this, it would under modern arrangements go to what are known as common stockholders, and at this point the organization of brain workers and hand workers should share with the common stockholders in the profits made for the common stockholders, and share on a definitely stated basis, varying according to conditions in different lines of business. Where this has been tried it has been found eminently successful.

The trust has developed naturally by reason of modern invention. It furnishes a more economical and efficient way of doing business, and we must remember that we do not stand alone in the world. There are other nations keenly alive to commercial advantages, and if we fail to adopt the best methods, how are we to retain our place in the forefront of industrialism?

But it is sometimes argued that in spite of any benefits which they may confer upon the country, trusts do so much and such widespread mischief that the duty of the Government is to suppress them, to break up their combinations, and to compel the component firms and companies to do business in competition with one another. And many of our lawmakers have been studying how to effect this most thoroly.

Would it not be better to preserve the acknowledged good that is in the trusts and eradicate or curb the evil? The situation that confronts our Government is not entirely new. It is paralleled by the railroad situation of forty years ago.

There has been no more wickedness up to date in the management of industrial than once existed in the railroads. All sorts of cunning, underhand devices were resorted to in the past by some men in the railroad business to fleece the public and build up private fortunes. Yet the Government did not destroy railroads on that account. Instead it studied the situation and then corrected abuses. We have solved the problem of how to compel even dishonest men to make pure food; we have learned how to enforce public control of large banks; we are not afraid to use steam because it can scald; nor dynamite because it can explode; nor the express train because it can jump the track; nor the sixty horse-power automobile; nor even chained lightning; but we are afraid of dishonest, corrupt, unfair and supremely selfish men. The art we must learn is to supervise, regulate and control the actions of such men.

The Government of the United States is peculiarly well fitted to deal with trusts, itself being a trust. Our Constitution starts with the declaration: "We, the people of the United States, in order to form a more perfect union." The central thought of these men at that time was to effect a consolidation; to organize a holding company with thirteen subsidiary companies; to create a monopoly in government in this country—and they said they did it to "establish justice, insure domestic tranquillity, provide for the common defense and promote the general welfare." From that day to this, when any new government in this country set itself up as such, and grew strong enough to be recognized as such, the original holding company took it over, absorbed it, and put it out of business as an independent government. It still had the right to retain its local self-government, but it had to swear allegiance to the holding company, and be loyal to the officers and policies of the said holding company.

Almost an exact parallel has occurred in the development of our great corporations. At first the idea of a holding company—of a great corporation that supervised, with advice and counsel, the smaller and perhaps weaker concerns, was considered so novel as to be almost revolutionary and unsafe. In bringing some of these holding companies into existence fights and battles took place. We are told that some subsidiary companies were forced to join the holding company; but that spirit has passed away. The

small company has been seeking admission to the large company, realizing where its best interests lie.

There is no question but that evil practices have been indulged in, in corporate life. Men have done things they should not have done, and it is the duty of State and Federal Government officials to investigate and find out what these evil practices are, that they may be eradicated.

In view of all these facts and circumstances, our Congress might be expected to view the recent developments among our great business enterprises with understanding and some sympathy. But that is not the case. Congress has appropriated money to find out what crimes these concerns have committed and what evil practices they have indulged in, but, so far as common knowledge goes, it has not taken one step to ascertain what good these concerns have accomplished and whether or not there is anything of benefit and value in them that should be preserved to the people. Its slogan has seemed to be "Millions for destruction, but not one cent for construction."

I think that the reason is to be found in the sort of men who comprise Congress. Few of them are familiar with the great problems of business or industry. Before the War of the Rebellion, American business men took a keen interest in public life and affairs. Merchants were governors of States, mayors of cities, members of the legislatures and of the National Congress. But at the close of the war the most vigorous and alert of our men realized the vast commercial possibilities opening up before a free people in a free land, under one centralized government, and seeing there the greatest field for the exercise of their powers and talents, threw themselves into the struggles of business and commerce as determinedly as they had done into the others.

After thirty years of this commercial upbuilding by these giant sons of giant minds, and thirty years of neglect of public duties and questions, these men found themselves with our business world full of mighty minds and our political world full of politicians. We were at peace with the outside world and among ourselves. By leaps and bounds, with the inventor's help, we were becoming at least a formidable rival in the world's commerce. We were growing rich in ability, in trade, in money. Here our new troubles began. The fabulously rapid growth of our business staggered the people and, in place of investigating to find the real causes that had brought about such results, our politicians, by the passage of the Sherman Act, declared war on the business methods being adopted by the business men of this country. In the struggle that has been going on both sides have erred, as men have in all wars, but now that our Supreme Court has said that we, as a people, are entitled to proceed in the light of reason, does it not behoove us all to lay down our arms and enter the reconstruction period?

Congress has ignored every suggestion by Roosevelt, by Taft, by Wickersham, looking toward any method that would preserve any good there is, any benefit or advantage there is to the people in large business undertakings, and has seemed content to let the country drift toward business chaos.

What has given us the sweatshop? Competition.

What has given us child labor? Competition.

What throws labor out of employment? Competition.

What causes low wages? Competition.

What brings panic and failure? Competition.

And what is our Congress at this moment calling loudly on our Attorney-General to enforce, even to the door of the jail? Competition.

The Congressman who stands for a literal enforcement of the Sherman Act stands for the sweatshop and child labor.

Competition produces the two extremes —millionaires and paupers; while cooperation looks toward more stable conditions and a more equal distribution of wealth.

The Sherman Law as it stands was passed by Congress without the people having had an opportunity to vote on it. Recently they have voted in favor of its amendment. The National Committee of the Republican Party, in June, 1908, adopted the following as a part of its platform.

"Trusts. The Republican Party passed the Sherman Anti-Trust Law over Democratic opposition and enforced it after Democratic dereliction. It has been a

wholesome instrument for good in the hands of a wise and fearless administration. But, experience has shown that its effectiveness can be strengthened and its real objects better attained by such amendments as will give to the Federal Government greater supervision and control over, and secure greater publicity in the management of that class of corporations engaged in interstate commerce, having power and opportunities to effect monopolies."

The Democratic Party at the same time, in the trust plank of its platform, among other things, declared for a policy that would prohibit the control by a "manufacturing or trading corporation, engaged in interstate commerce," "of more than 50 per cent. of the total amount of any product consumed in the United States."

With these platforms the respective parties went before the people of this country in a vigorous campaign. Each party attacked the other's platform and the subject was debated pro and con all over the land.

With such issues, and after a vigorous campaign in which they were fully and ably debated on both sides, the public, by a plurality of over a million and a quarter votes, returned the Republican Party to power in both the legislative and executive branches.

But after the election Congress did nothing to carry out the evident wishes of the people, and those responsible for the failure have since been condemned and significantly repudiated at the polls.

Can any one fail to reach the conclusion that the people of this country regard the trust question not as a legal question, not as a question of percentages, but as a moral question? To refuse even to attempt to modify the Sherman Law along the lines indicated in the Republican National Platform is to refuse to strengthen the moral law; to refuse to refine and punish wrong-doing; to permit the throttling of business, and to "mingle the innocent and the guilty in a common condemnation."

Chaotic conditions now exist in the corporate business world. At present it is impossible for any large interstate industrial company to know definitely whether its form of organization is legal or illegal. And there is a feeling on the part of the executives of the Government that they are in honor bound to go on and apply the law as they understand it to other large industrial companies.

Attempt to sweep the country back into the old era of ruthless competition, which would be the direct consequence of a vigorous enforcement of the Sherman law, and there will return the evils of deceit and fraud in business, violent fluctuations in prices, the deliberate driving to the wall of weak concerns, and the eventual creation of monopolies by survivors.

As a remedy for the present intolerable situation there should be established in Washington a business court to which our great business problems could go for final adjustment when they could not be settled otherwise. We now have at Washington a Supreme Court, to which is referred the final settlement of our legal questions. This court is composed, of course, of lawyers only, and it is the dream of every young man who enters the law that he may some day be called to the Supreme Court bench. If such a call comes, it matters not how lucrative his practice, he always drops it for the honor conferred. Why not have a similar goal for our business men? Why not have a court for business questions, on which no man could sit who had not had a business training, with an honorable record? This would surely come to be regarded by business men in the same way that the Supreme Court is regarded by lawyers. The supervision of business by such a body of men, who had reached such a court in such a way, would unquestionably be fair and equitable to business, fair and equitable to the public. Furthermore, it would not take out of business that invaluable asset, individual initiative. It would leave the every-day management of business untrammeled and allow men free swing to devise ways and means to improve, enlarge and develop domestic and foreign commerce.

New York City

# A Thanksgiving of Memory

BY LEONARD HATCH

"READ the last half of it again, Jane," I said, "the part about Thanksgiving."

So my wife put on her spectacles, and found the letter that had come to us from our son Henry that morning by the rural delivery. She read aloud:

Writing as I am just before Thanksgiving makes me think of your suggestion that I come up to the old home again to spend Thanksgiving Day with you. Dear father, how I should like to,—for the sake of seeing you and mother. But I have my wife and boys and of course I can't leave them. And I don't exactly like to ask them to come with me. They would be glad to please me, but my wife, you know, is delicate and used to furnace heat, and for that matter I don't know how I should stand the sudden change. As for the boys, for three weeks they have had their plans for the celebration of Thanksgiving all laid. They made me promise to take them to a comic opera in the evening. They would be heart-broken if any other plan should interfere. Some difference, eh, dad, between comic operas and the pop-corn and cider that used to make up my evening celebration? And really, I don't think one can have so much fun at a comic opera as scorching one's face before an open fire. But they haven't been brought up to feel that way,—that's all.

"My dearest love will go out to you and mother all thru the day."

Jane folded up the letter and pushed back a lock of gray hair.

"But it isn't just the same as if he was here," said she.

I made no comment. Then, "Read what Annie wrote you," said I. It was no added pleasure to me, hearing these letters aloud, but my eyesight isn't what it used to be, so Jane uses her eyes for us both.

She unfolded the letter from our daughter Annie who does typewriting and such-like work in a big city office. The first part of the letter was about some money she was sending us, but the last part of it was something like Henry's. This is what my wife read me:

"Things have been going splendidly lately. I've been given a raise in salary. And I've moved to a new room uptown which is much nicer.

"And now, mother, you must,—you just simply *must* come to see me this winter sometime, you and father. I can easily find a good place for you to stop, and we will see the town together, the stores, and theaters, and everything.

"I should like awfully to come up Thanksgiving, but I don't believe I better. Of course they might very likely give me a couple of days off at the office if I asked them. But I should lose just that much time, and work, work, work, day after day without stopping is what counts in this city.

"Perhaps Henry is going to be with you. I haven't heard. But whether he is or not, you and father must have the big dinner just the same."

My wife slipped the letter back into its envelope and took off her glasses. "Just the same!" she echoed softly to herself as she stared into the fire which roared on the broad hearth before us. "Just the same!"

Our Thanksgiving Day was almost over. It was our bedtime, but we two lingered there before the blaze. After the reading of the letters we did not speak.

In the story books old folks at a time like this always hold each other's hands or weep. But we did neither—just sat there staring into the fire, my wife knitting and I puffing at a pipe I've had since the war. How long we sat there I don't know, but by and by an oak log broke and fell apart with a shower of sparks. The fire died down. Jane folded up her knitting, rose, and lighted one of the glass hand lamps.

But before she went up to bed she came over and laid her hand on my shoulder.

"Anyhow, we can think of the old days," said she.

And so I sat alone and thought. . . .

It surely has been different to-day from Thanksgiving years ago. We got those two letters over a week since, and determined, Jane and I, to follow old customs and try to forget that our children weren't by us.

But Lord,—everything's different! When Henry and Annie used to be youngsters here, Thanksgiving was in the air weeks before the calendar got round to that Thursday.

It gave me a queer tight feeling round the throat the other Sunday to hear the Thanksgiving Proclamation read out in church. A different Governor writes it now and the words aren't alike any two years, but it's the same old Proclamation for all that. It still has all about "those blessings which the bountiful hand of Providence has bestowed," and so on. Henry used to like these proclamations. Said he wished they'd have them for Christmas and Fourth of July as well. He used to watch every Sunday in November till the day came when the minister would unfold the big crackling sheet and read aloud. When he began I remember how the boy used to grin and mutter "Turkey! Turkey!" under his breath; but by the time the end came with "In the year of our Lord" and that final phrase, "God save the Commonwealth of Massachusetts," I used to hear the lad catch his breath and see him staring with round eyes at the Proclamation. When it was read the other Sunday I saw him there beside me, though Jane and I were the only persons in the pew.

And then the turkey. We had one particularly big fellow all picked by the first of November, and then we turned in to feed him up. It used to be Annie's task to fatten up that bird for a month, and a good job she made of it, tho before she was in her teens she used to get so fond of the old fellow she'd beg me not to kill him after all. But once he was killed and dressed and singed and ready for the oven she was interested enough.

She was a great little cook, too, Annie was. Used to help her mother make the cranberry sauce and the pies. Made a mince pie for me once with a sort of a man-in-the-moon face cut in the top crust, and then, I recollect, didn't want me to eat it after all. She could bake bread, too, as good a loaf as her mother's. Precious little of that sort of thing she does now. She's too busy working a typewriting machine and doing shorthand writing to bother herself about cooking and housekeeping. A fine hand she'd have made about the house here in the country, if she'd been content to stay.

A fine wife and mother, too. I never saw such a hand with children as she was. Now she's in the city, she has no time to think of such things. Once when I said something to her about marrying and settling down, she only laughed and said she had her work to look after first of all. Jane and I must be getting old-fashioned; we don't exactly understand such matters. If the world is going on, somehow it seems to me that the women have got to be willing to put aside typewriting and such-like for the sake of getting married and having children and bringing them up. But then, I'm old-fashioned. Besides, Annie's my daughter and I'd like to see her in a home of her own. But I'm not complaining. In five years she's risen to be a sort of secretary in the city and that's something to say of your flesh and blood,—even if it isn't like having grandchildren.

Somehow these things have all been running thru my head to-day,—I suppose because I helped fix up the turkey just as I used to and watched Jane boiling and baking in the kitchen. For we *did* have our big dinner, just Jane and I, as the children wanted us to. It was the least we could do for them. Besides, Henry sends us more money than we know what to do with. It isn't everyone that's got a son like that.

So we had the big dinner, we two, and ate away at the turkey. But there was enough of it left to last us thru the week. Neither Jane nor I said much about the children, but each of us knew the other one was thinking of them. When we'd stuffed our elves on turkey

and cranberry sauce and sweet potatoes and beets and onions and squash and what not, we still had the pies to tackle. And that made me think of what Henry used to do when he was a little shaver. I told him once that if he'd get up from the table and run round the chimney it would sort of shake down what he'd ate so that he could hold more. And he believed me, and when he was stuffed full of turkey clean up to his necktie he'd hop up from the table and trot to the parlor and then into the kitchen and so back to the dining-room again. As there's a chimney runs up thru the center of the house he'd come back satisfied and eat half a pie.

Most likely down in the city to-day he's been telling his children some story of the same sort. He's got two fine boys, Henry has. One of them he's named after me. And it is a fine, sweet girl he married, good as anyone need ask for. To be sure, she don't like the country; but then, she was born and raised in the city, so that's not her fault.

Sometimes I can't help wishing Henry'd stayed at home here and kept up the farm now that I'm too old to run it, or had settled down on some other farm hereabouts. He had it in him to make a great farmer. I knew it, and he never denied it himself. He had the gift of it. When he wasn't much more than a lad he could make things grow on a side hill that was too much for me. And he could pick out the best horse from a score in less time than it would take most men to walk round the bunch. But he got it into his head that he wanted to go to the city;—thought he could get higher in the world. Perhaps he's right. That's what all the young fellows think nowadays. Not a farm within three miles of here but what the city's stepped in and taken some of the young folks. The one right next mine, Rathbone's it was, is clean deserted. I suppose this will be some day. It's all right, most likely. But I remember thinking, when I was visiting in the city, that it was kind of funny that all those folks should be huddled together without any room or any air to breathe, when all this land here in the country is going wasting. Seems sort of uncivilized to me to live where the real earth is all covered with bricks and pavements and almost the only trees grow in parks and have men to water them and have labels tacked to them telling what they are. It doesn't seem human to me, but then, I don't understand much about cities or why folks like to live in them.

And I guess Henry *does* like it, and likes making lots of money from being in business. He can go from his house to his office without being under the sky more'n fifty seconds, and that's something one can't do in these parts. But I sometimes wonder whether he wouldn't have been just as happy running a farm up here. To be sure, he couldn't have had that wife. But there was Fanny, that he used to be in love with here. When he went to the city he meant to come back and marry her, but he never did. I never spoke to him about it, for there are some things that even a father can't talk about to his boy. Fanny's never married. She's pretty near an old maid now, and teaches school. She always has a pleasant word for me when I see her. Perhaps she's forgotten Henry. I hope so. But I'm not so sure.

I'm drifting a long way from that Thanksgiving dinner Jane and I had together. It wasn't very jolly, any more than Christmas is nowadays. I tried going round the chimney before the pie. But it did no good. All the way round I kept thinking of the youngster and when I got back to the table I felt less hungry than before I got up.

When we got thru the meal we cleaned everything up and came in before the fire, and I read the letters from Annie and Henry—using my wife's eyes.

I wish sometimes I had had a better education, like the minister or the lawyer down in the village. Most likely they understand all these things. I don't. And the more I think, the more puzzled I get. I often wonder why it is that folks in the country who have children and rear them up and suffer for them, should have to lose them after all. And a good deal of the time it's the city gets them. Why is it? I've been to the city, and seen it and heard it and smelt it. But even now I don't understand any better. How has the city got

a bigger claim on my boy and girl than their native town has? I can't see. But I'm an old man, poorly educated and old-fashioned.

The last smoldering log on the hearth dropped into glowing coals. And I was sucking at my pipeful of dead ashes.

Perhaps it may seem that all this mass of recollections and ignorant perplexity was spoken out by me, was told aloud to the andirons at my feet. Yet it was all merely the thought and memory which passed thru my mind as I sat alone before the fire.

I rose, lighted my hand-lamp, and blew out the large lamp on the center table. Then I buried the glowing embers deep in ashes to keep the fire till morning.

My wife had spoken well. "Anyhow," she had said, "we can think of the old days." And she's right. Neither the city nor anything else can take that from me. That alone is cause enough for a Thanksgiving.

BROOKLINE, MASS.

# A Thanksgiving Song

BY ANNETTE KOHN

ALL our days
We give Thee praise.
O God, who holdest in Thy hand
And didst exalt and bless our land.
And gavest it from sea to sea
To all embracing liberty,
We give Thee praise
All our days.

For the golden glow of the orange tree,
For the purple grapes—for the honey-bee;
For the waving plumes of the yellow grain,
For the glorious sunshine and for the rain;
The coal in the mine—the ore in the hill—
The throb of the engine—the whistles shrill.
The fire of the forge, and the anvil's ring,
For the tinkling "'phone" and the cable string;
The whir of the loom, the clack of the mill,
For the "auto's" speed and the air-ship's thrill;
For the horse of flame on the road of steel,
And the voiceless voice that makes loud appeal;
For our busy marts and our busy streets
Where the white, black, brown and yellow man meets-
For the strong true arm of the workman brave,
For our churches and schools with power to save—
For hearts of our women—brains of our men,
For the laureled harvest of brush and pen—
For the wealth of herds on the prairies wide,
For the new homes rising on every side,
For the law that shields where our flag is unfurled,
For peace in our land and with all the world—
For our mighty name, in all men's sight
The pledge we must walk for aye in Thy Light,
All our days
We give Thee praise.

NEW YORK CITY

# Egyptian Art at the Metropolitan Museum

BY RICHARD GOTTHEIL

[The recent opening to the public of the Egyptian collection in the Metropolitan Museum of New York marks an important advance in the steady acquisition of valuable material by American institutions. The author of this article is professor of Semitic languages at Columbia University and head of the Oriental Department of the New York Public Library. He has traveled and studied in Europe and Asia Minor, and is a member of many learned societies.—EDITOR.]

THE opening of the new wing in which the collection of Egyptian antiquities is housed has given an opportunity to many of us to renew acquaintance with the ancient civilization of the land around the Nile. There is, perhaps, no country which has had so fascinating an artistic history as that in which the Pharaohs ruled. This history stretches from the dim dawn of things human, from the times of prehistoric man, almost down to our own days. As successive dynasties, peoples and religions have ruled over the land, each one has done something to add to its architectural and artistic glories. The hand of time, which in other parts of the globe is so ruthless, has been held in check by atmospheric and geological conditions, so that the story of this development may be read and studied as in a book, when once that book has been opened up for us. Egypt remains the land of wonders. The works of prehistoric man—of Egyptians, Persians, Ptolemaic Greeks, Coptic Christians and Arab Mohammedans — all pass before our wondering eyes, clad in a coat of many colors and tinted by atmosphere and sun, as is possible only on that soil. Whatever the hand of man has spared, the generous sand of Egypt has preserved, in order that we of the twentieth century may admire the works of generations so long gone by, and lose some of the conceit in our own accomplishments.

It is good to know that our own country is taking a hand in thus unearthing the records of the past. The generous liberality of Mr. J. Pierpont Morgan has made it possible for the Museum to keep an expedition in the field since 1906. This expedition has been under the competent guidance of Mr. Albert M. Lythgoe, with whom have been associated Mr. Arthur C. Mace and Mr. Herbert E. Winlock. The principal excavations have been carried on around the two pyramids and the near by cemeteries of Lisht, a place about 35 miles to the south of Cairo, between the pyramids of Dahshur and Sakkara on the north and of Medum on the south. The investigations of M. Maspero, Director-General of Antiquities in Egypt, made in 1882, and the excavations of the French Institute of Oriental Archeology at Cairo, carried out in 1894-1895, had identified these pyramids as having belonged to Amenemhat I and to his son, Senusert I, kings of the so-called twelfth dynasty, which ruled in Egypt between the years 2000 and 1788 B. C. But this is not the only spot that the expedition has examined. In the Oasis of Kharga (the "Outer Oasis"), to the west of Thebes, a Christian necropolis and a portion of the ancient city of Hibis has been explored. The tomb chapels of the necropolis have been studied, the streets and buildings of the city unearthed; and there seems to be every indication that the city was still standing as late as the fourth century of our era.

We shall look forward with much interest to the further investigations in the Kharga Oasis, for at Hibis a temple of Darius I has been uncovered which is supposed to be the only existing monument of the Persian domination in Egypt. We shall want to know much more about this temple, for the temple is altogether Egyptian in style and the Persian king is represented upon its walls as reverencing the gods of the land, exactly as if he were to the manner born. In this the easy tolerance of these Persian kings in religious matters is

shown; for, in the same way, they allowed the Jews to rebuild their temple in Jerusalem, and caused incense to be burned upon the altars of Apollo and Artemis at Delos.

In addition, the expedition intends to provide for the Museum exact copies and photographs of the principal monuments of Egyptian art which cannot be moved from their present resting place. This is of especial moment in Egypt, where the decoration of the walls of the tombs furnishes us with the best contemporary source of information regarding the life of the inhabitants. Whenever this was possible, the representations were cut into the solid stone. Where this was impossible, the space was covered with lime plaster or stucco and painted. The colors are often as vivid as when first put on, and modern processes can reproduce these colors with almost absolute exactness. A beginning has been made with the mural paintings in the wonderful necropolis at Thebes, more especially at Sheikh Abd-al-Kurneh. They belonged to the people of the eighteenth dynasty (1580-1315 B. C.), the dynasty of the Thutmoses and Amenhoteps, when Egyptian art reached its highest development. It was in these tombs that the great functionaries of the kingdom found sepulture.

The great value of the exhibit at the Metropolitan Museum can only be estimated properly if we remember that archeological investigations are carried on today in a manner very different to that which was in vogue in former times. The excavators no longer seek—as they did then—for beautiful pieces of art and architecture with which to deck out museums and to catch the eye of the wandering visitor. Each layer, as it comes to light, is carefully studied and photographed; each building and each object. In this manner the history of each building is followed back to its

THE EXCAVATIONS OF 1906-1907
Temple of Seti I at Luxor, by the expedition of the Metropolitan Museum

beginnings, and to each object is accorded its proper place in the civilization of which it was a part. Upon the basis of these notes and photographs taken on the spot, the various objects are arranged and reconstructed when they reach the museum, and with a care that is not at all apparent to the casual passerby. Very few are in a position to imagine the painstaking labor that is put into this part of the work.

Take, for instance, the coffin of the lady, Senbtes, found in the cemetery to the west of the pyramid of Amenemhat I at Lisht (ca. 1950 B. C.). The tomb in which it was placed is one of the few that has remained nearly intact. It is true that even this tomb has not entirely escaped the sacrilegious hands of cotemporaneous robbers. But the ghouls seem to have been surprised after they had had time only to strip off the gold that covered the edges of the outside coffin. The pottery that had been placed in the outer 'offering chamber" —two hundred and seven pieces of small model vases and saucers, larger dishes with offerings of ducks, joints of beef and the like—was all intact. The inner chamber had hardly been touched. A long, narrow box containing a mace head and the remains of three wooden staves; the canopic niche with its box containing the canopic vases (alabaster with wooden covers in the form of heads), and the coffin itself, were found practically as they had been set there. The outer one of the triple coffins had, it is true, crumbled away; but the two inner ones could be studied, and the second one brought to the Museum. Inside the second coffin were found staves, maces and a complete ceremonial whip; while the face mask was ornamented with inlaid beads of cornelian and glaze. On the body itself the valuable personal adornments of the lady had been placed. But these were all embedded in the pitch which had been poured over the body. By most heroic efforts all these adornments were saved; bead by bead and piece by piece they were dug out of the pitch, and with infinite labor put together in their original forms. Before even the coffin was moved from its resting place, the gold leaf which had fallen to the ground was replaced bit by bit along the edges; a piece of work that required weeks of persevering effort in the tomb itself.

All the various Egyptian antiquities that have been gathered in the Museum from various sources are now exhibited in a series of ten rooms. Here the student can follow the history of Egyptian civilization from its earliest beginnings in the neolithic period. Even in these predynastic, primitive times (between 4000 and 3400 B. C.) stone and pottery vases were turned out which are remarkable for their accuracy of design, considering that they were fashioned with very simple instruments. Some of these have already rude representations of boats and ostriches—presagers of the love for decoration which animated the later inhabitants of the land. Even the rude civilization of paleolithic man is represented by a series of flint instruments, tho we are left quite in the dark as to the relation of these beings to the neolithic inhabitants, who came after them.

From the predynastic period we pass to the early dynastic—the period of the Ancient Empire (3400-2000 B. C.). This covers the reigns of the first eleven dynasties, during which time the tremendous pyramids were built near to Cairo which all travelers admire. Specimens of the art of this period are to be found in the first two rooms of the exhibition. We have very beautiful examples of stoneware—nearly all of transparent alabaster—dishes and vases dating from the eleventh dynasty and coming from Sakkara; from which place come also the granite wall-reliefs of the tomb of Ra-Em-Ka, of the fifth dynasty (2750-2625 B. C.). Some of the scenes on the relief are exquisitely cut in sunken relief. Curiously enough, one or two figures not having been completed, the pencil tracings made for the cutter are still visible on the stone. A very interesting collection is that of slate palettes, in the form of birds, turtles, and fishes, on which eyesalves were prepared.

In the third room, given over to the transition period between the Ancient and the Middle Empires, one notices an excellent model of a pyramid and of a pyramid temple, made in conformity with the remains of that of King Sabum

at Abusir (fifth dynasty). One can study the whole arrangement of these mighty houses of the dead; the gateway-temple at the foot of the causeway which leads up from the Nile Valley, the temple itself with its many rooms and corridors, and back of this the pyramid-sepulcher. Painted wooden figures and statuets from Thebes (sixth to twelfth dynasty, 2625-2000 B. C.) show us how expert the Egyptians had become in the handling of wood as well as of stone and metal; which will not surprise those who have been accustomed to admire the "Sheikh al-beled" (city-mayor) in the Cairo Museum. Equally interesting are the pottery models of houses and offering tables from the tombs at Rifeh near Assiut and dating from the eleventh and twelfth dynasties. Tho they are very rude in workmanship, they are invaluable in giving us an idea of the house-architecture of those days, the primitiveness of which contrasts so glaringly with the magnificence of palace and temple.

PREDYNASTIC DECORATED POTTERY
4000-3400 B.C.

In the fourth room are the remains of the tomb of Senbtes described above. From Lisht come also five interesting mason's mallets, quite similar to those which we use today, and left there by these ancient masons after they had finished their job. Their worn condition is evidence that they had been well and faithfully used. In this room there is also a series of small boats from a cemetery near Asiut (early twelfth dynasty), fully equipped so that the soul might make use of them in their journeyings through the lower world.

The fifth room is devoted to the Middle Empire (eleventh to thirteenth dynasties) when Thebes was the center of power. It was at this time that extensive constructions were reared at Lisht, where the most successful undertakings of the Museum expedition were situated. Particularly noticeable in this room are some painted limestone reliefs, where the original coloring has been preserved by the Museum authorities in its admirable freshness, tho the stones have been treated in an heroic manner in order to preserve their outer facing. A large altar of red granite from the temple of Amenemhat I (2000 B. C.), on the top of which are depressions and markings, reminds the Biblical archeologist of similar altars found in Palestine. The excavations at Lisht make the museum collection especially important for the study of Egyptian art during the Middle Empire; a period in which ambitious extensions of territory into Nubia were attempted and the beginnings laid for those raids into Syria which carried Egyptian influence into the North.

In the two following rooms we come to the period of the great Pharaohs, the Thutmoses, Rameses and Amenhoteps, the New Empire (1580-945 B. C.), when Egyptian arms were pushed up into Asia, and Egyptian power measured itself with that of the Hittites and Assyro-Babylonians. It was at this time that the great religious reform was inaugurated by Amenhotep IV, who tried to substitute for the confused and overburdened religious ceremonial of the country the worship of the sun-disk as the great universal power. Some reminiscence of this attempted change is to be found in the inscription upon the

breast of the statue of Thutmosis III "The good god Men Kheper ra (Thutmosis) beloved of Amon," from which the name of the god Amon has been erased, in a mutilated statue of Amenhotep III, on which the same name has been rendered illegible, and in a head of the statue of the god himself, the nose of which has been wilfully broken off. We are, also, in a position to see how ancient the rifling of tombs is in Egypt. The custom of making the tomb a representation upon a small scale of the surroundings of the defunct during life, of putting there all those things that he was accustomed to use, excited the cupidity of marauders at a very early period. At a later time the priests gathered together the fragments of pottery and cloths which the thieves had left and carefully sealed them up in jars, which were then buried. Some of such jars, found in the valley of the Tombs of the King at Thebes, where Mr. Theodore M. Davis has done notable work, are exhibited here. From the same place come three wooden "ushabtes," figurines which the naïve faith of the times believed came to life and aided the dead in whatever manual labor they might be called upon to undertake.

PORTRAIT PANEL FROM THE FAYUM
Second and Third Centuries of the Christian Era

A noteworthy feature of the sixth room is a complete offering chamber from the tomb of the "Superintendent of the Treasures Sebek-Mes," found in a necropolis of the nineteenth and twentieth dynasties (1315-1090 B. C.) at El-Rezekat in Upper Egypt. Every stone of this chamber has been brought over and set up in its original position. We

have here depicted various scenes from the life of the "Superintendent," as well as the arrival of his body in the lower world. Here, also, ruthless hands have commenced to efface some of the pictures; probably with the view of using the stones for other buildings—even for other tombs. One is led to wonder at the utter want of respect for the dead shown by a people who are supposed to have held their religious observances in high esteem.

From an artistic point of view, perhaps the most beautiful piece in the whole exhibition is an alabaster canopic jar (Room 6), the lid of which is the portrait-head of Queen Teye, the wife of Amenhotep III (1410-1375) B. C.), and mother of the reforming king Amenhotep IV. There are a wonderful grace and dignity about the features which easily mark it as the work of an expert artist. The visitor ought to examine this in connection with the head of an obsidian statuet (Room 4) and the bronze statuet of the goddess Neith (twenty-sixth dynasty) in Room 8, to understand the charm and delicacy with which the Egyptians were able to inform their work. Not all the laurels in this respect must go to Greece and Rome.

In the ninth and tenth rooms we reach the Roman and early Christian periods (30 B. C. to 640 A. D.). Two new civilizations have come over the country, the Greco-Roman and the Byzantine-Christian. From the artistic point of view it is the first of these two that has had the greater influence. Yet, the old ideas and customs linger on, and that which is new is interwoven into them. We have an excellent example of this in the mummy and mask of Artemidora, which is exhibited in all its glory. It dates from about the year 100 A. D., and was found at Meir in Middle Egypt. The whole burial is Egyptian in character; but strong Greek influences are seen in the portraiture of the face and in the rich gold and colored ornamentation on the coffin. These European influences grew stronger as Christianity took a firmer hold on the people. They are seen in a number of portrait panels from the Fayum, which were placed over the dead person's face in lieu of the mask used in previous times. They are either in encaustic on wood or painted in full length on linen. They surprise us by their richness of coloring and by the vivacity with which certain traits are reproduced. The Egyptian painting art was cutting itself loose from the bonds of tradition. But it was soon to be driven into a corner by the ascendancy of Mohammedanism, with its distaste for the reproduction of the human and animal figure.

Very little interest has been exhibited, until quite recent times, in the art and architecture of the Copts, the Christianized remnants of the old Egyptian inhabitants. And yet they well deserve careful study. It was thru the Copts that Byzantine art found its way into the Nile Valley; and it was thru them again that both Egyptian and Byzantine elements passed over to the Arab conquerors. We shall, at some future time, have an excellent opportunity to become acquainted with this period—old for us, new for Egypt. The expedition of the Museum is investigating a number of early Christian sites—notably the cemetery at El-Bagawat in the Oasis of Kharga, and the very interesting Coptic monasteries in the Wadi Natrun, in the heart of the desert, some one hundred kilometers northwest of Cairo. The cemetery of El-Bagawat dates from the fifth century A. D. It contains the graves of humble folk which have not tempted spoliation as have those of kings and nobles. In addition, they are well preserved. As many as two hundred tomb chapels have been found there, which promise a rich yield of architectural, epigraphic and ethnological material for this period.

The work in the Wadi Natrun is being done in co-operation with the Museum of Arab Art at Cairo. It bids fair to be very fertile of results, as the ornamentation of the monasteries is due in a large measure to a Syrian monk, one Moses of Nisibis, and we may expect to find traces of Mesopotamian influences. But it is already possible to get some idea of this, the last stage of Egyptian art, from the sculptures coming from the Monastery of St. Jeremias at Sakkara; which monastery was excavated in 1906-1909 by the Egyptian government

and from whom the museum has been able to buy some duplicate material. The beautiful sculptured friezes exhibited in Room 9 show clear evidence of the best Greek influence.

It should be remembered that the Egyptian exposition of the Museum contains also the very extensive and highly interesting collection of smaller objects made by Dr. Chauncey Murch of the American Presbyterian Mission at Luxor and presented in 1910 by Miss Helen Gould. This has now been distributed in the various rooms, so as to illustrate the periods to which the individual pieces belong. The collection of seal-cylinders is, perhaps, larger and better than that in any other museum. Signet rings, scarabs, beads, amulets, and votive figures are found in large numbers; they represent the chief periods of Egyptian art, from the very earliest to the latest. Of more than ordinary interest are the objects in glass; since it now seems to be proven that the art of manufacturing glass was not an invention of the Phœnicians—as we had always been taught to believe—but of the Egyptians; and at a time some eight or nine hundred years previous to its first appearance on the Syrian coast. Mosaic glass seems also to have had its origin in this land of surprises; and of this the Murch collection has some excellent specimens.

The value of the Museum exhibition is enhanced by a splendid set of positive pictures which explain the methods and results of the different explorations and excavations. They are often a better commentary than the lengthiest exposition. Altho the Metropolitan Museum cannot yet vie with its sister institutions in Europe and Egypt, its method of presentation is far superior to that of many of the great foreign museums. It may not be true that the Egyptians are the oldest of peoples, as Herodotus tells us they believed themselves to be; but some of the roots of our own civilization go back to the land of the Nile; and this circumstance gives an added interest to the remains of this ancient society.

New York City.

# The Love of Friends

BY MARGUERITE OGDEN BIGELOW

Sometimes, meseems, the day is fair,
And young, green shoots are sped to the bud,
And chickadees chat in the sunny air,
And young streams rush to quicken the flood,
And the Spring her tender beauty spends
All for love, for the love of friends!

Sometimes, meseems, the heart is led
Thru thicket and avenue and mart,
Thru days when the crippled Hope has bled,
Past the words that ache and the thoughts that smart,
Till, like the storm, the journey ends
Sweet, full sweet, in the love of friends.

Sometimes, methinks, all things that are,
The joy of struggle, the power of peace,
The kiss of the mate, the light of the star,
The promise of birth, or the last release,
Are made most dear by the life that blends
Each with each in the love of friends.

Sometimes, methinks, we can bear all ill—
The hungry, thirsty lot of the poor,
The eyes made fast, or the voice made still,
All throes that the flesh must yet endure,
Or the wrench of loss, while yet God lends
Rest secure in the love of friends!

Montecito, Cal.

# My Summer in Florida

BY REV E. P. POWELL

Author of "The Country Home," etc.

I HAD spent six winters in Florida before I found out that I was not really getting acquainted with the State. The winters have a peculiar similarity, being the dry season of the year, and often quite too dry for gardens and orange orchards, without irrigation. About the last of October the deciduous leaves fall, and after that there is a sleepy pretense of winter. It is rarely cold enough for an overcoat, but occasionally a touch of frost, that laughs itself off the fields early in the morning. There is, however, an occasional twist of the thermometer, hanging on around 30 to 40 for three or four days. Roses are seldom out of blossom, and violets can always be found in January. Oranges are at their best in February, but there are varieties sweet enough for any palate after the first of November.

We had been accustomed to make our gardens as soon as we reached Florida in November, but those who lived there had already made them in September. The trouble with those planted later was the danger of a long dry spell, which would either prevent them from starting at all or would check the growth of young plants. This sort of gardening demanded irrigation, and to irrigate requires not only some expense in the way of engine and hose, but some time for preparation. However, we got on very well with cabbage, cauliflower and carrots, while lettuce, turnips and greens were in order all winter. If we did not get them ourselves directly from the ground, we found cabbage and lettuce in market in January, plenty of splendid celery in February, and potatoes in March and April. Sweet potatoes meanwhile stay in the ground all winter if you desire, to be dug when needed for the table or market.

Going North in April or May, we had only heard about the Florida Favorites and Georgia Rattlesnake melons, that cover the ground, and begin to ripen about the first of June. We had no reason to doubt that carloads went North "averaging" 40 pounds each melon. We had eaten mulberries in March and loquats in January; while grapefruit and oranges were with us all winter. Before we could grow them ourselves, we were permitted to pick up the drops (which really are the sweetest oranges and best) in our neighbors' orchards, without charge. It is astonishing how many oranges one may eat and not know it. But we got what the natives called "finnicky" about the way of eating. Early in the winter—or summer, as it seemed to us—we always peeled our oranges, and ate them with a knife and fork; a little later we began to bore holes at the blossom end, loosen the flesh inside and suck the orange; tired of this, we carried them to the house, cut them across the middle and ate them with the aid of a teaspoon—a little more deliberately. One may be excused a whim, where oranges cost nothing, and the best you see in the Northern market you would toss aside as inferior.

All this while we had been hurrying our Northern work so as to have the apples marketed or stored early in November. Getting a winter home for horse and cow, we took our collies and started, via ocean steamship line, for Florida. By the first of April we must be packed to return North and trim hedges, clear up the winter's wreckage, and set the whole fruit farm in order. Strawberries must be uncovered, grapes tied up, and the bees freed from the hive cushions. The problem was, could we not divide our forces and some of us stay in Florida all summer? One friend warned me not to undertake it, as the heat would be very "enervating." My friend, President Blackman, of Rollins College, told me that really I would find a Florida summer something more than endurable; it would be "delightful."

Thinking over the question, I took into my buggy a little darkie, and as we drove

thru the village, I said "Tell me, Jim, which really is best here, summer or winter?" "Well! suh!" he said, "I don't know for sure, suh! Ther's more possums in winter and more watermelions in summer." "But, Jim," I said, "that won't do, I want to know which is best, summer or winter." "Well! suh! to tell you de truth, suh! bof of 'em is best. They's sweet potatoes all the yeah round, and they's oranges most any time, and we go fishin', suh, in January jess as well as in July." Evidently Jim was a Floridian, and I was to get nothing definite out of him. When I reached home I asked "Aunt Mary" the same question, and she said: "Fact is, Mr. Powell, in summer you has to stay indoors de middle ob de day, sometimes; but de day is so mighty long, suh, and de mornin's and de evenin's so fine, suh! you can get all your work done." I asked her about 'possums, and she said: "They's here all de yeah; but in summer nights they don't seem to know what to do with theirselves. T'other night one climbed all over my roof, and Pete got up to shoot him; but Pete too sleepy to hit de barn doah. Dat 'possum by rights was mine, but he somewhar today off in de scrub."

At any rate I resolved to spend my summer in Florida; and a pleasanter or a healthier summer I have never known in a long life of nearly eighty years. The thermometer climbed up to 90 at noon, two or three times to 95; but it was higher than that in New York and all thru the North, while here there was a breeze, either from the Gulf or the ocean, fanning away that dead heat which makes a Northern midday in July so stifling. Not more than one night in thirty was uncomfortable, for at about 6 o'clock in the afternoon the thermometer promptly slid down to 75 or 80. I never heard of a sunstroke or a prostration from heat, either for man or beast, anywhere around the Gulf States, except in the cities, where they were kept hard at work during the middle of the day. We soon formed a habit of staying indoors from about 11 o'clock till 3, or, if compelled to be out during these hours, moderation was the rule.

Mornings are holy. They always are, and my only pity is for those who have never yet discovered the morning—the lie-a-beds who lose the cream of the day. In Florida the dawn is almost surely cloudless blue—after a cool, fresh and quiet night. You walk out with a delicious sense of welcome. The world is glad to see you. Up and down your orchard you find everywhere sweet odors, growth, such growth as you never saw before, and the mocking birds that are building in your grapefruit trees shout at you, and once in a while sing. Within an hour bulky white clouds tumble about the whole horizon, coming up without consideration of the wind, and having apparently no object whatever in view. So the heavens play between shade and shine till noon. Occasionally, but rarely, a distant tap of a storm drum or roll of artillery can be heard at 10 or 11. By 12 it has become torrid, and while you are at dinner the clouds make war. Generally at about 1.30 the showers are breaking over your head.

The wet season means quick rain, soon over. It is bad weather for haying, but it is good for gardening. You should see the things laugh as they add inch after inch to their growth. Peanuts in the soil mean peanut vines also for fodder. Beggarweed, the most outrageously misnamed plant in the world, hurries to make its second or third cutting in midsummer. Guinea grass is one of the most beautiful sights I ever saw, and it will give you three crops to a certainty. Then we have our Natal grass—something new, but the prettiest thing under the sun. As fast as you cut it, it comes out again with a green turf, and exquisite pink flowers, in tassels. As for curing it in showery weather, we found that it can be done exactly as we do in the North with orchard grass in June—take one load at a time to the barn, and make it where we can toss it under cover if necessary. It takes no more time to make hay in this way than to cut down a whole field at once, and get it soaked two or three times before curing.

During the rainy season the nights almost always give us panoramas of superb electrical display; not very much rain, but somewhere in sight superb fireworks in the clouds. I learned to enjoy what I rather dread in the North—that is, thunderstorms. I sat on my veranda as I would look at fireworks in Central

Park. There was no thought of danger; for that matter the pine trees standing 80 to 100 feet around you are every one a lightning rod. Harry had just started to the village on horseback one evening when a piling up of vast clouds began in the southwest. They simply rose up into a high peaked mountain, touched all over on its sides and pinnacles with the rays of the sun, which was only just below the horizon. Suddenly a flash darted from the crater. This was followed by strokes and cleavages of fire in every direction. The flame wound round and round; it opened great gaps in the sides of the cloud mass: and in all ways there was such an electric display as I had never before seen.

Looking townward I could see Harry riding boyfully along the trail that led him between orange groves, and almost everywhere under the huge pines. His whistle came back to me from afar as the only token of human life. My neighbors had nearly all gone North to escape the heat of a Florida summer. Harry's whistle died out slowly, and I knew that he had turned the corner by Adams's Grove and would soon reach the avenue: I was alone. Compact, solid, rugged-sided, but awfully symmetrical, my Vesuvius was for me only; fires belching from its sides in terrible flashes, the top a mass of snow, still sunlit into a steady blaze. Alone by itself it rose, and the magnificent drama was its own, and mine.

These margins of the day in the lake country of Florida are indescribable. The sun rarely rises without a good morning; it rarely sets without a benediction. This is peace; not merely quiescent absence of tumult, but positive, aggressive peace. All the sky illustrates the victory of the beautiful over the dark. Handfuls of crimson or of softly golden clouds toss themselves at the darkness, and forbid night. The stars must first come out; and they do. Venus in the midwest takes her throne. Wind whispers from the Atlantic laugh thru the pines like boys and girls in a garden of free flowers.

The stars are at last every one in place; it is peace worth the while. Faith, hope and love illumine the margin of the evening. It is the Hague Conference of God's heavens in session. It must have been under such a sky that Jesus was inspired with the Lord's Prayer—"Our Father Who art in the heavens! Thy will be done on the earth!" And why not? Why should not the good triumph down here among the pines and the oaks?

Night is here. But what a night! Singing and chirping from all the meadows and forest openings goes up to meet the cadences in the trees, and blend in one universal chorus of "Peace on earth, good will to men." The moon, risen well above the pines, is looking down at itself in half a dozen lakes. It has borrowed its light, but uses it generously. It creates another world, and another life of peace; still aggressive, organic and positive. Let us love one another; for love is of God.

The summer garden of Florida is made in May, what has not already been made in January or March, altho you may plant seed any month in the year. There is an instinct about plants as there is about human beings, and so it is that some of the vegetables will do very little in the way of growth before the season to which they have been accustomed. I planted my summer squashes in January, and they came up, but that was all. They looked about and watched and waited for spring. By and by something in March touched them that they recognized as all right, and I had my crooknecks in a short time. You know how it is in the North that hyacinth bulbs somehow know when to get ready under ice and snow, and are out of the ground as soon as the frost. Some things, however, lose their sense of season altogether and forget the calendar. Morello cherries blossom in November, and sometimes set fruit. Prunus triloba came to me from Ohio; and it was hardly planted before it burst into glorious bloom. Judas tree, that blossoms in New York in April, blossoms here half a dozen times, trying to find the right time. One or another of my peach trees is sure to be in blossom all winter.

Nothing, however, more upset my calculations than the performances in my poultry yard. I had never known a hen to moult except just as cold weather demanded new clothing, but here in Florida they drop off their feathers at the beginning of the heated term, and thru the two or three hottest months they are thinly clad and lay no eggs. The Florida hen

gives up her eggs when the price is highest; your Northern hen when they bring the lowest figures.

It was November 8 when I heard the first robin, freshly arrived from the North, and I thought, as I heard his almost plaintive call, that I comprehended why even the robin morning song has a touch of melancholy in it. This robin was so terribly alone; but others will soon give him company. They are scattered all about our lakes, finding something to eat; I think it must be berries mainly, for we have no earthworms in this country. In the spring they gather in vast numbers in the bayheads—that is where our brooks start—before going North. Their talk is incessant, yet it is always full of that sort of homesickness which characterizes the tourist. I do not know whether all the birds of passage express something of this sort when they are away from their nesting homes.

November 1 I heard the rattle of shotguns, and I recalled that the open season for tourists to disturb the serenity of our life had begun. I have not heard a quail for this two or three weeks. All summer these beautiful and lovable creatures have been in my gardens, and eating with my hens beside the barn door. They go and come in little bevies or flocks, and can be domesticated as soon as our sportsmen can find something more valuable to do than to murder them. I did not know until this summer that the mockingbirds have a second period of song, singing magnificently all thru September. They are hardly heard from thru June and the very hottest periods; but now for three or four weeks they sit on our ridge poles and in our persimmon trees and talk with us, or wake us at dawn with a shout of good morning. It is a wonderful repertory that they possess.

Wild flowers are marvelously profuse all summer, and even all winter there are sorts that astound you with their unlimited profusion. Nearly all of these are legumes, and one of them that blossoms in April very nearly resembles the sweet pea, both in its coloring and its shape and size. Sensitive plants, touchy, and some of them prickly, have their month, and are everywhere with crimson and purple. Thru July the partridge pea absolutely covers tens of thousands of acres with its elegant foliage and its brilliant orange colored flowers. The world is literally paved with gold; but in August a purple covering for the wood lawns and the fields is substituted. It is not easy to imagine the amount of nitrogen that these leguminous plants add annually to the soil of central Florida. Of course, I am just as glad, as the summer wanes into autumn, to find my Northern golden rods and wild asters at home about my lake, and throwing open their blossoms just as the bluebirds drop down out of the sky for the winter.

Apart from the pines and oaks I see very little vegetation that is not leguminous. There are legumes no taller than an inch, while the beggarweed stands 7 feet for hay, and the velvet bean grows 50 feet in a season. The North needs "cover crops" for winter, which it plows under in the spring. These protect the roots of trees from zero, and afterward make soil. The Southern "cover crops" keep the hot rays of the summer sun from burning down to the fibrous roots, and when plowed under they leave an immense amount of nitrogen, while creating a great volume of humus. In this way, with her cow peas and soja beans plowed under annually, added to what Nature herself accomplishes, Florida should grow soil rich with great rapidity—only that it is burned over once a year.

After the melons are shipped in June work grows less pressing, and fashion requires that a few weeks be spent on the coast. Mosquitoes we hardly know around the lakes of central Florida, but on the coast they so dominate that, in summer, comfort can be had by day only inside masks, and at night under netting. I have not slept under a netting during the last summer, nor during the six winters preceding.

I like the folk hereabout very much. The South is bound to be another New England. It is native in sentiment, and very little affected by immigration. But if you come with the intent of prodding and trying to force a little faster progressive sentiment, you will make yourself as uncomfortable as your neighbors. There is a superstition and there is a false social sentiment that must be allowed to evaporate; you cannot hasten its depar-

ture by sharp words any more than you can drive out bad odors with a sword. There are no lazy people left in the South, whatever there might have been during the slavery era. Crackers work in their own way, and sometimes drawl in speech, while the negro stock is a fairly good labor asset.

I am thoroly glad that I spent my summer in Florida. It has taught me what cannot be done quite as much as what can be. Whoever comes here to make a home must live in a teachable mood. He must learn some new garden and orchard problems, and he must not follow the crowd altogether. Florida has a great mission to accomplish. It is not only the floral, but the commercial garden of America. When it is rightly tilled it will supply Northern markets with not only the semi-tropical fruits, but with vegetables and melons ahead of all competitors.

And now, as the cool days dispossess the heat, what can be finer than a wedding of the North and the South—a barrel of apples from my New York orchard beside a box of oranges grown in Florida. Set these off with golden grapefruit from my Sorrento orchard, and a crate of Niagaras and Lindleys and Herberts from my Northern vineyard! Ah, well, not anything is perfect alone. I will not spend all of my summers in Florida, but will go to and fro, and widen out life, and get all of this beautiful world that I can see, and turn over into honest deeds. I should like to spend an eternity in making beautiful gardens.

Sorrento, Fla.

# The Truth About Cuba

BY SYDNEY BROOKS

[Our readers are familiar with the clear and concise articles of Mr. Sydney Brooks on political subjects. The last two articles were "Labor Troubles in England," in our issue of October 5, 1911, and "The Turco-Italian Conflict," in our issue of October 19, 1911. Most Americans are strangely uninformed about conditions in Cuba, and this article by an unbiased Englishman, who twice visited Cuba last year and interviewed leading men both in Havana and Washington, will prove of great value.—Editor.]

FOR many months past the American papers have published items of ill-omened news from Cuba. Tales of graft and corruption, violent attacks upon the Government by the Havana papers, shootings in cafés, deputations to the President warning him that a bloody revenge will be exacted if the alleged plots to assassinate his political opponents are carried out, the deportation of offending journalists, talk of American intervention so widespread and insistent that Mr. Knox thought it worth while to meet it with an official and explicit denial, an incipient "revolution" started by a half crazy negro, rumors of a growing racial antagonism in the field of politics, let upon lot of franchises and concessions granted to foreign speculators, with little or no regard for the permanent interests of the Cuban people, reports of the increasing pressure of taxation made necessary by administrative extravagance, threats of murder and pillage if So and So is, or is not elected President at the next election, denunciations of General Gomez and of most of his political allies and Cabinet Ministers for their real or reputed brazenness in amassing millions from the sale of, or from participation in, valuable public contracts, repeated prophecies of a collapse of the whole experiment of Cuban self-government amid the frenzied tumult that is bound to be stirred up by the approaching Presidential campaign—such has been the character of nine-tenths of the Cuban news supplied to the American people during the greater part of the year.

And naturally it has left on the American mind an impression of something like despair, as tho all the efforts and sacrifices made by the United States on

[illegible] of Cuba had been in vain, as the "Pearl of the Antilles" were at bottom incorrigible and its people destined to follow in the familiar path of Spanish American misgovernment. I believe this impression to be unjustified just as I believe much of the information on which it is based to be not so much untrue as partial and misleading, and presented in a way that exaggerates its real significance. This belief is the outcome of two visits which I paid to Cuba early in the present year for the purpose of inquiring into its economic and political conditions. I traveled from one end of the island to the other; I had many conversations with the politicians of all parties; I talked with the heads of the sugar and tobacco industries, with planters and with bankers, with storekeepers and journalists, with railroad men and manufacturers; with Americans, Spaniards, Cubans, Englishmen and Germans; and I rounded off my study of the Cuban question by spending a fortnight in Washington and discussing Cuban affairs with such authorities as President Taft, Gen. Leonard Wood, Mr. Elihu Root, ex-Governor Magoon and Mr. A. G. Robinson. As an Englishman, detached from all Cuban or Cuban-American interests, I was thus favored with some rather exceptional opportunities for getting at the heart of the Cuban problem, or at least for examining it dispassionately from all sides.

It is very clear that whatever else may be the matter with the island, there is nothing wrong with it as "a business proposition." Cuba is not only relatively but absolutely one of the richest and most productive areas for its size on the face of the globe; and its prosperity is not merely assured, but is indestructible. No political turmoil or upheaval can possibly arrest for more than a moment the march of Cuba toward a full realization of its unique material assets. And what these assets will amount to very few people have any idea of. The "Pearl of the Antilles" is still very largely an uncut gem. The "recovered garden of Eden" has barely begun to reveal its treasures. Cuba as yet is only on the threshold of its development; its resources have been scarcely even surveyed, much less exploited; it is doubtful whether more than one-fifteenth of the island is under any sort of cultivation; lying on one of the great trade routes of the world—a route that will be more than ever crowded when the Panama Canal is opened—it has nevertheless remained for centuries almost derelict; the surplus capital of the investing nations is only now beginning to find its way there; and the population of the island, little more than a mere two millions, is ludicrously disproportionate to a country that could, and in the future unquestionably will, support six times that number. Since the downfall of Spanish rule there has, of course, been a marked material advance. Cuba's exports have more than doubled, her total foreign trade has increased by something like $100,000,000, her staple industries, sugar especially, have greatly expanded, and enterprises which a dozen years ago were in the first tentative stage, such as fruit farming and mining, are now assured successes. Capital, too, has poured into the island under the wise and friendly protection of the Government; means of communication have multiplied; and the cities are rapidly equipping themselves with the hotels, telephones, lighting plants, sewage systems, transportation services and so on demanded by modern communities. Above all, yellow fever has been effectually stamped out; the island is today one of the healthiest in the world, and the beauty of its scenery and the brilliance of its climate are swiftly making it one of the pleasantest winter resorts in the West Indies.

But with all this, only a beginning has been made. Cuba is a frostless land of perpetual June, where the barometer rarely falls below 60 degrees or rises above 90 degrees; where the water supply in every province is fresh and abundant; where the distribution of the rainfall favors luxuriant crops and their ready marketing, and where nearly all the staple agricultural products of the tropical and sub-tropical zone are indigenous. Apart from sugar and tobacco, the small planter has an almost endless range of choice in fruits and vegetables, cattle, swine and poultry. There are large industries still to be built up on the native supplies of sponges and textile

plants; there are some 10,000,000 acres of uncleared forest, containing over fifty different varieties of hardwoods; there is something more than the possibility of establishing successful enterprises in copper, manganese, asphalt and oil; the eastern parts of the island are a natural storehouse of wealth, only waiting for men and capital to unlock it; in real estate and the financing of the sugar crop there are fortunes to be made as easily as in the Western States of America thirty or forty years ago; and above all, the island's greatest industry, sugar, is visibly on the verge of a vast, natural and enduring expansion. Ten years ago the sugar planters in Cuba, as thruout the West Indies, were thoroly demoralized by the fall in prices, the competition of the bounty-fed beet product, a lack of capital, and the Dingley tariff. Since then the bounties have been abolished; joint stock companies commanding ample capital and the best advice have at last given to the manufacture of sugar from the cane the same scientific and businesslike care that Germany has lavished on the beet; small plantations have been amalgamated; huge mills, equipt with the most up-to-date machinery, have been erected; the Dingley tariff has been modified; prices have risen and the crop that is now ripening promises not only to be the biggest in Cuba's history, but owing to the failure of the beet in Europe and the consequent world-wide shortage of sugar, to command record prices. With an assured entry into the American—the greatest sugar-consuming market in the world—with an ample supply of skilled labor, with some 10,000 square miles of cleared land suitable for cane cultivation and still undeveloped, and with the knowledge that she can produce sugar more cheaply than any other spot in the world, and that her competitors in the American market are reaching the limit of their capacity, Cuba has no hesitation in regarding her sugar industry as still only at the beginning of its career.

In Cuba, as elsewhere, the intending settler or investor needs common sense—needs especially to make sure that his titles are clear—but if he will only exercise ordinary intelligence and judgment, he will find the island one of the richest, as it is also one of the most accessible, fields for the expenditure of capital that could be wished for. Cuba, in short, is driving rapidly ahead, and undoubtedly its progress has been aided by the consistent policy of President Gomez's administration in encouraging the entry of foreign capital, facilitating the admission of the raw material and machinery needed for new industries, and improving the material equipment of the island. Since the Republic was restored—that is, since January, 1909—some 200 miles of railway and some 250 of wagon roads have been built, bridges have been repaired and constructed, the dredging of the Cuban harbors is being systematically proceeded with, a far-reaching scheme for insuring a pure and adequate supply of water for the principal cities has been initiated, agricultural schools and banks have been established, the post-office system has been greatly extended, a telephone concession has been granted which will in time result in the linking up of all the cities on the island, and many scientific commissions have been appointed in connection with the health, sanitation and industrial and agricultural problems of the country. This is all excellent work, and while in my opinion the Government could and should have done more to clear up the obscurity in regard to titles, to force the sale or development of the large estates that at present lie unimproved, and to provide a more plentiful flow of capital on easier terms, and while I think it made a serious mistake in instituting a national lottery, none the less its record in forwarding the material development of the island has been decidedly creditable. A Government cannot insure prosperity, but it can insure the conditions which make prosperity possible, and this General Gomez and his Cabinet have done, not only directly in the ways already touched upon, but also, and especially, by preserving a practically unbroken internal peace and by impressing themselves upon the country as men who know their own minds and will tolerate no disorder.

All this has not been accomplished for nothing. The Cuban Republic inherited unwarrantably heavy liabilities from the Provisional Government, all of which it

has planned. It presides over a people to whom office holding is an easy and attractive means of livelihood; it has had to meet the claims of the veterans of the war of independence; and it is faced with the expensive necessity of furnishing Cuba with the accessories of a modern state and of doing something to repair the damage and neglect of three centuries. These causes have combined to make the government of Cuba anything but a cheap one, and a vigilant "watchdog of the treasury" would no doubt be able to suggest a more provident system of administration and the abolition of certain superfluous offices. But tho the Cuban Government is not, and from the necessities of the case cannot be, an economical one, I cannot see that the charge of extravagance, so often preferred against it, is really justified. Its bonded indebtedness, most of which was incurred to pay off the soldiers' claims, amounts to just over $61,000,000, which is not a large figure considering that the annual revenue of the republic for the last four years has averaged more than half that sum. On December 31, 1910, there was a book balance of all but $2,000,000 in the Treasury, and one has only to turn to the financial columns of any newspaper to see that Cuba's credit is well above par—the 1904 loan of $35,000,000 being quoted on the London Stock Exchange (where it is mainly held) on November 10 at 104⅝. The weak spot in the Cuban finances is that about five-sevenths of the revenue is raised indirectly in the form of customs duties, and that, as always happens in such cases, the poor have to sustain a disproportionate burden. Direct taxation, however, and especially on land—which, roughly speaking, is the only taxable commodity that Cuba possesses—is highly unpopular in all Spanish-American countries, and from the political standpoint there is always something to be said in favor of raising money in the way that rouses the least popular antagonism and that involves the minimum of contact between the state and the citizen.

If now we turn from economics to politics, the picture becomes more obscure and in certain aspects less pleasing. To run an autonomous republic on a basis of universal suffrage in such a country as Cuba, which has never had any experience in self-government, where the percentage of illiteracy is inordinately high, and where a lamentable past has left a tradition of faction and suspicion, could never under any circumstances be an easy undertaking. Nor has it been rendered any less difficult by the provision in the Platt Amendment, which reserves to the United States a broad right of intervention in defense of Cuban independence and for the preservation of a government adequate for the protection of life, property and individual liberty. This provision puts a powerful weapon in the hands of any discontented group that is bold enough or unscrupulous enough to use it. By the simple process of firing a few cane fields or blowing up a few sugar mills or railroad bridges it is always open to a disgruntled faction, with little or no risk to itself, to bring about a state of affairs which could be readily represented in the United States as justifying American intervention. But, apart from this, how far has the experiment of Cuban self-government been jeopardized or complicated by the actions and character of the Cubans themselves? Have they made the most and the best of their opportunities or have they wantonly added to all their difficulties by a reckless indulgence in graft? If you listened exclusively to the gossip of the Havana cafés or relied for your information solely upon the Havana newspapers, you would quickly be forced to the conclusion that the Gomez Administration reached the top-notch of corruption. But that is what Havana has said and thought about every administration, whether Spanish, American or Cuban. It is one of the most poisonous fruits of long years of misgovernment that confidence in the honesty of their rulers seems to have vanished from the consciousness of the Cuban people. That graft exists in the national and municipal government of Cuba, and that more than one concession has been granted without a due regard for the public interests, it would be impossible to deny. What else could any rational man, knowing something of Cuba's past and of the character of her people and of the temptations to which they are exposed, have expected? I can honestly affirm, however, first, that

there was rather less than more of it than I had anticipated; secondly, that in spite of it, and partly no doubt because of it, Cuba is forging rapidly ahead; and, thirdly, that it has not gone far enough to justify any talk of American intervention. In this lamentable world of ours public services are often rendered by highly tainted agencies. As an abstract proposition one would, of course, feel bound to assert that concessions and franchises in Cuba ought to be awarded on their merits and without any suspicion of illicit motive or persuasion. But one would be obliged at the same time to recognize that Cuba, inevitably, has not yet reached that altitude of political morality and conscience on which such a maxim is acknowledged and acted upon instinctively. Situated as she is, her choice is roughly between material stagnation without graft and material progress with graft; and her reprehensible but not unnatural tendency is to choose the latter. In certain stages in the development of states it often happens that, so long as the graft is kept down to due proportions and is made to serve public ends, the resultant harm is not only not very great but may be actually counterbalanced by the benefits conferred on the people at large. I admit this argument is a dangerous one and by no means of universal application; but I would point out that the first step toward understanding Cuba is to decline to judge her by American or British standards or by any standards at all that do not take account of her peculiar history and of the temperament, idiosyncrasies and mental habits of her people.

To my mind the chief danger that lies ahead of the Cuban Republic is not so much graft by itself as the temptation to keep all offices and power in the hands of a particular group. President Gomez has proved a strong, original and energetic ruler, with a thoro understanding of the people he is dealing with. He has served his country well; he has done nothing to forfeit American sympathy and support; and it is altogether natural that he should desire to maintain himself and his friends in control of the Government. But that way lie some perilous possibilities. General Gomez in 1908 only became the victorious nominee of the united Liberal Party by the withdrawal of Señor Zayas, and Señor Zayas only withdrew his candidature on condition that he should receive the Liberal nomination for the Presidency in 1912. His friends and General Gomez's friends are now at daggers drawn; the Liberal Party is split in twain; and there are some ominous indications that an attempt will be made to ignore the compact of four years ago and to run either President Gomez himself for a second term or one of his intimate associates. The maneuvers and intrigues directed to this end have shown to perfection the Cuban genius for political tactics. But they have also inflamed the antagonism between the two wings of the Liberal Party to something little short of boiling point, and if the boiling point is actually reached we know by experience that Cubans will sacrifice anything and everything, even their country's independence, to the madness of political revenge. My hope and belief is that matters will not be allowed to go so far as all that, that a compromise will be effected, and that the aprehensions with which the friends of Cuba are watching the preparations for next year's Presidential campaign will prove to be unfounded. The Cuban Republic, considering everything, has justified the confidence reposed in it by the American Government. It has established a strong claim to be treated with forbearance and understanding and to be allowed to work out its salvation in its own way. Whatever may be its shortcomings, there can be no doubt that it is a form of government far more congenial to the masses of the Cuban people than any which American intervention would be likely to lead to. It is slowly educating the nation in the responsibilities of autonomy and training it in the realities of patriotism; and I cannot believe that it is destined to disappear, even temporarily, as the result of a feud of personalities and factions.

LONDON, ENGLAND.

# Horse Sense

BY JOHN BURROUGHS

[We are glad to give our readers this article by John Burroughs, the distinguished naturalist and nature essayist. Mr. Burroughs is now seventy four years old, but is an active traveler in many states. He originally taught school, but since 1874 has lived in the country and studied animal and bird life. He has been an occasional contributor in the past to THE INDEPENDENT.—EDITOR.]

We have heard so much about animal mentality of late years, and the tendency of the popular mind to credit the dumb friends with more than their share of intelligence is so strong, that one reads with peculiar interest the account of the famous German horse, Clever Hans, and the story of the puncture of the bubble of his supposed wonderful mental gifts, as told in a recent volume by Professor Pfungst, of the Psychological Institute of the University of Berlin. Here was a horse that had set all Germany agog by its supposed astonishing feats of intelligence, and stirred up bitter strife and debate among many prominent scientific men, baffling experts and learned commissions sent to investigate him, and convincing even his trainer and owner of his extraordinary mental endowments. People who came to scoff—Mr. Schillings, the noted African traveler and sportsman, and Professor Schweinfurth, and the zoölogist, K. Mobius—remained to wonder. The horse could apparently count, add, subtract, do problems in fractions, tap off the right answer, for instance, to a question like this: How much is ⅖ plus ½? He could change common fractions into decimals, and *vice versa*. He could apparently distinguish tones in music, pick out colors, spell, read, name dates and days, understand French and German, and a thousand other things impossible for a horse to understand, deceiving not only chance visitors and learned commissions, but apparently fooling, as I have said, his trainer, an old German teacher of mathematics. In fact, experienced educators declared that Hans was at about the stage of development of a child of thirteen or fourteen years.

It seems to me that any careful student of animal life would have unhesitatingly staked his life that the horse had no more conception of arithmetical problems than a child has of the differential calculus, but apparently some very astute men were convinced that he had. Not until Professor Pfungst took the case in hand was the mystery cleared up. Thru a long list of most ingenious experiments he discovered that the horse could not, unaided, do one of the many feats he was supposed to do; that he had no more knowledge of numbers than a block has, no reasoning or thinking powers whatever, and that a carrot, a piece of bread and a lump of sugar, which always awaited him at the end of his stunts, were the mainspring of his action. Or, as Professor Pfungst says: "Instead of the much desired intellectual feats on the part of the horse, there was merely a motor reaction to a purely sensory stimulus."

But while the claims for the horse's mental powers were dispelled, other powers, powers of observation, or perceptual powers, were disclosed—powers of their kind far exceeding those of the ordinary man. As soon as Professor Pfungst covered the eyes of the horse the game was up, and Hans was unhappy. When he could not see his interlocutor his power was gone. And then it gradually came out that Hans had been able to tap out the correct answers to questions put to him by reading certain delicate involuntary movements in the head and body of his questioners. When the right number had been tapped, or the right solution reached, his questioners, one and all, invariably indicated it by an upward movement of the head and body, movements so slight as to escape their own notice and the notice of the spectators, but yet sufficient to give

to the marvelous eye of the horse his cue. When the horse could not see his questioner he could not give the right answer; and if he could see his questioner he could answer a mental question as well as a spoken one. "In fact," says Professor Pfungst, "the responses of the horse were quite as correct when I did not even whisper the question inwardly." When asked to count, or to read, the horse never looked at the persons or the objects he was to count, or at the words which he was to read, yet he would give the proper response if he could see the questioner. His ears did not serve him at all; the responses were dependent entirely upon sight. "All speech was superfluous, and, except in so far as the tone of voice in which it was spoken was soothing or reprimanding, it was quite unintelligible to the horse." His feats would probably come under what was formerly classed as "mind reading," but Professor Pfungst clearly demonstrated that they were due to muscle reading. The mind of the horse seemed to mirror that of his interlocutor; when the latter was confused or uncertain, the responses of the horse reflected that fact; he failed often or where his questioner failed. When the questioner knew the right answer, Hans's responses were correct, nine times out of ten; when the answer was unknown to the questioner, the horse's responses were incorrect nine times out of ten. If the questioner tried to mislead the horse by thinking the wrong answer—as, for instance, that two and two make five—he never succeeded, because he could not banish from his own consciousness that the correct answer was four; consequently, when the horse had tapped four times with his foot, the involuntary tension and almost imperceptible forward movement which the questioner maintained while awaiting the responses from the horse gave way, and the very slight elevation of head and body which followed his own relaxation in attention gave the horse the cue to stop tapping.

JOHN BURROUGHS

Not until Professor Pfungst discovered these minimal involuntary movements in himself while questioning the horse, and then discerned them in others, did he arrive at the solution of the horse's supposed mental ability; then his numerous and elaborate tests and counter tests were made until the entire matter was cleared up, and resolved itself into finding that whatever the stunt proposed to the horse was, he began slowly tapping, closely watching his questioner the while, and he kept on tapping so long as the questioner's head and body remained bent forward in expectant attention, and ceased when, the correct number of taps being reached, the questioner lifted, tho ever so slightly, his head and body. The painstaking professor then put himself in the place of the horse, and was put thru similar tests, and found, after some practice, that he could answer first spoken, then unspoken questions from others, by closely observing their involuntary movements while awaiting his responses. This was, of course, done without letting his questioners know his purpose. Only after many trials was he able to answer mental or unspoken questions as the horse did, guided always by the slight, un-

conscious movements of the questioner. And he found that he failed under the same conditions that Hans failed and for the same reasons. If the question called for but one tap, he could not give it, neither could the horse, his explanation being that there was not time for sufficient concentration and muscular tension to cause the questioner to assume the stooping posture from which he would involuntarily rise when the correct number of taps was reached.

On the whole, no such light has ever been thrown upon the psychology of the horse, or upon that of any other of the larger mammals, as is thrown by these controlled experiments of Professor Pfungst. It helps one to understand the intimate relations that so often exist between horse and rider or driver, when the unspoken thought of the man is so quickly responded to by the horse. If some laboratory psychologist would now solve the mystery of the balky horse for us, how would not only mankind but also horse kind be the gainer! We have had many noted horse trainers and horse breakers, but their procedures do not seem to have been based upon any special insight into the psychology of the horse.

How this clever horse became able to discriminate these minute muscular movements is not clear, as the weight of evidence seems to show that his German trainer and owner did not consciously train him to take his cue from these movements, and did not seem aware that he made such movements while questioning the horse. He himself appears really to have believed that the horse had a mind and could be taught as one teaches a child, and he patiently set himself the four years' task of training him, and was, of course, very reluctant to see his dream dispelled by the crucial experiments of Professor Pfungst.

There is this fundamental difference between man and the lower orders that we need not have recourse to the laboratory to verify: We can educate a man, draw out and develop his intelligence, but we cannot in the same sense educate one of the lower animals. We can train an animal and cause it to form new habits, we can change its size, color, form, disposition, and make it our slave, but we cannot add to its natural intelligence to the extent of making it a thinking being. Mr. von Osten labored diligently for more than four years with his clever horse, employing sets of wooden pins, a counting machine, charts with numbers from one to one hundred, and with letters in German script accompanying the numbers; he also used a small organ to teach the horse to discriminate, as he believed, between tones, and used colored cloths to teach him to differentiate colors. With what must have been phenomenal patience, if he followed the laborious methods which he asserts he did, he drilled the horse by easy stages until he obtained correct responses to his questions (which became more and more complicated as the training advanced), until the horse appeared to be able to do many a stunt in calculation beyond the power of most of the human bystanders. And yet this painstaking old teacher of mathematics had all his theories of his horse's mental ability swept away when it was clearly proven that his correct tapping to questions, whether simple or complex, were all dependent upon his ability to watch his questioner and thus learn when he was expected to tap with his foot and when he was to come to rest.

All animal life flows more or less in grooves or channels, that of the lower orders more, that of man less. Perhaps we should say that the life of man flows in many more grooves and channels, his system of activities is so much more various and complex. His gift of reason enables him to vary and change his channels and to invent new ones. But four-fifths of the life movements of the animals immediately below him flow in fixed grooves and is dominated by the environment as a stream is controlled by the contour of the land. Watch a squirrel, for instance, carry away nuts to its hole, or to hide them in the grass and leaves. He never varies his course from that of his first trip—and that course is not the easiest one, but along the line that will give him the most coigns of vantage from which to keep a sharp lookout for his enemies. I have seen him go out of his way to go up and over an outbuilding 12 feet high and 8 wide, on every trip, and by the same short,

spasmodic sallies on each trip. Many birds sing their songs about six times a minute during the period of song, with the regularity of clockwork. And the song impulse runs down at the end of the breeding season like clockwork—tapers off to a half, to a third, to a note or two, and then stops. All the animals come nearer to automatons than a casual observation of them would lead one to believe. They are set going by their environment acting upon their organization, and are almost as much machines as are water wheels, tho not quite. They can and do vary their activities under stress of circumstances, which a machine cannot. But the animal has no free ideas, and hence no power of invention, as has man.

WEST PARK, N. Y.

# "A Hope, a Throb, a Memory"

BY ANNIE L. CROWELL

A HOPE, a throb, a memory!
I can but fancy that the wind-blown tree
Is calling me
To listen, listen, while it sings
Of birth and life and death.

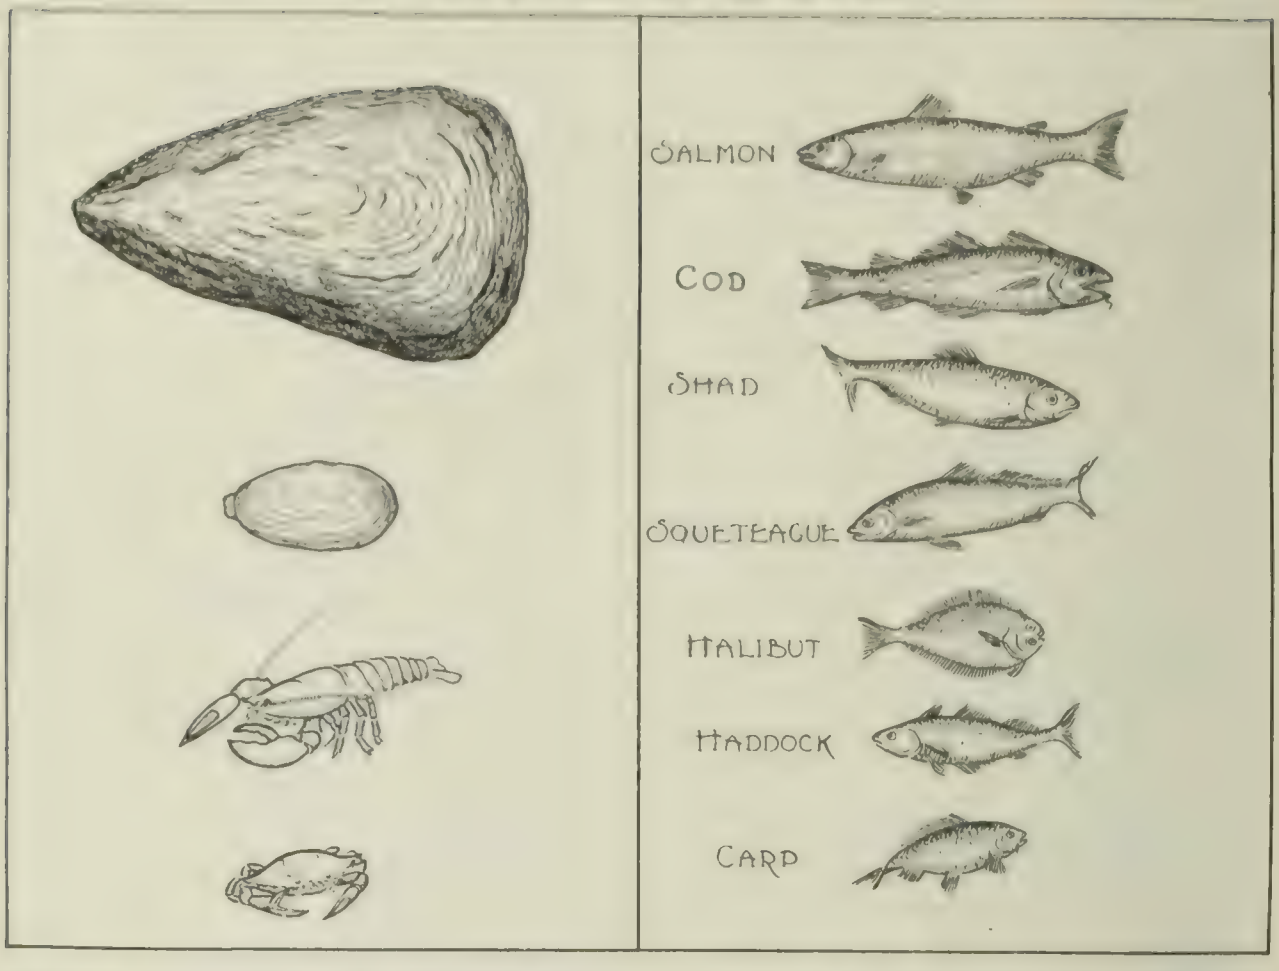
The pale and feathery grasses at my feet
Insistently repeat:
"A hope, a throb, a memory!"
The sloping hillside in the keen autumnal air,
Still whispers: "I was fair
When spring had touched me and her magic drew
All my desires of beauty forth.
The heat of summer in me beat;
Her ardor quickened me till tall and powerful
My sturdy grasses billowed in the wind
Like ripened grain; the pine was fragrant then,
And yonder birch-tree gloried in the sun,
Or drank with myriad leaves the welcome rain."

A hope, a throb, a memory!
The singing pine still calls. I gladly turn
To listen, listen, while it chants to me
Of birth—the lusty man-child, with the cry
That stirs to depths ungressed the parent heart.
Before the hush of sleep enfolds him, he is crowned
With all the dreams of destiny—
A royal progress his shall be,
Success shall wait for him, and fame
Shall lay her shining laurels on his brow.

—Of life—the effort—the resistless will
That knows no obstacle—the vision clear
That dares fulfil a dream-
Achievement, with its majesty and grace—
Control of nature's forces mysterious—and then
Of death—the silence—and the bleak finality—
The end of human action, speech and thought

How suddenly the tense is shifted now!
*He was—He did—He spoke—We knew him well—*
Remember! Aye, remember and recall!
No longer here? Shall we no longer know
The faith that kindled faith, the tenderness
That touched our lives with eagerness to bless,
The strength of purpose, righteous, undisturbed
By noisy clamor, superficial praise—
The man himself?
Remember! Aye, recall!
A hope, a throb, a memory,
The great ones of the earth pass by.

Yet evanescent and elusory
As seems this trinity.
Thru bud and bloom, and seed
That falls to earth to rise again in bud,
Runs life intangible.
The springs return,
The summers wax and wane, the autumns burn
And from their crucible,
When snatched again from out the drifted snows,
Comes forth anew the shimmering gold of spring.



So man shall live. Safe-hid within him lies
The life that yet shall be. Perchance denied,
Or beaten down, or stupefied,
But always there—imperishable soul.
A mystery we cannot solve as yet, life pulses on.
Life—life—. And what have we to do with death?
The silent waiting-moment ere we spring
To life renewed.
A hope? A throb? A memory?
The brief allotted breath
Of human life? Yea, verily! But we,
Through hope and throb and memory,
Shall reach our palingenesis and be aware
Of immortality.

AMHERST, MASS.

# Our Fish Bill

BY WILLIAM B. BAILEY, Ph.D.

Professor of Political Economy in Yale University

THE total value of the fishery products of this country for 1908 was about $54,000,000. This gives the value of the catch by the 144,000 persons gainfully employed in this industry. It does not take into account the value of the trout, perch, pumpkin seeds and other fish caught in countless numbers by the amateur angler or the small boy with hook, line and sinker. The value of the fishery products taken in 1908 and depicted in the accompanying diagram is:

| | | | |
|---|---|---|---|
| Oysters | 15.7 | million | dollars. |
| Salmon | 3.3 | " | " |
| Cod | 2.9 | " | " |
| Shad | 2.1 | " | " |
| Lobster | 1.9 | " | " |
| Clams | 1.9 | " | " |
| Squeteague | 1.8 | " | " |
| Halibut | 1.6 | " | " |
| Haddock | 1.3 | " | " |
| Carp | 1.1 | " | " |
| Crabs | 0.9 | " | " |

It must be disconcerting to the aristocratic lobster to find himself on a par with the lowly clam, and to the toothsome crab to be obliged to sidestep along in the rear of the procession. With the exception of the crab, none are included in this list unless the product exceeded a million dollars in 1908. It is, perhaps, surprising to find that the mackerel and bluefish did not obtain a place in this table, and that the whale should find himself crowded out by that undesirable immigrant, the German carp. To those of us who associate fishing simply with a hook and line it is something of a blow to learn that only seventeen per cent. of the total value of the fishery product of this country are captured in this sportsmanlike manner. Four-fifths of the catch is made with dredges, nets, pots and traps.

Out of a total value of fishery products amounting to about $54,000,000, $35,000,000 came from the Atlantic coast division and only about $7,000,000 from the Pacific coast division, while the Gulf of Mexico, the Great Lakes, and the Mississippi River divisions followed in order.

NEW HAVEN, CONN.

# Literature

## Feminine Literature

In picking out from our book shelf fourteen books written by women authors we expected to find some common characteristic of femininity which would give unity to the collective review. But we must acknowledge that we are disappointed in this expectation. The alleged uniformity of the sex does not show itself, for these volumes are as diversified as if written by men. Even the admittedly non-existent feminine sense of humor is in several instances so closely counterfeited that only careful microscopic examination can distinguish it from The Real Thing (masculine gender). One feminine quality must be conceded in that the heroines are always deliciously and appropriately attired, for it is sadly true that in fiction the man-made gown is all too rarely the irreproachable and soul-satisfying tailor-made. But beyond their conspicuous superiority in costuming, had these same books appeared anonymously, there would seem little clue by which to determine the sex of their authors. And the fair-minded critic might even go to the length of admitting that they afford no very sufficient ground for the prevalent notion that "the woman's point of view" must invariably have a squint in it.

The author of *Talk of the Town*[1] makes some very clever observations to this purport (they strongly tempt the reviewer to plagiarism) in one of her spicy essays. The "talk" covers a considerable range of subject and geography, and while the most of it has been said before, we may quote the words of an ancient critic that she has "spoken admirably," since "by a clever combination she has made old sayings new." Another woman, whose book is also not a novel, has achieved a distinct novelty. *The Autobiography of an Elderly Woman*[2] appeals very strongly as the utterance of a time of life which has often been written about but has not often spoken for itself. And if this woman is less optimistic and philosophic than a well-known masculine writer "On Old Age," she strikes one as much less obviously trying to deceive *herself* by concealing the *multa incommoda* of the drama's last act—of which the greatest is being "laid upon the shelf" by her children. With the books not distinctly novels may be grouped *Son*[3] and *The Story of Quamin*.[4] *Son* is the sort of work to which one instinctively applies the term "dainty." It is a series of scenes from the life of a little boy—scenes often pathetic but never moistly melodramatic, and notable by failing to close with a funeral. The chronicler of *Quamin* has recognized the existence of promising material in the superstition and quaintness of the Jamaica negro, but somehow she has not given to her material the magic touch.

It is greatly to be feared that the misogynist critic with a "feminization" theory to prove would find support for it in three books, to wit, *Children of Tomorrow*,[5] *People of Popham*[6] and *The Life Everlasting*.[7] He would cite them, one cannot doubt, as instances of the universal feminine tendency to prattle endlessly of extraneous matters. The author of *People of Popham* has an exceptionally clever style—for the first few pages. Long before the last one (which is particularly inane) that cleverness has rambled on so many excursions remote from the plot that it becomes about as refreshing as a sixth plate of ice cream at one sitting. If Clara E. Laughlin had written three books—a novel founded upon the complications resultant from the love of a State's chief magistrate for another man's wife, and two collections of sketches, on the "inside" of modern magazine publication and Bohemian New York respectively—

[1] *Talk of the Town*. By Ethel Train. New York: Chas. Scribner's Sons.

[2] *The Autobiography of an Elderly Woman*. By Mrs. Harvey Dunn. New York: G. P. Putnam's Sons.

[3] *Son*. By Clara E. Laughlin. New York: Chas. Scribner's Sons.

[4] *The Story of Quamin*. By Mary C. F. Hemyng. Boston: Houghton Mifflin Co.

[5] *The Long Procession*. By Mary Cadwalader. New York: George H. Doran Co.

she might have made each attractive bundled together, they become a weari- some mixture of rather crude social theories and "local color" recklessly splashed. Marie Corelli's sin is rather of endless repetition than introduction of side issues. And after she has sung her song of *The Life Everlasting* in many different keys, it is still not very clear what she would have us do to attain it. And she cheapens much that is fine and uplifting by a tawdry display of the magic and mystical more suggestive of the dark ages than of "advanced thought."

*Emerson's Wife*[8] and *The Lotus Lantern*[9] have the same handicap of dealing with regions whose very attractions have surfeited us with stories of them. The cow puncher and the geisha girl have a perennial charm, and these two books are sufficiently entertaining presentations of these fascinating features of Orient and Occident, but they suffer from inevitable comparison with "The Virginian" and "The Japanese Nightingale."

Of the five remaining books each is notable in its own way. The merit of *When Woman Proposes*[10] lies in its original plot. In a nameless country and dateless period a pretty young woman stops the wheels of commerce and revolutionizes the forms of government merely as incidental to her courtship of the man whom, having once seen, she resolves to wed. That her methods are at once "purely feminine" and overwhelmingly successful ought to make the story very delightful reading for the "Antis."

Unlike this lady, the American heroine in Italy does not intend to love *Her Roman Lover*.[11] It must remain a mystery to the American reader why she finally does so—to madness. But if the portrayal of his fascination is unconvincing, the delineation of the fundamental differences between Latin and Anglo-Saxon is not, and the disaster of their union is made to seem inevitable. Winifred Boggs, in her *Vagabond City*,[12] is more successful in making us succumb to the charm of a hero as unpromising at first as the Roman. It is true, the brilliant, rather rough and not wholly moral man with *die Wanderlust* in his blood, when married to a fool, is likely to appeal peculiarly to the woman reader who thinks that she is *not* one, but other readers, too, must feel the power of the book's ironic humor and unexpectedly tragic ending. But the tragedy of *Ethan Frome*[13] is more profound, because it is tragedy denied the solace of death. In the words of Mrs. Ned Hale: "I don't see's there's much difference between the Fromes up at the farm and the Fromes down in the graveyard, 'cept that down there they're all quiet, and the women have got to hold their tongues." It is a story of forty-eight hours of intense and passionate life, with twenty-four years of hideous death in life, and Edith Wharton has told it with all the power of the artist that she is, making every homely detail of New England farm life as vital as she has ever made it in the apartments of fashionable New York. The last of these books is also the last word of its author. The loves of two men and three women are delightfully told in it—delightfully, tho it leaves the best of the women unmated and saddened. It is difficult to resist the feeling that, while she wrote, their creator was trying to infuse into her own soul some of the courage and patience of the man and the girl who found a way to bear life's disappointment and weary waiting by becoming each *A Weaver of Dreams*.[14] The many lovers of her books will read this one with a fresh regret that her endurance should have been less than that of the children of her pen.

[8] EMERSON'S WIFE AND OTHER WESTERN STORIES. *By Florence Finch Kelly.* Chicago: A. C. McClurg & Co. $1.25.

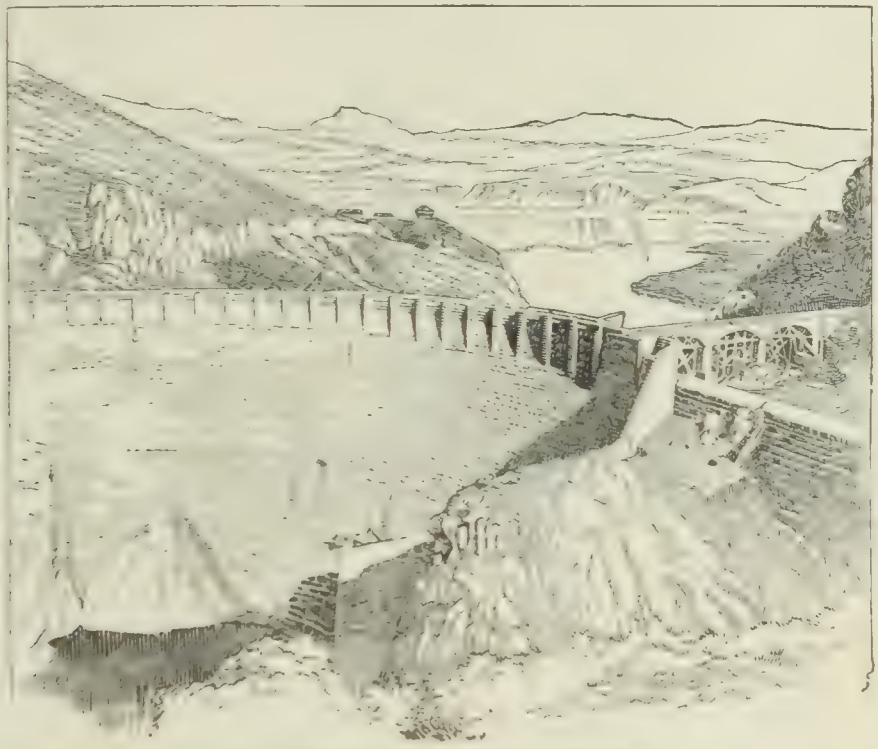
[9] THE LOTUS LANTERN. *By Mary Imlay Taylor and Martin Sabine.* Boston: Little, Brown & Co. $1.25.

[10] WHEN WOMAN PROPOSES. *By Anne Warner.* Boston: Little, Brown & Co. $1.25.

[11] HER ROMAN LOVER. *By Eugenia Brooks Frothingham.* Boston: Houghton Mifflin Co. $1.25.

[12] VAGABOND CITY. *By Winifred Boggs.* New York: G. P. Putnam's Sons. $1.35.

[13] ETHAN FROME. *By Edith Wharton.* New York: Chas. Scribner's Sons. $1.



[14] A WEAVER OF DREAMS. *By Myrtle Reed.* New York: G. P. Putnam's Sons. $1.50.

## An American History for the General Reader

IF it be true that one of the attributes of genius is the ability to do better than it knows how to do, the new textbook on American history that lies before us* is

*AN AMERICAN HISTORY. *By David Saville Muzzey, Ph.D.* Boston: Ginn & Co. $1.50.

indeed the work of that rare quality. We have not often handled a textbook so attractive or so exasperating as this, nor do we often consider books of this variety worth a serious criticism. But here is a volume filled with inaccuracies, showing on nearly every page that its author is no expert in his subject, yet compelling us to admit that it comprises

THE ROOSEVELT DAM—ARIZONA
(From Muzzey's "American History" (Ginn)

a real contribution to the literature of which it is a part.

Dr. Muzzey is a young man of varied and substantial training, but his experiences seem not to have included systematic research in American history. He is known as a promising scholar in the field of the later Middle Ages. Another and a more prominent scholar in the European field, Prof. James Harvay Robinson, rather humorously vouches for the "great skill" shown by the author in this particular work. But it is hard to imagine how any trained historian should undertake to write an American history without knowing that Mr Adams's "this is war" note had no connection with Lord Russell's detention of the Laird ironclad rams (498); that Texas had not completed the act of secession in time to meet with the other cotton States at Montgomery, on February 4, 1861 (414); that "the rapid extension of our population and our industry to the Far West" was not checked by the "sinister shadow" of the slavery question (507); that Professor McMaster does not spell his name with a "Mac"; that the bill to admit North Dakota and South Dakota was not signed on November 2, 1889 (549); that the McCormick reaper was not invented in 1834 (289); that the British Parliament did not "usurp" colonial rights when it taxed the colonists (115); that the Conestoga wagon, drawn by only four horses, did not carry express at a gallop (185); that the imperial reforms of Andros were not a "tyranny" (50). Mistakes of a proofreader are easily forgiven; accuracy is not to be expected of literary hacks who turn historians; but a trained scholar, in whatever field, ought to avoid mistakes like those of which the above are samples. The maps illustrating the text do not show technical expertness, and the publisher has used too many fanciful pictures for our taste.

But, given a blue pencil and editorial privilege, there is nothing that could not be corrected without changing the general character of the book. We should like to rewrite the chapters on the Mexican and Spanish wars. In the former,

we should decidedly disagree explicitly with Dr. Muzzey, our reading of Polk's diary convinces us of that President's deliberate intention to despoil Mexico by hook or crook (347). In the latter we should not refer to the cruelty of General Weyler without mentioning the insurgents' previous policy of devastation, and we should not state without qualification that the "Maine" was blown up by a Spanish mine (575, 576). These, however, are largely matters of judgment, and we would not be censorious regarding them. The general judgment of the author has been so admirable that we have only commendation for it.

The book may not succeed as a textbook for immature students. Its underlying philosophy is perhaps too serious for that. But it ought to have before it, after it has been edited by an Americanist, a great future as a small one-volume narrative, the little book for the average intelligent citizen that all the publishers are coveting. In its balance, its literary style, its neglect of the negligible, its construction, the book appears to us to strike a new level in American histories. The colonial beginnings are subordinated to their proper place, and the radical change in national trend since the Civil War is analyzed with a large degree of success. The author does not hesitate to express personal opinions, which are generally sound. His statement of the difficulties attending the problem of reconstruction is particularly illuminating. With an intelligent consciousness of social and economic movements now under way, he describes modern America as no other historian has done. Here his present interest in economics and sociology places him on solid ground. As his publisher announces, he tries to give proper recognition to the importance of the westward movement, and he succeeds as well as is to be expected from a New Englander living in New York.

We are disposed to believe that this is capable of becoming the best one-volume history of the United States in print, but in its present edition we are loth to recommend it to any one lacking the ability to detect its errors for himself.

**Serving the Republic.** Memoirs of the Civil and Military Life of Nelson A. Miles, Lieutenant-General, United States Army. New York: Harper & Brothers. $2.

General Miles has collected in an attractive volume the papers whose unimportance was seen when they appeared in serial form. Several years ago he brought out a larger and similar volume of reminiscence for the popular trade. Altho his life has been active and useful, he has been singularly unable to add material facts to our knowledge of the events in which he participated. He seems never to have been really in the inner confidence of the authorities at Washington, and when his one great chance came—the Spanish War—he was cheated of his opportunity. He adds another to the already portentous list of official assertions that the war was unnecessary, and reports having heard "a conversation between one member of the Cabinet and an assistant secretary, which was as follows: The assistant secretary said to the member of the Cabinet, 'What are you doing toward getting up a war with Spain?' The member of the Cabinet replied, 'I am practically alone in the administration, but I am doing all I can to bring it about.' The assistant secretary, with great gusto, replied, 'Thank God! Thank God!'"

**The Changing Chinese.** The conflict of oriental and western cultures in China. By Edward Alsworth Ross. New York: The Century Co. $2.40.

This book is not to be confounded with the ordinary globetrotter's volume. It is both of timely interest and of permanent value; a real contribution to the voluminous literature of the subject. Men like Williams and Smith, who have lived long among the Chinese, have given us in standard works the results of their experience, but here is something quite different, tho equally useful—the personal observations of a skilled sociologist, who knows how to classify and interpret what he sees. That Professor Ross has a vivid and picturesque style of stating his facts our readers need no assurance. A sample is better than any review, so we may refer to "The Race

BURNING OF OPIUM PIPES AND PARAPHERNALIA CONFISCATED BY THE FOO-CHOW ANTI-OPIUM SOCIETY
From E. A. Ross's "The Changing Chinese" (Century)

Mind of the Chinese," published in THE INDEPENDENT, September 7, 1911, and forming one of the chapters of this volume. The illustrations are mostly from fresh photographs, but often printed carelessly, even crookedly, surprising in a Century publication. The author argues strongly for exclusion of Chinese labor and he fears their industrial competition, if not now, in the next generation, giving some startling figures of the cheapness of manufacture. In the Hanyang Iron and Steel Works common labor gets $3 a month, just a tenth of what raw Slavs command in South Chicago. This plant, which now employs 5,000 men, is doubling its capacity, having last year contracted with an American syndicate to furnish annually for fifteen years from 36,000 to 72,000 tons of pig iron to a steel plant at Irondale, on Puget Sound. Now that the rebels have captured the steel works, the contract may be difficult to fulfil. We are glad to see that Professor Ross does not fall into the common custom of sneering at the missionaries. On the contrary, he gives them full credit as the chief factor in the regeneration of China now taking place before our eyes.

**The Believing Years.** By Edmund L. Pearson. New York: The Macmillan Co. $1.25.

That is a magical country where Mr. Pearson's book, *The Believing Years*, takes us. The small boy under the thraldom of Mr. Colburn, who wrote an arithmetic before any of us were born, is so genuinely a boy, his native town is so real a place, that we are quite sure we know them both, and that we loved them well in our own believing years. How can Mr. Pearson remember it all? And put into the simplest, sweetest prose imaginable the story of his childhood? The unaccountable behavior of certain "grave, elderly men nearly twenty-one years old," the unauspicious effort to entertain a strange little girl, by showing her treasures of tadpoles and green snakes and white mice; the joy of vaca-

son, the lagging return to school; the mystery of the world in which large boys of nine or ten move and have their splendid being before the adoring eyes of lesser men—it is all in the book, the charm, the freshness, the pathos and beauty of the believing year.

**Moses Coit Tyler, 1835 1900.** Selections from his letters and diaries. Made and edited by Jessica Tyler Austen. Illustrated. 12mo. Pp. vii, 325. Garden City, New York: Doubleday, Page & Co. $2.50.

The present writer first saw Moses Coit Tyler when he was a senior at Yale and delivered an oration perhaps for one of the literary societies. He was rather short than tall, had a fine figure, a very handsome face and light hair. His voice was mellow, his utterance persuasive and his oration very attractive and ended with an effective quotation from Longfellow: "Thou, too, sail on, O Ship of State." After graduation he studied theology, and was pastor for a year or two, lived three years in England, and after that was for most of his life a professor of English literature in Michigan University and of history at Cornell, interrupted by three years of journalism. During nearly all this time he was a frequent and most valued writer for THE INDEPENDENT. Indeed when Henry C. Bowen, proprietor of THE INDEPENDENT, bought the *Brooklyn Union* Professor Tyler was urgently asked to become one of its editors, but he then declined, altho later he was for three years on the staff of *The Christian Union,* but he did not like the work and was glad to be called back to the chair at Ithaca. That work he loved and he was a prolific author in both literary and public matters. The present volume is not really a biography, but is mostly a collection of his letters, with excerpts from his diary, and no great reticence has been observed, particularly as to his free expression of his opinions of men and things during the excitement of which Plymouth Church, Brooklyn, was the center in the early seventies. Part of this might well have been omitted. A man does not expect what he puts in his private diary to be given to the public. But one will find in this volume a wonderfully interesting and intimate account of experiences with a multitude of distinguished men in this country and in England. He died in 1900, and the last quoted lines of his were written to his sister:

> Many of the things I have toiled for in life now appear to me, as I approach the period of old age, to be mere froth and scum; and I am satisfied that to give one's life utterly to the good of others, in the ways pointed out by the Christian Church, is touching the reality of blessedness in living."

Perhaps the book is all the better for lacking so much of biography and giving us the inner thought and opinions of a noble and gifted man.

**Great Religious Teachers of the East.** By Alfred W. Martin, Associate Leader of the Society for Ethical Culture of New York. New York: The Macmillan Co. $1.25.

The lectures in this volume were delivered extemporaneously in the early part of this year before the Society for Ethical Culture, and have been written out and published in response to many requests. This process has left its stamp on the style, but not to the detriment of the book. Five great religious teachers besides the prophets of Israel are discussed with clarity and sympathetic insight, mainly from the standpoint of their ethical import for the world. In some places, as in the case of Buddha, the author seems to have been carried too far by his generous spirit of appreciation, and has magnified the good to the neglect of the evil effects of the teaching of these masters. Mr. Martin gives a noble delineation of Jesus's greatness as seen in "his unswerving loyalty to his convictions, his unsurpassed sympathy for men, his unalloyed consecration to a great life-purpose, his undying trust in a power higher than man." He is not warranted, however, in denying to Jesus any interest in political, social and industrial problems. The statement that "the concern of Jesus is exclusively with individual men and women and their reproduction of the divine love" could hardly be sustained on any interpretation of the Gospel story, even the most ultra eschatological. The book as a whole is to be commended as very pleasant and profitable reading.

**Recollections of a Parisian** (Docteur Poumiès de la Siboutie). Edited by his Daughters, A. Branche and L. Dagoury. Translated from the French by Lady Theodora Davidson. Pp. 407. New York: G. P. Putnam's Sons. $3.

These recollections range from 1789 to 1863: good Dr. Poumies lived thru two revolutions and under six sovereigns, to say nothing of the republic. When he went up to Paris from Périgord—as student—he found ruin and desolation everywhere. On the walls of many buildings he read the baleful inscription: "National Property. For Sale." Such a legend might be seen on the southern tower of Notre Dame as late as 1833; the cathedral passed for a few days into the ownership of a dealer in scrap iron. The reader of Balzac will find here an unvarnished account of Balzac's Paris—and more. There is a surprising liberality of spirit in the treatment of men and of régimes: the son of a moderate republican, this long-lived doctor is distinguished by a rare reasonableness, far above what one expects of a Frenchman modestly offering his contribution to social history. The book is full of anecdotes without giving too scrappy an effect. It is, also, uncommonly well translated. *Recollections of a Parisian* are worth owning—even worth reading.

**A Dictionary of Christian Biography and Literature,** to the end of the sixth century A. D., with an account of the principal sects and heresies. Edited by Henry Wace, D. D., Dean of Canterbury, and William C. Piercy, A. M. In one volume 8vo, pp xi, 1028. Boston: Little, Brown & Co. $8.

Here in one thick and closely printed volume we have, in revised form, the entire substance of Smith's Dictionary, with the same title. It is a standard work of prime value, and much more convenient than the bulky edition which it replaces. In this form it will be a treasure in any religious library and will not take up too much room.

**New Jersey as a Royal Province, 1738 to 1776.** By Edgar Jacob Fisher. New York: Columbia University. $3.

The influence of New Jersey during the colonial period was extremely unimportant. The situation of the Province, between New York and Philadelphia, gave to its affairs a suburban character that has never left them, while the peculiar nature of its establishment filled these affairs with intricacy. Dr. Fisher takes up his story after some of the worst of the proprietary tangles had been smoothed out, and the Crown had created an independent provincial government for the colony. His narrative is detailed and accurate, and not too vivid. His book is a worthy member of the series of colonial dissertations for which Professor Osgood's seminary has become famous, but from its local interest and technical character it can neither expect nor receive a wide reading.

**The Humbler Poets.** By Wallace and Frances Rice. Chicago: A. C. McClurg & Co. $1.50.

The desire to rescue from oblivion the men of one song is akin to that generous mood that looks after the under dog. In *The Humbler Poets* the authors have not adhered very closely to any clear definition of the word "humbler," since they include Kipling's "Recessional." Indeed they give themselves a much wider choice of verses than their title implies, defending themselves by saying that singular injustice would have been done our own age if contemporary odes and lyrics which are by true poets had not been incorporated here, tho the intention has been to include the work of men and women less well known, even to instances of poems produced by school children, by clergymen, lawyers and physicians in active practice of their professions, and by men in commercial business. The editors have shown taste and judgment in their chase thru the columns of newspapers and magazines for worthy specimens, rarely inserting a verse that has not some of the charm and dignity of good poetry. Many a minor poem would shame the bulk of the work of the major poets. The book is to be heartily commended for what it claims to be, and for much more; for it taps the sources of music in the great body of the English-speaking peoples and the spigots run quite as sweet and delicious juice as ever trickled out of the centuries of past history

## Literary Notes

A letter from the novelist and another letter from William Dean Howells, preface the *Henry James Year Book*, reverently selected and arranged by Evelyn Garnaut Smalley (Boston: Badger, $1.50). The editor falls into true Jacobean in writing that her task "has been not so much what to select, as what to regretfully omit." One or two quotations are provided for each day in the year 1912.

....If Henry Williams' handbook, *The United States Navy* (Holt; $1.50), had been published before the recent naval demonstration on the Hudson River, we should have "got more out of it." Beginning with the chapter on Naval History, the writer, who is a United States naval instructor, treats of the navy's organization and personnel, of classes of ships in the navy, high explosives, aeroplanes, designing and building, dry docks, and the national defense.

....In THE INDEPENDENT of October 21, 1909, Mr. B. B. Charles gave an account of "A Search for the Hittites," made by an expedition from Cornell University in Asia Minor. The official report is issued from Ithaca, N. Y., as Part 2 of Vol. I of *Travels and Studies in the Nearer East*, which is issued under the direction of Prof. J. R. S. Sterrett. It is a large quarto of 49 pages, with 27 plates and 45 photographic reproductions, and it gives copies of Hittite remains found by Mr. Charles and his two associates, A. T. Olmstead and J. E. Wrench. They visited every monument with Hittite inscriptions which they could learn of, and found others. It is a volume of first-hand material and supplements Messerschmits's "Corpus." No attempt is made at translation. We observe that Plate XXVII gives a new copy of a slab in the Metropolitan Museum, but the author does not seen to know that two others were added at the same time.

....George Harvey is known as a trenchant editorial writer; in *The Power of Tolerance* (Harper's; $1.50) he has brought together essays and addresses on The Soldiers of Two Republics, Common Sense, Journalism and the University, The Country Press, The Magazines, Athletics, and the question, Have Women Souls? There is one chapter on Woodrow Wilson: Colonel Harvey has been a Wilson-for-President boomer for at least five years, and hasn't run out of "copy," either.

....A play in blank verse by Israel Zangwill entitled "The War God," produced by Sir Herbert Beerbohm Tree at His Majesty's Theatre, has been dismissed by the London critics as pretentious clap-trap. The war god is Count Torgrim, Chancellor of the Kingdom of Gotha, which stands for Germany, while England is called in the play Alba. One of the characters is said to represent Tolstoy. The play is a sermon in the cause of international peace.

....M. Pierre de Nolhac has, in his account of *Madame Vigée-LeBrun, peintre de la Reine Marie-Antoinette, 1755-1842* (New York: Goupil & Cie., $5), told the story of one who painted in a *salon*, recorded artistically a society that was passing away, and proved herself the ideal portrait-painter of the European aristocracy. Her life of mingled good and evil fortunes is interesting enough to hold the attention even of the avowed philistine. This study makes a volume of about 300 pages, illustrated with four color plates and twenty-four photogravures.

....A French scholar, M. Fauchier-Magnan, has just published thru Perrin et Cie. an account of *Lady Hamilton, 1763-1815*. Mme. Vigée-LeBrun wrote of this distinguished beauty, "Nothing is more curious than the faculty Lady Hamilton acquired of suddenly giving to all her features the expression of grief or of joy, or of marvelously posing to represent different personages. . . . One could have copied from her enough different expressions to fill a whole picture gallery." For historians as well as for painters this "divine lady" (to use Romney's doubtful phrase) has worn very different expressions. But M. Fauchier-Magnan is very gentle to his "English Manon"—as it is nowadays the fashion for writers of every land to be, and with all sorts of Manons.

....Ordinarily it is American magazines rather than English publications that are published weeks or even months in advance of their dates, but the Christmas-tide is an exception and copies of the illustrated weeklies for Christmas have already reached this country. The London *Graphic* (50 cents), *Pear's Annual* (35 cents) and the *Illustrated London News* (50 cents) are as brave as ever in their colored pictures, verse, music, Christmas stories, and picture-supplements—and the best of them, this time, is the *Illustrated London News*.

....Next month there will be issued the *Memoirs of the Life and Works of Jean Antoine Houdon*, who is described by the authors, Charles Henry Hart and Edward Biddle, as the greatest of French sculptors. The book is being printed at the DeVinne Press on hand-made paper and the subscription price is $15. The American reader will be especially interested in chapters five and ten, with their accounts of the Franklin bust and Caffieri's jealousy, and of Houdon's visit to America.

....The latest addition to Macmillan's useful Home Life Series is Mr. H. K. Daniel's illustrated *Home Life in Norway* ($1.75).

....The ten volumes of Mr. Ambrose Bierce's *Collected Works* are now published in their entire sequence, and in three styles of binding (Neale Publishing Co.)

....It is only when we test it by use that we know the value of a traveler's language handbook, but E. E. Patton's *An American in Germany* (Boston: Heath; 75 cents) bears the earmarks of usefulness. It is intended to supply the vocabulary and constructions of everyday life, and should prove useful both in the classroom and, to the intending visitor to the German empire, on the ocean crossing.

....Mr. Kennerley deserves public thanks for undertaking the publication of Leonard Merrick's novels and short stories. *The Man Who Understood Women* is a short story, and gives its volume to a volume of tales just off the press, and very well printed ($1.20). A good many of these stories have a Parisian scene, and we find Mr. Merrick at his best in them. For Mr. Merrick is at his best when he adds a dash of pathos to a shake of cynicism, to garnish his dainty fantasies. "A new novel by Leonard Merrick is to me one of the events of the year," Mr. Barrie has said; and Mr. Merrick's short stories are better than his novels.

....Paul Elder & Co., publishers of San Francisco, issue a so-called *Impressions Calendar* that is striking both in decorations and text. The calendar is of as many colors as Joseph's coat, but is in good taste, all the same; which is more than we are sure of in the coat of Joseph. John Muir, Henry Van Dyke, George W. Cable, Robert Herrick, and (!) Ella Wheeler Wilcox (!) are among the Americans who, besides Victorian Englishmen and R. L. S. furnish quotations. From the same publishers we receive an *Impressions Annual* that is, perhaps, only a sublimated book-catalog, but so interestingly and attractively got up as to seem a very book itself.

A writer in the *Edinburgh Review* studies the authors of six great autobiographies: Cellini, Rousseau, Gibbon, Goethe, Mill and Herbert Spencer. None of these, he says, "stood in absolutely normal relations with women."

"Spencer never married, but never fell in love. Cellini, Rousseau and Goethe all escaped scatheless from the lower classes in which they had already had children. Mill's passionate devotion to his wife was such as to be almost unparalleled. In all these cases the sacrifices [illegible] Here [illegible] for the [illegible] of biography of [illegible]

We do not know whether M. Le Gallienne is to be denominated a "philosopher of biography," but he offers his own contribution to the subject. For while the publishers may or may not hold that their public has lost its taste for verse, they are persuaded that poets' love affairs tickle the palates of book buyers. Mr. Le Gallienne, a poet himself, has written a whole bookful of romances in which the Brownings, Chopin and Sand, Michael Angelo and Vittoria Colonna, Rossetti and Elizabeth Siddall, Mary Stuart and Pierre Chastelard are the principal figures (*The Loves of the Poets.* By Richard Le Gallienne. Baker & Taylor Co.; $1.50.) Frankly we find the bill of fare somewhat cloying, but it is undeniable that Mr. Le Gallienne writes better prose than most of those who manufacture this kind of literature.

....Another example in the same genre is *Goethe and His Women Friends,* by Mary Caroline Crawford (Little, Brown & Co., $3). There is, however, more excuse for studying one man and his amours than can easily be suggested for the other type of volume. In the present case Miss Crawford argues that the "platonic" element entered more largely into Goethe's "friendships" than most English biographers have represented.

> "Oh, Plato! Plato! You have paved the way,
> With your confounded fantasies, to more
> Immoral conduct by the fancied sway
> Your system feigns o'er the controlless core
> Of human hearts, than all the long array
> Of poets and romancers. . . ."

....A third book concerned with poets' love affairs is Mr. Francis Gribble's *Romantic Life of Shelley* (Putnam; $3.75). This writer is an expert in this kind of literature; George Sand, Rousseau, Chateaubriand, and other "romantics" have supplied him with the matter of vastly diverting volumes, written in a manner more sprightly by far than is used in the books of M. Séché and other Frenchmen upon whom he draws liberally—and generally without acknowledgment. Mr. Gribble is here on the defensive against carping critics; in his preface he explains that he does not indulge in "chatter about Harriet" out of wantonness, but to enable men to "see Shelley plain."

> "Nor does the repetition of such chatter imply the least disparagement of Shelley as a man or a poet. The idea that an interest in Shelley's relations with Harriet (and with Mary, and Emily, and the two Janes) is incompatible with an enthusiastic appreciation of the 'Prometheus,' the 'Cenci,' and the 'Epipsychidion,' is the fixed notion of a few pompous people; but it should be shaken out of them."

To make it altogether clear that such "pompous people" are mistaken, to enable his readers to "see Shelley plain," Mr. Gribble concludes his work with twenty-three pages devoted to "The Sequel" being a chapter on Mary Shelley's Suitors: Trelawny, and the Americans Washington Irving and John Howard Payne ("Home, Sweet Home")

*Football for the Spectator* by Walter Camp (Richard G. Badger, Boston, 75 cents) gives in compact form the necessary information for a spectator intelligently to enjoy the modern game. Whatever Walter Camp, the famous Yale football strategist, has to write on football is good, and this small book is no exception.

....Any business man will enjoy the few minutes that it takes to read *The Ginger Cure* by William G. Rose (Duffield; 50 cents). It tells of the startling changes brought about in a conservative business house by a hustling advertising man. In addition to the amusing side there is food for thought in the suggested innovations.

..From G. P. Putnam's Sons we receive five volumes in their series "Tous les Chefs-d'œuvre de la littérature Française," as follows: A new French translation of the *Chanson de Roland*; Amyot's *Deux Vies parallèles;* the first volume of Rabelais's works; a volume of extracts from Voltaire, entitled *Philosophie*, and Balzac's *Père Goriot*. Each volume is preceded by a short introduction The price of each volume is forty cents.

....The ninth annual issue of *The Christian Movement in Japan* (Tokyo) is full of information in regard to the foreign and domestic affairs of the Japanese people. Commercial, educational and charitable movements are reviewed and special attention is of course given to the religious and missionary work and workers of the empire. The veteran missionary and editor, Daniel C. Greene, announces that this issue is the last to be made under his supervision.

....The title of a book that is republished with garish decorations in what is called the "Author's Edition" is *For Lovers and Others*. The volume is delicately designated by the publishers as "a delightful book of exquisite verse, commemorating the Affection Days of Life, and portraying the Awakening, Development, and Perfection of Love, with intimations of the Divine quality of Love." The author is James Terry White. The sub-title is "A Book of Roses." Enough said. (Stokes; $1.)

....*Sunday Evenings in the College Chapel* (Houghton Mifflin; $1.25) is the fourth and concluding volume of Prof. Francis G. Peabody's collection of stimulating addresses and sermons delivered in Harvard College Chapel during the period of his administration there. High thought and ideals presented in clear, vigorous style give the book a quality that will appeal especially to young men. All the themes except the last are drawn from the New Testament, and most of them from the Gospels.

## Pebbles

ON the news that J. P. Morgan had tripped in passing the contribution box, steel common declined a point.

Sarah Weinstein, 7A10: "The New England States are England, Ireland, Wales, Germany, Italy and France."—*School Sixty-two.*

"JOHN, whose hair is this on your coat?"
"Blamed if I know! Whose eye is this on the end of your hatpin?"—*Kansas City Journal.*

"MADAM," remarked the weary wayfarer with the bandaged eye, "I was not always as you see me now."
"I know it," replied the stern-visaged woman at the back door. "The last time you were here you had on a deaf-and-dumb sign."
*Puck.*

"I WOULD like to get off today, sir," said the office-boy.
"What for?" asked the boss.
"My grandmother died last night, sir."
"But you told me that story before."
"Yes, sir; she dies every night, sir. She is playing Little Eva in an 'Uncle Tom's Cabin' show, sir."—*Yonkers Statesman.*

FIRST FRESHMAN.—What's that Jap in our class studying for?
Second Freshman.—Journalism. He's going into newspaper work.
First Freshman.—I don't believe he will make a success of it.
Second Freshman.—Oh, yes, he will! He's going to be a yellow journalist.—*Judge.*

ON one occasion Governor "Dick" Oglesby went down to Joliet to inspect the State prison, and in one of the cells he found a very ugly man.
"How did you get in here?" asked Oglesby.
"Abduction," was the reply. "I tried to run off with a girl, and they caught me."
"I'll pardon you as soon as I go back to Springfield," said the governor. "I don't see how you could expect to get a wife in any other way."—*Argonaut.*

A LADY who owned a tortoise-shell cat called up her grocer one morning and gave her usual economical order—an order for dried beans, hominy, yesterday's bread, and so forth—and she concluded with a request for one cent's worth of cat's meat.
The grocer sighed, for this order would have to be delivered three miles away, but, as he was entering the items in his order-book, the lady called him up again.
"Mr. Sands," she said, "O, Mr. Sands!"
"Yes, madam?"
"Mr. Sands, I want to cancel that order for cat's meat. The cat's just caught a bird."—*St. Louis Globe-Democrat.*

# The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra: to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

## The Citizen's Thanksgiving

THE farmer, the artisan, the merchant, the professional man have each their special reason for thanksgiving peculiar to their class; but all of them, citizens all, have their general blessings which call for gratitude to God. For we are not so much divided into classes and castes as we were, altho the trail of the serpent is yet over us; but we are all one humanity, each responsible for each, and all sharing the vast benefits which this age brings to us. There are old men living in every community who have seen the world revolutionized in their day, a better civilization, an advancing kingdom of God come to them; the whole world brought closer to them by railways, steamships, the telegraph, and, later, the telephone, the automobile, and, latest of all, so that our boys are making them as new toys, the aeroplane and the wireless telegraph. The morning penny paper brings to the poorest the news of the whole world. The products of the world are all dropt at our door, and the very slums and ghettos have privileges and dainties their grandfathers never imagined.

All this means the kingdom of God come down, or coming down, to men. For the kingdom of God is not all religion; it is in part comfort and happiness. Jesus talked the kingdom of God, and he taught us that it is not a circle with a single center, but an ellipse with two foci, one the love of God with all the heart, which is religion, and the other, love of our fellow men as ourselves, which is social service. Whatever helps social betterment advances the kingdom of God. Every factory which cheapens the cost of cloth; every vessel that brings us oranges and bananas for the street peddler to sell; every electric light that protects our streets; every improved roadway over which we can ride or walk; every law that sends the child to school and takes him from the factory, these and a thousand other things which ameliorate the condition of society, and all meant, in part, to benefit everybody, all these physical blessings are a part of the advancement of the kingdom of God on earth, and so an occasion for thanksgiving to God on this Thanksgiving Day.

For the world believes in God, believes more in one God than it ever did before. Even the biologists who thirty years ago were so clear that the laws of nature and life give no room nor occasion for God, are not so dead-sure as they were. They do not understand what life is quite so well as they thought they did. The workings of life and the activities of will and mind do not seem so dependent on efficient compulsive causes as before. The materialist philosophy, all so mechanistic and hollow and hopeless, is passing by, and a healthier and more spiritual one is taking its place, which does not of evil purpose exclude God.

The citizen of our country, and the citizen of the world, has much to rejoice in, not only when he considers the swift process of civilization about him, but when he looks beyond and glimpses the overturnings among the nations. What he sees must amaze him. Even among the decadent or decayed nations new sproutage springs from old roots, and ever and everywhere it is sap of liberty that inspires the new life. The love of all men is giving to all the claim of equal rights; and equal opportunity, sought and secured for all, is the very substance of the kingdom of God. The

dull cycle of Cathay has closed, for the white man has called the yellow man to move forward and up, and join in the fellowship of the kingdom which allows no king but God, under whom all men of all hues are brothers. We rejoice to see India asking more and able to receive more self-government, and a new breath of impulse blowing inward from the coast of Africa, before which the lion flees away, and the march of civilization covers his tracks.

The new spirit is abroad everywhere in this greatest year of grace. In Russia, in Germany, in Spain, in Portugal, in Great Britain, in our own land men are wisely and blunderingly demanding their rights, rights perhaps never thought of before, differing, disputing, fighting with tongue and ballot, but all seeking the kingdom of God in their right or wrong way, but sure in the end to find the right way; split in parties, but one in purpose, the high purpose to make men better and happier. There is no occasion to doubt or despair; it is a season to exult with a lofty gratitude, a holy joy, that we see this year the dead calm broken, the west wind blowing, conservatism and insurgency, the old social order and the new socialism, their banners waving in bloodless combats of peace; for we know that in the end truth will prevail, and the sharper the fight the speedier the victory. It has been a marvelous year, one in which we may be proud to have lived, praying to live thru a greater year to come. Let every citizen reach his thanksgiving far past his own loved family circle, and thank God that he sees the whole world travailing in glorious pain, waiting for the revelation of that justice and truth which shall bring the liberty of the glory of the children of God.

## The Farmer's Thanksgiving

THE old Thanksgiving was a farm affair. It was originated where the wild turkeys gobbled and the wild ducks quacked. It was intended as a summary of all the good things that the year had brought forth from the earth, and on the earth, and with this review of the months the heart naturally exprest itself in giving thanks. There was a delicious quaintness about the blessing that went with food at the table, that might well be revived; but this glorious thought of thanking God for all the good things that had caused sweat of the brow and chapping of the hands should never be left out.

Let us see how the matter stands today. It is true that the farmer could not command steam power, but for fifty years he was master of the inventive genius of the Yankee brain. From 1855 to 1895 the "Year Book of Agriculture" points out that human labor gained in its power to produce a bushel of corn over three hours; that is, it went down from four hours and thirty-four minutes to forty-one minutes. The cost of producing this bushel declined from 35 cents to 10 cents. Between 1860 and 1890 the time required for the production of a ton of hay went down from thirty-five and a half hours to eleven hours; and the cost of producing that ton was reduced from about $3 to $1.25. The old-fashioned sithe had gone out of sight and the broad-sweep mowers were carrying the farmers while they directed the work.

Power is the farmer's at last; not only machinery, but the power that drives it. Electricity makes every brook in the land of value, and these gurgling streams, that formerly only ran the boys' waterwheels, are now doing the milking at the barn, the churning in the milk house, and a large share of the Bridget work in the kitchen; that is, the brooks are doing this work where there is up-to-date farming. Referring to the same "Year Book" we find that seven crops have gained in the cost of labor since the middle of the last century nearly seven hundred of millions of dollars annually. We can hardly look for any very revolutionary gain in machinery hereafter, but the gasoline engine or the electric engine set down at our door, to pump our water and drive it thru the house, to saw our wood, to irrigate our gardens, to cut our silage, and vastly more, that is what we may look for at every modest farmhouse.

Education is also getting to be the farmer's, and for this he will learn to give thanks more liberally by and by. The farm boy and the farm girl are not getting somebody else's education today, but the legitmate educ tion that belongs to a farmer. THE INDEPENDENT said thirty years ago that we were educating

our boys away from the farms, not to them. The schools sent our lads home with a bit of knowledge about everything under the sun, except a knowledge of animal and vegetable life. This is no longer true. The graduate of an agricultural college understands how to lay out his land to the best advantage; how to conserve the soil and the water; better yet how to make soil out of the air and bring up plant food from "the farm under his farm." Beside this, agriculture is being readjusted so as to lay its basis on every familiar science. It is a way-back farm that has no shop or laboratory, where the young folk cannot study botany and entomology at home.

A vast system of university extension is growing up, and by means of bulletins and corn trains and other appliances education is going about the country seeking willing ears and open hearts. A school in an orchard is no longer a novelty. Why should it be? There is no educator, said Asa Gray, to compare with those old trees that filled the Oriskany Valley. It will soon be the rule that our boys and girls will do most of their studying out of doors.

The privileges of farm life have multiplied immensely. Free mail delivery naturally belonged to all the country, but we did not think of it in that light. Country telephones were denied us until within about twenty years; now it is a poor man indeed who cannot be linked on with all the rest of the people, for business purposes as well as social. The teamster takes his order by telephone. Postal savings banks had a hard time of it with the legislators, but they are now accepting the small savings of farm boys and farm laborers. Very soon we shall have parcels post service, and this will nearly equalize chances of the city dweller and the most isolated farm house.

Beyond all the rest the farmer must be thankful for good roads. It was nothing less than providential that the automobile brought about a new day for the farmer's team and wagon. The automobile was provoking in its lawlessness, but it is settling down now to be the best means of haulage for any one who wishes to reach the market. It is going to revolutionize the whole business of trucking and fruit growing. It will carry five times the load at three times to five times the speed of the old market wagon. Meanwhile it has introduced a new era of road making that is a saving of two-thirds in all haulage. Piety may anticipate golden streets hereafter; it can ask for nothing better just now than concrete Telford.

Are we so overwhelmed with material progress that we must forget God? He is a blind man who cannot see *benevolens* in the history and the happenings of our common life. Life is robbed of half its charm where one has not learned to be grateful. The delight of returning love for love is a single paragraph in the story of duty. Here will blossom the desire to co-operate with the Eternal Worker. He is a child of God who causes to exist a nobler fruit or more valuable vegetable, if only his chief aim is to benefit his fellow man.

## Equality at Law

RELIGION is not the only subject upon which the human race talks cant, and religious hypocrites are not the only, and perhaps not the worst, hypocrites. The principal subject upon which people in the United States talk cant at the present time is the majesty of the law, and our most nefarious hypocrites are a lot of respectable people who earnestly want the law enforced—on their fellow citizens.

There are three possible and familiar attitudes toward the law, and three corresponding classes of persons. Certain persons want law and government for everybody. Some of these are called, or call themselves, Socialists; others wear no tag. Certain other persons want law and government for nobody. They are called anarchists. Yet other persons want law and government for everybody except themselves. They are called individualists. Not to be misunderstood, we hasten to add that there are other individualists—or individualists in another sense of the word. A large proportion of Americans are individualists in the sense here indicated. It is among these that we discover the talkers of legal cant.

Discussion of the Sherman anti-trust law has brought the canting sort of in

dividuals prominently into the forums. They can say nothing too bad about the agitators and the politicians who have "wrecked business" by this abominable act. Mr. Wickersham, as the Attorney-General who has undertaken to enforce it, is anathema, and President Taft, as the Chief Magistrate who put Mr. Wickersham up to such dastardly doings, must be summarily disposed of in the coming presidential campaign. In the eyes of these vociferous economists, Mr. Taft, Mr. Wickersham, the Justices of the Supreme Court and the gentlemen who drafted the Sherman act have committed the unpardonable blunder of assuming that law and government are for everybody. That is socialism pure and simple, and the United States must be saved from such socialism at any cost.

And the offenders could so easily have found out for whom law and government ought to be created, and to whom they should be applied. The lawyers and the journalists retained by our most substantial business interests could have told them in a twinkling. The recent unfortunate strike of the wretched New York ash cart men has afforded an opportunity for making the matter perfectly clear to the dullest comprehension. Government and law are for all misguided folk who would curtail the liberty of any sovereign American citizen who stands ready to take a striker's job off his hands. The right to lift a hundred and fifty pounds of garbage without assistance, into a cart higher than your head, at any time after twelve o'clock at night in the winter season, is unmistakably one of the inalienable rights that were contemplated by the Declaration of Independence, and any public service employee who goes on strike with the idea that he can monopolize such employment is clearly conducting himself in restraint of trade. Law and government for such a creature are an obvious necessity.

Again, to avoid misunderstanding, we hasten to say that we do not allege the right, legal or moral, of public service employees to strike. The ethics and the expediencies of this question are by no means as simple as some people imagine, but we are not now discussing them. We are merely pointing out the ridiculous mental contortions of those purveyors of legal cant who with one breath so glibly call for the enforcement of law against wage-earning monopolists that combine in unions and go on strike, and in the next breath declaim against the "un-American" policy of any governmental control of business. Such talkers are not only ridiculous; they are thoroly mischievous, and we venture to predict that the sober-minded body of American voters is going to sit on them at the first opportunity. They are a public enemy and a social nuisance.

Equality before the law has been at least one of the ideals of Americanism, and it is going to be made one of the realities. If liberty is right for business, it is right for labor. If monopolization is execrable in trade unions, it is execrable in corporations. If we are going to call out the police when strikers throw bricks, we are going to call out the entire power of national and state governments, if necessary, when magnates and corporations wreck properties and in defiance of the plain letter of the law crush defenseless competitors. If, on the other hand, we decide that competition is not desirable we are going to give the poor man the same rights to enter into combination that the rich man enjoys.

These truths we hold to be self-evident, and the sooner the hypocritical talkers of legal cant acknowledge them and subscribe to them the better off they will be.

## A Notable Trust Decision

After the enactment of the Sherman Anti-trust law, similar laws were made in several States. Missouri has a statute aimed at great incorporated combinations, which, if prosecuted to conviction, may be heavily fined and prevented from doing business there. Suit was brought, under the law, against the International Harvester Company, commonly called the Harvester Trust. The defendant corporation was found guilty, required to pay a fine of $50,000, and forbidden to do business in Missouri. The final decision of the State's highest court was made known a few days ago. It is accompanied by remarks of an extraordinary character. We quote a part of the Chief Justice's opinion. Consideration of it may promote a

reasonable and just solution of the Trust problem. The Court said:

"The evidence shows that the price of harvester machines was not materially higher after the New Jersey corporation [the defendant company] entered the field than it was before, until 1908, when it was increased 8 or 10 per cent., whilst in the meantime there had been *a greater increase in the price of the material and labor* used in their construction. The evidence also shows that, while harvesting machines were the chief products of the companies absorbed by the International Harvester Company, that company has greatly enlarged its business and extended it to many other farm implements, and has thus put itself in competition with the many concerns that theretofore were, and still are, engaged in manufacturing such other farm implements, and the farmers generally *have profited* thereby. The evidence also shows that the machines manufactured by the International Company have been greatly improved in quality, and that the item of repair material has been reduced in price and placed within closer reach of the farmer. On the whole, the evidence shows that the International Harvester Company *has not used its power to oppress or injure the farmers who are its customers.*"

In another place the Chief Justice said that "the price" had "not increased in proportion to the increased cost of construction or the increased merit of the machines." One of his concurring associates, desiring to make his views clearly known, wrote a separate opinion. The court, he said, was "required by the statute" to condemn a company "which is proved by the facts to have been so far beneficial to the community." Pointing to the evidence cited by the Chief Justice, he added that "furthermore, independent manufacturers have not suffered by reason of the combination." It appears also that there had been testimony from scores of retail dealers to the effect that the company had used no unfair methods in its transactions with them or in its treatment of competitors.

All this was quite complimentary to the defendant corporation. Upon such a statement of facts one would say that it was entitled to a vote of thanks. Still, it must be condemned, driven out and fined. Why? The Chief Justice explained:

"When men deliberately and intelligently go to work and acquire power that will enable them to control the market, if they choose to exercise it, there is no use for them to say that they did not intend to control the trade or limit competition; nor, when the legality of their act of acquisition is in question, is it any use for them to say, We have not used the power to oppress any one."

And the Justice who wrote a separate opinion remarked:

"The statute, however, is plain in its terms and indicates very clearly that it was the purpose of the Legislature to forbid a license in this State to any foreign corporation which should prove to be a member of any combination organized to lessen competition, and this without regard to the question whether the consumer would be injuriously affected."

We suspect that the Supreme Court of Missouri has not a very favorable opinion of the Legislature by which this law was passed, or of succeeding Legislatures that have failed to amend it.

The defendant corporation is one that was recently in imminent danger of being prosecuted by the United States, and whose officers have been in conference with the Attorney-General as to changes—in the direction of disintegration or dissolution—by which prosecution in the future may be averted.

Now, how is the public interest served by the enforcement of such a statute as this Missouri law against a corporation characterized by the State's highest court as a public benefactor? The company has power, it is said, which could be used to the injury of the public, but the court acknowledges that this power has not been so used. Indeed, the court admits that the company has studiously refrained from such a use of it.

Would it not be for the public interest in Missouri and elsewhere to preserve and retain and enjoy the benefits enumerated by the court, and at the same time, by some official influence, to insure a continuance of good conduct, to prevent a possible misuse of the power? Ought there not to be a Federal Interstate Trade Commission, by which the power may be controlled and regulated?

## The British Species

It is a matter for no little gratulation that the pestilent British species of militant suffragist called the suffraget has not proved adaptable to our political climate. Specimens have been imported and have been on exhibition and have occasionally been admired, but the attempt to raise the breed here has been a dismal

or a happy failure. They show here no such vitality as did the gipsy moth and the cabbage butterfly when introduced from abroad.

The British suffraget is a strange brood. They invert not only the characteristics of the sex, but would subvert the very principles of persuasion and of reform. During the last week they made a fresh outbreak of violence for the absurdest sort of reason. Prime Minister Asquith had announced that he would introduce a bill into Parliament to correct some monstrous inequalities in suffrage and give but one vote to one man. The suffragets asked him to add the provision that would give women also a vote, all women as well as all men. He told them that he was not himself a believer in woman suffrage, but if an amendment to the bill should be offered in the House and find acceptance there, he would not oppose it, but would make it an administrative measure. As there are many members who would be glad to offer such an amendment, and the chance of success was not very small, one would think that this concession would have been most gratifying; but these British suffragets have so little sense of reason or humor that they were angry and entered on a bitter belligerent campaign. They stormed in a body the Parliament House and, when repulsed gently enough by the police, they separated in bands, walking, or riding in automobiles, with stones under their coats, with which they smashed hundreds of windows, or battered them with hammers, and were arrested as they expected and desired. Then when several hundred of them, ladies at other times, ladies of position and wealth, many of them, were brought before the magistrate, they refused to pay the fine imposed, but chose proudly to go to prison; and to prison they went, sentenced for a period from five days to two months.

Now, what did they expect to make by that vicious procedure? We are told that in the early history of the Church so eager were the enthusiasts to achieve the glory of martyrdom that they would purposely provoke arrest by insulting the altars, so that they might be given to wild beasts in the circus, until the bishops had to rebuke and forbid their stupid zeal. Some such a mob-madness for the distinction of imprisonment has obsessed this British species. They glory in their vulgar shame.

But again we ask, What do they expect to accomplish by the harridan tactics of smashing windows and going to prison? One would think it would be just the way to disgust sensible people and spoil their chances. They say they want to call attention to their cause. They have done that well enough, or at least have called attention to themselves. Is breaking the laws, damaging property, rioting in the streets, fighting the police, being sentenced to prison as lawbreakers, a good way to persuade lawmakers that they are fit to make laws and give to Great Britain a better, saner, purer condition of society? We do not pretend to understand the British temper, but in this country such behavior would disgust men and women alike, and would mightily injure the cause they sought to subserve.

We have no such suffragets here. We have suffragists, and they take a different and better method to persuade the people. They apply their arguments to reason and not to windows. They speak, they write, they plead, they even show themselves in processions, but all womanly and peaceful. They copy no hooligan tactics. They go to legislatures and speak in committees and they win votes. Their method does not insult the logic of human nature; and they succeed. They have attained partial suffrage in half the States of the Union, and complete suffrage in six, with more to follow. Their way pays here. Perhaps the British way will pay in Britain, but that would prove a different kind of human nature to prevail there than prevails here. We shall see.

## Browning or the Budget

THE term "clubman" has a rather definite connotation. But the term "clubwoman" may mean various and diverse things. The clubwoman may be feminist or anti-feminist; she may be a fanatical temperance reformer or addicted to cocktails and cigarets; she may be a connoisseur of mezzotints or an expert in sewage. Consequently those who praise and those who criticise women's

clubs are apt to have in mind quite opposite tendencies. It is very desirable that a diversity of aims should be maintained or even increased, and for that reason we deplore the prevailing disposition to force all the culture clubs into utilitarian channels. No doubt great good has been done in recent years by directing the attention of the tens of thousands of clubwomen in this country to questions of practical importance and of using their collective energies for local benefit, but there is danger that the value of other forms of interest and activity may be overlooked. As it is now a group of women who meet together for the sole purpose of reading poetry to each other or looking at pictures together is likely to be the object of so much contempt and ridicule on the part of their Martha-minded colleagues, to say nothing of the sterner sex, as to be forced to disband or go to reading poetry to factory girls and convicts who don't want to hear it, or to getting up a loan collection for the schoolhouse. Unless a department can make a showing of "something done" in the annual report it is likely to be eliminated. The sense of duty to others is apt to be a hyperdeveloped organ in woman, and this can be played upon until she gets so she can't enjoy herself without feeling miserable about it. The right of woman to her own amusements is the last of woman's rights to be asserted and the hardest for her to maintain.

Now, it was a perfectly proper instinct which drove the women of the latter 80's to the collective pursuit of art and literature. They plunged into the depths of antiquity to escape from the ennui of everyday duties, and they flew to the uttermost parts of the earth to enlarge their mental horizon. The culture club of those days was not a department of municipal government or an extension of the home circle. It was a change. It is not always that now. The housewife who has spent a weary week trying in vain to make both ends meet is expected to spend her free Saturday afternoon at the still more hopeless task of getting the city budget to balance with its revenue. A woman who has worked hard all the forenoon cleaning house is required, under penalty of being accused of the crime of incivism, to devote the rest of her day to the question of cleaning the streets. Now, if she had spent her spare hour in fingering archaic colored prints of court personages, nobody would have objected except certain old-fashioned moralists who are nowadays not listened to. It is recreation and her right. But if she chooses to spend it fingering platinum prints of cinque cento madonnas she becomes the butt of journalistic jokers and the scorn of professional philanthropists and artists. For this is not—to their minds—recreation. It betrays an unwarrantable aspiration for esthetics. She is trying to get above her station. Snub her down.

That class of women, unfortunately too large, which have been freed from any useful occupation in the home thru their own selfishness or their husbands' indulgence, should, on the principle that change is recreation, be the chief participants in the practical work of the society. A lady whose sole imperative duty is leading a white, fuzzy, microscopic dog out for his morning walk, ought to qualify for the mothers' club and study eugenics.

The especial danger of the position into which our present social system rather than an immutable providence has placed women is that the narrowness of their household occupations shall produce a narrowness of mind. The remedy for this, or, more accurately speaking, the relief from it, comes from seeking recreation and relaxation in something of a very different character. If housework is prosaic, poetry is the natural outlet. If it is monotonous and confined to daily necessities, the caprices of art and the vistas of history will afford a welcome change.

After all, these two ideals of clubdom, to increase efficiency and to give recreation, are not so incompatible as they may appear. True recreation increases efficiency. Chesterton has something to say apposite to this as to everything else:

"We should always be much more inclined to trust a solicitor who did not talk about conveyancing over the nuts and wine. What we really desire of any man conducting any business is that the full force of an ordinary man should be put into that particular study. We do not desire that the full force of that study should be put into an ordinary man.

We do not in the least wish that our par- could lay one should pour its energy into our forensic games with his children, or rides on his bicycle, or meditations on the morning star. But we do, as a matter of fact, desire that his games with his children, and his rides on his bicycle, and his meditations on the morning star should pour something of their energy into our law suit. We do desire that if he has gained any especial ling development from his bicycle, or any bright and pleasing metaphors from the morning star, that they should be placed at our disposal in that particular forensic controversy. In a word, we are very glad that he is an ordinary man, since that may help him to be an exceptional lawyer. . . ."

We hope, then, that the women who have a taste for the cultivation of arts, letters and sciences of no practical use to them, will not allow themselves to be bluffed out of it. All work and no play makes Jane a dull girl. The dilettante and amateur spirit, in that it is play and not work, is more akin to the true spirit of artistic creation than the professionalism which always strives to supplant it. It is perhaps the particular form of the artistic gift which it is woman's province to preserve. We do not indeed fear that in the long run she will neglect this feminine fine art, which consists in the discovery, encouragement and application of the other fine arts. We rejoice to see that the women of California, in the heat of their recent struggle for political rights, did not forget it. One of their campaign banners bore the significant legend, "Bread for all and Roses, too!" This has given Mr. Oppenheim a theme for a poem in the December *American Magazine:*

"As we come marching, marching in the beauty of the day,
A million darkened kitchens, a thousand mill-lofts gray
Are touched with all the radiance that a sudden sun discloses,
For the people hear us singing, 'Bread and Roses, Bread and Roses.'"

**Mr. Roosevelt's Announcement**

The announcement is made by *The North American,* of Philadelphia, on the authority of Mr. Roosevelt himself, that he is not, and never has been, pledged to support Mr. Taft for re-election, and that he will support no one whatever. It is further added, on his authority, that he is not himself a candidate and never has been; that he refuses pledges of support and wishes his friends not to urge his presentation as a candidate. He is not a candidate, he says, and he wishes all such suggestion to cease. We take him at his word; but will they cease? Will this pronouncement have any great tendency to make them cease? It is not clear to us that such is the case. It appears to us that, barring some unfortunate mistakes, Mr. Taft has made an excellent President and has accomplished more than most Presidents. The country would be safe in his hands for another quadrennium. But while he has been a genuine progressive, to some progressives he has seemed to lag too much, and some who do not want Mr. La Follette would like Mr. Roosevelt, while others more conservatively inclined imagine that Mr. Roosevelt would be a safer President, from their point of view, than Mr. Taft, if one can judge him from the latter's Attorney-General's efforts, and they turn to Mr. Roosevelt. It would be too much to ask Mr. Roosevelt that he declare that he would not accept the nomination. All he can do is to ask his friends not to push his name; and yet they will remember that he did not wish to be nominated as Vice-President and did his best to escape it; but when prest upon him he was obliged to accept it.

**The Mayor of Indianapolis**

Mayor Shank, of Indianapolis, has tackled a pretty big job if he attempts to supply the people of the city with coal and provisions at wholesale prices. He thought the coal dealers were taking too large profits, and so he bought coal by the carload and sold it for what it cost him. It pleased the people, all but the coal dealers. Then he began selling in the same way potatoes and apples bought in quantity from the farmers. He could undersell the merchants, for he is a rich man and does not need the profit. This last week he has bought up turkeys and chickens in the same way by the quantity, to drive the poulterers out of business or compel them to reduce their prices. His is not quite as extreme as the old way of the Roman rulers, who offered the populace "bread and games"

for which they asked no pay, but the principle is the same. It is not safe political economy. It may please those who take advantage of it and get their Thanksgiving turkey a few cents cheaper, but retail merchants we must have in our cities and towns, and they have a right to their profit. If they fleece their customers by suppressing competition, there are, or ought to be, other ways to prevent it, either by law or by counter-combination; but we do not see the wisdom of having a mayor or other official seeking popularity by breaking down the laws of trade and giving away part of the cost of service. We do not know that Mayor Shank is seeking re-election, but if he were we could not see the difference between his gifts to the voters and those of the candidate who offers cigars or money.

**Sunday Mails**

In Italy, where the employees on the Government railroads are not allowed to strike, they are able to let their grievances be known by obeying the regulations so very strictly and carefully as to disorganize the service. In a similar way the letter carriers in 1874 secured the reversal of an order by the Postmaster-General that they should deliver letters on Sunday in all first-class cities. The letter carriers in this city did not like it; it spoiled their rest day and increased their labor. So they developed the plan of delivering letters to clergymen while they were in church. Dr. William M. Taylor was in the midst of a sermon in the Broadway Tabernacle when up the middle aisle walked a postman with a pack of letters on his back. The ushers tried to stop him, but failed. He stopt before the pulpit and held out some letters. The preacher did not like the interruption and asked by what authority mail was served on Sunday. "By orders of the Post Office Department," was the answer. Dr. Taylor refused to receive his letters, and before continuing his sermon exprest his disapproval of the innovation. Before the end of the week the order was withdrawn at Washington. We now have three fourths of the post offices closed on Sunday, and all of them ought to be. A bill was before Congress at the late session closing all offices on Sunday and it ought to be past; but as there are important special delivery letters, such as those caused by sickness and death, there should be provision made that such letters can be delivered even on Sunday, but otherwise none but the most necessary work should be done, and postmen and clerks should be required to work but six days in the week, whether in the city or country.

**Government by Commission**

We wonder if the public has any conception of the rapidity with which the government of cities by commissions is advancing thruout the country. At last accounts 170 cities in the country had adopted this solidified method of securing responsibility and economy. These cities are in thirty-three States, East and West, North and South. Their population ranges from Oakland's 150,174 to less than 5,000. Of the cities besides Oakland, Cal., that have over 100,000 inhabitants are Birmingham, Ala., Lowell, Mass., and Omaha, Neb., while twenty-one others have over 40,000. A number of State capitals have adopted the plan; among them are the capitals of Alabama, California, Illinois, Iowa, Kansas, Kentucky, Nebraska, New Jersey, North Dakota, Oklahoma, South Carolina, Tennessee, Texas and Utah. As an illustration of the very simplest form of commission government we may mention Sacramento, the capital of California, which has just adopted the plan. The entire government of this city of 44,696 inhabitants is invested in five men, chosen by a general ballot of the men and women of the city. The five have just been chosen, but hereafter one will go out every year and one be chosen. This will be the shortest ballot yet on record for local offices. Sacramento adopts the plan after eight other cities had tried it, including Oakland, 150,174 population; Berkeley, 40,434; and San Diego, 39,578. Among the important cities which adopted the system in the elections of November 7, besides Sacramento, there were Lowell and Lawrence, Mass., with 106,294 and 85,892 population respectively; Stockton, Cal., and Lexington, Ky. Of the cities which have made trial of it not one has gone back to the old way, for Chelsea, Mass., is not an exception; its

board of control was a temporary expedient with an imperfect system voted by the legislature for three years, as an expedient after the great fire. No commission city has yet returned to the aldermanic plan, and none seems likely to do so.

**A French Duel**

Professor Langevin, a French scholar of distinction, loved Mme. Professor Curie, an even more distintinguished chemist, more than he did the mother of his four children, a large number for a French family. His wife brought suit, and a journalist published some of Mme. Professor Curie's letters to her lover, and characterized him as a coward and a sneak. That made M. Professor Langevin angry, and he challenged the journalist to a duel. At the signal to fire the professor raised his pistol, but the journalist did not lift his hand. Then the professor dropped his hand without firing, and the seconds took the pistols; honor was satisfied, and mutual respect restored. Might all duels end so, that the duello might go out in a gale of laughter. The French public seems to favor the professor, who naturally found more enjoyment in the society of a woman of genius than in the commonplace mother of his children. Why should not two people of high quality be superior to all the conventions of men and all the laws of God? It seems strange to these French people of society that Madame Langevin should object to her husband entertaining his admired affinity in his private lodgings. Long may we hold to the old puritanical notion that there is one moral law for genius and mediocrity, and that a double obligation rests on genius to hold every home sacred.

**Is a Meeting-House a Church?**

It was in the most fashionable Presbyterian church edifice in New Orleans that there was held an interdenominational meeting in which a number of women made reports and said a few words—innocent and proper enough. But there were Presbyterians who were appalled. Does not the Bible distinctly command that women shall not speak in church, cannot even ask a question, but must ask their husbands at home? So the church and its pastor were summoned before the Presbytery and the Synod, and condemned for a breach of church law. The case will now go to the Southern General Assembly, and we fear for the result. And yet the pastor and the church have a good technical defense. These women did not speak in church, they spoke only in the meeting-house. What Paul forbade was speaking in the *ekklesia*, the meeting of the company of the believers. They did not speak in a Presbyterian *ekklesia*, but to an unofficial interdenominational company of unassorted people. The building is not the church. We can get an idea of how far the Southern Presbyterian Church is behind the Northern by recalling that some thirty years ago a more flagrant case occurred in New Jersey. The Rev. Mr. See, pastor of a Presbyterian church in Newark, actually invited Miss Smiley to preach to his people. For this breach of ecclesiastical law he was brought before what is called a "court of Jesus Christ" and adjudged guilty; but we have heard of no such case since, altho plenty of women speak.

**A Two Miliion College Library**

It is good news that plans for a new library building at Harvard, to cost two millions and to house 2,400,000 volumes, have been drawn by direction of a committee of the Harvard overseers. The destruction of the long outgrown library building, Gore Hall, is to precede the completion of the new edifice. Harvard University has one of the largest and perhaps the most valuable of all academic libraries—it is an entirely different proposition from what it was when to Ticknor, returning from Germany, it seemed "a closetful of books"—and it is time that a university so well provided with athletic grounds and scientific museums should have a house wherein to range its book collections conveniently and with regard to the architectural decencies. Besides, a new library will go some little distance toward replacing the loss of the old elms that used to ornament the Harvard Yard.

Mr. Waldstein, the Slade Professor of Fine Arts in Cambridge University, has resigned his position, and in a letter to the London *Times* says that it gives a salary of only $1,700 a year, which is all the provision for teaching architecture, Egyptology and general Oriental archeology, medieval and Renaissance art, history, esthetics and the art side of ethnological and anthropological studies. Poor Cambridge! Our American universities make generous provision for these subjects, and perhaps a dozen of them have special schools of architecture, and have had for years. Professor Waldstein does not dare to beg for professorships in all these subjects, but he begs at least for lectureships at $250 a year, which we think England ought not to be too poor to supply.

In a letter recently published Lord Roberts, great military authority that he is, says:

"My country, right or wrong, . . . is the sentiment most treasured in the breast of any one worthy of the name of man."

So said Stephen Decatur in a toast given in Norfolk in 1820:

"Our country! In her intercourse with foreign nations may she always be in the right; but our country, right or wrong."

In response John Quincy Adams wrote:

"And say not then, 'My country right or wrong,'
Nor draw thy sword in an unhallowed cause.
But when thy country wanders from the right
Furl up her banners and avert thy sight."

Which doctrine is right, that of the two soldiers or that of the statesman?

We hear much of the labor organizations, with their 1,750,000 members, and their $5,000,000 last year in aid of strikes but we hear much less of the organization of farmers, perhaps because they have no strikes, and no desire to shorten the hours of labor. The farmers have over 12,000 fair associations in the country, with over 246,000 members; and their income was over $6,500,000, of which over $2,500,000 was spent in premiums, while the attendance at the fairs was more than 15,000,000. No other business so abundantly enriches the country as does that of the farmer.

When Mr. Balfour suddenly vacated the leadership of the Conservative party in the House of Commons there were three candidates for the succession—Mr. Austin Chamberlain, Mr. Walter Long and Mr. Bonar Law; one a Unitarian, one an Anglican Churchman and one a Presbyterian; and Mr. Law, the Presbyterian, won. He is also a great chess player.

Let no one, cleric or lay, hereafter dare, if he feels aggrieved, to summon any priest or other ecclesiastic before a court for any civil or criminal action; for by a *motu proprio* an old rule is interpreted afresh, and any one who is guilty of such an invasion of ecclesiastical immunity is *ipso facto* to be excommunicated.

The lesson to be derived from the recent suffraget demonstration in London is that it is dangerous to tell women that there is something they cannot do. For years men have been saying that women could not throw stones. Those who live in glass houses should not make derogatory remarks.

Last Monday a man was hanged in Georgia for the crime of killing two negro women, the first time, it is said, in the history of the State that a man has been executed for killing a negro. Very occasionally one has been hanged for killing a white man.

Hereafter chewing gum will be banished from the ship stores of the navy. The officers do not like to see the enlisted men moving their jaws on parade. It is not clear that chewing gum is more unsanitary than tobacco, and we hope to see tobacco also excluded and forbidden.

We are glad that Great Britain is waking up over the Persian crisis. She may well consider Mr. Shuster's long protest, and be concerned over Russia's attempt to take possession of two provinces.

Not all the muckrakers of New York City were on a strike last week; only those who wear white uniforms on the street.

# Insurance

## Death of John F. Dryden

In the death of John F. Dryden, president of the Prudential Insurance Company of America, the insurance world has lost one of its most prominent and distinguished members. Under Mr. Dryden's leadership the Prudential was built up from the most humble beginning to one of the largest life insurance companies in this country.

Mr. Dryden was born on a farm in Maine in 1839. When he was seven years old, his family moved to Worcester, Mass. Young Dryden, between terms at school, worked at the machinist's trade in the Worcester shops and mills; but his consuming desire was for education.

In the face of tremendous difficulties, complicated by a naturally delicate constitution, he finally earned enough money to take him to Yale. He was then twenty-two years old, and for two years he struggled thru the college course, at the end of that time being compelled to abandon it because of illness. It is worthy of note that thirty-five years afterward Yale made Dryden an honorary master of arts, in recognition of the gallant struggle that he was obliged to abandon.

On leaving college, he sought employment with a life insurance company, and spent the next ten years of his life in that business. Life insurance yielded him a none too generous living, but he studied it carefully and diligently, with a view to branching out for himself at the first opportunity. The opportunity came in the spring of 1873, when he was thirty-four years old. He had determined that the best, the logical money-making scheme for him to pursue was to pick out some prosperous, well populated factory community and establish himself there in an insurance company that should possess an elastic charter.

He secured his charter, but that did not mean the immediate launching of his project. Followed the long, discouraging search for capital to back up the enterprise. He went to the men in Newark who owned factories, pointing out to them that their laborers were a thriftless class, who, whenever they fell sick or died, had families which called upon the employer for assistance. All this could be obviated, according to Dryden, if the employers of Newark would get together behind a wonderful plan that he had perfected in his mind.

Dryden's plan was an adaptation of an idea which had been already largely exploited in England. But to him, nevertheless, should be given the credit for realizing the possibilities of introducing the idea to America. Briefly, this plan was to insure laborers for the insignificant sum of five cents weekly, the premiums to be collected weekly. But at first the wealthy business men of Newark did not take to Dryden's suggestions. Two weary years he spent in appeals and arguments before he could secure the minimum sum on which he reckoned he could safely begin business—$5,900.

At first Dryden was his own entire office, and he drew no salary at all for a time. During 1876 it was $100 a month, and for the next two years it was $150. The little group of men who helped him out of their own purses and by their personal efforts pinched and toiled with him, and, to do Dryden full justice, he was not afraid to admit his obligation to them in after years, or to state freely that to them belonged the credit of the Prudential's success as much as to himself.

Two and a half years after Dryden went to Newark, at the end of 1875, just two hundred and eighty-four policies were in force. Then an advertisement was put in the Newark papers calling for agents, both men and women, to canvass from house to house. With these five, and then ten, and then twenty policies a day were written. Dryden prodded and cajoled the agents to the limit of their energy. He inaugurated contests between agents and awarded prizes. He devised systems of higher commissions for greater volumes of business As soon as Newark was well organized, a new group of agents was set to work in the neighboring factory town of Paterson. Other New Jersey towns were covered.

Within four years the network of

agents has spread over into Pennsylvania and New York. The weekly flood of collections into the little basement office in Newark ran into the thousands. This part of Dryden's scheme of fortune was simple enough. Get men working for you on a plan by which a fixed fraction of each man's earnings goes into your own pocket. Then multiply the number of men, spread them over the civilized world. The talent for organizing and disciplining agents, and keeping them working to the limit, was Dryden's unique genius. It was at least half of what made him and the Prudential great.

On March 3, 1880, by a special act of the Legislature, the Prudential secured the withdrawal from the policyholders of the right to vote. It was this action, operating to throw into the hands of Dryden and his friends the control of $20,000,000, which brought down upon the company and its president the most scathing public criticism which followed the insurance investigation in this State. Apparently Dryden was not particularly in favor of this move, and, according to his own words, he endeavored to secure the consent of his associates to its revocation, but without success. He exprest these sentiments on the witness stand when he was being examined by Charles E. Hughes, later Governor of New York and now justice of the United States Supreme Court.

It was this act, conferring such extraordinary powers upon Dryden and the group that controlled, with him, the funds of the company, that made him the millionaire he was when he died. Once they had secured exclusive domination over the company's assets, steadily growing from month to month, they turned the money in their keeping to the purchase of interests in the gas works, electric railroads, lighting companies, banks, trust companies, manufactories, and other substantial interests of the State. The Prudential wove a network of money tentacles that stretched from end to end of the State of New Jersey and made its officers the most powerful men in the community, able to dictate to the executives at Trenton, and to make and unmake Governors.

When the Prudential and Dryden had been raised to such heights of influence and affluence, it was not strange that the company's president should have desires for personal political fame. He wanted to be Senator, and the company, nothing loath to have a representative in the senior branch of Congress, was decidedly willing to help him. So Dryden was straightway elected to fill the five-year unexpired term of Senator William J. Sewell, who had died.

His failing health forced him to withdraw from the contest for his re-election in 1907, and since that time Mr. Dryden has lived in comparative retirement. His physical conditon had recently given warning of an impending breakdown. After a recent severe surgical operation pneumonia developed, and he died at his home in Newark, aged seventy-two.

Of the 470 persons insured by the Mutual Life Insurance Company of New York in 1843, the first year of its existence, one, Charles H. Booth, died at the age of 101, while five policyholders died at an age beyond the "limit of life." These are as follows:

| Name. | Died. | Age at Death. |
|---|---|---|
| Charles H. Booth | May 29, 1904 | 101 |
| Robert Street | Feb. 1, 1903 | 97 |
| Charles Rhind | Apr. 23, 1908 | 98 |
| Homer Blanchard | Nov. 27, 1902 | 97 |
| Jesse W. Hatch | Jan. 24, 1910 | 98 |

In addition, John P. Daniels, of Milford, Mass., who has carried a policy since November 25, 1854, passed his ninety-sixth birthday April 29, 1911. His is not the oldest policy, altho he is the oldest living policy-holder in the company.

We are opposed to taxes on insurance. Such taxes make a wise and thrifty practice more expensive. The State of Wisconsin, as an example, derived $728,000 in taxes from insurance companies last year. The expense of their insurance department was about $33,000. Why should States derive this profit from the insurance business? It is estimated that $12,000,000 annually is paid by insurance companies in taxes. Let this amount be used in fire prevention and in improving the sanitary condition of our cities.

# Financial

## The Bankers' Convention

MANY otherwise intelligent and well informed persons know little or nothing about banking, and therefore are not accustomed to give to such meetings as the annual conventions of the American Bankers' Association the credit and weight which they deserve. The thirty-seventh annual convention of this great association was held last week in New Orleans and attended by about 4,000 men. We have paid some attention to the record of proceedings, the papers read, the discussions, etc., and it seems to us that such a convention is one which the American people may well regard with pride. The record of it can be held up before the world with confidence that in no other country could it be surpassed, if indeed it could be equaled. But to many, as we have said, it is a sealed book. We should like, if limits of space would permit, to set forth here summaries of the thoughtful and well written papers that were read—for example, those of Paul M. Warburg, J. B. Martindale, F. I. Kent and Benjamin Strong, Jr., of New York; President Schurman, of Cornell University; James B. Forgan and George M. Reynolds, of Chicago; F. J. Wade, of St. Louis; L. P. Padgett, of Tennessee; Arthur B. Chapin, of Massachusetts, and Assistant Secretary Andrew, of the Treasury Department.

As had been expected, the leading topic was what is known as the Aldrich plan for currency reform. Mr. Aldrich spoke forcibly in explanation and defense of this plan, which was the subject of many papers. As a rule, it was heartily commended, altho there were occasional criticisms of details. And at the close of the convention this plan was formally approved, with only one dissenting vote, that of General William R. Hamby, of Texas. It is to be noted that approving resolutions had already been adopted at the conventions of twenty-nine of the forty-six State associations, or at all in which it was a subject for consideration and action. President Schurman was one of those who spoke for it at New Orleans.

Among those best qualified to perceive the merits or defects of such a proposition there is scarcely any opposition to this plan. In the minds of many who are not so qualified it is handicapped by its association with the name of Mr. Aldrich, but they must admit it to be conceivable, even if their unfavorable judgment of his conduct concerning other matters is a just one, that he has hit upon a good plan for a currency system. It is a plan that provides for co-operation rather than for concentration or centralization, and for co-operation by means of an organization in which may be found many safeguards against control by a few persons or banks. We need organized co-operation for the reformation of a national currency system which President Schurman called "the worst in the world."

*

....In the calendar year 1910 the steam and electric railroads of the United States bought 148,231,000 crossties, paying $75,889,000 for them.

....The Memphis *Commercial-Appeal's* estimate of the cotton crop is 15,045,000 bales. On November 14 all ginning records had been broken by an output of 11,269,986 bales.

....Estimates of the world's crops of four cereals, as compared with those of last year, are published as follows by the International Institute of Agriculture: Wheat, 100.2 per cent.; rye, 93; barley, 99.4; oats, 90.8.

....Exports of boots and shoes are growing. They will be about 8,000,000 pairs in this calendar year, against something more than 7,000,000 last year, and the value of them, if those sent to Porto Rico and Hawaii be included, will be about $15,000,000.

....Enforcement of the Sherman act does not prevent new mergers. Consolidations of three companies manufacturing threshing machines in Indiana and Michigan, with a capital of $22,000,000, and of two companies manufacturing shoes in St. Louis, with a capital of $21,000,000, were announced last week.

## Survey of the World

**Mr. Taft Speaks Out**

In an interview published last week, Mr. Taft said that while he would welcome nomination and election for another term as President, he is not willing, and has not been willing, "to purchase it at the sacrifice of his freedom to do his duty as he sees it." Rather would he go back to private life, "with no heartburnings." He regrets the fact that his Winona speech on the tariff, "dictated on the cars between two stations," was given to the press before he had sufficiently revised it.

"One must not lose sight," he adds, "of the fact that while I was pledged to insist upon lower tariff duties there were many Representatives whose motive to protect the industries of their districts was just as strong as mine to comply with my construction of the platform. . . . In spite of handicaps, I did secure tariff reductions. . . . I induced Aldrich to cut down his amended cotton schedule about 10 per cent. I made a like attempt with wool. I got hides on the free list, and lower duties on coal, iron ore and scrap iron. If the Payne bill had passed the Senate in the shape in which it passed the House there would have been little serious censure. I realize now, tho, that . . . I ought to have made as strong a point on paper as I did on hides. . . . I consulted Mr. La Follette as to the amount of duty needed on paper, and he thought $2 was too low . . . and wanted a sliding scale of duties from a higher rate. We compromised on $3.75. . . .

"I could not get free lumber, either. Gifford Pinchot threw his influence into the scale for the retention of a $2 duty on lumber instead of backing a general effort to put it on the free list. This concession to the lumber interests was doubtless regarded by him as justified by his need of the support of the big lumbermen in prosecuting his forestry work. The bill carried only a $1 duty."

Of the program before him the President said:

"I believe on principle in a general income tax. But I would not resort to the ordinary income tax except in an emergency like war, when I would have it graduated so that those citizens who had most at stake should bear a correspondingly large share of the burden. . . .

"In the domestic field I suppose reductions in the woolen and cotton schedules and possibly in the metal schedule of the tariff will go to the top of the calendar. These will be founded, as far as my recommendations are concerned, on the report of the Tariff Board. In the House the Democratic majority have always professed themselves ready to accept any reductions they can get, and I am going to take them at their word in good faith. Where the insurgents will stand I am not prophet enough even to surmise.

"For another thing we ought to obtain some legislation which will enable Alaska to develop without infringing on our broad policy of conservation. Then there is the question of ratifying the peace treaties with England and France and the fiscal treaties with Honduras and Nicaragua, which in their way are peace treaties also, as their purpose is to remove one of the most prolific causes of war."

——The President and his advisers desire to avoid such maneuvering for renomination as might take the form of machine activity. When the time comes for choosing a chairman of the National Committee, the post is likely to go either to Charles D. Hilles, the President's secretary; William Loeb, Jr., Collector of the Port of New York; Walter Lowrie Fisher, Secretary of the Interior; Charles Nagel, Secretary of Commerce and Labor; Senator William E. Borah, or Frank B. Kellogg.

**Various Republican Candidates**

Wharton Barker, a retired banker, of Philadelphia, told the Senate Committee on Interstate Commerce, on November 28, that a New

York financier had informed him, in 1904, that the financial interests would support Theodore Roosevelt for President because he had "made a bargain" with them "on the railroad question." The "financier" he meant to call to mind was, beyond a doubt, the late E. H. Harriman. "I wish Mr. Roosevelt were here," said Mr. Barker, concluding his story. "It would be interesting if he were," agreed Senator Townsend. According to the Philadelphian, Mr. Roosevelt "was to holler all he wanted to"—but a bill was to be brought in by recommendation of the President, cutting off rebates and free passes, permitting the railroads to make pooling arrangements, and providing for maximum rates. Mr. Barker added:

"I told him I didn't believe Roosevelt had made any such agreement; but when the annual message of 1905 went to Congress he recommended most of those things. I wrote to President Roosevelt and told him what I had heard. . . . It was the only letter of mine Mr. Roosevelt ever failed to answer."

Mr. Roosevelt's comment is as follows:

"I would as soon discuss a pipe dream with an outpatient of Bedlam as discuss such nonsense."

Mr. Barker was the Presidential candidate of the anti-fusion Populists in 1900, when he received some 50,000 votes.—— A United States Senator is said to have written a letter offering Mr. Roosevelt political support if he will run for President in 1912. It is asserted that Senator Crane wrote the alleged letter. The Massachusetts Senator has been regarded as a supporter of the administration. Senator Bourne, of Oregon, has also been named. The Roosevelt candidacy worries LaFollette workers. Walter F. Brown, chairman of the Ohio Republican State Committee, has predicted that his State will declare in favor of a third term for Mr. Roosevelt. Mr. Brown is a close friend of Boss Cox, of Cincinnati. On the other hand, Senator Gronna, of North Dakota, says that, in spite of Roosevelt's popularity in the latter State, "it is too late now to swing the State away from LaFollette." Undoubtedly there are many "Roosevelt progressives" in Northern Ohio and Michigan, and in other States progressive Republican leaders express the view that the LaFollette candidacy is not developing the expected strength, while Mr. Taft's re-election is said by these speakers to be out of question. The name of Justice Hughes is heard in certain quarters, but there is no likelihood of his re-entering political life. New York politicans blame the coolness toward Mr. Taft upon "natural depression," and say that it is temporary. They deny the substantiality of the LaFollette boom, and refuse to take the Roosevelt talk seriously.

**The Dynamiters Confess**

On December 1 John J. McNamara, secretary-treasurer of the International Association of Bridge and Structural Iron Workers, confessed to having blown up the Llewellyn Iron Works, at Los Angeles, on Christmas Day, 1910, and his brother, James B. McNamara, pleaded guilty to responsibility for the Los Angeles *Times* explosion of October 1, 1910, which involved the death of twenty-one persons. These crimes, like many others perpetrated during recent months, were directed against the construction of non-union bridges and buildings, and at the general policy of the open shop. The McNamara brothers were represented in the trial at Los Angeles by Clarence S. Darrow as chief counsel, who advised their making a clean breast of it. Job Harriman, one of their attorneys, is the Socialist candidate for Mayor of Los Angeles. It was prophesied that when sentence was pronounced, on December 5, James McNamara would be given a life term, and his brother a short term. The prosecution is saved a long trial and its expense to the community, altho the county had already run up a bill of $200,000.—— The bribery charges against Bert H. Franklin, chief detective of the defense, will not be dropped, for Franklin, a former United States deputy marshal, is charged with having paid $500 to George N. Lockwood, a venireman, and when he was arrested, immediately after the act of bribery, he had $3,500 in currency on his person. The bribery case is said to have been responsible for the confessions. A light sentence is likely to be given to Ortie E. McManigal, who gave a confession implicating the McNamaras to William J. Burns, the detective who

made the arrests in the case. McManigal may be taken to Indianapolis to be used in the investigation of dynamiting cases by the Federal Grand Jury.——Walter Drew, chief counsel for the National Erectors' Association, which retained Burns and his detectives in September, 1910, to investigate the dynamiting cases, says that the fight has just begun:

"What we want to find out now," he says, "is, who were the men behind the McNamaras. . . . The big principle behind it all is the prosecution of the men who paid the McNamaras and countenanced and instigated this outrage. This is a national issue."

According to Assistant District Attorney W. J. Ford, of Los Angeles, the Federal and State Governments are co-operating to uncover "one of the most gigantic conspiracies ever conceived." Said Detetive Burns:

"The outcome is a great victory for the people who believe in fair play. . . . I feel also that I have gained a great personal vindication. I have been accused by Mr. Gompers and by every labor and Socialist paper in the country of trying to 'put over' a great hoax."

The part of the dictograph—a small mechanical register of conversations, used to take down the words of the prisoners when alone together—is believed to have been considerable in this case. It was the dictograph that Burns used triumphantly in the Illinois Central graft cases of the Ohio Legislature.

**Labor's View**

Samuel Gompers, president of the American Federation of Labor, says that the confession of the McNamara brothers will be considered at the executive council of the Federation in Washington, January 8. "Labor was grossly deceived," he adds. He asserts that he believed in the honesty of the brothers in their denial of the murder charges against them, and confesses that the disclosure of their guilt "will do labor much no good." He refuses, however, to make an investigation of constituent unions with a view to discovering more dynamiters. Mr. Gompers's right-hand man, Calvin Wyatt, organizer of the federation at New York, brands the McNamaras as "traitors to the cause of union labor" and to humanity itself. Labor had collected a fund of $190,000 to defend the dynamiters. There is much discussion as to the use to which the remainder of the sum will be put. It is suggested by certain newspapers and certain unions that it be voted to the widows and children of the Los Angeles *Times* victims. The Los Angeles unions want an accounting by the attorneys.——"We have always condemned acts of this kind," says Andrew Furuseth, of San Francisco, president of the International Seamen's Union of America, who has urged that every worker should subscribe a week's wages to the defense of the brothers. Charles H. Moyer, president of the Western Federation of Miners, who, with Heywood and Pettibone, was arrested in connection with the murder of former Governor Steunenburg, of Idaho, five years ago, declares that the confession furnished capital with a club which it

"will not be slow to use against organized labor. For that reason, no matter how guilty I might have been, I would not have confessed."

**Cuba and Other Islands**

The Conservatives have introduced in the Cuban House a bill to repeal the civil service la. . in order that there shall be no bar against the removal of Spanish guerrillas from office. This was done at the request of the Cuban Veterans' Association, which threatens to kill all guerrillas whom the Government fails to dismiss from their places. Reporters of a newspaper in Havana that had ridiculed General Loynaz del Castillo, an officer of the association, were severely beaten in the streets, last week, and the general was about to shoot the editor of the paper when his pistol was knocked out of his hand.——Solis, the Cuban bandit, who for two years has avoided capture, now demands $15,000 ransom for two young men who are in his custody. They are a son and a nephew of a rich planter named Alvarez, whose estates are near Camaguey.——The Board of Survey which has been inspecting the wreck of the "Maine" has found near the wreck a piece of a sheet of metal, containing rivet holes. It is said that this was never a part of the ship, and some think it is a remnant of a sub

marine mine.——A banking firm in New York offers to Hayti a loan of $2,500,000 at 6 per cent., with 1½ per cent. commission. Commander W. W. White, a retired officer of our navy, has been employed to patch up and reconstruct the navy of Hayti.——On the 2d the Congress of Santo Domingo elected Senator Eladio Victoria to be Provisional President, thus filling the vacancy made by the assassination, on November 19, of President Caceres. There was no disorder. Several of our warships had been sent to the harbors of the country.——In a three days' engagement last week with Moros in the Philippine island of Mindanao, twenty or thirty of them were killed, and one soldier of the Third Infantry.

**Madero's Foes in Mexico**

There was not much fighting in Mexico last week, but in several ways a growth of opposition to Madero was shown. In Juarez the people elected to be their mayor Juan N. Medina, a Reyist, who was removed from office in August last by General Orozco, one of the Maderist commanders. The people of Casas Grande went even further, electing Enrique Portillo, who was then and is now in jail for aiding a revolutionary movement in favor of Reyes. Several members of Congress have left their seats and the city to work for Reyes. Another member, Señor Pola, introduced on the 29th ult. a resolution to compel them to return. In Tepic the armed Reyists were overcome by Federal troops, and their leader, having been captured, was put to death. A rising in Sonora was checked by many arrests. At El Paso our Government arrested fourteen members of the Reyist junta. One of these was recently the Reyist candidate for Governor in Coahuila. Another was formerly bombmaker for a party of Magonists. The Adjutant-General of Texas writes to Governor Colquitt that, in his opinion, the real revolutionary movement is supported by the friends of Dr. Francisco Gomez, and that Reyes has been used to divert attention from it. Dr. Gomez, whom some have called the brains of Madero's revolution, has written to General Orozco, saying that he is not working for Reyes. The Madero revolution, he adds, has not been completed. He is trying to complete it, because the Madero Government is doing nothing in that direction. His brother Emilio, recently in the Cabinet, is ambitious and has followers. In Durango, last week, a revolutionary group of them was attacked successfully by the troops, who killed the Gomez commander, one Palacio.——The Zapatists have not surrendered, but fifty of them were killed, last week, in battle.——Madero's quarrel with the State of Oaxaca has not been settled. He still refuses to assist the State's forces in putting down a local rebellion which has cost several hundred lives. Oaxaca's Governor and people denounce his policy.——The press continues to talk of the danger of intervention by the United States, and persists in asserting that our Government has discriminated in favor of Madero and against Reyes. Señor Pola, while defending in Congress his resolution calling back the Reyist members, dwelt on the danger of intervention. The United States, he said, professed a desire to hug Mexico to its bosom, but only in order that it might choke Mexico by hugging. Some say the press articles criticising the United States are inspired by Gomez, Reyes, their friends and other opponents of Madero, who would lead the masses to believe that Madero was supported by our Government, and that his revolutionary movement was financed by some of our capitalists. There are signs that a great number of ignorant Mexicans are losing faith in him because the lands of the rich have not been distributed among them and no great increase of wages has been ordered.——It is expected that the new law for compulsory military service, which goes into effect on January 1, will add 15,000 men to the army.

**The Anglo-German Dispute**

Now that France and Germany have come to an agreement in regard to Morocco, the veil is being lifted from the discussion which went on simultaneously between Great Britain and Germany. One side of the story was told by Foreign Minister von Kiderlen-Wächter at a secret session of the budget committee of the Reichstag

on November 17 and in part made public four days later, and the other side of the story was told by the British Foreign Secretary, Sir Edward Grey, in the House of Commons on November 27. The two accounts give quite opposite impressions of what took place, but are not altogether irreconcilable as to the facts. It appears that on July 1 the German Government notified all the Powers signatory to the Algeciras Convention, which includes the United States, of its intention of sending the gunboat "Panther" to Agadir. The German Ambassador at London was at the same time instructed to explain to the British Government that this act was thought necessary for the protection of the lives and property of German subjects and *protégés* in Southern Morocco, but that no objection had been raised to the French advance to Fez, altho the German information in regard to the situation of the Europeans at Fez did not agree with the French information. It was the opinion of the German Government that the course of events had rendered the provisions of the act of Algeciras illusory, and it seemed doubtful whether France would be able to return to the *status quo* of 1906.——On July 4 Sir Edward Grey told the German Ambassador that Great Britain could not take a disinterested attitude concerning Morocco or recognize any new arrangement arrived at without her consent. On July 21, nothing having been heard from Germany in the meantime, Sir Edward Grey informed the German Ambassador that he had been waiting in hope of an agreement between France and Germany, but that he had learned that the German demands for cessions in the Kongo were of such a far-reaching character that it was obvious France could not accept them. In case of the negotiations with France failing, Great Britain would be obliged to take some step in order to protect British interests. He pointed out that the Germans were in the closed port of Agadir, that they were landing and negotiating with the natives, and it might be that the German flag had been hoisted at Agadir, which was the most suitable port on that coast for a naval base. The German Ambassador replied that, if the German proposals for compensation were unacceptable to France, it showed that France did not set as much value upon the free exercise of her claims as might have been expected. She must, therefore, put up with the presence of a foreign warship in a Moroccan harbor as part of the bargain. A North African empire from Tripoli to Senegambia with a predominant position in Morocco, was no small matter. England had been compensated in Egypt, which also was no trifling matter, but Germany had not been compensated with anything.——This conversation was so unsatisfactory to Sir Edward Grey that, after consultation with Premier Asquith, it was decided to make at once a public announcement of the position of England; so that very evening Chancellor of the Exchequer Lloyd-George introduced a paragraph into his speech declaring that, where British interests are affected, Great Britain must not be ignored if it was to remain a great Power. This created a sensation thruout Europe, and on July 24 the German Ambassador made an indignant remonstrance, asserting that the speech had been generally construed as a threat and had given rise to a high degree of dissatisfaction in Germany, and had furnished a large part of the British and the entire French press with an occasion for violent attacks upon Germany. Instead of making her wishes known thru the ordinary diplomatic channels, a public declaration had been made which could not have been supposed to have any other effect than to complicate and confuse the political situation and bring about a violent outburst. Germany, the Ambassador said, had never thought of the establishment of a naval port on the Moroccan coast and would never think of such a thing. That intention existed only in the British imagination.——Sir Edward Grey, in explaining to Parliament the course of the negotiations, said of this communication from Germany:

> "It was exceedingly stiff in tone, and I felt it necessary to say that the fact that it created surprise in Germany was in itself a justification for the speech. I felt that the tone of the communication made it inconsistent with our dignity to give any explanation of the speech."

——On July 27 another note was received from the German Ambassador, which, according to the English version,

was couched in much more friendly language, and after that the negotiations with France proceeded smoothly. Sir Edward Grey declared that England had no secret treaties now that the secret clauses of the Anglo-French agreement of 1904 had been published. The relations with Russia and France had been changed from friction to friendship. A nation like Germany, with the biggest army in the world and a very big navy that was going to be still bigger, should do all in its power to prevent the natural apprehensions in the mind of those who had no aggressive intentions toward them. It would, he said, be a disastrous policy for Great Britain to allow it to be understood that she would in no circumstances give her friends assistance if they were attacked. The Foreign Secretary concluded with the remark:

"Let us make new friendships, by all means, but not at the expense of those we have. I desire to improve our relations with Germany and intend to maintain our friendships unimpaired. The German Imperial Chancellor recently made two speeches which were inspired by the hope of seeing his country strong but not aggressive. If that is the spirit of the German policy, then within two or three years the talk of a great European war will have gone. The effect of the Moroccan settlement must be to relax tension and to remove a great obstacle from the path of European progress. For years the question of Morocco has been a discomfort to diplomatists. It has been settled without breaking the peace of Europe, and the part his Majesty's Government has taken has contributed materially to that result."

——Sir Edward Grey's speech is regarded as one of the most important pronouncements of England's foreign policy in many years, and the House was packed to hear it. The new leader of the Opposition, Andrew Bonar Law, followed with a speech commending the manner in which the Government had defended British interests, and the leader of the Laborites, Ramsay MacDonald, also approved of the policy in regard to Germany, tho he criticised the secrecy with which the negotiations had been carried out and questioned the Persian policy of the Government.

**Secret Morocco Treaties**

Since the announcement of the treaty between France and Germany about the partition of Morocco last month, three secret agreements on the same subject have come to light. The first consists of certain articles forming part of the Anglo-French treaty of 1904, but hitherto withheld from the public. According to them France agrees not to ask for a time limit on the British occupation of Egypt, and Great Britain, on the other hand, recognizes the right of France to preserve order in Morocco and to carry out administrative, economic, financial and military reforms. The trading rights of France in Egypt and of Great Britain in Morocco are not to be abridged. Spain is allowed to extend her territory in Morocco, but not to alienate any part of it to another Power. ——The treaty with Spain, also negotiated by M. Delcassé the same year and now for the first time published, is more liberal and specific in its grants to Spain. The course of the boundary line between Spanish and French Morocco is prescribed in detail, but it may be summarized by saying that it starts on the Mediterranean coast, at the mouth of the Muluya River, and extends to the Atlantic, leaving Larache and Alkazar in the Spanish zone, and Wezzan and Taza in the French. Tangier, which is in the Spanish zone, "is to preserve the special character given to it by the presence of the diplomatic corps and by the municipal and sanitary institutions." Spain is also granted an extension of the Gold Coast to the northward, including Ifi and reaching to the southern point of Morocco just south of the Sus Valley, where Germany has recently tried to get a foothold by sending warships to Agadir. For fifteen years—that is, to 1929—Spain agrees not to take any action in her spheres of influence without the consent of France, while France is bound merely to notify Spain of any action she may take in Morocco affecting the Spanish zone. But it is stipulated that:

"In the case in which the political state of Morocco and the Shereefian Government should prove incapable of subsisting, or if thru the weakness of this Government and its persistent powerlessness to secure public peace and order, or for any other cause recognized by a common agreement the maintenance of the status quo should become impossible, Spain may exercise her action without constraint in the region constituting her sphere of influence."

This clause is important because, in the impending negotiations between these

two Powers, Spain will doubtless allege and France dispute that the recent Spanish seizure of Larache and Alkazar was justified by its wording.——On November 12, a week after the conclusion of the agreement between France and Germany, some "explanatory letters" between the German Foreign Secretary and the French Ambassador at Berlin were given to the press and contribute new features to the agreement. Germany specifically agrees not to oppose the establishment of a French "protectorate" in Morocco. Germany is to share with France in industrial and commercial enterprises in Morocco and Kongo, but to have no preferential economic advantages. Railroads are to be constructed, first from Tangier to Fez, then from Casablanca to Fez, and into the Sus Valley from Agadir, which is to become an open port. The extension of Kamerun southward to Corisco Bay leaves Spanish Guinea completely surrounded on the land side by German territory. In case Germany wishes to purchase Guinea and the Corisco and Eloby Islands from Spain France will waive her prescriptive rights. Germany agrees not to interfere in the negotiations of France with Spain concerning Morocco. The significance of these treaties is discussed editorially in this issue.

**Persia Defiant**

The Russian Government on November 29 presented an ultimatum to Persia demanding the dismissal of W. Morgan Shuster, the American Treasurer-General of Persia, and his assistants. Russia further demands that the Persian Government submit for Russian approval the names of all foreigners

A MAP OF PERSIA

Showing the Russian and British spheres of influence according to the Anglo-Russian agreement of August 31, 1907. There is reason for believing that the neutral zone left between them is ultimately to be conceded to Great Britain. The provinces along the Caspian are now invaded by Russian troops and various points along the Sea of Oman and the Persian Gulf to its head have been recently occupied by British troops from India.

at present employed or to be employed in the future, and that Persia's future relations with Russia and Great Britain be regulated in conformity with the interests of those Powers. Persia must also agree to pay the expense of sending the Russian troops to Persia. Unless these demands were complied with within forty-eight hours Russia would send troops to Teheran. This ultimatum created great excitement among the Persians, who are enthusiastically in favor of Mr. Shuster, recognizing him as their sole defender against the aggressions of Russia and Great Britain. Processions numbering thousands paraded the streets of the capital and other cities bearing banners inscribed "Independence or Liberty." A long and heated session of the Mejliss or Persian Parliament was held, and by unanimous vote a resolution rejecting the Russian demand was passed at 11.45 o'clock, just a quarter of an hour before the expiration of the forty-eight hours specified in the ultimatum. In the discussion the speakers declared that it was impossible for Persia to sign away her own independence. If Russia should wrest it from her it would be God's will. In reply to a deputation from the Mejliss, Mr. Shuster begged them to consult only the interests of their country and not to consider him. The chief ground for Russia's demand for Shuster's dismissal is the circulation of a Persian translation of his letter to the London *Times*, which was summarized in these columns last week. Shuster has denied responsibility for the Persian version, and he has complied with the wishes of the British Government in removing from office the British subjects who had been appointed to collect taxes and administer finances. He protests that the opposition to him is due solely to his refusal to betray the people he is serving by officially recognizing the Russian sphere of influence in Northern Persia. One of his first acts was to attempt to reduce the interest paid at the rate of 7 per cent. to the Russian bank by refunding the loan at 5 per cent. thru American capitalists. Bombs have been discovered by the police in Teheran which were intended for the assassination of Shuster. Ala-ed-Dowleh, ex-Governor of the Province of Fars, was assassinated at the door of his residence in Teheran by the Persians, who were indignant at his efforts to re-establish the deposed Shah. The Russian troops landed at Enzeli have taken possession of Resht, and bodies of Cossacks have been sent on to Kasvin and to Teheran.

**Nanking Captured**

Nanking, the southern capital of China, is now in rebel hands. It surrendered somewhat unexpectedly, without either a prolonged siege or a bloody assault. After the revolutionists had captured Tiger Fort, inside the walls, and also secured the Taiping Gate, the Manchu general, Chang Hsun, recognized that he could not hold the city, and acting under the advice of the American Vice-Consul, Mr. A. Gilbert, and the missionaries, he agreed to surrender without a fight. The revolutionists then took possession of the city and also of Purple Hill, the imperial stronghold. General Chang escaped in disguise. The Tatar city was sacked and burned by order of the revolutionary authorities. This leaves the whole of the lower Yang-tse in the hands of the revolutionists, who have also control of the fleet of some twenty vessels. Since Nanking was the capital of the old empire of China before the Manchu invasion, and was for ten years the headquarters of the Taiping rebellion, its capture has greatly strengthened the cause of the revolutionists for sentimental as well as practical reasons. At the same time they have suffered a serious setback in the loss of the three cities at the junction of the Han and Yang-tse rivers, where the revolution began. The imperialists first captured Han-kow and then crossed the Han River and secured possession last week of Han-yang, which contains the steel works and arsenal. This put the third city, Wu-chang, at their mercy, but so far it does not seem that they have gained possession of it. An armistice was negotiated on December 1 by the British Ambassador at Peking, by which each party agreed to abstain from aggressive movements for three days. The revolutionists at Urga have expelled the Chinese officials and declared Mongolia independent.

"Ever since the attempt has been made to discover a rational basis of morality, human nature, regarded essentially as good, has been taken as that basis. Religions and systems of philosophy, on the other hand, which have tried to find another foundation for morality, have regarded human nature as vicious at the roots. Science has been able to tell us that man, the descendant of animals, has good and evil qualities in his nature, and that his life is made unhappy by the evil qualities. But the constitution of man is not immutable, and perhaps it may be changed for the better.

"Morality should be based not on human nature in its existing vitiated condition, but on human nature, ideal, as it may be in the future. Before all things, it is necessary to try to amend the evolution of the human life, that is to say, to transform its disharmonies into harmonies (Orthobiosis). This task can be undertaken only by science, and to science the opportunity of accomplishing it must be given."—Metchnikoff's *The Nature of Man*, p. 288.

IF Carlyle were writing now his "Heroes and Hero-Worship," he would have to add—however much he would have disliked to—a chapter on "The Hero as Scientist." For the popular ideal of greatness has been decidedly changed in the last half-century and new standards of heroism have been established. Creative genius is beginning to take rank above destructive, and men are coming to recognize that the heroism of those who save life may be quite as great and is certainly more admirable than the heroism that is measured by a monument of skulls. A striking proof of this shifting of public appreciation is afforded by the referendum carried out by the *Petit Parisien* three years ago to ascertain whom the French people regarded as the greatest names their country had produced during the nineteenth century. Fifteen million answers were sent in, so the result may be taken as representing the consensus of opinion in a larger degree than such newspaper *plébiscites* generally do. It was to be expected that the name of Napoleon would head such a list. It would have in almost any other country except France. But France, always devoted to the cult of *La Gloire* and hitherto chiefly captivated by the bellicose form of it; France, where every man is trained in the army and educated in schools established with the avowed purpose of increasing the military strength of the nation, France ranks Napoleon fourth in the list of eminent men and puts at the head of it the name of a modest chemist and physiologist, Louis Pasteur.* It is a common observation that new ideas and social tendencies are apt to become manifest in France earlier than elsewhere. The French clock seems to be fast, always keeping a bit ahead of mean European time. If so, we may expect that before long other countries may come to give due honor and, what is more important, due opportunity and encouragement to the scientists, inventors and authors who confer glory upon their country by benefiting the whole world.

The worthy successor of Pasteur as

*The list is instructive because it shows clearly that the names first in the hearts of their countrymen are those who have become eminent in science and letters or have done signal service in the cause of the republic. The leading names are as follows: 1, Pasteur (receiving 1,338,425 votes); 2, Victor Hugo (1,227,-[illegible]); 4, [illegible] 4, Napoleon Bonaparte (1,118,034); 5, Thiers (1,039,453); 6, Lazare Carnot, organizer of the republican army of the Revolution; 7, Pierre Curie, discoverer of radium; 8, Alexandre Dumas *père* 9, Dr. Roux, inventor of the diphtheritic serum; 10, Parmentier, introducer of the potato into France; 11, Ampère, father of dynamic electricity; 12, Brazza, who secured the Kongo region for France; 13, Zola, novelist and defender of Dreyfus; 14, Lamartine, republican poet; 15, Arago, astronomer and [illegible]; 16 Sarah Bernhardt, actress; 17, Premier [illegible]; 18, Marshal MacMahon; 19, President Carnot; 20, Chevreul, chemist; 21, Chateaubriand; 22, Ferdinand de Lesseps, constructor of the Suez Canal and projector of the Panama; 23, Michelet; 24, Jacquard, inventor of the pattern loom; 25, Jules [illegible]; 26, President Loubet [illegible] Denfert Rochereau, defender of Belfort.

Director of the Institute he founded is the subject of this sketch, Elie Metchnikoff. The foremost of French medical men, he was neither born a Frenchman nor trained as a physician. Like Pasteur, he entered the realm of medicine by crossing the frontier of another science. Any man who pursues a straight line of thought will find that it leads him across many of those imaginary lines which have been drawn between the sciences, just as an aviator crossing Europe in an air line pays no attention to the artificial and historic boundaries which divide state from state. Pasteur was a chemist, an inorganic chemist at that, and he was running down the cause of asymmetry in crystals when he found himself over in the field of biology. He had been engaged in separating the leftward skewed crystals of tartaric acid from those that skewed to the right by picking them out of the mixture by hand, but he discovered that he could throw the burden of selection off on an agency whose time was less valuable, namely, the yeast plant, which has an appetite for one kind of crystals, but disdains the other. This led him to the germ theory of life and of disease and enabled him to save millions annually to the farmer and stock-raiser and unnumbered human lives.

Metchnikoff's experience was similar. He was a zoölogist less interested in man than in the invertebrates, devoting his time to the study of the minuter forms of life on the barren steppes of Russia and in Mediterranean waters. It was in Italy at Messina in 1882 that he made the discovery which led him to fame as one of the benefactors of the human race. Now, if a man should deliberately set out for such a goal, if he should be incited by egotism to become famous, or inspired by altruism to relieve the suffering of humanity, about the last thing he would try would be to sit down in a laboratory all day with his eye glued to a microscope watching the blood corpuscles chase each other thru the veins of an infant starfish. But since Metchnikoff was less influenced by the two motives mentioned than he was by a desire for truth for its own sake and regardless of consequences, all these things have been added unto him. If the anti-vivisectionists had their way about it, experimentation in animals, if allowed at all, would be restricted to physicians and to the specific purpose of curing disease. This, however, would be one of the surest ways to check medical progress, for the advancement of a science ordinarily owes little to those who are professionally engaged in its practice or have their eyes focused upon some practical result of their investigations. At least the world may rejoice that thru the liberality of French law the work of these two men has never been hampered—Pasteur, who discovered the cause of disease, and Metchnikoff, who discovered the cause of immunity. These are two cornerstones of this foundation on which is now being erected the structure of a rational system of hygiene the purpose of which is to prolong human life by the elimination of disease rather than by its cure. The change that is taking place in medicine is analogous to that taking place in philanthropy. The modern philanthropist appears cold-hearted because, instead of dropping a coin into a beggar's hat, as did the charitable in former days, he devotes himself to a systematic study of the causes of poverty. The modern medical man is likewise misunderstood if he seems indifferent to the suffering around him and is absorbed in the investigation of remote biological problems having no perceptible relation to human needs. But the beneficial results of the scientific method in both philanthropy and medicine are already sufficiently apparent, so that we can see that it will do much more for humanity than the kind but blind benevolence of the past.

The fame of France in art, literature and science is in large part her reward for her hospitality in giving to men of other lands the freedom and encouragement which they could not find at home. One example is Maeterlinck. Another is Metchnikoff. He left his native country chiefly because of a difference of opinion on political questions between himself and the Czar. Not that he has ever been a revolutionist, but as a Jew by race, an atheist in religion and a liberal in politics he was triply obnoxious to the powers that be, and after the assassination of Alexander II in 1881

Многоуважаемому Германну Бархштейну
на добрую память
Ил. Мечников.

[To my highly esteemed Herman Berndein for a pleasant remembrance—ILYA METCHNIKOFF]

the students were too much excited over politics to attend to their studies. So he resigned his professorship in the University of Odessa and went abroad to devote himself to biological research.

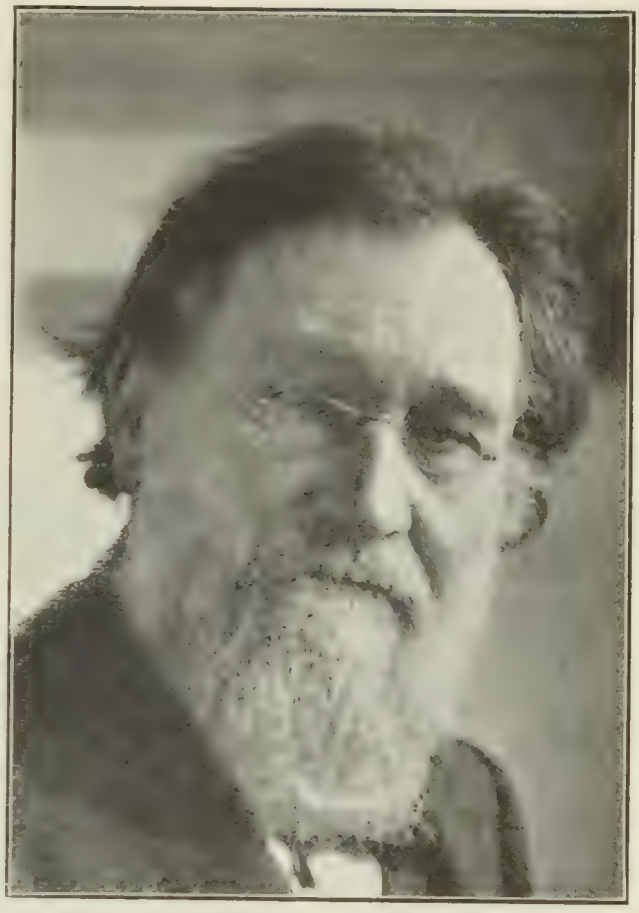
He was born in the Province of Kharkov, Little Russia, May 15, 1845. His father was an officer of the Guards, afterward a general. His mother was a Jewess, and it was from her that he derived the love for science which early manifested itself. He won a gold medal in the high school of Kharkov and passed thru the university of that city in two years instead of the customary four. Then he went to Germany and studied at Giessen, Göttingen and Munich. Returning to his native land he taught in the University of St. Petersburg and in 1870 went to Odessa to take the chair of zoölogy in the university there.

The years spent in private study, chiefly at Messina, the earthquake city of Sicily, were most fruitful, for his investigation of intercellular digestion in minute marine invertebrates gave him the clue to the protective action of the blood in the higher animals and man, and in 1884 he outlined his theory of inflammation, which was, in short, that the congestion of blood at a wound was due to the efforts of the leucocytes or white blood cells to overpower the invading microbes. The value of this discovery was recognized immediately by the two foremost authorities in biology: Virchow, the German who had discovered the leucocytes, and Pasteur, the Frenchman who had discovered the microbes. Metchnikoff had now found the missing link which brought these two discoveries together and showed their meaning.

ELIE METCHNIKOFF: AN EARLIER PORTRAIT

In 1888 Metchnikoff was called to the Pasteur Institute, and in 1895 became its director. Here he found an exceptional opportunity to devote his talents to the relief of suffering humanity. Such institutions for the advancement of the science of medicine have since been established elsewhere: the Institute for Experimental Therapeutics in Frankfort-on-the-Main, the Cancer Research Laboratory of London, the Rockefeller Institute in New York, for example; but the French people were the first to respond to the need of the man they have delighted to honor by endowing, in 1886, an institution which should continue his work as well as perpetuate his name. The Nobel prize for the most important discovery in medicine was in 1908 divided between Metchnikoff, of the Pasteur Institute, and Prof. Paul Ehrlich, of the Frankfort Institute, who has in these latter days made "606" the mark of the beast, instead of 666, as prophesied in Revelation.

Characteristically French, too, is the artistic setting which has been given to this home of science. The visitor naturally approaches it thru the long and handsome Boulevard Pasteur, then turning into a side street he finds on his left the Pasteur Institute and on his right the more imposing buildings of the Institute for Infectious Diseases and the Laboratory of Biological Chemistry, recently erected for carrying out the treatment which the experimental work of



the other side of the street has suggested. A new department is now to be added for the study of tropical diseases such as the sleeping sickness, which has depopulated a large part of the Nyanza region. This extension of the work is made possible by the receipt in 1909 of the bequest of $8,000,000 by the miserly and eccentric Jewish banker who called himself Osiris.

As the visitor passes into the courtyard of the Institute, his nerves, already shaky with thoughts of microbes and mad dogs, he is almost startled to see, half hidden among the trees, a man engaged in a death struggle with a wolf. This is a bronze statue of Jupile, a shepherd who, bitten by a mad wolf, was one of the first patients to receive the Pasteur treatment for rabies. In a crypt of marble and mosaic underneath the building is the tomb of Pasteur, as impressive, if less imposing than the tomb of Napoleon under the dome of the Invalides not far away. The reception room of the Institute is adorned with large paintings showing the modern miracles of healing, better authenticaeted than those of Sainte Geneviève, depicted by Puvis de Chavannes on the walls of the Panthéon.

Professor Metchnikoff is ordinarily not accessible to visitors, especially interviewers, but since I was armed with a letter of introduction from Prof. Jacques Loeb, of the Rockefeller Institute, whom he regards as the foremost of American scientists, I was fortunate enough to find him in.

He has rather a short figure and a large head, with a bushy gray beard, but hair that is still dark. His spectacles are not sufficient to impart severity to his mild blue eyes. His voice is low and pleasant, and he speaks, as he moves, without either hurry or hesitation. He is a worker among workers, inspiring with his indefatigable zeal the young men who come to him from Europe, America and Asia to pursue their researches in bacteriology.

A walk thru the Pasteur Institute is like a visit to a zoological garden, for the study of each particular human disease requires the discovery of some species that is also susceptible to it. Here are not only the dogs, guinea pigs and rats common to every bacteriological laboratory, but also many others closely connected with Metchnikoff's special interests; parrots and geese, for example, which are remarkable for their longevity; bats, which eat rotten food and yet maintain an aseptic intestinal tract; and chimpanzees, which, as the literal blood relations of man, are capable of sharing the worst of his diseases.

A CHARACTERISTIC POSE.

Like Agassiz, Metchnikoff has "no time to get rich." At his home in the suburbs of Paris he sets an example of the plain living he advocates, supplementing the meager salary given him at the Institute by the income of a small estate in Russia. The $20,000 he received from the Nobel Foundation he devoted entirely to the furtherance of his researches in longevity.

M. Metchnikoff has given the best possible proof that he has no personal aversion to women who enter his profession, for he married in 1875 as his second wife a Russian bacteriologist of distinction. He dedicated to her his first volume of "Optimistic Studies," and in it he cites her experiments on the growth of microbe-free tadpoles. She

is an artist as well as a scientist, and here, too, M. Metchnikoff shares her tastes, for he is fond of painting and music. They have no children, but he has a godchild to whom he is devoted.

His high regard for individuality leads him to look with favor upon the entrance of women into the universities and the professions. He has no fear that it will result in the production of a class of celibates corresponding to the sexless workers of the beehive. On the contrary, his observation of the feminist movement for more than forty years has shown him that learned ladies are by no means wanting in the marital and maternal instincts common and proper to their sex. Of a thousand women in the St. Petersburg Medical School, 10 per cent. had been married before, and 44 per cent. were married during their course of study. A conspicuous case of feminine scientific genius is that of Sonya Kovalevsky, who attained the highest eminence in that field which, by the common consent of men, was formerly regarded as unattainable by women, that is, pure mathematics. But the day when she received the doubled prize of the French Academy of Sciences she wrote to a friend that she had never felt so unhappy, and the cause of her unhappiness, as revealed in her letters and romances, was that she was not beloved as other women were.

Altho Metchnikoff would grant to women every opportunity for the exercise of their talents, and thinks they had better occupy themselves with science than with fashions, he believes genius of a high order to be much rarer among them than among men. When he was called upon by the women doctors and scientists at the Naturalists' Congress at St. Petersburg for his opinion of the feminist movement, he created considerable consternation among them by the following frank language:

"Your complaint, as I understand it, is that man has excluded woman from all higher intellectual occupation by unnatural means, so that her mind has become atrophied, her capabilities blunted, her talents stagnant. You would remedy all this by being made man's equal in politics. You would then, you say, develop your slumbering abilities, overtake, and possibly surpass, your immemorial enslaver—man.

"But do you really need this political equality in order to attain this supremacy? Has the down-trodden among man ever needed it? His political equality has come as an effect not as the cause of his intellectual development. The mind that dominates in the artistic and scientific world ultimately arrives at political supremacy.

"But what art or science has man closed to you? You are here; but really, ladies, I have failed to discover a Bichat, a Louis, a Jenner, or a Pasteur among you. Have you personally been impeded in your careers more than certain individuals among man? Now let us take the arts. Is there a man-master so unnatural who ever forbade his female slave to express herself in music? But where are your Beethovens, your Wagners, your Verdis, your Brahms? I beg of you, dear ladies, if you remember one, tell me.

"What brutal slave owner at any time forbade women to beautify canvas with satisfying hues and lines depicting life or nature? As in music, man has encouraged women to do these things, yet where are your Raphaels, your Leonardos, your Rubenses? Have women been forbidden to mold, carve, or draw? Yet where is your Phidias, your Michelangelo, your Cellini? Did you ever hear of a woman architect?

"Home and motherhood there, of course, the most radical among you will not say that man has attempted to restrain you—there you have had from time immemorial, in all ages, in all places, under every condition, absolute and full freedom. Still, is it not man, the enslaver, who teaches you domestic economy? Is it not from man that you have learned how to care for your offspring in illness, how to amuse them in health? Who discovered the laws of domestic hygiene? Was it a woman?

"Now, my dear ladies, has man ever excluded you from the kitchen? No, you say, you have been enslaved there. 'Cook! Feed the brute!' is eternally dinned in your ears. It would seem reasonable that at least in this sphere woman should have reached a high standard of perfection. And the actual result? Ah, dear ladies, I must confess. If I want a really good dinner I must have recourse to a chef.

"And now, ladies, I ask your pardon, you have all studied physiology and psychology, and you know where such considerations would lead me. But one word more: Do not lose sight of the significance of your request. 'Professor, what is your opinion of the feministic movement?' for that makes out your case perfectly—to advocate your cause you would call in the help of man."

Metchnikoff has very little liking for the political methods in vogue in our republics. He thinks young men too reckless, opinionated and pessimistic to be entrusted with the ballot at the age of twenty-one. "It is easily intelligible," he says, "that in the new conditions such modern idols as universal suffrage, public opinion and the referendum, in which

the ignorant masses are called upon to decide questions which demand varied and profound knowledge, will last no longer than the old idols. The progress of human knowledge will bring about the replacement of such institutions by others in which applied morality will be controlled by really competent persons." But he fails to inform us how these "competent persons" are to be selected and placed in power.

To give an account of the varied researches which Metchnikoff has carried on or has superintended at the Pasteur Institute is apart from our purpose and would in any case be impossible here, because it would involve the recapitulation of a great part of the history of medical progress for the past quarter century. During this period the science of medicine has been completely revolutionized, for the use of traditional and empirical remedies has been largely replaced by a systematic search for the causes of diseases and the experimental determination of methods of avoiding or counteracting them. In general, the change may be characterized as a return to nature. In the older medicine at its best a dose of some vegetable or mineral substance, such as quinine or mercury, comparatively harmless, but altogether foreign to the body, was administered thru the mouth and in time reaching the blood thru the digestive system, killed off or paralyzed the disease germ. In modern medicine at its best, some substance, such as the diphtheria antitoxin, that is already present in the blood in quantity sufficient under ordinary circumstances to prevent infection, is reinforced in an emergency by more of the same substance prepared in the blood of the horse. Or if that cannot be done, the next best thing is to inject some serum that by a natural reaction will stimulate the body to prepare in excess its own antitoxin or excite the phagocytes to greater exertions in overcoming their enemies. In any case, the object is to induce an artificial immunity as nearly as possible like the natural immunity of the healthy body.

ENTRANCE OF THE PASTEUR INSTITUTE, PARIS

Phagocytes—that is, "devouring cells"—was the name given by Metchnikoff to the leucocytes or white cells, which he found wandering about the body in search of their prey. They lead a sort of semi-independent life, like the simplest one-celled animal, the ameba, and they penetrate to all parts of the body, even squeezing in between the

toughened tissue of the skin and bones. When a cut is made in the skin they are borne to the breach by the flow of blood and there pile up and coagulate, forming a new skin to protect the raw flesh, somewhat as a breach in a rampart is hastily filled in with sand bags. Not only that, but when the enemy actually gains entrance either by storming a wound or sneaking in thru some unguarded opening, then the white cells rally to the attack, surrounding and destroying the invading microbes. If these multiply too rapidly the phagocyte reserves are mobilized, new recruits by the million are called out, until the bodily force is victorious or exhausted. Such a battle we call a local inflammation, or, if the engagement is general and long continued, a fever. Under the microscope we may watch the foes engaged in single combat, the phagocyte devouring the bacillus, a living, formless mass of protoplasm, stretching out extemporized tentacles and engulfing the rod, globe, or writhing spiral which we may afterward see slowly digesting in its interior.

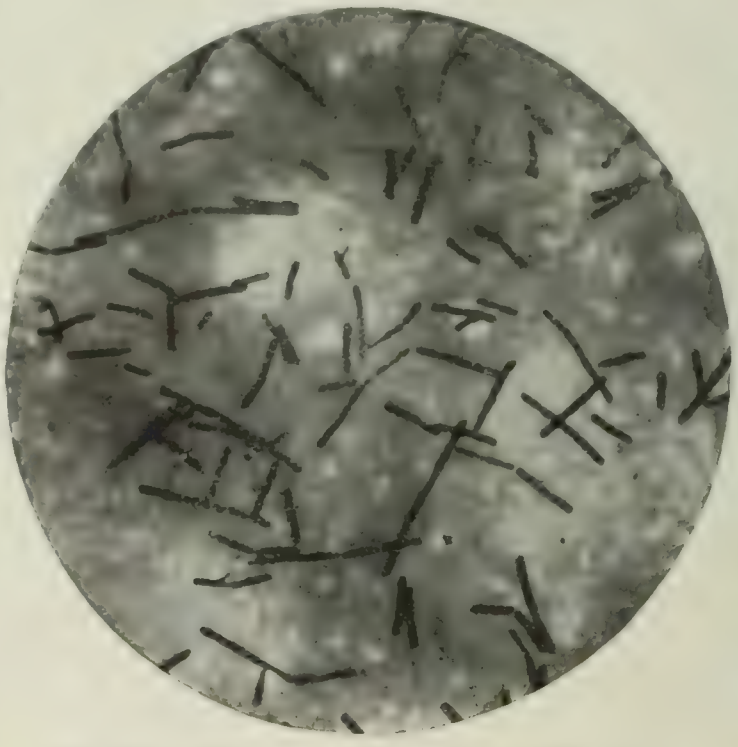


PHOTO-MICROGRAPH OF A ONE-MONTH CULTURE OF *BACILLUS BULGARICUS*.
From Douglas's "The Bacillus of Long Life" (Putnam)

To be sure, the operation is not quite so simple as Metchnikoff first conceived it. A condition is always more complicated than the theory devised to explain it. The question has been hotly debated and is not yet settled whether the phagocytes best defend us by their life or by their death. It appears that as they undergo dissolution they give up to the blood certain substances which dissolve the disease germs or neutralize their poisons, and this may be a more important means of defense than the englobing or engulfing process. Then, too, these white cells seem at times strangely indifferent to the presence of their dearest foes, or perhaps we should say, their favorite food. There is needed in the blood on such occasions a substance known as opsonin, which being absorbed by the microbes the phagocytes attack them with avidity; this opsonin serving as some biologist, doubtless an Englishman, has said, like Worcestershire sauce as an appetizer to the phagocytes.

But for further discussion of these questions I must refer the reader to his family physician, who will take pleasure in repudiating these vague and fanciful interpretations of mine. He will be able to tell whether phagocytosis or bacteriolysis is the fashionable mode of combating disease germs and he will introduce the reader to alexin, agglutinin, antibodies, sidechains and other interesting and useful novelties that he contains within him to a greater or less degree, let us hope a greater.

But these same voracious white blood cells which ordinarily serve as the defenders of the body may in the period of its weakness become its worst enemies. This reminds us of the Prætorian Guards who in the later days of Rome precipitated its decline by attacking the capital. The phagocytes show an unfortunate predilection for the higher elements of the human organism and, according to Metchnikoff, the most distressing symptom of old age, the weakening of the mind, is due to their devouring the nerve cells. But besides that they play havoc all thru the body: eating up the pigment of the hair and so whitening it; causing degeneration of the liver and kidneys; robbing the

skeleton of its lime and depositing it in the blood vessels, thus doing double damage by weakening the bones and hardening the arteries. In these symptoms of senility the germs of disease form an important factor, both in weakening the body and instigating the treacherous insurrection of the phagocytes. Hence Metchnikoff comes to the conclusion that: "The senile degeneration of an organism is entirely similar to the lesions induced by certain maladies of a microbic origin," and thus he arrives at his famous definition: "Old age is an infectious chronic disease, characterized by a degeneration or an enfeebling of the noble elements and by the excessive activity of the phagocytes."

If old age is correctly characterized as a disease and especially if it is due in part to microbic invasion, it ought to be possible to cure or postpone it. This, then, is what Metchnikoff has in recent years made the main aim of his researches.

In particular he suspects the large intestine of harboring some of the most dangerous of the microscopic enemies of man, the cause of many of the ills that flesh is heir to. It is in his opinion an excessive and comparatively unimportant organ, for it can be shortened or removed without serious consequences. A comparative survey of the anatomy of the vertebrates shows that as a general rule the longer the intestine the shorter the life. He does not advocate its extirpation by surgery or its disinfection by chemicals but he would crowd out its wild and poisonous flora by harmless cultivated species. Among the friendly microbes he regards the lactic acid bacilli as most useful for this purpose. These act upon milk or fruit sugar converting it into lactic acid which is destructive to most other microbes, including some of the most dangerous. For example, mysterious outbreaks of typhoid fever have been recently traced to "typhoid carriers," that is, persons who, while immune to the disease themselves, may yet serve for years as conveyors of the infection. But a thriving colony of Bulgarian bacilli will drive out the typhoid bacilli and so put a stop to the spread of the disease.

The difference between harmless and injurious bacteria on which the lactic acid theory depends is easily understood because it is a matter of common observation. Meat and milk have much the same composition so far as their protein is concerned. But whereas meat promptly spoils, that is, putrefies, with the formation of disgusting and poisonous products of decomposition, milk sours instead and will remain wholesome and to some tastes palatable for several days. Both are the results of bacterial decomposition but the difference is due to the fact that milk contains a kind of sugar which inoculated with the proper bacilli is converted into lactic acid and thus the growth of the bacteria of putrefaction is for some time prevented. Tho under certain circumstances it happens that the latter get the start of the lactic acid makers and then the milk goes the way of the meat and we have a case of "ptomain poisoning." In short, the aim of swallowing cultures of lactic acid bacilli by wholesale is to keep the contents of the remote regions of our digestive apparatus in the condition of soured milk rather than that of decayed meat. Recently the same treatment has been recommended for preserving the teeth, since these mild mannered and beneficent bacilli rubbed into the gums will dispossess those which ordinarily grow in our mouths and attack our teeth.

For aid in his fight against the bacterial poisons that bring on disease and old age Metchnikoff has resorted to his native steppes. The Tartars and Kalmucks of southern Russia had always had as their favorite food koumiss prepared by the fermentation of mare's milk and nomads of all races have made use of some form of curdled milk, chiefly because of the difficulty of preserving other kinds of animal food under primitive conditions. The keffir of the Caucasus, the leben of Egypt, the matzoon of Armenia, the dadhi of India and yahourth of Bulgaria are all produced from milk by the use of various species of lactic acid bacilli associated with other bacteria of fermentation. Of these the last, the Bulgarian yahourth, yoghourt, or yagurt, contains the strongest bacilli, that is, those that are able to stand the largest percentage of the prod-

out of their own activity, lactic acid, and so Metchnikoff has made them the basis of his dietetics.

A surprisingly large proportion of centenarians are reported from Bulgaria, where yagurt is used, and Metchnikoff cites a large number of cases of men and women of extreme old age who have lived largely on sour milk or on sauerkraut, which also contains the lactic acid bacilli.* Most of these are found among the poorer classes or comparatively uncivilized races. Sir Moses Montefiore is one of the very few rich men who have past the century mark. Metchnikoff uses this as an argument for the simple life. But it is questionable whether such data, derived from the casual reports of individual cases and the generalized observations of travelers, are of muc hevidential value. Claims to longevity among the unlettered are notoriously unreliable. It would be very unsafe to hold that the negroes were longer lived than the whites because so many mammies could tell of remembering Washington. When the British old age pension bill passed the number of poor people in Ireland who came forward with evidence that they were over 65 years old surprised the actuaries and embarrassed the budget. Women are apt to restore double-fold in old age the years they deprived themselves of in the later thirties.

It is also curious to see a skeptic like Metchnikoff giving serious consideration to the accounts of longevity given in the Pentateuch which many orthodox theologians are willing to concede as legendary. He balks, indeed, at Noah's 950 years and Methusaleh's 969, but accepts as probable Aaron's 123 years and Moses's 120, quoting the words of Jehovah: "My spirit shall not always strive with man for that he also is flesh; yet his days shall be an hundred and twenty years," He accounts for it by their more healthful mode of living and their freedom from alcoholism and the diseases of vice nowadays the chief cause of premature old age. He calls attention also to the fact that sour milk was in common use among the patriarchs and was esteemed by Abraham food fit to set before angels. In regard to the Mosaic dietary regulations he says:

> "Some of them, it is true, such as the prohibition of uncooked or partially cooked meat, are confirmed by modern knowledge. But the greater number of the Mosaic rules, as, for instance, the prohibition of the consumption as food of blood or the flesh of pigs or hares, and so forth, are in direct opposition to a modern knowledge of hygienic diet."

Metchnikoff, of course, being a scientist, uses these reports of longevity gathered from historians and travelers merely as suggesting profitable lines of research, not as proof of any theory. Such proof can only be obtained by direct experimentation and accordingly he has for the past twelve years been experimenting upon himself. The Pasteur people do not belong to that class of physicians who refuse to take their own medicine. Metchnikoff still has a weak heart as the result of an intentional inoculation with recurrent fever and some of his collaborators have inoculated themselves with the most loathsome of diseases for the purpose of testing a remedy for it. Brown-Séquard, of the College de France, tried, at the age of seventy-two, to rejuvenate himself by injections of animal secretions, but his hopes proved unfounded.

But the means advocated by Metchnikoff for the prevention of senescence, even tho it may never fulfil his expectations, has at least the merit of being harmless, for it is merely the systematic employment of a food which has been in use by a large part of the human race from the earliest times. The object being to colonize the lactic bacilli in the lower part of the digestive tract, the best way of attaining this has yet to be worked out. The generous drinking of buttermilk or curdled milk, tho this may be nutritious or otherwise beneficial, does not necessarily accomplish the object, for the bacilli may have been mostly killed off by the acidity or may be destroyed in the stomach. Taking a dose of the bacilli in a dried form, as a tablet or powder, may fail to serve the purpose because they are in an inactive state and may not be able to secure a foothold for lack of suitable food, such as

*He might add to his notable examples of persons addicted to the use of curdled milk the case of Tze-Hsi, the Dowager Empress of China, who at the age of seventy-four had energy enough to change her own mind and revolutionize the government of 400,000,000 people.

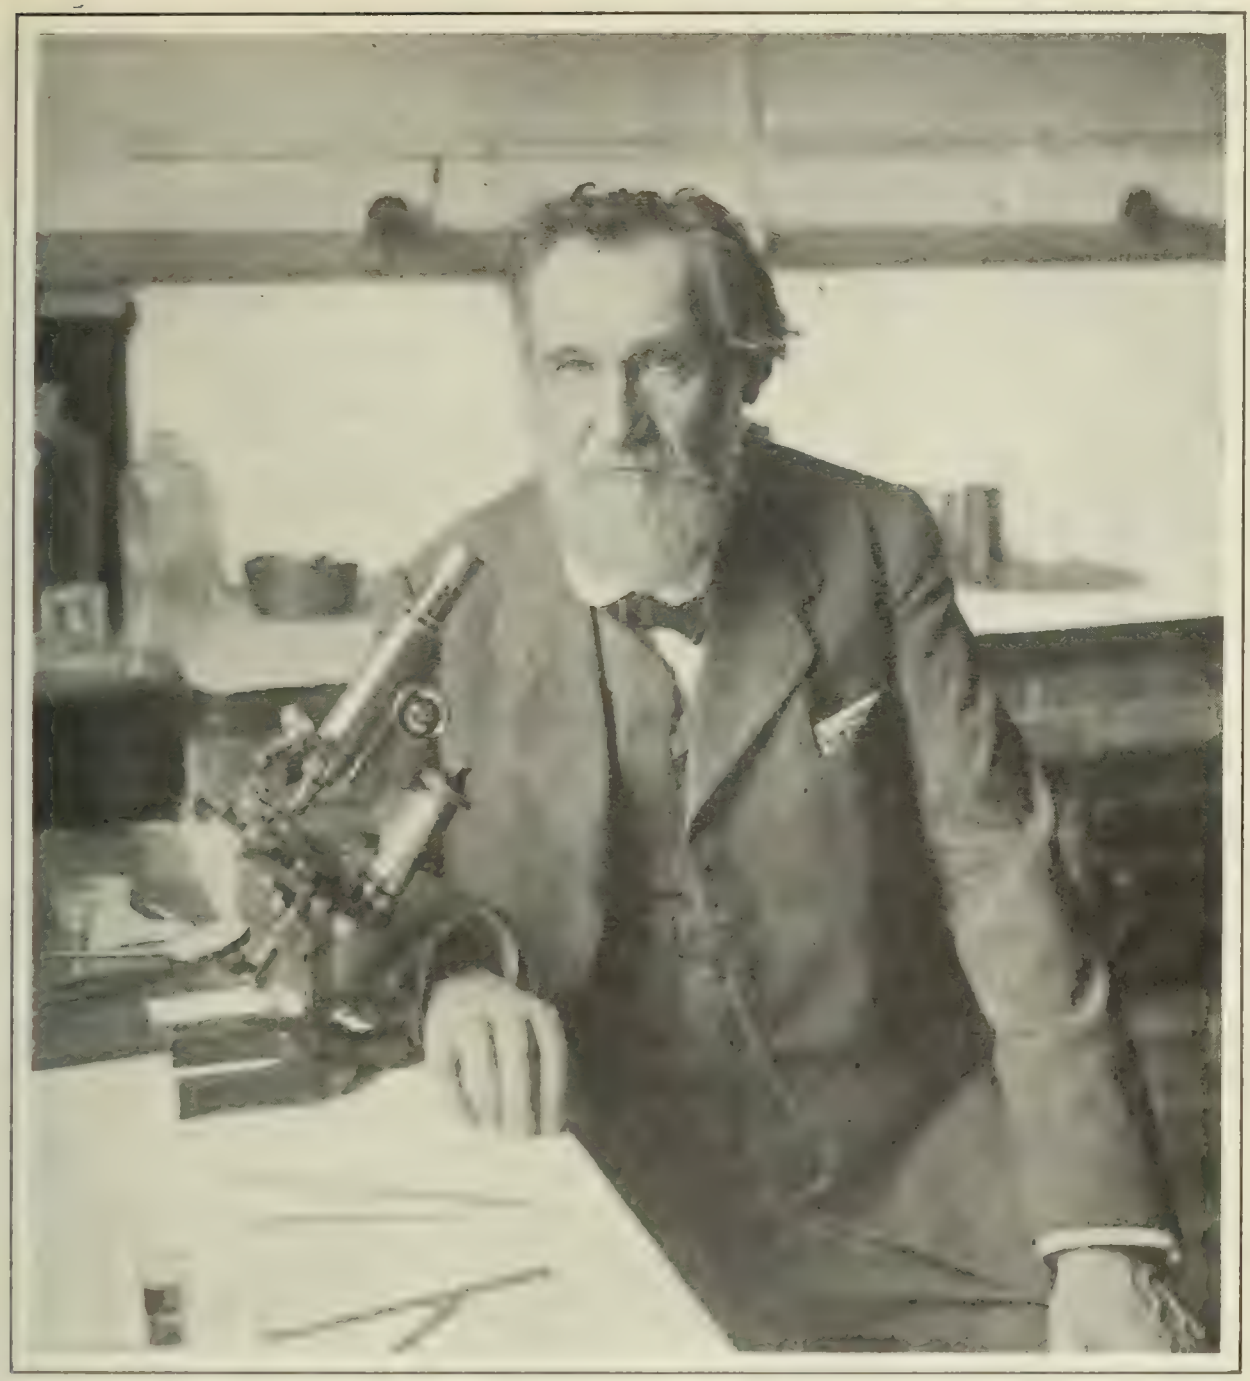

Photo by Underwood & Underwood, New York

PROFESSOR METCHNIKOFF IN HIS LABORATORY AT THE PASTEUR INSTITUTE

milk or fruit sugar. So Metchnikoff has adopted the plan of taking pure cultures of the Bulgarian and paralactic bacilli in pasteurized milk or sweetened bouillon and also in the jam and in a kind of candy prepared from cooked dates soaked in the pure cultures. He abstains from all alcoholic beverages and uses only cooked food and boiled water. His daily diet in addition to this consists of three to five ounces of meat, grains, legumes and stewed fruit.*

This goes counter to the raw food advocates, but here Metchnikoff has the best of the argument. He also questions the advisability of excessive chewing as advocated by Mr. Fletcher and cites cases where the health has been injured by the practice and the resulting disease cured by more rapid eating.†

As soon as Dr. Metchnikoff first made known his theory the public, always on the lookout for a new "Elixir of Life,"

* [illegible] of fermented milks with methods for their preparation in the household may be found in a volume by L. M. Hollande recently published under the sensational title of "The Bacillus of Long Life" (Putnam, 1909).

† "The Prolongation of Life," page 139.

demanded fermented milk and the supply was immediately forthcoming, not always of a satisfactory character. Many of the cultures sold in powder or tabloids for the purpose or dispensed in drink at the soda fountains are inactive and useless or contain other and sometimes undesirable forms of bacteria. I have found it easy enough to prepare the fermented milk in the household where the proper cultures are to be had. All that is necessary is to sterilize the milk by heating it to the boiling point or near it and keeping it there for ten minutes; then cool quickly to 100° Fahr. and add the ferment in tabloids or powder or some of the former batch, and keep covered at this temperature for twelve hours. A vacuum bottle or fireless cooker is convenient for keeping the temperature even. The fermented milk properly prepared is somewhat thickened, slightly acid and palatable even to those who do not like ordinary buttermilk.

Metchnikoff's views as to the value of lactic acid have met with not only the legitimate skepticism and criticism of the medical profession, but also with the usual ridicule from the press. "Who would want to live one hundred and fifty years if he had to drink sour milk three times a day?" is asked, and he is alluded to as "the modern Ponce de Leon searching for the Fountain of Immortal Youth and finding it in the Milky Whey." Of course Metchnikoff should not be held responsible for the exaggerated expectations founded upon his theories or for the fakes foisted upon the public in his name. He is indeed an original thinker and a bold experimenter, but he is not a sensationalist or a seeker for popular applause. He has never said that he expected to live one hundred and fifty years or that any one else could by following his regimen. But he does regard that period as more nearly the normal length of human life than the commonly accepted limit of sixty-five or seventy, and as possibly attainable thru the advance of medical science. Tho he comes of a short-lived family and all his brothers died at an age much younger than he has now attained, his health is unusually good for a man of sixty-five and he is as hard-working and enterprising as ever. It is not the mere prolongation of life for which he is working, but the prolongation of the period of serviceable and enjoyable life. If he had remained in the University of Odessa he would have been retired from his professorship on the ground of old age in 1900, the year before he published his second and greatest work, that on "Immunity in Infectious Diseases."

The title which was given to his most popular book in its English version, "The Prolongation of Life," was not of his choosing and misrepresents his aim. He regards this volume as well as its predecessor, "The Nature of Man," as "Studies in Optimistic Philosophy." They are written to show that science is not merely of use in facilitating and ameliorating the lot of human beings, but is also adequate as a guide to conduct and capable of providing it with ideals of future aspiration. In an age when, as it appears to him, religion has lost its power and thinking men no longer have faith in immortality, he sees them turning to mysticism on the one hand and to pessimism on the other, and his purpose is to find a way out that does not involve either. As an exposition of the Religio Medici of the twentieth century his work has great significance, and even those who look with confidence to a future life to rectify the disharmonies of this one may read with interest the opinions of one who does not hold their faith upon what may be accomplished toward perfecting the conditions of existence and may sympathize with and second his efforts at such amelioration.

Essentially his aim seems to me to be the same as that of Epicurus: to relieve mankind of its two great evils, pain and fear, the fear of the gods and the fear of death, the first to be dissipated by showing it to be imaginary and the second by welcoming death at the proper time. Like Epicurus, too, but unlike most Epicureans, Metchnikoff preaches plain living and the avoidance of luxury and dissipation of all kinds. "It would be true progress," he says, "to abandon modern cuisine and go back to the simpler dishes of our ancestors," and he objects on hygienic grounds to modern dress, dwellings, and social customs.

Optimism he regards as the natural

philosophy of old age when a proper appreciation of the value of life is attained and youthful pessimism outgrown.

"In the normal course of life, however, the young do not show an instinctive clinging to life in any marked degree. They often risk their lives for trifling reasons and commit all sorts of indiscretions hurtful to life or health without a thought of the consequences. They may be inspired by the highest motives, but they are equally ready to fritter strength away in the gratification of the lowest appetites. Youth is the age of disinterested sacrifice, but also of indulgence in all kinds of excesses, alcoholic, sexual and others. Youths seem to think that they will always attach the same value to life, and that between death at thirty years of age and death at sixty there is a difference only of time. As their love of life is indifferently developed, young people are often extremely exacting, the pleasure they enjoy being but moderate, whilst the suffering provoked in them by the slightest annoyance is intense. They consequently become epicureans in the lowest sense of the word, or else abandon themselves to exaggerated pessimism."—*The Nature of Man*, p. 116.

Pessimism was the militant philosophy of the nineteenth century and its effects are increasingly felt in the present world-wide tendency to suicide, individual suicide due to the failure of the instinct to live and race suicide due to the failure of the instinct to propagate. But even pessimism, harmful as it is upon humanity, may, according to Metchnikoff, have its uses:

"It is pessimism which has been the first to draw up a true indictment of human nature, and if pain is to be regarded as useful in its quality of danger signal we should equally recognize that the pessimistic view of the universe is a step onward in the evolution of humanity. Without pessimism we might easily sink into a kind of contented fatalism, and end in quietism, in the manner of many religions."—*Nature of Man*, p. 194.

The difference between the philosophical pessimist and the scientific optimist may be illustrated by two incidents. In 1831 Schopenhauer, in spite of his theory that life was evil and worse than nothing, fled from Berlin to Frankfort at the first outbreak of the cholera. But we recall that Metchnikoff, professed optimist and lover of life, went last summer to Manchuria into the center of the bubonic plague in its most virulent form in order to learn how to relieve human suffering. The difference is one between whiners and helpers.

Schopenhauer wrote that "an alteration of the atmosphere so slight that it cannot be detected by chemistry brings about cholera or yellow fever or black death." Metchnikoff's dry comment on this is: "Humanity will be fortunate if the pessimistic philosophers prove as wrong about their other grievances as they have proved about disease and medicine." And he adds that if Koch had discovered his vibrio in 1831 philosophy would have taken a different course, for Schopenhauer need not have been frightened away from Berlin, and Hegel, who died of the cholera, might have gone on with the development of his idealism.

Another paradox appears in the fact that Metchnikoff, who makes little account of altruism in his system of morality, has devoted his life to arduous and dangerous researches for the benefit of others, and, without hope of reward in another life in either the Buddhist or Christian sense, has labored assiduously to lay the foundations of a science by which posterity can profit. He regards altruism not as a permanent and indispensable virtue, but as something to be gradually got rid of, at least in its extreme forms of heroism and self-sacrifice. As this is one of the most striking and, it seems to me, most original points in his philosophy, a passage must be quoted:

"As it is highly probable that with the advance of civilization the greatest evils of humanity will become lessened, and may even disappear, the sacrifices to be made will also become less. Now that there is a serum which protects against plague, there is no room for the heroism of the doctors who used to incur the greatest danger in fighting epidemics. Until lately doctors used to risk their life in treating the throats of diphtheritic patients. A young doctor who was a friend of mine, of high ability and promise, died from diphtheria contracted under these conditions. He met his death, in isolation from his friends in case of affecting them, with the utmost heroism. Now that the antidiphtheritic serum has been discovered, such heroism would be unnecessary. The advance of science has removed the occasion of such sacrifices.

"It is now very long since there has been opportunity for the heroism which steeled the hand of Abraham to sacrifice his only son to his religion. Human sacrifice, based on the highest morality, has become more and more rare, and will finally disappear. Rational morality, altho it may admire such conduct, has no use for it. So also it may foresee a time when men will be so highly developed

that instead of being delighted to take advantage of the sympathy of their fellows, they will refuse it absolutely. Neither the Kantian idea of virtue, doing good as a pure duty, nor that of Herbert Spencer, according to which men have an instinctive need to help their fellows, will be realized in the future. The ideal will rather be that of men who will be self-sufficient and who will no longer permit others to do them good." *Prolongation of Life*, p. 323.

As he objects to conditions that demand sympathy and self-sacrifice from one person for another, so also he opposes any state of society that involves the sacrifice or subordination of the individual for the benefit of the community as a whole.

"It is most probable that no shade of socialism will be able to solve the problem of social life with a sufficient respect for the maintenance of individual liberty. None the less the progress of human knowledge will inevitably bring about a great leveling of human fortunes. Intellectual culture will lead men to give up many things that are superfluous or even harmful, and that are still thought indispensable by most people. The conceptions that the greatest good fortune consists in the complete evolution of the normal cycle of human life and that this goal can be reached most easily by plain and sober habits will convince men of the folly of much of the luxury that now shortens human existence. Whilst the rich will choose a simpler mode of life and the poor will be able to live better, none the less, private property, acquired or inherited, may be maintained. Evolution must be gradual and much effort and new knowledge is required. Sociology, a newborn science, must learn of biology, her older sister. Biology teaches us that in proportion that the organization becomes more complex, the consciousness of individuality develops, until a point is reached at which individuality cannot be sacrificed to the community. Amongst low creatures such as Myxomycetes and Siphonophora, the individuals disappear wholly or almost wholly in the community; but the sacrifice is small, as in these creatures the consciousness of individuality has not appeared. Social insects are in a stage intermediate between that of the lower animals and man. It is only in man that the individual has definitely acquired consciousness, and for that reason a satisfactory social organization cannot sacrifice it on pretext of the common good. To this conclusion the study of the social evolution of living beings leads me. It is plain that the study of human individuality is a necessary step in the organization of the social life of human beings."—*Prolongation of Life*, p. 231.

One might think in reading "The Nature of Man" that Metchnikoff was laying the foundations of a pessimistic instead of an optimistic system of philosophy. He begins, as Schopenhauer or Von Hartmann might have done, by showing how ill adapted to his environment is that simian abortion we call man. Among the examples of marvelously perfect adaptation of structure or instinct in nature are cited Darwin's orchids and Fabre's wasps. M. Fabre seems to be indispensable to French philosophers. We have seen that Maeterlinck and Bergson get some of their finest illustrations from this "Homer of the Insects." But man is not so favored of nature as the orchids or wasps:

"There can be no doubt but that the human constitution, altho in many ways perfect and sublime, exhibits numerous and serious disharmonies which are the source of all our troubles. Not being so well adapted to the conditions of life as orchids are, for example, in the matter of their fertilization by the mediation of insects, or the burrowing wasps for the protection of their young, humanity resembles rather those insects the instinct of which guides them toward the flame which burns their wings."

In the first half of the nineteenth century there were published at the cost of $5,000 apiece eight volumes known as the Bridgewater Treatises on "The Power, Wisdom and Goodness of God as Manifested in the Creation," using as illustrations the structure of the hand, the instincts of animals, the chemistry of digestion, and other unworked sources of natural theology. The science was not bad for its time, nor was the argument altogether fallacious. But the authors overlooked one thing, namely, that Bridgewater is a game two can play at and that it would be equally possible to fill eight other volumes by picking out a different set of facts, almost equally imposing, to prove something very different, either that there was no God or that there was a devil, either atheism or Manicheism. Metchnikoff's "Nature of Man" supplies much of the material that a devil's advocate might then have used in his Anti-Bridgewater Treatises.

But Metchnikoff, writing in the twentieth century, makes quite another use of it. He has doubtless never read the Bridgewater Treatises nor have many of us. There is no reason to now. They have become waste paper, not because they were false, but because the whole mass of the argument against them has

vanished, the half recognized and subconscious argument against theism derivable from the undeniable existence of disharmonies and imperfections in the universe. This battlefield is deserted; tho the same struggle continues, it is on higher ground. This change has been wrought by the introduction of the idea of evolution. We now realize we do not live in a static universe. The theism which is founded on evolution may serenely acknowledge the discords and failures which would be fatal to the theism of the Bridgewater era. And Metchnikoff, as an atheist, is equally untroubled by the existence of misleading instincts and useless, disease-producing organs, for interpreting them in the light of evolution he escapes the slough of nineteenth century pessimism and arrives triumphantly at the goal of optimism.

At least he says he does. I cannot see that his argument leads to optimism in the strict sense of the word, altho it certainly leads him to a very sane and hopeful meliorism. The weakest point in his doctrine of orthobiosis seems to me his theory of euthanasia, that at the end of the "normal cycle" of life—whatever that may be—the desire for life is replaced by an instinct for death. The evidence he adduces in support of this is very scanty and questionable. It is curious to note that it was the experiences of Metchnikoff's brother which supplied Tolstoy with the material for the most harrowing picture of the fear of death in all literature, "The Death of Ivan Ilyitch."

In "The Prolongation of Life" Metchnikoff devotes much space to an analysis of the first and second parts of "Faust" and the life of Goethe, whom he manifestly regards as an excellent example of a complete and well ordered life. The reader will observe that while he condemns Goethe's drinking habits because they undermined his constitution, he has, from the standpoint of a naturalist, no word of blame for his promiscuous love affairs, since these contributed to the development of his genius. This is, to say the least, a very one-sided view to take of it.

But these articles are concerned with the exposition rather than the criticism of the authors discussed, so I will conclude with a quotation which sums up his philosophy and sets forth his ideals:

"In progress toward the goal, nature will have to be consulted continuously. Already, in the case of the ephemerids, nature has produced a complete cycle of normal life ending in natural death. In the problem of his own fate, man must not be content with the gifts of nature; he must direct them by his own efforts. Just as he has been able to modify the nature of animals and plants, man must attempt to modify his own constitution, so as to readjust its disharmonies.

"Breeders form a conception of the ideal result when they are about to attempt the production of some new variety which shall be pleasing esthetically and of service to man. Next, they study the existing individual variations in animals and plants on which they wish to work, and from which they will select with minutest care. The ideal result must have some relation to the constitution of the organism selected. To modify the human constitution, it will be necessary, first, to frame the ideal, and thereafter to set to work with all the resources of science.

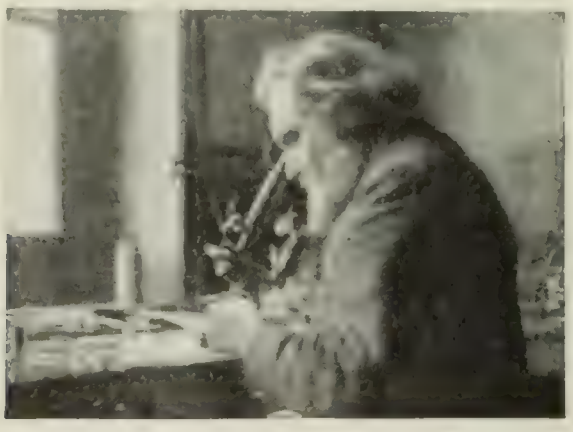
"If there can be formed an ideal able to unite men in a kind of religion of the future, this ideal must be founded on scientific principles. And if it be true, as has been asserted so often, that man can live by faith alone, the faith must be in the power of science."—*The Nature of Man*, p. 302.

### How to Read Metchnikoff.

The philosophy of Metchnikoff is given in two volumes published in this country by Putnams, *The Nature of Man* ($1.50) and *The Prolongation of Life* ($1.75). The second and later volume will perhaps better serve the purpose of the general reader, but either will give the main outlines of his theories. Both volumes are written for the medical student rather than the public, and discuss some unpleasant subjects, but not in any objectionable manner. The English translation, at least in the first editions, is clumsy and careless. These works in the original are entitled *Essais sur la nature humaine*, Paris, 1903, and *Essais optimistes*, Paris, 1907. The German version, *Studien über die Natur des Menschen*, Leipsic, 1904, is prefaced by Ostwald. *The New Hygiene*, Three Lectures on the Prevention of Infectious Diseases, prefaced by Lankester, is published by W. T. Keever & Co., Chicago, at $1.

Articles by Metchnikoff easily accessible are: "Studies in Natural Death," in *Harper's Magazine*, vol. 114, p. 272; "The Utility of Lactic Microbes," in *Century*, vol. 79, p. 53; "Old Age," in Smithsonian Report, 1904.

A criticism of Metchnikoff's individualism from a socialistic point of view is "The Optimism of Metchnikoff," by F. Carrel, in *Fortnightly Review*, vol. 89, p. 51. A criticism to which Metchnikoff has made a reply in his second volume is "Morale et Biologie," by D. Parodi, in *Revue philosophique*, vol. 58, p. 113. *Metchnikoff, philosophe* (Bibliothèque



[illegible] is a pamphlet by a young Catholic, Fernand Dwelshauvers, in a style of frantic denunciation.

An interesting character sketch by A. McFarlane is to be found in *McClure's Magazine*, vol. 25, p. 541. To Mr. Herman Bernstein, whose interviews with Metchnikoff, in the New York *Times* of August 1, 1909, and March 5, 1911, I am indebted for many facts and a photograph.

Good articles on the theory of immunity as developed by Metchnikoff and others are: "The War Against Disease," in *Edinburgh Review*, October, 1910; "Paul Ehrlich: The Man and His Work," by Marguerite Marks, in *McClure's Magazine*, 1911, p. 184; "Natural Resistance to Disease," by Dr. Simon Flexner, of the Rockefeller Institute, in *Popular Science Monthly*, July, 1909, and in *Smithsonian Report*, 1909; "The Struggle for Immunity," by H. S. Williams, in *Harper's Magazine*, December, 1911.

Circular No. 171 of the Bureau of American Industry of the United States Department of Agriculture gives a description of *Fermented Milks* by F. A. Rogers.

# To Love

## (In Certain Magazines)

BY MARION PELTON GUILD

UP, Love, into the mountains! Thou hast lain
  Beside the slimy river bank too long;
  Thy rusting lyre has half forgot its song;
Thy snowy wings are fouled with many a stain;
Thine azure eyes are clouded, and arraign
  The unworthy dreams that to their windows throng;
  Thou, thou, our angel-pure, our Titan-strong,
Court'st the blackening brand, the fettering chain!

Ah, beautiful, defiled, unfold those wings
  That urge thee mightily to soar and save!
    Seek thou the mountain-tops, the sweep of view,
The sky's communion, and the crystal springs;
  Low in their candid pools thy soilure lave:
    Then with thy glory dazzle us anew!

MILTON, MASS.

# Brother Millionaire

BY MARY P. GILDER

BEING now a woman of some little experience, I find myself unable to join in those occasional feminine symposiums where "the brutes" are condemned as a sex. I have known too noble men for that. And of the half dozen noblest two were millionaires, using their wealth unselfishly and wisely, as the others used their less material resources. Tho poor enough myself to satisfy the most exacting of social reformers and wont to associate chiefly with my own impecunious kind, I numbered these millionaires among my closest friends. I have at times sojourned in their houses and in those of others of their class. As a joyous student of human nature, I have made the most of such opportunities for observing the very rich; and I have come to the conclusion that they are just folks like the rest of us. If you prick them, they bleed; if you tickle them, they laugh; and if you intrude upon their private concerns, they resent it.

Of course, we all like to see any kind of power put to its fullest and most appropriate use; millionaire power being no exception. How obvious and agreeable is this variety of power, and how divertingly has it become everybody's business! In fact, in the present tendency to socialize everything (which may God further), the socialization of millionaires seems to be getting more than its due share of attention. The heroic efforts many of them make to do it for themselves are not always taken into account. Probably this is because, like other manly men, they do not exploit their own deeds, and because the normal is always less conspicuous than the abnormal. I speak now not of the Carnegies and Rockefellers, but of those whose modest competencies do not exceed four or five millions.

But, with his peculiar difficulties, is it any wonder that our millionaire does not always spend his money as we wiseacres of the people would have him? Rather a thousand times does one wonder that on the whole he spends it so well! Which of us could surely stand the tests he daily meets? But because we do not have to meet them, because upon us, as upon all true Franciscans of the spirit, shines the sweet and enlightening face of our Lady Poverty, we occasionally see opportunities for wise expenditure which he does not see. Prithee, brother millionaire, eager to do yet more good with your wealth, take a few suggestions, not expert or scientific, but just human, in the friendly and tentative spirit in which they are offered.

First, then, why not finance an individual orphan? The needs of the children appeal to us all; we realize that any true social progress must depend largely upon what is done for "these little ones." And we are coming to see that they are best handled as individuals, not in masses. The adoption of orphans by upright and competent persons is one of the simplest and most effective means of helping the young and contributing to the general welfare. Moreover, so great is the appeal of a bereaved or forsaken child to the average human heart, that the number of persons who would adopt children if they could is impressively large. Not only rich people, but many men and women of insufficient means, actually do so. I shall never forget the case of an aged couple, living on $30 a month, with no funds outside this starvation wage, who deliberately adopted a little girl, for the simple reason that her need was pressing and they could not let her suffer. But also there is no question that many persons otherwise admirably qualified are deterred from this form of service to society by lack of money. One thinks of this when one hears the current criticism of childless women who try to solace themselves with pet dogs. "How wicked," cries the warm-hearted spectator, "how disgusting, when there are so many boys and girls in the world who need mothering!" Now, I am not saying that there are not rich and foolish women of

whom such criticism is perfectly legitimate. But I am speaking of another class. For instance, two of the noblest and tenderest single women of my acquaintance have a dog to which they are pathetically devoted. And they admit frankly that they long for children, but hesitate at the expense of adopting one. Surely it is well, before passing judgment, to stop and consider the difference between what it costs to keep a dog and the expense of rearing and training a child, to say nothing of the comparative degrees of responsibility involved.

Here, it seems to me, lies the millionaire's opportunity. Perhaps he is situated so that he could not himself adopt a child. But here is a very considerable number of competent and trustworthy persons, willing to take all the responsibility and do all the work, if only sufficient funds can be provided. And here is another number of such persons, actually struggling to do the work on insufficient funds. What more blessed and human task than for the millionaire to finance one or more of them? And what more honorable co-operation than that between the two kinds of givers, the giver of care and the giver of money, uniting in a common love for the child?

Again, the great new movement for the public health offers far more opportunities to the kindly millionaire than have yet been utilized. Take the anti-tuberculosis crusade. Not only is there room for more sanatoria and educative work than the State can supply; not only do many existing sanatoria and educational agencies need placing on a firm financial basis; but there are a number of minor needs, of a more individual kind, which appeal directly to the sympathetic heart. Special food supplies and apparatus for open-air life, such as tents, reclining chairs, warm blankets and wraps, hot water bottles, are required by thousands of the strugglers who make up the tuberculosis classes, and by other thousands all unclassified. The gift of one hot water bottle to some shivering, disheartened invalid would seem to rank in significance with the scriptural cup of cold water.

But in this connection, as indeed in all work for the sick, there is one field which the millionaire might make peculiarly his own. This is the supplying of those so-called superfluities which are often more necessary to the spirit than daily bread. A few years since I spent some months in a sanatorium for the treatment of tuberculosis. The great-hearted physician at its head would not turn from his doors any patient, however far advanced in disease; and hence the place had become a headquarters for very sick people, far sicker than the average to be found at such institutions. The needs of tubercular patients were thus manifested there in their direst form. One evening, when the first autumnal chills were closing in, I heard a memorable conversation at the men's shack in that place. Any listener to that grimly candid talk, punctuated by ominous coughing, would know that consumptives, tho a brave set, are far from maintaining always that state of unnatural cheerfulness which tradition ascribes to them. Rather to many of them life is a daily tragedy. Now, if we well people need so greatly the touch of beauty, of joy, of inspiration, to lift us above the commonplace, how much more do the sick crave similar blessings, to hearten them in their long battle with Giant Despair? The old established custom of carrying them flowers is but a finger pointing in the right direction. Moreover, the need of chronic invalids is greater and more keenly felt than that of those who are ill for a short time only. Beautiful natural surroundings; buildings, furnishings and appointments which are not only serviceable and sanitary, but actually soothing and healing by grace of form and tender harmony of color; well selected libraries for uplift as well as diversion; choice pictures; an occasional opening of the door to heaven by the key of great music;—should not all these be the rightful heritage of our suffering brothers in the better days to come? And with them should assuredly go the means of whatever healthful diversion is possible to them, simple games and the like, together with the chance of training in beautiful and interesting kinds of handicraft. A few fortunate sanatoria have already gone far toward realizing this ideal. The colossal Thorwaldsen Christ in the entrance hall of the Johns Hopkins Hospital, with its almost overwhelming

message of compassionate power and love, shows what a single great work of art may do for the sick. But the mass of such institutions in this country have been forced thus far to limit themselves chiefly to physical ministrations. The sickening glare of the unrelieved white walls in a large hospital which is considered one of the last words of modern sanitary construction still beats upon my brain.

With regard to gifts for educational purposes (not from Mr. Carnegie, but from our common millionaire), there is a point which may bear further emphasis. This emphasis may be permitted to one who was for several years in close touch with the administrative board of a growing college. When a large sum is bestowed on some college or university, it is apt to have a designated special purpose, such as the erection of a building or the endowment of one particular branch of investigation. Such gifts are of course admirable, and one would not look them too closely in the mouth. Still, it often happens that the institution's greatest need is not in the direction chosen. To give a college a new dormitory when what it desires most keenly is a fund to meet the running expenses of its gymnasium, may be satisfactory to the giver but is a bit disappointing to the recipient. The wise donor, therefore, who desires to make his offering of the utmost avail, will consult the governors of an institution of learning before deciding upon the form his gift shall take. And unless he has some special object at heart, he will permit his money to be applied according to their judgment, or, better still, will put it into their hands to be used at their discretion. "Unrestricted funds for general purposes" are a boon much sighed for by college trustees.

There is one special form of endowment, however, which, so far as I know, has not been attempted at any of our American colleges or universities, but which I should like to suggest for the consideration of the enlightened rich. That is, the establishment of chairs of creative literature and art. Noble provision has been made of late years for scientific research, and great are the benefits already accruing to us therefrom. But for imaginative creation, what has been done? Yet the critics are constantly and rightly lamenting our low state of development in the fine arts.

But Pegasus must be fed and sheltered, or he cannot soar. If, however, in order to achieve food and shelter, he must submit to daily toil at the plow, which any average wingless horse could do as well as he, he often loses his chance of flight—of the supremely beautiful and valuable thing which he alone can do. Would it not be better economy to provide him with those primitive necessities, thus setting him free to do his own high task? If he really be Pegasus, there will be no danger but he will work harder than any draft horse of them all. But actual genius is rare, you say. Yes, so are rubies. But there are tests for rubies, and also for genius.

I have known two cases in point. A certain woman, who holds an honored place as an educator, has a genius for poetry. (I use the great word advisedly, having weighed it in this case for thirty-odd years, and being corroborated by intelligent witnesses not a few.) There are hundreds of other women who can teach the subjects she teaches. There is not one of them all who can write as she writes. Yet, because of the underlying money question, she has spent the greater part of her life in teaching, in the executive and social duties that pertain to her position, and in writing prose that would bring in immediate cash returns. The one starry task for which she was born, a task demanding, like all creative work, the highest pitch of vitality, has been crowded into odd moments, into scanty breathing spaces, when the tide of vigor was well nigh at its lowest ebb. Thus has one of the most exquisite American poets been almost lost to us, tho not quite. For (and here is the miracle) her verse has still been written with a keen delight, an unconquerable grace. A golden shower of lyrics, struck out at intense heat against the anvil of difficulty, priceless gleams of patriotism, of faith, of sympathy well nigh divine, attest the fuller glory that might have been. But how simple, for some one whose gold is of the earthly kind, to raise such a poet above money considerations, and set her

free to sing with God's other nightingales. And it could be done for what some men spend on polo.

Not that the task would be wholly simple. Men and women of genius have their due share of self-respect; often, indeed, an honorable sensitiveness as delicate as the bloom on the peach. One would not insult them by asking them to accept money except for value received. But if it could be proved to them that their creative work was recognized to be of far more genuine value than most work for which money is paid? Our privileged millionaire might, as I said, establish at some college or university a chair of creative literature, with a sufficient endowment to support its occupant in reasonable freedom. Appointments might be made, as to other chairs, on the basis of work actually done, and on the opinion of competent judges. Continued tenure of the chair might be conditional on the production from time to time of original works of literature in such quantity and quality as to justify the arrangement. If at any time there should be no person of sufficient merit available, the chair might remain empty until such person could be found. It seems to me that any man or woman of creative gift might accept such a position with entire self-respect, and that the benefit to the community as well as to the individual would be incalculable.

Or take the case of a man I know, a painter of rare quality and of thoro training in the art centers of Europe. His mind teems with beautiful images; his fingers, instinct with almost preternatural skill, are restless unless they are handling brush or pencil. But he must first of all support himself and his family. At the present stage of art feeling in America, few indeed are the painters who can do that with any sort of adequacy. And this man has a proud self-respect which forbids him to angle for customers. He paints portraits chiefly, because they are the best paying pictures he can produce, and fills in the intervals between orders with illustrative work for books and magazines. Naturally his portraits and illustrations show the master hand. But meanwhile the great ideal conceptions of his genius languish unexprest; and the daily harassments of making both ends meet, are far from conducive to those golden moods in which the choicest work of genius blossoms and matures. Poor Pegasus! the harness galls the wings, and the wings obstruct the harness. Is not this painter a type of many artists in America? Of course, one has to reckon with the general feeling that in our time and country the public welfare demands many more practical things than pictures. Yet we have among us financiers sufficiently enlightened to recognize the need of great pictures also, and to pay vast sums for them. Might not the same fine sense of values which leads a millionaire to pay hundreds of thousands for a masterpiece of art induce him as well to finance the production of masterpieces? And as captain of industry in this new sense, might he not find it effective and inspiring to establish a chair or chairs of creative art, on a basis similar to that already suggested for chairs of literature?

WELLESLEY, MASS.

# Permanence

BY CLINTON SCOLLARD

SHOULD chiseled plinth and rounded arch
Dispute with Time's unswerving march,
How vain the effort! These must pass
Like blown sea-vapor from a glass.

The spheres that sing and swing in space,
One day their orbits who shall trace?
And yet the soul, that aura bright,
Shall outlast chaos and the night!

CLINTON, N. Y.

# How the World Is Moving On

BY JUSTIN McCARTHY

MOST of the English newspapers, metropolitan and provincial, of this day contain articles on the death of Joseph Pulitzer, the founder of the *New York World*. The London *Daily News* says: "During the past century America has produced a number of newspaper men whose fame is world-wide. We may put them into two classes—those who came before and those who have come since the advent of Joseph Pulitzer at the end of the 70's. He it was, more than any other man, who made of the American newspaper the thing we know today. He invented those methods of news gathering and dressing, of publishing, illustrating and leader writing, which have been imitated more or less closely in every part of the world; and the American Sunday newspaper, which no country has yet succeeded in imitating, was largely his creation." Many years have passed away since I first came into personal acquaintanceship with Mr. Pulitzer in New York, where he was then at the hight of his power and popularity, a hight which he maintained during the remainder of my personal residence in the United States, and indeed, I take it for granted, up to the moment of his death. I do not purpose, however, to enter just now into any consideration as to the moral value of the influence exercised by the *New York World* and journals of the same order which have been lately making themselves more and more conspicuous thruout what we must describe as the civilized world. I have been for many years a frequent contributor to American literature, and more especially to American journalism, and have never felt reason to feel anything other than pride in my admission to that new field of world's intellectual development. At one period of my literary career I spent about four years in the American States, and during that time I think I visited every State in the Union, and very fortunately for me it happened to be the period of the great American poets and politicians, statesmen and orators and humorists, most of whom I had the great pleasure of knowing as friends. One of my most valued friends in the States was Whitelaw Reid, the American Ambassador in London, whose acquaintance I first made in New York at the same time as that of the late Joseph Pulitzer, who was the founder, or perhaps I should rather say the creator, of that order of journalism so full of animation and what we may indeed call "life," which has since his time established itself in every great city of Europe as well as of America.

We have had, however, a period of extraordinary excitement in Europe as well as in the United States, and the utterly unexpected and very fierce encounter between Italy and Turkey has stirred up once again under entirely new conditions the sympathy which a great number of English, Scotchmen, Welshmen and even Irishmen in former days always felt with the people of Italy. Certainly, when Garibaldi was the darling hero of so many British populations one of his actual followers would have been indeed surprised to hear that the countrymen of Garibaldi, including also some of his habitual comrades, could have seen without condemning the process of war which was carried on by the chiefs and the soldiers of the kingdom of Italy against the Turks in Tripoli. I sincerely hope that Italy will keep out of all such wars as that with the Turkish dominion during the whole of her future, and it is hardly needful to give any warning about the necessity of avoiding the touch of pitch for a nation which is unwilling for any consideration to become defiled.

That region of Europe which has the deepest and most thrilling interest in the political fortunes of Europe during the immediate coming period is assuredly my own native country, Ireland. Every reliable indication makes it evident that Ireland has a right to expect elevation to a position of absolute self-government in the political constitution of Great Britain

RIGHT HONORABLE ARTHUR J. BALFOUR

Born in Scotland in 1848, Mr. Balfour is a Master of Arts of Cambridge University. He is Chancellor of Edinburgh University, and the author of "A Defence of Philosophic Doubt," "The Foundations of Belief" and other philosophical, literary and economic essays. He is a bachelor, and an ardent golfer. He sits in Parliament for the City of London, and entered the Cabinet in 1886. Five years later he became leader of the House of Commons.

during the next few months. The cause for which Lord Edward Fitzgerald and Wolfe Tone gave up their lives, to which O'Connell devoted the best services of his whole career, for which Robert Emmett died, and Thomas Addis Emmett went into exile and their example was followed by Smith O'Brien and Thomas Francis Meagher is now at last on the very verge of triumph, and there is every reason to believe it will be crowned with complete success before the coming summer brightens upon us. It seems to me certain that the final settlement of this home rule question, which now looks as if it were so near and so sure, will do as much or more for the benefit of the political constitution of Great Britain as of Ireland. Not Ireland alone suffered during centuries from the policy which Great Britain consistently and persistently adopted in her method of ruling the subjected island. Some of Britain's own sons, some of her wisest, her bravest, her most patriotic sons, have been thoroly devoted to the cause of Ireland's practical government by Ireland herself. One of the greatest of England's philosophical teachers, John Stuart Mill, made himself a consistent and steady advocate of genuine home rule for Ireland thruout the greater part of his life and until its close. John Bright and Richard Cobden were advocates of Ireland's cause in England's Parliament. I need hardly remind the readers of the INDEPENDENT that Mr. Gladstone twice brought in a measure of home rule just at the close of his illustrious career, the first of which was rejected by the House of Commons. He brought in another bill in 1893, which passed thru the House of Commons, but was thrown out by the House of Lords. Now at last the time seems to have come when the measure will be passed by the House of Commons and left under entirely altered conditions to see whether the House of Lords will venture to reject it again and leave itself to something like the certainty of being extinguished by the creation of a number of new peers, whose advanced views, already made known to the existing government, will guarantee to the statesmen in office the immediate carrying of their measure. I do not myself feel any serious fear that we shall have to see home rule for Ireland carried as the result of such a political convulsion. The highest pride and pleasure to know for me must be that Ireland had accomplished her full genuine political self-control with the full acquiescence of Britain's Parliament. I am still not without some and even good hope that the House of Lords, seeing that the decreeing of its extinction as a despotic ruling chamber must be practically invited and even compelled by its rejecting the measure of home rule, may let the light into their minds and see their way to pass the coming home-rule bill rather than have it forced upon them by the House of Commons, and thus supply to the advanced intellects of the country a practical vindication for the instant establishment of home rule.

The present session of Parliament will be made memorable in the history of the empire by the retirement of Mr. Arthur

James Balfour from the leadership of the Conservative party. Arthur Balfour was a statesman whose ability was recognized by all parties, sections and cliques in either House of Parliament, and he had many sincere friends even among members of the most opposing parties and sections in each House. He was always very friendly and kind to me, and while he and I were almost always opposed where any question of practical legislation was concerned I was always very glad and so I hope was he when any rare occasion gave us an opportunity of passing into the same lobby on a division. He is not, I believe, going to leave the House of Commons, in which the greater part of his life has already been spent, but I suppose he wants to give himself an opportunity of trying whether life would be enjoyable if entirely unfettered by political struggles to body and man and mind. I first made his acquaintance at the same time with that of the late Lord Randolph Churchill and the other members of the Fourth party. That thoroly independent little party of four was made up by Lord Randolph Churchill, Arthur James Balfour, Sir John Gorst and Sir Henry Drummond Wolff. It naturally happened that on a great many unexpected occasions the Fourth party had an opportunity of voting in co-operation with the Irish National party, who were then following the leadership of Parnell, and thus for a considerable time the Fourth party came to be regarded in the House of Commons as involved in a sort of occasional partnership with the Irish National party and was habitually stigmatized by many genuine Tories as a fellow conspirator with Parnell and Biggar. I have not yet heard whether Mr. Balfour is supposed to have any inclination for the finishing of his political career in the House of Lords, but if he shares the ambition of so many other statesmen in that direction I sincerely hope that the present Liberal Government will see their way to gratify his inclination at the earliest moment. Mr. Balfour is to be succeeded, we are told, in his position as leader of the Tory party by Mr. Bonar Law, who has not made much so far of his political career. He is chairman of the Glasgow Iron Trade Association and has sat in the House of Commons since 1900, and he cannot be said to have won anything like a success during his few years in the representative chamber of Parliament. Now it will not be denied by any reasonable member of the Liberal party in the Commons that Arthur Balfour is one of the most distinguished members, taken all round, known to this present House, and his withdrawal from the House makes a distinct reduction in its intellectual value.

Of course it would be quite impossible that any member of the present House of Commons could prove that Mr. Bonar Law was totally incapable of performing adequately all the duties coming on the successor of Mr. Arthur Balfour as leader of the Unionist party. But if the Conservative party are quite content to accept the leadership of Mr. Law for that of Mr. Balfour they seem to me as much to undervalue the political capacity of the statesman who is leaving as to overrate

ANDREW BONAR LAW

The British business man of Canadian extraction who has succeeded Arthur James Balfour as leader of the Conservative Party. Mr. Law has represented the Dulwich Division of Camberwell since 1906 and was formerly an iron merchant of Glasgow. Like Mr. Balfour, he is a golfer, instead of writing essays on philosophy he plays chess.

that of the new man who is suggested to succeed him.

Last Saturday was a day of much mark in the joint history of the United Kingdom and in that of India. It was the occasion of the first departure of a reigning King and Queen of England from their native land to visit the vast realm over which they rule as Emperor and Empress of India. There is every hope and belief that the spontaneous visit will create a most favorable and grateful impression on the various populations of the Indian Empire.

LONDON, ENGLAND.

# Real Mind Reading

BY STEPHEN S. COLVIN, Ph.D.

[The author of this article on the newer methods of mental diagnosis is Professor of Psychology in the University of Illinois, and for this year is Honorary Fellow in Columbia University. He is a Doctor of Philosophy from the University of Strasburg, a member of the American Psychological Association and a fellow of the American Association for the Advancement of Science. A more extended and technical account of the association method of mental diagnosis is to be found in his recent book, "The Learning Process."—EDITOR.]

RECENT investigations in the field of applied psychology have clearly shown that conscious states are governed by definite laws. They do not come and go without reason. As in the physical world, so in the mental, there is no chance. Everything that happens has its cause. Chance is merely the name that we give to hide our ignorance. If we can only extend our knowledge we shall find that there is no more mystery in the workings of the human intelligence than in the sweep of the planets thru space. In consciousness, as in the material world, there is a place for everything and everything is in its place. An idea may seem to appear in the conscious field without reason, but if we could trace its coming and know whither it was going, we would find that it had nothing strange or occult about it. Its path thru the mind is as definitely marked and predetermined as is the course of the comet thru the solar system. Once the comet was looked upon with wonder and awe, and its appearance on the outposts of the universe was regarded with superstitious terror. Now science has solved its supposed mysteries, as it has so many other riddles and as it will certainly solve the riddle of the mind.

This newer conception that conscious states are as rigid as material things is due in no small degree to the investigator and practitioner in mental diseases, who in dealing with the abnormal mind has been compelled to find causes and to forecast results. Myth and imagination have been ruled out of the field of physical medicine; they are rapidly disappearing from that of mental medicine. One of the principal workers in the field of mental diseases to bring about this newer conception is Dr. Carl Jung of Zurich. A part of Jung's work has been brought to the attention of Americans in recent books, articles and discussions on the psychology of crime and the methods of its detection, and popular interest in the subject has been aroused largely because of the spectacular elements involved. It would be wrong, however, to obscure the fundamental meaning of Jung's results by considering solely or chiefly their bearings in this narrow field of applied psychology. The great significance of these investigations lies in the discovery that mental associations can no more be broken at will than can the workings of gravity be suspended thru human desire. A conscious state is not a thing that comes and goes at the command of its possessor.

Jung's method of mental diagnosis,

which he has applied more to the treatment of nervous diseases than to the detection of crime, is in the main surprisingly simple. It consists in giving either orally or visually to the person under examination a series of words one at a time, and to each word as it is given the subject is instructed to reply at once with the first word that comes to mind. A record is made of each word that is presented ("the stimulus word"), the reply that is made ("the reaction word") and the time elapsing between the speaking of the stimulus word and the reply of the subject with the associated word ("the reaction time"). For example, the stimulus word may be "street," the associated word "narrow," and the reaction time one and three-fifths of a second.

In the conduct of the test a list of one hundred stimulus words is usually chosen, so selected as to represent a variety of common situations in life of the normal individual. A typical list includes such words as part, old, flower, wild, family, wash, cow, woman, abuse, door, marry, house, dear, virtue, happiness, mother. In part thru the replies given to these words and thru the general behavior of the subject, but chiefly thru the length of the reaction times between stimulus and response, the investigator is able to arrive at some of the most important facts in regard to the mental content of the person who is being tested. Normally words presented in the manner described are reacted to in from one to three seconds, but if in the list of stimulus words there are any that possess unusual significance for the subject the result is that the response to these words is generally materially lengthened. The peculiar meaning that certain words in the list possess may be due either to the circumstance that the person under investigation is in an excited mental state and tends to read into purely colorless words a significance that they do not actually possess, or to the fact that among the words presented some have been purposely selected to refer to an important fact in the experience of the subject. If the person's nerves are in a high state of tension he is apt to read into the most innocent words a hidden meaning. He imagines the investigator has some particular purpose in presenting these words to him and he fears that his replies will reveal some secret. Under these conditions he becomes unduly excited and greatly confused. His conscious processes are stampeded, so to speak, and under the stress of the examination his mental organization goes to pieces. Often he hesitates and is incapable of any reply whatsover. Generally the time of his responses is greatly lengthened, often to ten or fifteen seconds.

When the subject is normal, but when some of the words presented possess a real and not merely a fancied significance, a state of emotional excitement is aroused similar to that in the abnormal subject. The normal subject under these conditions fears, and with good cause, that his replies will uncover what he desires to conceal. If, for example, the person under investigation is implicated in a crime, he will find that the associations called forth by the significant words, if exprest, will show his guilt. When these words are presented he hesitates and this hesitation is revealed by a lengthened time in the response. Perhaps the crime committed has been that of murder and the victim has been poisoned. It is known to the investigator that the poison was in a bottle kept in a drawer that was carefully locked by the criminal; that when it was removed from the drawer a part of the contents of the bottle was accidentally spilled and that this left a stain on the floor which the criminal attempted to remove with a towel. If this were the case, among the many non-significant words would be the significant words bottle, drawer, key, unlock, spill, stain, wipe, towel. In the presence of such words the guilty person will hesitate, because of the emotion that they tend to call forth and because of the fear that the replies will be damaging. This hesitation will invariably be revealed by lengthened times in the response, for try as he may the guilty person cannot escape the fundamental law that associations once formed cannot be broken at will.

Jung's method of mental diagnosis has been worked out not alone by European investigators. During the past

few years it has been attempted in several American institutions of learning with uniform success. In one experiment the attempt was made to ascertain which of two possible series of acts the person under investigation had performed. One set of acts involved opening a box in which had been placed a dancing mouse; the other the examination of a second box that contained a pack of playing cards. After the examination the subject was given two different series of words to which he was to react. In the first series there were significant words relating to the contents of the first box. In the second series the significant words referred to the contents of the second box. Some of the words of the first series were movement, small, white, dance, tail, rat. In the second series were the significant words play, ace, diamonds, clubs, king, jack and hearts. The significant words in the first series showed on the average longer reaction times than the significant words of the second series, thus indicating that the first box had been opened.

Another experiment aimed to discover which of two persons had performed a number of acts according to definite instructions. These instructions read as follows: "Go to the shop, place a hammer in the drawer which is indicated by the mechanician and carefully examine the articles in the drawer, so that you can answer correctly the following questions: 'How many keys are there on the key ring? What is the label on the ink bottle? Is the ink bottle empty? Is the stop-watch running? What is the number on the back of it? How many blades has the knife? What is the color of the handle? Can you pull small nails with the hammer?'" Both of the subjects were tested with a list of one hundred words, among which were thirty-eight that referred to the acts connected with the list of instructions. The "guilty" subject in this test was discovered by the fact that his average reaction times for the significant words were longer than for the non-significant words, while in the case of the innocent subject the non-significant words were reacted to somewhat more slowly than were the significant words.

The writer has been able to demonstrate the Jung method with success not only before small classes of psychology, but also before large bodies of students and audiences of a general character. The fact that in more than a score of trials there has not been a single failure argues strongly for the validity of the procedure. In several of the tests the method used consisted in placing a number of articles in two sealed envelopes. In each envelope was a different set of objects and there were carefully written instructions in regard to the examination and use of the contents. A subject was selected by lot and told to open either of the two envelopes that he should choose and to follow out in detail the instructions therein contained. Of course, he was to remain in complete ignorance of the contents of the unopened envelope. After he had examined the contents of the opened envelope, and had followed out every direction, he was then given a list of one hundred words, orally presented, with the instruction to immediately respond on hearing a word with the first word that came to his mind. However, he was told at the same time to avoid in his replies such words as would indicate in any way which envelope he had opened. In the list of words prepared for the test, twenty-five were so selected as to refer to the contents of one of the envelopes and twenty-five to the other. The remaining words were indifferent, i. e., they had reference to the contents of neither enevelope. In every instance the subject tested showed longer average reaction times in response to the words connected with the opened envelope than to the words referring to the unopened envelope. The non-significant words showed the shortest reaction times. Quite often, too, the person tested betrayed by the character of his responses, as well as by his lengthened reaction times, which envelope he had opened. A few typical illustrations will serve to show the manner in which these tests worked.

On one occasion the subject opened an envelope which contained among other things a copy of "Oliver Twist." He was told to read carefully that part of a chapter describing Oliver's instruc-

tion in the art of picking pockets and in the removal of names from stolen handkerchiefs. Here the instructions read: "How do you think Oliver removed the names; could he have done this with an acid?" In connection with this part of the test the words turn, jump, twist and run were given in the order named. When the significant word "twist" was spoken the subject hesitated and after a period of five and one-half seconds replied "Oliver," which of course clearly indicated which envelope had been opened. Later, when the significant word "acid" was given, the subject replied "ink" after an interval of ten seconds.

In another test a graduate student and assistant in psychology, who was entirely familiar with the method and who had confidently asserted that he could not be detected, since he could guard his replies and control the rapidity of his reactions, found it impossible to free himself from the natural association that certain words called up. In this test the student had opened an envelope containing a school arithmetic. To the significant word "textbook" he replied in two seconds with the word "mathematics." Later in discussing the test he said that his thought had been so occupied with the idea that he must keep down the reaction times that he found himself helpless when confronted with the word "textbook" and was forced to reply as he did. Still a third student, who was likewise familiar with the method and who had in advance of his examination correctly guessed what certain of the significant words would be and had prepared replies that would in no way indicate what he had done, found it impossible to escape the influence of the underlying associations that the significant words called forth. In one part of the test he was instructed to purchase a bottle of blacking and shine his shoes. The significant word in this connection was black. After completing the test, in describing his state of mind, he wrote: "The shining of the shoes stood out strongly. So I remembered the black shoe polish and the black shoes, and when I heard the word 'black' they stood out as irrepressible as mountains."

In the light of the foregoing, it cannot longer be held that ideas are the unsubstantial things that tney are popularly supposed to be. A mental fact can no more be changed at will than can a physical fact. Indeed, the psychologist knows that the tyranny of ideas is the most difficult of all tyrannies to master. The person who is under the dominance of an unfortunate set of mental associations is no more to be blamed than is the individual who is the victim of an insidious physical malady. Those who fondly imagine that all human ills are purely mental and have thought for this reason that they can more easily be cured than if they were physical have little reason for the faith that is in them. It is indeed true that ideas can be weakened and even driven from consciousness, that new associations can be formed and old ones destroyed, but not by the mere desire of him who possesses them. It often takes days—yes, even months and years—to banish the undesirable thoughts, and sometimes, when we think that we have disposed of them and thrown them into outer darkness, they rise unbidden like the ghost of Banquo to disturb the feast of reason and the flow of soul.

New York City

# The Healing of a National Breach

BY DUDLEY H. MILES

[The author of this contribution is an instructor in English at Columbia University. He writes that the article was suggested to him by investigations he made in connection with the "Photographic History of the Civil War," newly published by the *Review of Reviews* Company. Our readers will remember two articles by Enoch Morgan Banks on this general subject that appeared in our issues of February 9 and July 13, 1911.—EDITOR.]

JAMES BRYCE, the optimistic Ambassador from England, recalled the other day, in addressing the New York Chamber of Commerce, that one of the grave problems that faced the nation in 1870 was sectional animosity. At that time he was in doubt as to the ultimate healing of the wounds inflicted by our Civil War. Speaking some forty years later, he declares that problem solved. Native observers of American life will agree with him. It is none the less instructive to recount some of the episodes in the growth of this happy reconciliation.

Mr. Bryce would in 1870 probably have settled upon Senator Charles Sumner as one who had deepened the breach between North and South by his negro legislation. Nevertheless, when he died on March 11, 1874, the Massachusetts delegation invited Lucius Q. C. Lamar, Congressman from Mississippi, to second the resolution for suspending the business of the House out of respect to his memory. His eulogy of the New Englander that 28th of April was expected to be only a perfunctory performance. But when he rose to speak the House and galleries became silent, and as he proceeded Speaker Blaine sat motionless, with tears running down his cheeks. Opponents in many a hot debate, Democrats and Republicans alike, were melted to tears. When he sat down, all seemed to hold their breath, as if to prolong the spell. Then came a burst of hearty and sympathetic applause such as had not been heard since the war. Of the speeches delivered in both houses Lamar's alone was sent by telegraph to all parts of the country. The seemingly excessive tribute was merited, because his eulogy was conceived in the most magnanimous spirit, closing with a plea for a fuller understanding and a closer union.

Two years later came the hundredth anniversary of the signing of the Declaration of Independence, celebrated by the International Industrial Exposition at Philadelphia. The honor of writing the official cantata for this national thanksgiving was most significantly conferred upon the Southern poet, Sidney Lanier. The cantata, composed for Dudley Buck's music, was sung "in the open air, by a chorus of many hundred voices, and with the accompaniment of a majestic orchestra." Daniel Coit Gilman thus describes the event: "The devotional exercises awakened no sentiment of reverence. At length came the cantata. From the overture to the closing cadence it held the attention of the vast throng of listeners, and when it was concluded loud applause rang thru the air. A noble conception had been nobly rendered." The incident had a wider bearing. Lanier was the first Southern poet to give a full, clear voice to the spirit of nationality.

An equally enthusiastic demonstration occurred ten years later in New York City. The New England Society extended an urgent invitation to Henry W. Grady, then managing editor of the Atlanta *Constitution,* to attend the annual banquet on December 22, 1886. He was a leader in his native State of Georgia. His father had lost his life at the head of the forlorn hope directed by Gen. John B. Gordon against Ford Stedman only two weeks before the surrender at Appomattox. Yet the son looked back on the struggle with no bitterness. The outcome he accepted loyally. To innumerable rural audiences he preached the gospel of industrial alertness and national unity. However, as he was almost unknown in the North when he stepped into the banquet hall of the New England Society, he expected to make a mere formal response to the toast, "The

South." The occasion proved inspiring. "When I found myself on my feet," he said, describing the scene on his return to Atlanta, "every nerve in my body was strung as tight as a fiddle string, and all tingling. I knew then that I had a message for that assemblage, and as soon as I opened my mouth it came rushing out." This impromptu address, flashed over the country as "The New South," not only made Grady famous from coast to coast, but marked him as one of the potent influences in the unification of the once sundered sections.

That unification was actually taking place had been apparent at the death of General Grant in 1885. The last words made public from his bedside were: "I am thankful for the providential extension of my time to enable me to continue my work. I am further thankful, and in a much greater degree thankful, because it has enabled me to see for myself the happy harmony which has so suddenly sprung up between those engaged but a few short years ago in deadly conflict." The harmony was real. With only insignificant exceptions, the Southern press used language like this from the *Mobile Register:* "The South unites with the North in paying tribute to his memory. He saved the Union. For this triumph—and time has shown it to be a triumph for the South as well as the North—he is entitled to, and will receive, the grateful tribute of millions who, in the course of time, will crowd this continent with a hundred imperial States and spread to the world the blessings of republican freedom." Another paper of influence, the *Montgomery Advertiser,* remarked: "Looking at the life and character of General Grant from the broadest national standpoint, it is true to say that no man since Washington has better illustrated the genius of American institutions or the temper of Americans as a people."

A truer test of national spirit came in 1887, when it was shown that the survivors of the "lost cause" were as loyal to the Union as the survivors of the cause that won. In that year Adjutant General Drum suggested the return of the Confederate battle flags then in the War Department at Washington to the Governors of the States from whose troops they were captured. Tho the project was not carried out, the attitude of the North during the agitation may be seen in Senator Hoar's address of welcome to the R. E. Lee Camp of Confederate Veterans from Richmond, Va., delivered at Faneuil Hall, Boston. He said: "Your presence tonight is a token that the memories of four years cannot efface the memories of three hundred. . . . You have learned something of the Puritan. We, too, have learned to know as we never knew before the quality of the noble Southern stock; what courage in war; what attachment to home and State; what capacity for great affection and generous emotion; what aptness for command; above all, what constancy—that virtue beyond all virtues, without which no people can long be either great or free. . . . In the great and magnificent future which is before our country, you are to contribute a large share both of strength and of ornament."

The Southern spirit was equally admirable. When Governor Fitzhugh Lee of Virginia heard of the Northern protest over the return of the flags he said: "The country should not again be agitated by pieces of bunting that mean nothing now. The South is part and parcel of the Union today, and means to do her part toward increasing its prosperity and maintaining the peace of the republic." The leading Southern newspapers treated the subject in a similar manner. The *Atlanta Constitution* said the flags would have been received "as a solemn pledge that the last spark of resentment between the two best armies the sun ever shone on had died out forever." It, at the same time, recorded its belief that "the great American heart can neither be misled nor deterred. It has determined that there shall be peace. . . . The war is over—its results are fixed—its passions are dead; and its heroisms and sacrifices have bound this people together as they were never bound before." It was therefore no exaggeration for that eminent Mississippian, L. Q. C. Lamar, in his oration at Charleston, the center of secession, on the unveiling of the statue of Calhoun, the apostle of States' rights, to declare that the appeal to arms in 1861 guaranteed and established "the indissolubility of the

American Union and the universality of American freedom."

The progress of unification was furthered by the work of historians and biographers. Patriots like Lamar and Grady caught the heart of the people, but for permanence of good relations the public mind had also to be enlightened. Beginning with the last decade of the nineteenth century, students in American history who had been trained to scientific accuracy and impartiality in the growing universities of the country, brought into clear light the disputed causes of the war, and investigated the inner nature of the conflict and its results. The immediate effect was not always pacific. When a life of the Southern romancer, William Gilmore Simms, appeared in 1892, certain chapters that discussed without reserve his political activities raised such a storm of criticism that the young biographer was threatened with the loss of his position in a Southern college. Within ten years, however, many who still disagreed with the conclusions of the book were ready to admit the right of the author to express his opinion frankly and fearlessly. Richmond itself turned out to give him an enthusiastic welcome.

A broader influence was exerted by the novelists. The South took pride in the recognition of its writers by Northern magazines and publishers. The emergence of a new author was an occasion for demonstrations of sectional enthusiasm which at the same time bound the section to the nation by giving it a conscious share in the national life. Then came the vogue of the historical novel. For a time it seemed as if the Civil War and Reconstruction periods were the only ones novelists knew anything about. But, tho the field was much overworked, this activity had a salutary influence in acquainting the whole country with Southern civilization and conditions. Indeed, one of these novels was reviewed at some length in a periodical of national weight devoted almost exclusively to politics and industrial progress. The prophecy of Lamar, "Know each other and you will love each other," was proving true.

The final stage in unification may be found in that ninety days' frolic known as the War with Spain. Congress removed all discriminations against former Confederate officers. Wheeler's brigade at Santiago revived memories of his Civil War raids, and inspired many a generous poem like John Howard Jewett's "Joined the Blues." Indeed, North and South were drawn into relations of exultant brotherhood. The sacrifice of blood and gold in the cause of an oppressed people fostered an intensity of patriotism that lifted national life from the individualism and sectionalism that had lingered on since the Civil War. This new patriotism was no spasmodic affair of the moment. Political parties were still fervidly debating about imperialism and the colonial policy when the assassination of McKinley, in 1901, startled the whole country. Prof. William P. Trent, an acute observer, once remarked: "I recall vividly how I had to make a flying trip from North to South at the time, and how impressed I was with the fact that not a particle of difference could be noticed between the sections; both were deep in grief. I should say that few events of our time have brought out our essential unity more clearly than his assassination."

How true the observation was may be judged from an incident almost unnoticed at the time. On February 24, 1905, a bill for returning the Confederate flags was passed in Congress without a single dissenting vote, without even a single moment's debate. This result was not due to careful prearrangement. It was due to the spontaneous unanimity among the representatives of a harmonious people—a silent but impressive proof of the completeness of our union. Despite the lingering of hoary prejudices in a few scattered citadels, the celebrations of this fiftieth year since the opening of hostilities between North and South show that Ambassador Bryce is not mistaken. The problem that looked so threatening in 1870 has been solved, thanks to the character of the American people, and all faces are turned toward the new problems arising from our stupendous growth and complex development.

## Flights of Fiction

After reading the following eleven novels we are reminded of that childhood classic concerning the diverse temperaments of certain geese:

> "One flew east and one flew west;
> One flew o'er the cuckoo's nest."

Our modern novelists seem to have similar tendencies. Something new, something different — something "o'er the cuckoo's nest," seems to be the animating influence controlling fiction, no matter to what extreme points of thought or of scenery it carries the writer.

Norman Duncan's *The Measure of a Man*[1] is one of a trilogy of semi-religious books and takes precedence over the remaining ten of this review in its "differentness." It is a story of the great wooded and ice-bound North. John Fairmeadow, the hero, comes into one of those lonely settlements of evil so much exploited in fiction, but so rarely interpreted beyond the bloody drunkenness of them. Fairmeadow would be the conventional preacher-comrade typical of the evangelistic novel were it not for Mr. Duncan's power of strange illusion, which makes the redemption of Swamp's End by Fairmeadow poetically symbolic and daringly dramatic. *The Singer of the Kootenay*,[2] with its scenes also laid in the Far North, is the kind of story which prejudices the average reader against religious novels. Presumably the author found it impossible to construct a hero from a publican and sinner, have him sing his way to the ministry, and not at the same time make him an anemic Christian, with a hysterically religious feminine counterpart. The author of "The Rosary" has not been so fortunate in conceiving her latest novel, *The Following of the Star*.[3] The heroine, whose fortune is contingent upon her marriage, bribes a young minister to marry her by offering him means to carry on his missionary labors. She marries him and speeds him on his way to Africa the very day of their wedding. Such a plot would seem to offer limitless opportunity for adventures by the missionary husband among the unfriendly heathen and for complications at home, but the author ignores these and reduces the story to an uninteresting correspondence between husband and wife. Pure romance would have been more acceptable than five hundred pages of vague allegory and cumbersome letters. In *Victor Ollnee's Discipline*[4] Mr. Hamlin Garland has taken a quite different flight from that to which we are accustomed in his too realistic interpretations of the West. This is the story of the struggle of a young college-bred man against the phenomena of the psychic as presented thru his mother as a medium. This conflict forms the motive of the novel, but Mr. Garland fails to impress us with the quality of his hero's final conviction of the truth of the psychic, perhaps on account of the author's personal skepticism. The book has value only as a collection of seances well narrated. Mr. Coolidge is still writing about Western ranch life, but his latest novel, *The Texican*,[5] has fallen short of "Hidden Water," which appeared last year. *The Texican* is a story of skillful theft and maudlin drunkenness. Dozens of Western novels have dealt so thoroly with the ingenuity of cattle thieves and the shame of the law in that section of our country that Mr. Coolidge is only repeating an old story. In fact, the only story which seems to bear limitless repetition is the detective story. Suspicion remains a constant source of entertaining speculation which quite reaches its hight in *When No Man Pursueth*,[6] a story of the

[1] The Measure of a Man. By Norman Duncan. New York: Fleming H. Revell Company. $1.25.

[2] The Singer of the Kootenay. By Robert E. Knowles. New York: Fleming H. Revell Company. $1.25.

[3] The Following of the Star. By Florence L. Barclay. New York: G. P. Putnam's Sons. $1.50.

[4] Victor Ollnee's Discipline. By Hamlin Garland. New York: Harper & Brothers. $1.30.

[5] The Texican. By Dane Coolidge. Chicago: A. C. McClurg & Co. $1.50.

[6] When No Man Pursueth. By Mrs. Belloc Lowndes. New York: Mitchell Kennerley. $1.35.

slow, secret poisoning of a woman and the efforts of a young doctor to diagnose the case. Admirers of Conan Doyle may doubtless discover many errors of deduction, but they cannot deny the interest of the dramatic events which make up the narrative. Mr. Tracy in *The Silent Barrier*[7] has taken the shadow of a story, cast it in the mountains of Switzerland, and has thereby given it enough scenery and atmosphere to hold it together. There is the triangle of a hero and a heroine and a villain, but it is not the people, but the scenery, that makes the story. On the other hand the atmosphere and scenery of *In the Shadow of Islam*[8] are a transparent mask for a narrative of progressive politics in Turkey, with the problematic question of race antipathies to form complications. After a series of religious, psychic and political novels we are glad to find three in which the romance of narrative is the predominant feature. *The Transfiguration of Miss Philura*[9] is an ingenious storiet, in which a quiet little spinster takes some theories of new thought to heart and works out her own romantic salvation with surprising success. *Cap'n Warren's Wards*,[10] a delightful story by Joseph C. Lincoln, will recall "Coniston" to admirers of that book. Cap'n Warren, with his dry wit and unexpected capabilities, belongs in the class with Mr. Churchill's stuttering hero. Cap'n Warren, a Cape Cod countryman, is appointed guardian of his rich brother's two children, and the story is chiefly concerned with his disciplining of the two. *Bypaths in Dixie*,[11] with Mammy Phyllis as a feminine Uncle Remus, is a collection of negro stories which, tho not so familiarly known as those immortalized by Mr. Harris, yet have that same quality of the dramatic and imaginative which ought to make "Miss Race Hoss's Party" quite as valuable an asset to nursery lore as "Br'er Rabbit and the Tar Baby."

[7] THE SILENT BARRIER. *By Louis Tracy.* New York: Edward J. Clode. $1.25.

[8] IN THE SHADOW OF ISLAM. *By Demetra Vaka.* Boston and New York: Houghton Mifflin Co. $1.25.

[9] THE TRANSFIGURATION OF MISS PHILURA. *By Florence Morse Kingsley.* New York: Funk & Wagnalls Company. $1.25.

[10] CAP'N WARREN'S WARDS. *By Joseph C. Lincoln.* New York: D. Appleton & Co. $1.50.

[11] BYPATHS IN DIXIE. *By Sarah Johnson Cocke.* New York: E. P. Dutton & Co. $1.25.

## Immortality Among the Egyptians

DR. BUDGE, in his early connection with the British Museum, was devoted to the Assyrian and Babylonian monuments gathered there, but with his elevation to the very responsible post of keeper of the Egyptian and Assyrian antiquities there he turned his attention more to Syriac, Coptic and particularly Egyptian manuscripts and remains, and has published many learned volumes. The one of his works with which the present is most in line is the two sumptuous volumes on the Egyptian gods, to which two new volumes* are a noble counterpart, altho we must mention his three volumes of the "Theban Recension of the Book of the Dead," published in 1897, and following his facsimile edition of the "Papyrus of Ani." These prolonged studies have fitted him to prepare the present volume, which will be of importance in the comparative history of religion.

Dr. Budge, as is known, for he has previously defended it, believes that the Egyptians from the earliest times believed in one great supreme god, to whom the name *Neter* was given, a *deus exsuperantissimus* among the inferior gods, who might be treated as his subordinates, having special fields of control; while he remained too distant for much personal worship. This religion is regarded as indigenous or African, not imported from the West, but coming perhaps from the native tribes of the Sudan. In charge of an expedition from the British Museum far up the Nile Dr. Budge has had very favorable opportunities to study the present religious notions of these people, who have, he believes, retained much of their ancient religious ideas; and he has developed the subject in an interesting way, with citations from many African travelers.

But the present volume is devoted to Osiris, whose worship, with that of Isis, became so popular thruout the Roman Empire. One of the two great temples whose ruins dominate Palmyra was that

*OSIRIS AND THE EGYPTIAN RESURRECTION. *By E. A. Wallis Budge.* Keeper of the Egyptian and Assyrian Antiquities in the British Museum. Illustrated after Drawings from Egyptian Papyri and Monuments. 2 Vols. 8vo. Pp. xxxv, 404; viii, 430. New York: G. P. Putnam's Sons. $10.50.

of Osiris. The author, with a wealth of illustrations, gives the reader the story of Osiris as given by the monuments, the various forms under which he was figured, the story how he was killed—for he had a human body—by his enemy Seb and his body dismembered, and how he was restored to life by his son Horus and after this resurrection was admitted into heaven as a chief god, and became there the judge of the souls of the dead while Thoth held the scales which weighed their heart. Osiris was thus a popular god, much more popular than Ra, the sun god. All this and much more is elaborated with extracts from the texts, both hieroglyphic and in translation, as well as by many copies of Egyptian scenes. One is constantly surprised at the immense extent of the Egyptian art and literary matter that has come down to us and has been so patiently recovered by scholars. Only Ra can be compared with Osiris in religious interest, and he only because as the sun god he seems cognate to the Syrian Baal and the Babylonian Shamash, whose name we have in the biblical Samson. But it is a deeper interest that attaches itself to Osiris, for he is the center of the doctrine of the resurrection and the future life, which dominated Egyptian religion as completely as it has the Christian and the Mazdean. We are much indebted to Dr. Budge for this important work.

THEODORE DREISER

*

**Jennie Gerhardt.** By Theodore Dreiser. New York: Harper & Brothers. $1.35

This story of a beautiful young girl who begins life as a scrub-woman, will remind the reader, curiously, of many

other heroines. Moore's Esther Waters was also a servant girl, and Zangwill's Merely Mary Ann scrubbed floors and hallways for her living, but Jennie Gerhardt resembles them distantly. Lily in Sudermann's "Song of Songs" has much of Jennie's pathetic gentleness of nature, making each the easy prey of better instructed selfishness. DuMaurier's "Trilby," too, had so little of self in her make-up that she lacked the protection of self-respect. Jennie's story of self-forgetful sacrifice is told with the baldest simplicity, with no tragic hightening of the situation. It is like a gray day—all the landscape keyed low, and not a gleam of cheerful sunlight anywhere. It has the sort of fatalism which grows out of character. Jennie is weak and gentle, with a passion for self-immolation, and that makes her tragedy not a red tragedy of hate nor a black one of despair, but the gray commonplace one of a woman whom the world has cast out as a sinner, yet who never feels herself quite vile, because her impulse had always been to love and to serve those around her. Poor Jennie is morbidly grateful to those who help her family, and she does not stop to scrutinize the motives of her benefactors. She is a dreamer, too, living in a world of her own—which was necessary if she were to live at all. Two men make her the victim of her own pity and generosity; yet, tho they are admittedly evil, the author sees each situation from their point of view, so calmly that he seems unduly cold-blooded. We miss the warm indignation that should fire his heart at sight of their cruelty. Several of the characters in summing up Jennie say: "She is a good woman," but we wonder if so much soft-heartedness is really "good." Jennie's wretched story might have been so different if at any crisis of it she had had more sense and less sweetness. The novel begins with sorrow and ends with an interrogation. The lives it has passed in review seem all so futile and meaningless. There is no lift to the spirit, as when we read of suffering bravely borne to some end, however dimly apprehended. The author is either a fool or a genius. At first we were annoyed by his failure to make the most of his situations, and by his repeatedly missing, apparently thru mere stupidity, opportunities for fine dramatic climaxes. But gradually the possibility dawned upon us that the author was deliberately keeping down the emotional tone and that he was exercising as great art in avoiding sensational scenes as other authors do in contriving them.

**The Ideal of Jesus.** By William Newton Clarke. New York: Charles Scribner's Sons. $1.50.

Dr. Clarke has put the religious world under still greater obligation to him by adding another book to his list of noteworthy publications. His gracious and winning manner of presentation, his clear and leisurely style, his accurate and convincing biblical interpretations, above all his deep, searching thought, are here utilized in elucidating the most important and profound elements in Christianity. For Professor Clarke rightly claims that *The Ideal of Jesus* "represents his contribution to humanity better than anything else we can mention," however difficult it may be to define or even perfectly discern that ideal. For the basic facts in his discussion the author relies entirely on the Synoptic Gospels; largely on St. Mark. His exclusion of the Gospel of St. John from his sources is not due to the unsettled questions of authorship and date, but to the certainty that the Johannine materials have been cast in the mold of some other mind than that of Jesus. "Utterances," he says, "that have been consciously recast by another mind, however true their spiritual testimony may be, cannot rightly be used for the purpose of setting forth the actual ideal of the living Jesus himself." The rich spiritual qualities of the book, the absence of all polemic tone, and its suggestive interpretations of the mind and purpose of Christ give it extraordinary value for the preacher, but no reader can fail to profit greatly from so clear and persuasive an exposition of the many-sided ideal of Jesus. Dr. Clarke's keen vision of truth, broad sympathies and wealth of experience were never used to better purpose than in this volume, which should be on the table of every thoughtful minister and student of the Gospels.

**Ship's Company.** By W. W. Jacobs. With 34 Illustrations by Will Owen. New York: Charles Scribner's Sons. $1.25.

Not all the diverting tales gathered together in this volume concern mariners and their world afloat or ashore, but enough of them to justify the title do so, and Mr. Jacobs won his reputation by telling us about British tars on the main and in the pub. He has lost neither his droll humor nor his skill as an historian of the "lower orders." W. W. Jacobs is not, however, a writer to discuss. He is essentially an author for reading purposes. English as he is, his stories are as thoroly enjoyable from the American standpoint as O. Henry's are from the English.

SOME OF MR. JACOBS'S "SHIP'S COMPANY"
(Scribner's)

*

**The Iron Woman.** By Margaret Deland. New York: Harper & Brothers. $1.35.

*The Iron Woman* is a tragedy of motherhood. The quartet of young people come and go; play together as children; love, quarrel and make up; are vivid, beautiful, faulty, immature creatures, but the figure that dominates the book is that of Sarah Maitland, the Iron Woman. An extraordinary woman, with the mind of a great financier and the heart of a child, carrying heavy responsibilities in her great iron-works as well as the ablest of manufacturers, a busy, powerful leader of industry; but helpless to rear and train her only son, whom she idolizes. Her pathetic efforts to undo the wrong she had done him by her indulgence, by cutting him off from his inheritance, burn deep into our sympathies. She is a great woman, but not to be comprehended by her light-natured, spoiled only son, nor by a timid and conventional stepdaughter. The stormy-tempered heroine, Elizabeth, never wins our sympathy with her insane rages, in one of which she spoils three lives, her own included. David Richie is more attractive, and his mother, Helena, is the same gentle and lovable person that Dr. Lavendar, whom we miss in this sequel, watched out of sight at the close of "The Awakening of Helena Richie." Her self-conquest brings a rich reward when she is able to save David at the crisis of his life. Long ago Dr. Lavendar had said to Helena Richie:

> "My child, your secret belongs to your Heavenly Father. It is never to be taken from His hands except for one reason: to save some other child of His. Never for any smaller reason of peace of mind to yourself."

Helena Richie, with all her loveliness, fades into insignificance beside Sarah Maitland. The Iron Woman is as strong as a man and, at heart, as sensitive and modest as a girl. That with all her powerful mind she was incapable of understanding her son was her tragedy

and his. We pity her and respect her, and most of the interest of the book vanishes when she leaves it, "a great tower falling and crumbling in upon itself," and the sorrows and anxieties of the others look small in comparison with that great, silent grief at Blair's unworthiness, which at last broke his mother's heart. Blair, Elizabeth and David work out their salvation from the worst effects of Elizabeth's crazy temper, Blair's selfishness, and David's longing for revenge upon the man who has wronged him. Helena Richie has the courage to risk her son's love in order to save him. It is a painful story, except for the great portrait of Sarah Maitland, which is to be compared only, among the books of the year, to Maxwell's wonderful characterization of Mrs. Thompson.

**The Quest of the Silver Fleece.** A Novel. By W. E. Burghardt DuBois, author of "The Souls of Black Folk." Illustrated by H. S. De Lay. 12mo, pp. 434. Chicago: A. C. McClurg & Co. $1.35.

What will not Professor DuBois write? We had known him as a student of statistics, a collector and arranger of economic facts in reference to negro life, and again as the author of the best book which from the inside eloquently and pleadingly opens to white people the souls of black folk; but this is a new venture into the field of fiction which several other men of more or less color have entered, but no one so well equipt as Professor DuBois. His first venture is no failure. Of course, it is a race story and a very interesting one, and admirably told with the true artist's touch. Its scene is in Alabama, and it lingers about a school something like what the Misses Thorne's has been in Calhoun, where white women from the North devote themselves to the task of teaching colored youth. There is the rich, aristocratic planter, who hates the school, but finally endows it, and the Northern merchant and mill owner; but the chief interest centers in the ambitious colored boy and the wild colored girl of the swamp and their growth to culture, power and love. The author has put into the story all his wealth of justice and passion, and not merely as a romance, but as a study of race psychology it is well worth the reading.

**The Better Country.** By Dana W. Bartlett. Boston: The C. M. Clark Publishing Company. Pp. 555. $1.50.

No great literary art has gone to the writing of *The Better Country*. The style is bald and without grace or dignity. The arrangement of the book is poor, and the subjects are miscellaneous and lacking in correlation. Nevertheless, Mr. Bartlett has produced a little book which ought to be in every household and school in the country, and which should be read, not only by men and women interested in the prosperity and well-being of the country, but by every boy and girl in whom may be awakened a spirit of social service and of true patriotism. In the short space of this one volume Mr. Bartlett has brought together the many lines of progress which are now being followed by the Government of the United States. He tells of irrigation, forest preservation, roads and waterways, life-saving and education, and of the combat with disease in plants, animals and mankind. He also describes the work on the Panama Isthmus, both of building the Canal, and for the welfare of the workers. The work in cities—social settlements, care of infant life, and efforts to combat the tenement evil are not neglected, and Mr. Bartlett devotes a chapter to the progress of the nation toward greater democracy—the movement for the initiative, referendum and recall. Taken as a whole it is an account of the beneficent work of Government in its collectivist activities—its new sphere as distinguished from the older individualistic conception of the duties of government—the defense of the country from external enemies and the policing of society. It is a curious lack in a man writing from Los Angeles, where woman suffrage has so recently been adopted, that while Mr. Bartlett heartily commends woman suffrage as practised in Norway, Sweden, Australia and New Zealand, not even in describing the trend toward greater democracy does he make any mention of the extraordinary and widespread demand for the vote by the women of the nation which is so largely inspired by the desire of women to take their part in social service and national uplift.

**The Revolutionary War and the Military Policy of the United States.** By Francis Vinton Greene. New York: Charles Scribner's Sons. $2.50

General Greene promises to write a three-volume history of the wars of the United States, and has now produced the first volume, on the Revolution, as an earnest of his good intentions. The book is clear and direct, and as interesting as technical military history often is. Thru it runs a strain of appeal for a standing army—a large standing army; and in the closing chapter the military policy of the United States, in its incorrigible reliance upon the militia, is adversely criticised. The maps are numerous and admirable, being borrowed from the author's West Point classmate. Mr. Charles W. Burrows, who had them made some time ago to illustrate the extensive history by E. M. Avery, to which he has given such whole-hearted devotion.

**Charles Darwin and Other English Thinkers,** with reference to their religious and ethical value. By S. Parkes Cadman. Boston: The Pilgrim Press. $1.25.

This is based upon a series of lectures delivered in the fall of 1910 before the Brooklyn Institute of Arts and Sciences. Dr. Cadman is himself an English thinker of the honest, vigorous, sturdy sort, who welcomes truth even tho it shocks and displaces old beliefs. He is, therefore, akin to Darwin, Huxley, Mill, James Martineau, and Matthew Arnold, and speaks of them and for them with sympathy and authority. On page 30 he says: "When Weismann said that the wonderful results of evolution were brought about as tho they were guided by a supreme intelligence, he spoke better than he knew. Theologians and men of faith need no longer be afraid of science. They can accept the reign of law and they can rejoice in it. It is confirmatory in many ways of the greatest and most Christian ideas they can entertain concerning the workmanship of the all-wise God." As the eloquent preacher of the Central Congregational Church of Brooklyn, Dr. Cadman, in the ten years of his pastorate, has added 2,000 members to his flock, an unusual number being cultured and thoughtful men, and this book will widen his audience.

*Charles the Second.*

**The Gay King.** Charles II: His Court and Times. By Dorothy Senior. Frontispiece and 16 illustrations. Pp. 362. New York: Brentano's. $3.50.

If you'd write bi-og-raphy
Take care that your hero be
A high-born person, *incompris.*
—*Old Ballad.*

It isn't even necessary, perhaps, that he be high-born. Take Rousseau, for example; he was lowly enough in pedigree as in morals; but not too lowly to be whitewashed nowadays. He didn't commit suicide, and he *was* wronged by the Encyclopedists and by every one else (a "conspiracy," you see), and those five children sent to the foundling asylum weren't his, even if they were Thérèse's. And such a "gay king" as Charles II of England is neither too gay nor too kingly to be whitewashed. "Few have been more widely misunderstood. . . . Black he certainly was—but he was not the devil." Devilish enough, however, to furnish excellent gossip. The biography by Dorothy Senior is decidedly entertaining; full of anecdote and conversation. The Restoration was, when all is said, a brilliant period—tho brilliant with the phosphorescence of decay.

## Literary Notes

From Henry Holt & Co. we receive *The Ring of the Nibelung Stories*, retold from the music dramas by Filson Young, with metrical translations of lyrical portions by Eric Mackagan, this being the second American from the sixth English edition ($1.50). It is an exceedingly well made book and the composition of it is wholly respectable.

....Says the Boston *Transcript*, editorially:

"The long anticipated 'row' over 'The Playboy' has come, not when and where it was expected—to wit, in Boston—but in New York. These truculent Irishmen, who would deny to others the right to listen undisturbed to a play that they happened to dislike, blustered and threatened here and did nothing in the theatre, except to emit a few timid hisses and outcries that volleys of applause and a vigilant policeman or two quickly suppressed. In New Haven, the chief of police who exercises what is called an intelligent and needful supervision of the acted drama, mistook 'Blanco Posnet' for 'The Playboy,' duly censored Shaw's play, which he believed to be Synge's, and for a day even the most bellicose Hibernian smiled at him. In Dublin nobody thinks of 'demonstrating' nowadays against 'The Playboy,' but everybody, even the participants, smiles over the memories and the tales that are told of those demonstrations. The militant Hibernians of New York have fallen into an old and out-moded Dublin fashion. So to do may have been truculent and soothing, but it was not intelligent."

The *Transcript* goes on to deny the right of fanatics to oppose "the common right of all of us to act what plays in the theater we choose, and to see what plays we choose, so long as they do not offend against common and elementary decency." Continuing:

"The unintelligence of the whole proceeding lies rather in the taking of a very romantic, literary and fantastic play as a literal representation of ordinary Irish life and character. It lies in the complete obtuseness of the objectors to 'The Playboy' to the fine idea that runs thru all this fantasy of wild imagination and wilder word that a man lives up to what his environment believes him to be, and that a full life, whatever be the illusions of it, is better than a starved one. It lies most of all in the taking of a romantic and fantastic pleasure of the theatre as tho it were a solemn indictment of all Irishmen as habitual parricides and admirers of parricides. As soon try Shakespeare's comedies, or Gilbert's operettas, by the tests of reality and statistics."

We reproduce the words of the editor of the very respectable and highly conservative Boston newspaper because they are so notably fair and free from passion. In New York it would be difficult so admirably to control oneself in discussing the organized rowdyism of certain "patriotic" societies. Elder Daniels tells his brother, in Shaw's play, "The Shewing Up," that "What keeps America today the purest of the nations is that when she's not working she's too drunk to hear the voice of the tempter." Yet thus far no Americans have thrown potatoes at the Irish players who act the play in New York. American accept the Shavian play as comedy, in part, tho its author calls it "a sermon in crude melodrama." Why don't the self-called Irish Americans show that *they* understand comedy?

....A small volume entitled *Lee's Invasion of Northwest Virginia in 1861* (A. B. Hall, Glencoe, Ill., $1.25) has been published privately by its author, Granville Davisson Hall. It prints much of the original correspondence from the Official Records. The chief aim of the author is to expose the inconsistency of the State of Virginia in seceding from the Union on the ground of coercion, yet, at the same moment, using every effort to coerce its own western counties and prevent them from forming a new State

....According to the *Pall Mall Gazette* Mr. Barrie found his original for the Maggie Wylie of "What Every Woman Knows" in his mother; and many of the sayings and doings of that heroine were inspired by her. Thus when Maggie objects to her brother sitting in the best chair (which she covers up carefully before retiring), Barrie was thinking of his mother's saying, "I wouldna sit in the fine chair, James." Maggie produces her knitting on all occasions, just as her prototype "had her stockings always on the wires for odd moments."

....In the years from 1896 to 1903 the late Dr. Michael L. Rodkinson, with immense labor and boundless enthusiasm, issued ten octavo volumes of his translation of the Talmud. We more than once called attention to this monumental work which is now once more offered to the public in a second edition by the Talmud Publishing Company of Boston. It is a work for libraries, and for scholars both Jewish and Christian, for we are too little familiar with this great collection of the laws and institutions of Judaism. We are glad once more to call the attention of the public to it, assured that even the curious reader will find much in it to interest him, while the psychologist and much more the student of religion may well devote many hours to its study.

....The author of "The Psychology of Religious Experience," Edward Scribner Ames, Ph. D., is not only Assistant Professor of Philosophy in the University of Chicago, but also the minister of the Hyde Park Church of the Disciples of Christ. From time to time some of his sermons have been separately printed. A half dozen of these bearing on *The Divinity of Christ* (Chicago: Bethany Press) are now published in a small volume authorized by his church. Dr. Ames does not deny being a liberal, but strongly objects to being styled a "Unitarian," quoting with enthusiasm a saying of one of the early leaders of his denomination: "I am neither a Unitarian nor a Trinitarian, but strive to be simply a Christian." The sermons are thoughtful, moderate in tone, and straightforward in expression.

....Ten of Miss Margaret Slattery's delightful talks to young people on themes of daily interest are found in the little volume entitled *Just Over the Hill* (Pilgrim Press; 50 cents). Each subject is illumined by incidents and anecdotes handled in an attractive way.

....In *Visions and Revelations* (Scribners), Rev. J. T. Dean, M. A., of Coldingham, has given a popular exposition of the Book of Revelation. Mr. Dean seeks to interpret the pictures and sayings of the book in the light of their immediate and contemporary meaning and application to the lives of those who needed encouragement and hope in the sufferings necessitated by the conditions prevalent in the Roman Empire toward the close of the first century. The tone of the work is healthful and bracing.

...Two revised Hymnals have just been brought out to meet the changing needs of Church worship and to embody the new materials that are accumulating, especially such as give voice to the growing social consciousness and emphasize the Kingdom of God among men. *The Hymnal, Revised*, is published by the Presbyterian Board of Publication, Philadelphia, and *Unity Hymns and Chorals* (50 cents), revised and enlarged, with service elements, comes from the Unity Publishing Company, of Chicago. The latter book still retains the cut-leaf feature of its predecessor, whereby any tune may be set over any hymn.

...The readers of THE INDEPENDENT, who have so long enjoyed the correspondence of Mr. Justin McCarthy, will be interested in a reference to him in the "Memoirs" of Lady St. Helier, who has written her reminiscences of the leading Englishmen whom she has known. She writes as follows:

> He was much more the man of action than the politician. His heart was in his books and in his literary work, and he was entirely unfitted to be a member of the House Rule party. Generated, accomplished, gentle by nature, full of imagination, he was more fitted for a life of study than for the turmoil of politics. He had not even the appearance of a patriot, and in all the stormy time which he passed thru in the House of Commons, with its victories and its defeats, his heart was always in his little study. He exercised, however, a great influence on the rising men of the Home Rule party, thus in a sense justifying Parnell's choice, and his efforts were always used in the interests of peace, but he was no match for the combative spirits to whom he was allied. He had a great affection and admiration for Mr. Parnell, who, in spite of his cynical description of him, really appreciated and deferred to Mr. McCarthy's opinion. Those who knew him were extremely anxious to have and that he should have succeeded him for many years from [illegible] in London one realized how proper it is to see him with the dignities that have accrued to him all his life. He was one of the people of whom we love a great deal at our time, and there never was any objection on the part of his numerous successors to accord him, on all occasions, the most distinguished position in London society. Lady Dorothy Neville and others have always been most kind to me, and always welcome."

## Pebbles

WILLIS.—How's his credit? Does he pay?
Gillis.—O, yes. He always pays something down and never pays anything up.—*Puck.*

SOME cities are concerned with street car problems—Indianapolis is satisfied with its Shanks Mayor.

"IT is a thousand pities," says the New York *Evening Post*, "that Champ Clark and William J. Bryan cannot be rolled into one." But we should roll them farther than that, if we knew how.

HEWITT.—I believe in the greatest good of the greatest number.
Jewett.—Yes, and you think the greatest number is number one!—*Puck.*

FIRST Little Suffragette—"Don't you want a dolly that talks?"
Second Little Suffragette—"No, I want one that breaks windows."—*New York Sun.*

"How did that story pan out about the man up the Bronx who found the big hailstone on his back stoop this morning?" asked the city editor.
"Nothing in it," replied the reporter. "He discovered it wasn't a hailstone, after all. The iceman left it there."—*Woman's Home Companion.*

"PEPYS was a remarkable man."
"Yes," replied the man who isn't especially literary. "I understand he is one of the few people who managed to stick to it after they started in to keep a diary."—*Washington Star.*

The Chicago *Tribune* reprints from the East Dubuque *Register* this gem of ray serene:

> He attacked [illegible] like the magnate does the steel, legions [illegible] devoted friends.

In the same excellent journal we read an advertisement that originally appeared in the *Economist*, an advertisement of a bank for sale "in goop farming section in western Illinois." We have always wondered where the Goops lived, and are grateful for the information. Who says advertisements are less instructive than the rest of the paper? But it is the Erie *Record* that achieves literary greatness without the artful aid of the compositor. "Mr. Rodgers butchered Monday," we read there. We hope he never kills Friday—for that would be too much like a lynching.

CYRIL MAUDE had been reviewing "The English Novel Before Shakespeare," says the *Pall Mall Gazette*, and, the review finished, he wrote to a friend, "What an excellent and readable book it is!" I used to say of another French critic:

> One English critic's their dull wits keep training
> When—enter Taine! and all is entertaining

But the epigram would be far truer if it could be adapted to Jusserand. For example:

> A Frenchman comes into English fields
> Of letters, seldom has a keen stand;
> But if there's one to whom objection can't
> 'Tis Jusserand—he has the key-crowds

# The New Hampshire Historical Society Building

THE new home of the New Hampshire Historical Society, the gift of Edward Tuck, of Paris, was dedicated at Concord, N. H., on November 23, 1911. The building is of Concord granite, with interior decorations of steel, concrete, marble and bronze. The most impressive feature is the sculptured group by Daniel Chester French, and the main rotunda, octagonal in form, with ceiling arched and vaulted, in Old Convent gray Siena marble, and its stairway, breaking to the right and left. The stairway leads to the second story, and the massive tablet of bronze, the gift of Hon. Benjamin A. Kimball, telling in simple words the story of the gift:

"This building was presented to the New Hampshire Historical Society by Edward Tuck, Anno Domini, 1910. This tablet was given by Benjamin Ames Kimball to express and perpetuate the gratitude of the society for the munificence of Edward Tuck."

The entrance to the rotunda is thru the heavy bronze grill, over which is the group by Daniel Chester French. It consists of two figures, male and female, kneeling on either side of a shield bearing the seal of the historical society and surmounted by an owl, as the symbol of wisdom. The aged female figure on the right represents ancient history. She holds in her right hand a skull symbolizing the dead past, and is studying a tablet upon which her left hand rests—the tablet representing the records of the past.

From the rotunda corridors run to the east and west, the former terminating in the main lecture room, finished in white marble. On the west is the reading room, with a fireplace at the south end, over which on a background of marble, in letters of bronze, are recorded the names of those who contributed to the fund for the purchase of the lot and care of the building.

The books are arranged on shelves on the side of the room, leaving the center for the desk of the librarian and the reading table.

In the assembly hall light at night is furnished from electric lamps which are placed in the center of the ceiling panels while in the reading room light is furnished by bronze electric candelabra, arranged on the pillars on either side of the

apartment. On either side of the corridors are the various committee and administration rooms.

On the second floor the rotunda is finished in Caen stone and the opening to the room below is protected by a heavy railing of bronze. On this floor is the exhibition room, with flooring of brick tiling, and lighted from the ceiling. On the west end is the stock room, with shelves sufficient to furnish room for the accretions to the library of the society for many years to come.

All the walls of the building are tinted in light colors, which contrast with the white of the ceilngs.

In the basement is the newspaper room, the heating and ventilating apparatus and the mechanism which controls by means of compressed air the windows in the top lights on the roof of the structure.

Mr. Tuck, in his presentation address, spoke in part as follows:

It is my office in the ceremonies of today formally to present this building to the New Hampshire Historical Society, preparatory to its official dedication. I am pleased to be able to present to the society a building the urgent need of which has existed for so many years, one that it will possess in its own right and that will be worthy of what is believed to be one of the most valuable historical libraries in the United States. It is an even greater pleasure to have this opportunity to testify to my loyalty to my native State by causing to be built in its capital city and of its own imperishable granite, a structure which I have intended should be, in its perfection of artistic design and of material execution, a source of gratification and pride for all time to the people of New Hampshire. In the monumental sculpture over the portal of the building we have the grandest specimen of the artistic work of a son of our own State, one of America's most celebrated sculptors, Daniel Chester French.

There are in the State of New Hampshire two institutions of which we, the sons of the State, have just reason to be especially proud; Dartmouth College and the Historical Society.

Miss Edna Dean Proctor read a poem entitled "The Mountain Maid," from which we print the last two stanzas:

O the Mountain Maid, New Hampshire!
For beauty and wit and will
I'll pledge her, in draughts from her crystal springs,
Rarest on plain or hill!
New York is a princess in purple
By the gems of her cities crowned;
Illinois with the garland of Ceres
Her tresses of gold has bound,
Queen of the limitless prairies
Whose great sheaves heap the ground;

And out by the vast Pacific,
Their gay young sisters say:
"Ours are the mines of the Indies,
And the treasures of far Cathay";
And the dames of the South walk proudly
Where the fig and the orange fall
And, hid in the high magnolias,
The mocking thrushes call;
But the Mountain Maid, New Hampshire,
Is the rarest of them all!

Addresses were also made by Governor Robert Perkins Bass, of New Hampshire; Hon. Charles Francis Adams; Guy Lowell; President Ernest Fox Nichols, of Dartmouth College; Senator Jacob H. Gallinger, of New Hampshire; Prof. George Lyman Kittredge; Hon. Charles R. Corning, and Frank B. Sanborn. The president of the New Hampshire Historical Society is Daniel Hall and the secretary is Henry A. Kimball.

# The Independent

Entered at New York Post Office as Second Class Matter

Published by Charles W. Bowen

130 Fulton Street New York

A WEEKLY MAGAZINE FOUNDED IN 1848

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.52 a year extra to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and club-bing rates will be granted as low as offered by any responsible agency.

Orders for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 15 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

## The Confession

WHO believed that the McNamara brothers were guilty of the crimes and murders attributed to them? Almost everybody. It was incredible that such a succession of dynamite explosions should occur, meant to destroy a single class of structures put up by non-union labor, without somebody interested in the destructions, and able to find money and energy for it, being responsible; and the evidence published was enough to make it almost certain that these were among the guilty men. Who were those that disbelieved, or tried to disbelieve, their guilt? Samuel Gompers, as head of the American Federation of Labor, believed them innocent. They told him they were and he easily accepted their word. So the leaders of various unions of organized labor believed them innocent, and they had already raised, before the trial began, $190,000 for the defense, and were planning by assessments to raise a million. They were utterly blinded.

Why were they so blinded? It is not enough to say that a man must be supposed innocent till proved guilty; that is a legal principle, but not a social or a business one. When there is evidence against a man who is as yet untried the citizen has the same right as the grand jury which presents an indictment to withhold judgment either way, or even to believe him guilty. These willing believers could not but have known in their bottom hearts that people high in the counsels of their order were in a shameful conspiracy, and that the evidence pointed to Indianapolis. Their duty was plainly to make thoro investigation and find the facts which now they know too late by confession. Why did they not do it? Why did they instead raise an enormous fund, by assessment on the whole country, without finding out whether it was to be used for defending an innocent man, or shielding a guilty one, possibly by subornation and bribery, means by which not a few guilty men have escaped?

Now that the two McNamaras have confest, and Mr. Gompers says the outcome will do no good to union labor, and everybody knows it must injure it as hitherto conducted, a universal cry of condemnation and detestation rises from all the leaders. They cry that the two men have been traitors to federated labor and ought to swing for it. We do not doubt that with many of them this is an honest feeling; but with others the anger is because they have owned up instead of fighting, guilty tho they were, to the end. The fact is, and one might as well understand it, that there are in union labor two camps, one of honest, law-abiding men, who, we believe, are the large majority, and of whom, we suppose, Samuel Gompers is one. There is another wing who are Socialists verging or verged over to anarchism. They are very active men, and have been trying hard to swing the labor unions into the Socialist camp. Mr. Darrow and others among the McNamaras' lawyers are of this tribe. The methods of dynamite prove those who use it, and those who approve it or apologize for it, to be of the same class. Just now they are stunned by the confession, and they join with the law-abiding element in denouncing the guilty men; but they do it not from detestation of the crime, but because of the damage done by confession.

Labor unionism is a fine thing. It can do and has done much good. In these

days, when the corporations combine, the workmen need to do the same for their own defense. But there should be no lawlessness about it. In too many strikes success is sought by methods that are utterly anarchistic, like this at Los Angeles. The fortunate conclusion of this trial should be made to purge the Federation of Labor and its subordinate unions of all influence or control by the anarchistic element which is mustered under the decent flag of Socialism. Such men should be shut out of office and influence or they will ruin the cause of labor.

Still, further, we repeat that it is the duty of the Federation of Labor, and of the labor unions, to ferret out the men who are guilty of such crimes as the McNamaras have confest, and other acts of lawlessness. We have had a strike in this city of the men who sweep the streets and remove the garbage, and some have been killed and many injured. The violence has been in the presumed interest of the strikers, and none can so easily find who are guilty of it as the union men themselves. Many of them know. Probably a hundred men had fair knowledge of what the McNamaras were about. Their counsel knew, and an inner circle must have known, months ago that they were guilty, and yet they assessed this large sum on honest men all thru the Federation, not to defend the innocent but to shield the guilty, and to make dynamiting safe for the perpetrators. No wonder Mr. Gompers looks haggard and worn. Instead of preventing the crime they were consenting parties to the murders. Mr. Gompers says he can do nothing, that he has no authority, nor the other officers of the American Federation of Labor, to make investigation. That is a silly and cowardly position to take. There must be a way; a way should be made. He says he cannot meddle with the subordinate unions. At least the Federation can, thru its official board, do what Congress can do anywhere in the States, investigate, learn facts and publish them. That will stop the evil.

The combinations of labor, labor trusts, have done many unlawful things; so have the combinations of capital. Neither can throw stones at the other. We have had some evidence of late that the capitalists' trusts are trying to obey the laws; and it is equally a good sign that the combinations of labor are, thru their leaders, denouncing lawlessness. It is much to be hoped that in neither case will the converts fall from grace.

## Cheer Up, Mr. Gompers

"'WELL, it won't do the labor unions any good,' said Mr. Gompers, as he vainly tried to extract a wax drinking cup from a broken machine to get water to allay his thirst."

Cheer up, Mr. Gompers, it may not do you any good, but you won't mind that, if the cause doesn't suffer, for, as everybody knows, your life is consecrated to the cause. Your judgment is a bit at fault just now. It will do the labor unions more good than anything which has ever happened to them—always excepting you.

You admit that "the unions of this country have been imposed on before by enemies and have been injured by friends." The People *versus* McNamara will agree with you on this point at least, but if you and the people should undertake to separate the sheep from the goats in your fold, you would all get tired before you got thru.

If you take the "friends" of the unions at their own estimate of themselves you must include those whose zeal springs from "principle," and the McNamara's profess to have been actuated by "principle." Doesn't it look to you now as if the time were ripe for re-examining certain "principles" that have taken a pretty strong hold upon the conscience of that contingent in the labor union membership which is represented by men of the McNamara type?

You have heard, haven't you, of a tendency in the labor union following, and in the Socialist party as well, to adopt some of the principles of revolutionary syndicalism? You understand, of course, that among the principles referred to are those which justify sabotage and "necessary violence"? You are aware also, perhaps, that some of the labor union men feel indignant at the European syndicalists for having taken, without credit, the sabotage article of their creed from the trade unions which

are said to have formulated and practised it before syndicalism was heard of.

In the light of what has happened don't you think that an overwhelming majority of the labor union membership will now begin to feel that these "principles" are of doubtful value to the cause? Don't you suppose that this majority will pull itself together soon and take decisive action against those "friends" who are so far committed to the "principles" in question that they can't cheerfully acquiesce in the opposing judgment of the majority? Don't you think it probable that the majority will then choose leaders who cannot only say, as you do: "My attitude has always been the denunciation and the discouragement of that sort of thing," but can also actually accomplish what you have in mind when you add: "It must be stamped out if the labor unions are to endure"?

And if that happens it won't be true, will it, that the McNamara confession will not have done the labor unions "any good"?

## Mr. Taft and the Tariff

A LARGE part of the long authorized interview with President Taft which was published last week relates to the tariff revision of 1909. That revision, a monumental political blunder, greatly affected the fortunes of the Republican party. It caused a memorable political revolution at the Congressional elections of the following year, and there is no proof that the attitude of a majority of our voters toward those who were responsible for it has since been changed. Mr. Taft begins with some remarks about his public address at Winona, where he characterized the new tariff law as "the best ever passed." If he had prepared that address carefully and "revised it deliberately" he would have used the "comparative" in place of that "superlative." But he was in a hurry. "I dictated that speech to a stenographer on the cars between two stations, and glanced thru it only enough to straighten its grammar."

But if he had said that the new tariff law was a "better" one than any of its predecessors, instead of asserting that it was the "best ever passed," this would have been only a slight change, and he shows no desire to withdraw from the position taken in that address. The question has been, however, not what he said at Winona, but what he did while Congress was engaged in the revision, what he could have done, and what he ought to have tried very earnestly to do.

He knew that the old tariff had been made much too high (as some of the framers of it admitted) in order that there should be allowance for reductions by those reciprocity agreements that the Senate afterward refused to ratify, or even to consider. He had been saying that the rates of that tariff were "generally excessive," and that the Republican platform called for "a substantial downward revision." In public speeches he had urged that the demand of the people for such a revision should be satisfied. But he must have seen that there was not such a revision in the bill which Mr. Payne reported from the Ways and Means Committee to the House. If our memory be not at fault, Mr. Payne admitted that this bill would increase the average ad valorem rate on dutiable imports from 44.16 to 45.72 per cent.!

And the bill which the House passed, having used this committee bill as a basis, was not a "substantial downward revision." Mr. Taft now says: "If the Payne bill had passed the Senate in the shape in which it passed the House, there would have been little serious censure of it in the country at large." Here he is very surely in error. While the House bill was in some respects a better measure than the bill of the Senate, the enactment of it would have caused political revolt.

Undoubtedly he desired to exert his influence legitimately to procure what he would regard as a good revision. He should have begun so to exert it at the start, when the House committee's bill was brought out, and should have persisted thruout the House debate. But his present opinion that the country would have accepted the House bill with "little serious censure" shows that at that stage of the proceedings he did not see much room for improvement of the pending revision.

While the Senate was making the bill more objectionable, it was commonly

said in Washington and in the reports of press correspondents that the President was waiting for the sessions of the conference committee. When that committee should take up the House bill and the Senate bill, with the purpose of reaching an agreement, the President, it was repeatedly asserted and apparently with authority, would insist upon the reductions that ought to be made.

But when the conference stage is reached, the door is no longer open for more than a very few changes, because the committee is empowered to deal only with the comparatively small number of duties as to which the two branches of Congress have disagreed. This was pointed out in THE INDEPENDENT on May 20, soon after the beginning of the debate in the Senate, whose bill was not passed until July 8. We said then:

"A great deal of nonsense about reforms in conference has been put in circulation. It is said that even Mr. Taft has been looking to the conference committee for the reductions which so many desire. That committee will be controlled by those who made the House bill and those who are now shaping the bill of the Senate. And its work will be confined to those duties as to which the two bills disagree. In all probability the Senate rates will be higher than those of the House in a large majority of cases which the conferrees will be empowered to consider, some of them having been made higher to provide material for trading. If this be borne in mind, the general character of the conference work can be foreseen. The final result promises to be something worse than the House bill."

And it was worse. Mr. Taft addressed the conference committee with pleas, arguments and threats of a veto. But the field for possible reductions had then become a very narrow one. He accomplished something, but it was not much.

We should guess that Mr. Taft had never studied tariff legislation and that his knowledge of the subject was not extensive. He had not been a legislator, he had been otherwise busily engaged, and in twelve years there had been no revision of the tariff laws. While he felt that the public demanded "substantial downward revision," he did not realize how imperative the demand was, did not foresee how sharp the disappointment would be if the demand should not be satisfied, and was so misled as to the measure of the desired downward movement that, as he says now, he thought (and still thinks) that the Payne House bill would have been received by the public with "little serious censure."

In many ways he was admirably equipt and qualified for his high office, but with respect to this very important question of tariff revision he was in sore need of wise counsel, which should have been at hand. There are indications that he did not get it.

## Diplomatic Secrets Revealed

THE agreement between Germany and France in regard to Morocco must be pretty close to the golden mean of compromise, since it seems equally unsatisfactory to both. Frenchmen and Germans, outside the Government, vie with each other in denouncing the treaty as a betrayal of their respective countries thru the surrender of important interests. The German Crown Prince applauds the opposition, and M. Millerand attacks the French Government. Both Herr von Kiderlen-Wächter and M. de Selves are likely to lose their positions as Foreign Ministers, in consequence of their successful diplomacy. Great Britain, which undoubtedly aided in bringing the matter to a settlement, gets thanks from neither.

One reason for this openly exprest dissatisfaction on the part of the newspapers of all three countries is because they are exasperated at the revelation of their own impotence. They have a great deal to say about it because they had no say in it. The discussion follows the decision. The Reichstag and the Chambre des Députés, however much they may talk, have nothing to do but approve. One is reminded of the rural justice of the peace who, when the lawyer for the prosecution arose to make the opening argument, said he hoped the gentlemen would excuse him; it looked like rain and he wanted to get his hay in; and they would find his decision in the envelope on the desk when they got thru with their speeches.

Sir Edward Grey declared in Parliament that Great Britain had now no secret treaties. In order to say this with a clear conscience he had made public the day before the secret clauses of the treaty with France in 1904. This revelation makes waste paper of those

pages, perhaps volumes, of British patriotic protest against the criminality of surrendering the southern Pillar of Hercules to a great Power like France. Even so well-informed a man as Lord Curzon voiced this objection no longer ago than last summer. But now we know that the north coast of Morocco goes not to France, but to Spain, a country from which England need fear no rivalry. It was stipulated in the convention of 1904 that England was to have a free hand in Egypt and France the same in Morocco, with the exception that whenever the Sultan should cease to exercise his authority Spain was to be allowed to annex a certain extent of territory adjoining Melilla, Ceuta and other points under Spanish control.

This explains why Spain embarked upon the Melilla campaign and persisted in carrying it thru to the end, regardless of the sacrifices of life and money and the risk of a revolution at home. We understand now why Spain last summer seized Larache and Alkazar on the flimsiest of pretexts, and also why France submitted to it so tamely. For the secret treaty of 1904 between France and Spain has now also transpired, and according to this, Spain is entitled to a slice of Morocco from the mouth of the Muluya River, on the Mediterranean, to the Atlantic, including Larache and Alkazar, as well as Tangier; also to a strip of the Atlantic coast from Rio d'Oro to Morocco, just below Agadir.

The Algeciras Conference was therefore a solemn farce. The twenty-five estimable gentlemen who spent the first three months of 1906 in that sleepy old Spanish city wrangling over spheres of influence and the policing of the ports were wasting their breath, as doubtless they suspected at the time. The terms of the partition of Morocco had, except for the consent of Germany, been secretly settled two years before by the mutual agreement of England, France and Spain. It must have been highly amusing to M. Delcassé, retired to private life at the demand of Germany, to observe this grave discussion of dead issues and the recent outburst of Gallic indignation at the Spanish occupation of Larache and Alkazar, when he had signed away these two cities five years before. Ignorance on the part of journalists as to the foreign policy of their government is, however, quite excusable, when we see that the Foreign Secretary himself does not know it. M. de Selves questioned in the Chamber of Deputies as to whether France had protested against the seizure of these two cities by Spain, answered that no protest had been made. This occasioned some surprise, which was altered tho not lessened the next day when he confest that he had been mistaken, that three notes of protest had been dispatched within the past few months from the office of which he is nominal head. This tends to confirm the German suspicion that it is really M. Delcassé and not M. de Selves who is Secretary of Foreign Affairs. Exactly on what grounds France is entitled to protest against the action of Spain is not at all clear.

The Franco-German treaty concluded at Berlin in November is still coming out piecemeal, either because it was thought wiser to break the news gradually or because it was found impossible to keep the agreements longer secret. We now learn, tho a little late, that the prowling of the "Panther" was not a failure, that Agadir is to become an open port, a railroad to be constructed up the Sus Valley, and the mines opened to German exploitation on equal terms with French. Spanish Guinea, which is now enclaved by the extension of German Kamerun, may be purchased by Germany without protest from France.

On one other question of still greater importance—that is, the reversionary rights of Belgian Kongo—both Governments are reticent. We know that this was one of the questions discussed at Berlin by the German Foreign Minister and the French Ambassador, but not how it was settled or if it was settled at all. As the matter formerly stood, the old Kongo Free State, in case it should ever be relinquished by Belgium, would revert to France. What would happen now if the Belgians should wish to sell it to Germany or if Belgium itself should at some future time become more closely identified with the German Empire either thru the accidents of war or the pressure of economic interests, is one of the secrets that are still secret.

## Our Persian Mordecai

It is of no use, say some, to hope for any good thing out of Persia. It is, they tell us, utterly disintegrated, its government corrupt and weak, past redemption; and the only thing to be done is for two good and gracious and benevolent Powers like Great Britain and Russia to undertake the task of order and rule. And this they are attempting to do. Persia being unable to regenerate herself, they will generously divide the spoil.

Now we believe no people on the face of the earth to be hopeless; not our Latin republics, nor Turkey nor China nor Persia. What was there fifty years ago more hopeless and backward than Japan? But now Japan is one of the premier nations. Only a few years ago the Sick Man roused himself, threw off his chains, renewed his constitution, and now Turkey is, if let alone, a nation of good hope, moving with fair speed along the right way. So China has wakened from her thirty centuries of sleep and is shaking herself like a mighty man ready to run the race of modern enlightenment. Why not Persia? She, too, has felt the worldwide impulse, and has made the start by expelling her Shah, as Turkey removed her Sultan, only, instead of shutting him up, she let him find refuge in Russia. She adopted a constitution and created a Mejliss, a Parliament.

Why not let her try? It is a pity to strangle her. Persia has been in her flower the mightiest nation in the world. Her empire embraced Asia Minor, Syria and Egypt. She originated the best religion the world has ever seen, next to the products of Palestine. In later days her poets and her culture and her arms were supreme in the East. We do not believe she has lost the power to reproduce the breed of noble men. We fear it is mutual jealousy and combined greed that have made Britain and Russia evil friends in this hour of Persia's hope and danger.

Observe the agreement between Britain and Russia. It is that the northern third of the country shall be Russia's sphere of influence and the southern third Great Britain's, and both agreed to maintain the integrity of the nation. We do not quite know how Great Britain interprets that integrity, but it is clear how Russia does. It means that Russia shall rule her third. But observe that Persia was not consulted. She has never consented to let these two Powers dictate to her. Morocco did consent to such an overlordship by France, but Persia never. The two Powers have treated Persia as if it were an unoccupied waste, a no-man's land, which they might deal with as they pleased; and so now, when the Persian authorities crushed a sedition fostered by Russia and took possession of a rebel chief's estate, Russia stormed and made the threat that if an apology and restitution were not made in forty-eight hours she would march on Teheran, and that Mr. Shuster, the American financial adviser, must be removed.

The Persian Mejliss has the amazing and beautiful courage to say No. Somehow the presence of the strong American Jew, Mr. Shuster, has put spirit into the Mejliss and it dares to refuse the demand of Russia, backed by the advice of Great Britain. And it is an inspiring sight, call it utter rashness, if you will, to see the modern Mordecai pushing back Russia on one side and Britain on the other. We are not ready yet to say that he must fail. Already England feels very sore over the predicament in which she is placed, to support Russia in a most unjust demand, and one which subverts the exprest words of the treaty, which promised independence while taking it away. It looks as if Russia might easily sweep down on Teheran and expel Mr. Shuster and dictate terms: but it may not be so easy. We see what a Tartar Italy has caught in Tripoli, and there may be another Tartar in Persia. At any rate, this invasion of a free state just attempting to secure liberty and just government ought to stir the nations to protest. We would have the United States, whose citizens are trying to give lessons in self-government, make at least a protest, and would have the conscience of Great Britain pricked and roused until some method of protection may be given to the successor to the throne of Cyrus and Darius and Ahasuerus. We rejoice that Mr. Shuster has made an appeal so strongly to Great Britain for justice; that appeal the conscience of the

world must back up. We do not see why we should not, as we have a right, approach Russia in a friendly way, and ask her to present her claims to the Hague Court. We have the right to speak. We have not only Mr. Shuster and his American associates in Persia's capital, but we have a band of American missionaries in Urumia, as Great Britain has in other cities of Persia, and we may consider ourselves concerned in this outcome.

What we ask of the strong nations of Europe is that they let those Eastern nations alone that are wakening from a long stupor of sleep. Give them a chance, China, Turkey, Persia. Let us see whether they can stand strong on their feet. Let us rejoice in their effort and help them in every way we can. That is what we are doing for the Philippines in one way, and for Cuba and San Domingo and Liberia and Persia in another. Our part may be that of a strong, or at least a sympathetic elder brother among the weaker nations of the world.

## Congress in Session

THE session of Congress which began on Monday last will be a long one. It may be that adjournment will not be reached before the national political conventions in June. With a Presidential campaign so near at hand, there will be much maneuvering for partisan advantage. Legislation will be retarded or prevented because the House is strongly Democratic, while the Senate has a Republican majority. But in the Senate the insurgent Republicans hold the balance of power and are inclined to act with the Democratic minority as to recommendations from the President. Unfortunately, the efforts of the two parties to gain advantage in the coming national contest may make the session a fruitless one, so far as several important subjects of legislation are concerned.

Mr. Taft asks for Federal incorporation of great companies engaged in interstate business, with a measure of regulation. Democrats who agree with Mr. Bryan will oppose such incorporation. He asserts that it is designed to relieve Trusts of supervision by State legislation. Such legislation and supervision are not commended to the public by the recent decision and opinion of Missouri's Supreme Court in the suit against the International Harvester Company. He would have all trade combinations made "unreasonable" by an addition to the Sherman act. There will be a movement for the appointment of an Interstate Trade Commission, and we think it ought to be successful. But legislation concerning this question, which will be the subject of much discussion, may be deferred. In the House, the Democratic majority will pass bills reducing the tariff on wool, woolen goods, cotton goods, steel and certain other products. The fate of these measures in the Senate and at the White House cannot be foreseen. Mr. Taft's Tariff Board's reports will probably set forth facts calling for reductions in the wool and woolens schedule, but the Democrats will not be guided exclusively by these reports. Probably certain reductions will be enacted, by compromise with the controlling majority in the Senate. But the Democrats will prefer to keep the tariff issue alive for use in the campaign.

A report and a bill will be submitted by the National Monetary Commission, and a bill for currency reform ought to be passed. But politics may bar the way. What is called the Aldrich plan, or something closely resembling it, will be proposed, and we think that something like that plan ought to be, and eventually will be, accepted. But in Congress and elsewhere there are many who agree with Mr. Bryan, who asks his party to oppose this plan, because it is designed "to enable Wall Street to strengthen its strangle-hold on the country's business." His record does not make him an eminent and respected authority on questions of national currency and finance.

The great peace treaties should be ratified. Provision for the utilization of Alaska's coal, under just regulation, should be made. Panama Canal tolls must be fixed by law. The report of the Hadley Commission concerning railroad stocks and bonds will suggest legislation, and reports from other commissions are soon to be received. Reports from com-

mittees of the Democratic House which have been conducting investigations will serve as warrants for bills of a more or less partisan character. Several subjects which we have not mentioned call for consideration and action. But, on account of partisan disagreement and for other reasons, much that ought to be done will be postponed to await the decision which will be made at the polls in November.

**The California Heresy Case**

We have made mention of the action of the Presbyterian Synod of California asking the trustees of the Presbyterian Theological Seminary in San Francisco to remove Prof. T. F. Day on the ground that as Professor of Old Testament he lacks faith in the historical character of certain chapters in Genesis. Professor Day has written a communication to the directors of the seminary in which he declines to resign voluntarily. He says that he is not heretical, and that if the synod thinks he is it is its duty to require the local presbytery to try him for heresy. The directors then took up the matter, and by a vote of 12 to 10 refused to yield to the demand of the synod. We suspect that the slender majority in the synod knew that the presbytery are with him and would not convict. His case has been before the directors more than once, and they had previously refused to act on the complaint. We may congratulate the California Presbyterians on the liberty they will still have in the investigation and teaching of Scripture. Let it be understood that the synod has the right to approve or disapprove a nomination for a professorship, but its powers over the seminary end there. It has no authority to remove a teacher once appointed. The directors can remove him, or his presbytery can condemn him, and reduce him from the ministry, in which case his removal from the professorship would be likely to follow.

**Woman's Seven Activities**

Bishop Tuttle, Presiding Bishop by age in the Protestant Episcopal Church, has in a sermon declared himself as against woman suffrage; and he says:

> "There are seven lines along which human activities in the main project themselves. These are the home, the school, society, the church, business, government and war. Now look at these seven and see in how many of them woman is predominant."

In a fair number. In the home certainly; in the school an overwhelming number of teachers are women; in society women are the leaders and men only appendages; in the church two-thirds of the active members are women; in business men predominate, with a big proportion of women in the offices; in government the men have excluded women; while in war women allow men the advantage. The bishop's argument is not overwhelming.

**Shut Out from Harvard**

The Harvard authorities have forbidden the use of a hall in the university grounds for an address by Mrs. Pankhurst. Permission had been given for a series of lectures on "The Progressive Movement," if limited to students only, but it was not thought that a university building should be used to address the general public on political questions. The college paper which reports the refusal says that the reason given by the authorities to allow Mrs. Pankhurst to speak is that this is a man's college, and that women should not ordinarily be allowed to speak there. We have no doubt they have spoken many times, and we doubt if this really was the reason. A more likely reason might be that Mrs. Pankhurst has come to this country to defend and propagate lawlessness and violence. She boasts that her daughter was one of those who took part in the late demonstration of window-smashing in the cause of justice. Now, that kind of teaching and that kind of conduct is what we call anarchism in the case of Emma Goldman. If not theoretic anarchism it is practical anarchism. It wantonly, purposely, persistently breaks the laws, destroys property and resists the police. Addresses along that line are not healthy in an orderly, law abiding community, such as the corporation and faculty wish Harvard to be, and we are not surprised that the use of the hall was forbidden to her.

**Inequality in Alabama**

It is a question often raised in these days when we get weary of giving money and labor for the uplifting of the negroes of the country, whether half a century after the Civil War is not time enough to let the race take care of itself, or be taken care of by the States. An article which we are not able to print, seeking support for the Snow Hill Institute in Wilcox County, Ala., gives data to answer the question. There are nearly 11,000 negro children of school age and 2,000 white children; over five times as many negroes as white. But the school funds were not divided proportionately. Last year there was assigned for teaching the negro children $6,538.09, while the white children received $26,128.36. That is, one negro child received for his education about 60 cents, and each white child about $13. And this glaring injustice is not exceptional. The six counties surrounding and touching Wilcox County have 59,978 negro children of school age, for whom there was appropriated in 1910 $44,114.16, while for the 18,255 white children there was allowed $220,533.20. Such startling inequality of opportunity explains in great part why the Southern negroes have made no greater progress, and also why aid is still needed to supply their deficiency of opportunity.

**Dissatisfaction with the Vatican**

The following extract from *The Western Watchman*, of St. Louis, illustrates the freedom with which a considerable section of the Catholic press expresses its dissatisfaction that Archbishop Ireland was not one of those to be made Cardinal:

"The *Ave Maria*, after devoting nearly a column of eulogy on the new American cardinals, has this to say:

"'The general rejoicing over their elevation, however, is not unmixed with regret that at least one other American prelate, whose services to the Church are so conspicuous as to render the mention of his name unnecessary, was not included in the bestowal of Papal honors. Tho, of course, no complaint on this score will be heard from American Catholics, they can not help feeling regretful, and may be excused for expressing disappointment. Political activities familiar to every one, combined with unrecognized instrumentalities, have resulted in the deprivation to the Sacred College of a Cardinal who would have been a light among its most illustrious members.'

"This statement is not overdrawn and the coming semi-centennial celebration of Archbishop Ireland's priesthood will give the American people an opportunity of expressing their feeling on the subject. We would not be surprised if the golden jubilee of the Pauline prelate were to eclipse that of Cardinal Gibbons in splendor and magnificence."

**Ecclesiastical Immunity**

The old, old, contention that the clergy are not amenable to civil law has, as we mentioned last week, been, in a measure, revived by the latest *motu proprio* of Pius X, and it raises some curious questions. It reads:

"Any private person, layman or cleric, male of female, who without the sanction of ecclesiastical authority, summons and compels to appear any cleric, no matter his grade, before lay tribunals, civil or criminal, is by the very fact excommunicated *latæ sententiæ*."

That is, he incurs the excommunication without any further action being needed. We note that the Pope sets aside all question of the guilt or tort of the party accused. The *motu proprio* includes the lowest grade of clergy, so that if Combes, the former Premier of France, since he has the four Minor Orders, should refuse to pay his grocer's or tailor's bill, the tradesman who would sue him would be excommunicated. It seems also that the many brotherhoods and sisterhoods cannot enjoy the exemption of this *motu proprio*, altho casuists may try to include them on the canonical axiom, "*Communicatione privilegiorum*," which is a pretty broad mantle. We rejoice that the full reports of the Cardinalitial ceremonies plainly contradict the current reports as to the Pope's mental failure. Otherwise the question would have perplexed canonists whether this *motu proprio* is binding, or even whether the new wearers of the red hat have a right to take part in the election of a successor to the present Pontiff.

**Bookshops**

Two classes of people buy old books: collectors and persons who have discovered that old books are the most likely to yield them satisfaction. Of this second class, a great number end by becoming

out-and-out collectors. The genuine collector is neither more nor less than a booklover who adds a certain amount of expert knowledge to his sentiment. A good deal of this knowledge is acquired in the university, the public library and the study; but a part of it, at least, comes from dalliance in bookshops. All that bookshops demand of you is leisurely attention. Men rush into certain kinds of shops, give an order and hurry out again. But you should never hurry out of a bookshop. You might miss, by that, the one particular volume that ought to be *yours*. A bookshop, with plenty of second-hand books on its shelves, suggests a cemetery to the pessimist: a mortuary chamber for yesterday's immortals. But how many of the shabby volumes do refuse to die, no matter what becomes of their authors! All books do not pass out of existence between night and morning, as most of the new novels do. And that explains, in part, why time spent here is not wasted. One of Mr. Lucas's most delightful novels has lodgings over a bookshop for its scene; and some of the best chapters in the book ("Over Bemerton's" is the name, in case you haven't read it) describe the shop itself, and the people in it. Carlyle said that a good collection of books makes the best of universities; and you need not pass any examination to enter the bookshop. This kind of university has produced several notable graduates; the fathers of Samuel Johnson and of Anatole France—bookworms in the good sense of the word—were both of them retail booksellers.

**The Farmers' Congress**

The Farmers' Congress, which held its recent annual session at Columbus, Ohio, is a unique body, in reality legislative but with no power to enforce its legislation. It relies upon public sentiment to secure the enactment of its recommendations in the several States, and it has not been altogether a vain reliance. From year to year most of its recommendations become law thru the action of Congress or the State Legislatures. This year it recommends or repeats its recommendation of a parcels post system; the direct election of United States Senators by the people, and the centralization of schools in rural communities. It endorses the educational bill which is now pending in Congress, a bill that proposes to give aid to the teaching of agriculture in the public schools of our country. This bill has undergone considerable amendment, and passes under different names. It is now called the Grout Bill. Our Agricultural Colleges are not in harmony concerning this bill, some of them insisting that the teaching of agriculture shall remain largely under the direction of each State. The tendency, however, to correlate the work of the Agricultural Colleges and Stations in the Department of Agriculture at Washington is growing—a natural growth. The Congress renews its opposition to free-seed distribution by members of Congress, and demands that it shall be abolished by national legislation. It takes strong ground in favor of stringent legislation on the part of Congress to prevent the traffic in spirituous liquors, under national license, across State lines, and the hauling or delivery of goods of this character in dry territory. The composition of the Farmers' Congress is such that the movement lacks publicity. Some of its members are appointed by the Governors of the different States, others by various State Departments of Agriculture, and others by agricultural organizations. It leaves the representative force somewhat vague, and the personnel of the Congress very changeable. However, many laws of vital importance to farmers and the people in general have originated with this Congress, and others have been very decidedly aided by its endorsement before passage. The recent sessions at Columbus showed that the farming element of the country is not as inclined to endorse what are sometimes called populistic measures as it used to be. Our farmers are becoming educated scientifically and politically thru the Agricultural Colleges, to take front rank as legislators.

In Australia the Presbyterians, Congregationalists and Methodists appear to be making progress toward a corporate union, but as to a federation with the An-

glican Church the outlook is hopeless, because the latter Church refuses to acknowledge the validity of the orders of the non-Episcopal churches. Such a claim for exclusive valid orders rests on sacerdotal principles that cover the sacraments, as to which no compromise is possible. For any official recognition or federation, either the Anglican Church and her daughters must recognize the validity of non-Episcopal ordination, or non-Episcopal churches must yield and accept ordination from the hands of bishops; and we are sure the latter will not yield.

They had the other day a convention of Jewish farmers, representing a dozen communities in various parts of the country. They reported good success on the part of those who had gone back to their ancestral business of cultivating the soil. But we notice that the speakers were mostly business men and not farmers. Mr. Oscar Straus, who talked in Yiddish, told the experiences of the new farmer:

"We went like blind sheep, and when we saw a green spot we thought we had found a farm—you know how happy the Jew is when he sees a bit of green—and that we needed only to put in seeds to reap trees next season. Some of us even thought we could plant crackers, absurd as that sounds, but could find no cracker seed."

Hundreds of telegrams have been sent by labor leaders to Los Angeles demanding that the full penalty of the law be inflicted on the two brothers McNamara. Let us think for a moment what the effect would be. It would be tantamount to the announcement that confession would do no good, and that hereafter men guilty of similar crimes and confessing must die. Then they would not confess. Confession is dangerous for others implicated, and of course they want those who confess killed. They deserve it, but we would rather encourage confession than discourage it. We cannot but suspect the motive of some of these telegrams.

The census tells us that the percentage of negroes is falling in this country, and so even tho allowance is made for immigration. It is not easy to believe this, but we are told that it is accounted for by the excessive number of deaths. But in South Africa it is the whites that are losing proportionately. In the Cape Province the white male population has decreased in seven years by 16,825, while the negroes have increased by 54,346. Taking the whole of British South Africa there has been a considerable white increase, but the negro increase has been four times as great.

A child five years old died in this city last week of diphtheria. The mother had called in a Christian Science healer who gave it "present treatment" once and "absent treatment" several times, but who did not report the case as infectious to the authorities and testified that she did not know it was diphtheria. The mother has been arrested for allowing her child to die thru neglect of medical care. It is well known that by the injection of an antitoxin a cure is obtained in almost every case. A child's life is of too much value to the community to allow such neglect to go unpunished.

It was in the City Temple, in London, Mr. Campbell's church, that a meeting was to be held for a benevolent purpose, and Prime Minister Asquith was a principal speaker. But as soon as he began to speak an invasion of suffragists yelled and howled so that his voice was drowned with cries of "Votes for Women," and he left the church in disgust. If they think they can make converts in that way they are greatly mistaken.

We presume that most of the members of the Cabinet will, in their annual reports, recommend, as does the Secretary of the Navy, the establishment of a civil service pension. Mr. Meyer says that the salaries of the employees should also be raised. Since 1854 living expenses have enormously increased, and yet 25 per cent. of the Government clerks receive less than the $1,200 which was the minimum salary in 1854.

Oxford University remains perverse. A convocation refused, by a vote of 595 against 360, to allow students of mathematics and science to dispense with Greek.

# Insurance

## Life Insurance and Justice

In an address recently delivered by Darwin P. Kingsley, president of the New York Life Insurance Company, at Kansas City, Mo., he characterized life insurance as a logical development of the demands of modern civilization. We quote the following from his remarks:

Life insurance reveals the vast possibilities of scientific cooperation. It is a working plan of self-government, at once scientific, humane, and just. Applying the principle to civic problems, isn't it conceivable that every citizen on reaching maturity and acquiring the right of franchise can be rated, as a citizen, just as the individual is rated when he applies for life insurance? Is there no way of calculating and stating with workable exactness what a man must pay to general society if he is to get certain things in return? And is there no way of stating with equal exactness what a man shall forfeit if he takes social and civic benefits and fails to perform the social and civic duties prescribed? Is a plan of government inconceivable which shall encourage the strong and yet control the greedy, which shall with exactness measure to a man what he shall ultimately take, and yet put substantially no limit on what he may take if he pays the just price?

Life insurance is such a plan. It not only applies these doctrines rigidly to great bodies of men, but so strongly have men responded that the accumulated social and human values now represented by life insurance almost surpass imagination.

The Glens Falls Insurance Company, in a recent bulletin, has the following interesting opinions to offer on the fire insurance situation.

We are rather cheerful minded and hopeful; but there are unpleasant features of fire insurance which are plain enough and serious enough to prevent hilarious indifference.

The increased loss ratio is a no small check upon happy expectation, while the distinctly visible reduction in the average rate of premium helps to make the smile come off. It is the fact that rates have reached below what they were some years ago when they dropped so alarmingly under the danger point as to make a sharp general advance a necessity.

We might further specify smaller matters, like increase in commission, fees, licenses and taxes; loss of interest from extended premium credits and prepayment of losses, etc., all amounting to a perceptible aggregate when compared with what used to be.

Per contra items are not distinctly visible, altho improvements in construction and better fire prevention and fire extinguishing facilities and equipment, and other improvement, all with good promise of lessening the fire loss, ought to be a large other-side consideration; but, notwithstanding, losses have actually increased! which, however, may not and ought not to be a continuing experience.

The most direct and surest remedy for this unpromising situation is increased rates, and such would undoubtedly be the result of a more general application of careful schedule rating, instead of the guessing plan and the rating to meet competition.

A summary of the statements of 214 American life insurance companies, made by the *Insurance Press,* gives the total amount of life insurance in force as over $16,000,000,000. The rank of the first ten States, according to the assets held by their domestic companies, is as follows:

| | | |
|---|---|---|
| 1. | New York | $2,128,448,266 |
| 2. | New Jersey | 367,176,126 |
| 3. | Wisconsin | 275,786,250 |
| 4. | Connecticut | 267,252,926 |
| 5. | Massachusetts | 249,837,785 |
| 6. | Pennsylvania | 248,455,890 |
| 7. | Ohio | 89,112,325 |
| 8. | Vermont | 50,438,517 |
| 9. | Illinois | 30,249,905 |
| 10. | California | 22,864,067 |

The leadership of New York, the center of the American insurance business, is easily accounted for. The Prudential of Newark, and the Northwestern Mutual, of Milwaukee, greatly assist the showing of their States, while the many prosperous companies of Hartford bring Connecticut into a rank far above its proportionate population.

According to figures published by the Penn Mutual Life Insurance Company the total life insurance in the United States, excepting industrial insurance, was $6,131,646,974 in 1900, or $80.69 per capita; in 1910, $11,799,192,093, or $128.29 per capita, an increase of $5,667,545,119, or $47.60 per capita.

The list is a growing one of the smaller agency companies which have reinsured in 1911 and retired on account of extremely heavy losses, increased expenses and hard competition.

# Financial

## Funds for Currency Reform

TESTIFYING last week before the Senate Committee on Interstate Commerce, Wharton Barker, of Philadelphia, denounced the Aldrich plan for currency reform, for the indorsement of which thruout the country, he asserted, a fund of $1,000,000 had been or would be raised. Mr. Barker has been known as a foe of the gold standard. In 1896 he was an ardent advocate of free silver coinage, writing and circulating pamphlets in support of his views. We presume that the inference which he would have the public draw from his assertion about a fund of $1,000,000 is that the great banks and the capitalists connected with them are raising or have raised this fund to be used in procuring the adoption of a plan which would serve their selfish purposes rather than the interests of the people.

So far as we can learn, contributions of money to be used in such a field have been solicited only by the National Citizens' League for the Promotion of a Sound Banking System, whose aim is to excite an intelligent interest in currency reform and thus to promote good legislation. This League, which originated in Chicago and is a non-partisan organization composed mainly of merchants and other business men—of borrowers from and customers of banks, rather than of bankers—has had branches formed in twenty-five States. Its President is John V. Farwell, and the chairman of its executive committee is Prof. J. Laurence Laughlin, of the University of Chicago. The president of the Massachusetts branch is ex-Governor W. L. Douglas, the well-known manufacturer of shoes. John Claflin, a well-known merchant, is at the head of the New York branch, and associated with him are men representing several of the largest retail or wholesale firms in the State and city. The fundamental principles set forth by the League as those which should be embodied in any plan for currency reform are as follows:

1. Cooperation, not dominant centralization, of all banks by an evolution out of our Clearing-House experience.
2. Protection of the credit system of the country from the domination of any group of financial or political interests.
3. Independence of the individual banks, national or State, and uniform treatment in discounts and rates to all banks, large or small.
4. Provision for making liquid the sound commercial paper of all the banks, either in the form of credits or of banknotes redeemable in gold or lawful money.
5. Elasticity of currency and credit in times of seasonal demands and stringencies, with full protection against over-expansion.
6. Legalization of acceptances of time bills of exchange, in order to create a discount market at home and abroad.
7. The organization of banking facilities with other countries, to aid in the extension of our foreign trade.

If the Aldrich plan, or any other, meets these requirements, it will have the League's support. Professor Laughlin says the League has been in need of money for various legitimate expenses, but has never thought of raising $1,000,000. It has solicited small subscriptions. Those who know the character of the officers of the central body and of the branches must be convinced, as we are, that the money the League receives will be honestly and decently used. The officers should realize, however, that any attempt to raise a large sum will be subject to misrepresentation, and that the funds required should be procured from business men and firms rather than from banks. As the press will do its share of work in the campaign of education, we presume that a large fund is not needed by the League.

*

....Last year, 21,075 miles of railroad in this country were operated by oil fuel, 24,526,883 barrels of which were consumed.

....The Census Bureau says that in 1909 there were in this country 5,186 laundries operated by mechanical power, representing an investment of $68,935,000, receiving $104,680,000 for work done, paying $53,008,000 per annum in salaries and wages, and employing 112,064 persons.

The Independent

VOL. LXXI NEW YORK, THURSDAY, DECEMBER 14, 1911 No. 3289

# Survey of the World

**The Dynamiters Sentenced**

James Barnabas McNamara was sentenced by Judge Bordwell at Los Angeles, December 5, to life imprisonment in San Quentin, the prison opposite San Francisco. John Joseph McNamara was sentenced to serve fifteen years in the same prison. Before the sentences were pronounced the district attorney read the confession in the handwriting of J. B. McNamara. This document, dated December 4, stated, in part, that he had, on September 30, 1910, at 5.45 p. m., "placed in Ink alley, a portion of the *Times* building, a suitcase containing sixteen sticks of 80 per cent. dynamite set to explode at 1 o'clock the next morning." His intention, he continued, was "to injure the building and scare the owner. "He regretted the loss of life.——After seven months and thirteen days in the Los Angeles county jail the McNamara brothers were taken to a Southern Pacific Railway train on the afternoon of December 9 and next day were delivered to the authorities of San Quentin. All hope that they would aid the Federal Government and Oscar Lawler, named by the President as attorney for the Government, in its investigation of the dynamite conspiracy, vanished when they for the third time refused to say a word. They made it plain they would stand pat on their pleas of guilty. Their mental attitude was made apparent in the declaration of both brothers that "about the meanest skunk of the bunch is the man who squeals."——Samuel Gompers, president of the American Federation of Labor, said at New York last week that the sentences pronounced in the McNamara case were "appropriate." According to Morrison who had charge of the McNamara defense fund, over $200,000 was subscribed in this cause by laboring men, and all of this sum except what went to Clarence Darrow, the costly attorney for the defense, went for printing and incidental legal expenses. He promises an accounting. Darrow's whole fee was about $100,000, he thought. This lawyer received $50,000 as a retainer. He also received numerous remittances of $10,000 each.——The McNamara ways and means committee, meeting at Washington December 7, issued a statement on the confession of the dynamiters, signed by all its members except Frank M. Ryan, president of the Bridge and Structural Iron Workers' Association. It brands the McNamaras as "recreant to the good name and high ideals of labor," and expresses satisfaction at their "commensurate" punishment. Investigation by Government authorities is welcomed. ——United States deputy marshals are looking for 125 witnesses subpenaed to appear before the Federal grand jury at Los Angeles. Another investigation in progress is that of the Federal grand jury at Indianapolis. There has been plenty of dynamiting for both juries to investigate. It is believed that the letters, etc., found at Indianapolis in the rooms of "J. J." incriminate certain labor leaders and show that many of the dynamiting jobs were undertaken "by request" and paid for out of other treasuries than that of the Ironworkers' headquarters.—— One consequence of this case may be an agitation at Washington to insist upon the Federal incorporation of labor unions.——Job Harriman, Socialist candidate for Mayor of Los Angeles, was defeated by a majority of 50,000 votes, December 5. The successful candidate, George Alexander, was elected on the "Good Government" ticket. The defeat

of the Socialist, who was one of the McNamaras' counsel, is ascribed to the failure of women voters to support the Socialist party, and also to the effect of the dynamiters' confession. It is believed that a heavier percentage of the newly registered woman vote was polled than of the men. The initiative ordinance providing for municipal prohibition was voted down, but the provision for a municipal newspaper carried. We discuss this subject editorially. Altho Candidate Alexander denies that he is a Socialist, he promised on the stump city ownership of many industries and utilities.

**In Congress**

Congress convened last week, and Representative Hamlin, of Missouri, chairman of the Committee on Expenditures in the State Department, who unearthed the Day portrait scandal of the special session, stated that while the secret fund of the State Department is only $90,000 a year, the department had expended secretly in six years, under blanket vouchers, $732,981, or $122,163 annually. Last year, he continued, the secret expenditures amounted to $200,000. He made this fact the basis of a vigorous attack upon the President.——In the Senate, December 5, Miles Poindexter, of Washington, introduced a bill to abolish the Federal Commerce Court. Since this court enjoined the Interstate Commerce Commission from enforcing its long and short haul order, the commercial bodies of several Western cities, notably Spokane, Senator Poindexter's home, have demanded its suppression. Representative LaFollette, a cousin of the Wisconsin Senator, has a somewhat similar bill. Mr. Poindexter referred in his speech to the "raw Commerce Court" and its "absolute destruction" of the powers of the commission, rendering perfectly futile the advance of twenty years in governmental railroad control."——The long awaited report of the Controller Bay land controversy was adopted December 9 by the four Democratic members of the House Committee on Expenditures in the Interior Department, of which Representative Graham, of Illinois, is chairman. This is the last chapter in the "Dick to Dick letter" case; an attempt to connect the President with an Alaskan land scandal, tho the letter is not mentioned in the majority report.——The first annual report of the Secretary of War, Henry L. Stimson, outlines an ambitious program of reform, calling for the concentration of the scattered units of the army, both for the purposes of economy and efficiency as a defensive and offensive weapon; maintaining a large portion of the regiments of the mobile army at war strength instead of keeping them in the present state of depletion; changing the conditions of enlistment so as to create a reserve force of men in civil life with military training to be available in the event of a sudden call to arms, and the establishment of a reserve supply of ammunition for the field artillery. These changes are in accord with those urged by Major-Gen. Leonard Wood, Chief of Staff, and other officers of the general staff. The Secretary says that many of his suggestions are the result of lessons learned from the mobilization of last spring on the Mexican frontier. It is proposed to send the cavalry regiments into the South and Southwest, where they can use the horses winter and summer.

**Presidential Messages**

The trust message of the President is discussed in this issue editorially. In a second message, sent to Congress December 7, Mr. Taft discloses hopes that the present negotiations with Russia may end in a satisfactory solution of the Jewish passport question, which was the occasion of a mass meeting in New York City last week. The diplomatic negotiations with Russia have for their object the securing of a clearer construction of the 1832 treaty and the modification of existing Russian regulations interfering with the full recognition of the rights of Hebrews who are American citizens. The question of American relations with Mexico during and subsequent to the revolution in that country is discussed in this message, and the mobilization of American troops. The Chinese loan is briefly referred to. "In the war which unhappily exists between Italy and Turkey this Government has no direct political interest," the President remarks. The fiscal year, ended June 30, shows

great commercial progress: "marking the highest record of exports of American products to foreign countries," the gain over the preceding year being $300,000,000, and the total valuation over $2,000,000,000. The extension of the merchant marine is urged, and legislation to facilitate the extension of American banks in foreign countries.

**How the "Maine" Was Wrecked**

The Vreeland Board of Inspection, which has been examining the wreck of the battleship "Maine," arrived in Washington on the night of the 7th. Its report, submitted to Secretary Meyer on the following day, is generally in accordance with that of the Sampson Board of Inquiry, which declared thirteen years ago that the ship had been "destroyed by the explosion of a submarine mine, which caused the partial explosion of two or more of her forward magazines." The following brief summary of the Vreeland report has been given to the public by Secretary Meyer:

"The board finds that the injuries to the bottom of the 'Maine' were caused by the explosion of a charge of a low form of explosive exterior to the ship, between frames 28 and 31, strake B, port side. This resulted in igniting and exploding the contents of the six-inch reserve magazine, A-14-M, said contents including a large quantity of black powder. The more or less complete explosion of the contents of the remaining forward magazine followed. The magazine explosions resulted in the destruction of the vessel."

While the Sampson Board relied mainly upon evidence given by divers, the Vreeland Board has been able to see and examine all parts of the wreck. This board is composed of Rear-Admiral Charles F. Vreeland, chairman; Commander Joseph Strauss, explosive and ordnance expert; Naval Constructor William B. Ferguson; Chief Constructor Richard M. Watt, head of the Bureau of Construction and Repair; and Lieut.-Col. William M. Black, of the Army's Engineer Corps, who has superintended the work of clearing the wreck. It brought to Washington a model of the wreck, showing the displacement of plates, keel, etc. As to the supposed position of the mine it disagrees with the Sampson Board, which placed it at about frame 18.——The Cuban House has passed a bill suspending the civil service law for six months, in order that President Gomez may remove summarily the office holders who formerly fought against the revolutionists. A list of them has been prepared by the Veterans' Association.——General Edwards, chief of the Bureau of Insular Affairs, in his annual report recommends that as a matter of justice to the Porto Rican people, and to remove a cause of political unrest, all Porto Ricans properly qualified should be admitted to citizenship of the United States. He says:

"The Porto Rican is now without any national status as an individual. Traveling abroad, he is a man without a country. Both as a practical and as a sentimental matter this has been for many years a cause of political agitation and unrest in Porto Rico, and is the fundamental argument of the small portion of the islanders found in opposition to the Government of the United States and its policy."

**Various Items**

The proposed sale of the Brooklyn Navy Yard is, it is reported, only part of a general scheme for the concentration of Atlantic Coast yards proposed by the joint Army and Navy Board, which has presented its conclusions to Secretary Meyer. This board recommends the abandonment of the yards at New York, Boston and Portsmouth, N. H., and the establishment of a large yard at Narragansett Bay. This plan in turn is part of a broader scheme which the board proposes providing for one large yard north of the Delaware Capes, another south of the Capes at Hampton Roads, torpedo stations at Charleston and Key West and a naval base with repair and docking facilities at Guantanamo, Cuba. The Philadelphia yard at League Island will be retained as a fresh water basin. The Secretary of the Navy will make known his opinion, and make recommendations to Congress, about January 1; but he is known to favor the above program in theory, at least.——John W. Garrett, of Maryland, has been nominated by the President to be Envoy Extraordinary and Minister Plenipotentiary to Argentina.——$225,000 is the sum asked for the maintenance of the Tariff Board for the coming fiscal year in the estimates lately submitted to Congress.

Democrats of the House who opposed the creation of the board and who have announced a determination to revise the tariff without respect to its recommendations will attack this appropriation. The estimates submitted to Congress December 4 contemplate a saving of $21,283,921.43 as compared with the amount appropriated for the fiscal year 1911-1912, the total estimate being $745,834,563. This does not include the Post Office appropriation. That department is expected to be self-sustaining. The greatest economies projected are in the estimates for public works.——Of the 4,766,883 persons residents of New York City, according to the late census, 2,741,504, or 57.5 per cent., are native born whites. This shows a relative falling off. The foreign born whites number 1,927,720, or 40.4 per cent. of the entire population. This is an increase of almost 4 per cent. in ten years. Today the native white population having both parents native born numbers only 921,130, those having one or both parents foreign born being about twice as numerous. In 1900 there were 60,666 negroes; in 1910, 91,702. There has been a 10 per cent. falling off in the Asiatic colony. The general increase in the population of the city during ten years amounts to 38.7 per cent.——The National Rivers and Harbors Congress ended its session in Washington, December 8. Its resolutions urge the adoption by the Government of a broad and liberal, systematic and comprehensive policy of waterway improvement. They argue that such improvements as have been recommended by Government engineers and approved by Congress be completed as rapidly as possible, and that the minimum annual appropriation required to carry forward waterway improvements on a scale commensurate with the importance of the work to be done is $50,000,000. The Congress also recommended the enlargement of the powers of the Interstate Commerce Commission to the end that the commission may more effectually regulate competing land and water carriers and provide for the interchange of traffic. Local interests are also urged to at once start the work of providing adequate and properly equipped terminal facilities so that water borne commerce may be handled with the minimum of cost and labor and the maximum of efficiency and care. The creation of a bureau in the Department of Commerce and Labor for the purpose of developing the use of American coastwise and inland waters and compiling and disseminating useful information concerning opportunities for their use is also advocated.——An explosion at the Cross Mountain Coal Mine, near Briceville, Tenn., December 9, entombed between 125 and 200 miners, and a heavy loss of life is indicated.

**The Situation in Mexico**

At the end of last week our Government, it is reported, had information showing that Madero was losing his power and that serious disturbance was at hand. While there had been no organized and extensive revolt against his Government, there was unrest in almost every State, with petty uprisings and a widespread revival of brigandage. General Reyes is said to have crossed the line and, after remaining in Northern Mexico two or three days, to have returned in disguise. Several letters found at El Paso are said to prove that General Orozco, one of Madero's revolutionary commanders, recently entered into negotiations with Reyes. It is also asserted that a Reyist attack upon Juarez was prevented only by the arrest of one of Orozco's messengers. Two days after these charges were published Orozco was seen on the street in Chihuahua, where he holds an office in the army.——Much indignation has been caused in Oaxaca by the lynching of Dr. José Gomez and eight of his associates. Gomez, an attorney and a deposed officeholder, was leader of the local rebellion at Juchitan, which cost 300 lives. Madero refused to assist the State forces, and therefore the State practically seceded. Madero chose to negotiate with Gomez for peace, and promised that he should be protected on his way to the capital. Gomez, bearing Madero's signed passport, was taken from a railroad train on the 5th, at Rincon Antonio, by the forces of the Governor of the State, and placed in jail. An hour or two later the people of the town took him and his associates from

jail and hanged them. Two days later, the followers of Gomez were flocking to the cities of Oaxaca, making parades and denouncing both Madero and the Governor. A Congressman from Oaxaca complained at the capital because Madero had sought to protect Gomez while Governor Juarez was trying to arrest him. Madero, he declared, should be dragged to the bar of justice for violation of the Constitution.——There is much disorder in Yucatan, to which it is said that 5,000 rifles were shipped from New Orleans on November 28. In Yucatan and Chiapas there is talk of secession. In parts of Chihuahua there is open revolt, and bands of rebels are raiding the ranches. A Reyist plot has been discovered in Sinaloa. Foreigners in Torreon have called for protection, expecting a new rebellion. Dr. Francisco Gomez publishes a statement denying that he is implicated in any movement against the Government. At the same time he criticises the course of Madero, with whom he was formerly associated, saying that the President is seeking a constitutional dictatorship.

**South and Central America**

Three commissioners from Ecuador recently arrived in New York, where they are to confer with bankers concerning a loan. They will make a similar inquiry in Europe. One of them is a son of President Estrada; another is a graduate of Lehigh University.——Reports from Venezuela indicate that a revolt against the Gomez Government, under the leadership of Dr. Alexander Vasquez (recently in New York), will soon take place. Vasquez has the support of Dr. Delgado, said to be the richest man in Venezuela, who asserts that a revolutionary force of 5,000 soldiers will soon be in the field.——Argentina's Congress has approved the boundary agreement with Bolivia and the cause of much controversy has thus been removed.——The British, Bolivian and Peruvian commissioners recently engaged in a definite demarcation of the disputed boundary between Bolivia and Peru have returned to Lima.——Conflicting reports about the revolution in Paraguay are published. The rebels have withdrawn from Villeta, at which point they were recently threatening the capital.——For some weeks there has been disorder in Pernambuco, owing to the claims of two rival candidates for Governor at the recent election. In one riot thirty persons were killed. Brazil's President has asked the two claimants to settle the controvery by arbitration.——Juan E. Paredes, formerly a financial representative of Honduras in the United States, is sending to members of our Congress a pamphlet published by him in New Orleans. He asserts in this pamphlet that our Government by threatening a protectorate induced President Davila to sign the loan agreement, and in return for this harassed the Bonilla revolutionists; but aided the same revolutionists after the Congress of Honduras had refused to ratify the agreement. It is said that the Government at Washington will soon receive a protest, bearing the signatures of more than 100,000 residents of Honduras, against this loan agreement or treaty, now pending in the Senate. They assert, it is reported, that it would be unconstitutional for Honduras to negotiate a loan under the proposed conditions, and that they would even prefer annexation.——An extensive revolutionary conspiracy has been discovered in Nicaragua. Our Government is striving to prevent a filibustering expedition, planned at New Orleans.——President Cabrera, of Guatemala, hastens to disclaim, for himself and his Government, any responsibility for utterances hostile to the United States at the recent meeting of Central American journalists. He could not approve, he says, remarks in the slightest degree offensive to the United States, to which Guatemala is "linked by many bonds of friendship."

**British Politics**

Premier Asquith has assured the House of Commons that the Government would do all in its power to pass during the lifetime of the present Parliament a comprehensive Irish Home Rule Bill. This means that the bill for the insurance of wage-earners and the bill for the disestablishment of the Church of England in Wales will be pushed thru rapidly. To what extent the Government is willing to use pres-

sure to advance its measures was shown by the passage of Part I of the insurance bill on the night of November 30, when 470 amendments were adopted by the use of the "guillotine." The entire Opposition, after a vigorous protest by Mr. Law, rose and left the Chamber in a body. The speaker's voice grew tired of putting the amendments and he had to be relieved by the Deputy Speaker. In the case of only one of the amendments a division was called for by the Laborites, but otherwise there was no opposition. The House of Lords will probably be afraid to reject or to amend to any considerable extent the insurance bill, for on the whole it is a popular measure, altho it has aroused various protests from many quarters where it conflicts with established customs and private interests.——The Naval Prize bill passed on its third reading by a vote of 172 to 125. This low majority was due to the fear that the measure will cripple England in time of war by cutting off the food supply from oversea. The measure carries out the declaration of London defining neutrality in accordance with the policy of the Hague Court. The House of Lords is likely to reject the bill, in spite of the fact that it was approved by the last conference of the Colonial Premiers.——The Foreign Minister, Sir Edward Grey, has written to the Earl of Lytton, strongly protesting, in behalf of himself and his colleagues of the Cabinet who are in favor of equal suffrage, against the disturbances of the suffragets, which he says are not only very repugnant, but seriously retard the progress of the cause. ——The King and Queen of England, on their arrival at Bombay, December 2, and at Delhi December 7, were received with magnificent ceremonies and a great display of enthusiasm. Four fires of unknown origin have broken out in the Durbar camp at Delhi, one of which destroyed the pavilion prepared for the reception of the Indian princes by the King-Emperor, causing a great loss of valuables collected there for the ceremony. These frequent and mysterious fires have renewed the anxiety felt in England for the safety of the royal party during the Durbar.

**The Morocco Question** At the final session of the Reichstag on December 5, the Imperial Chancellor, Dr. von Bethmann-Hollweg summed up the German side of the Morocco controversy with England in a dispassionate and conciliatory manner. He announced at the beginning of his speech that the Imperial Government accepted for the future parliamentary control of any measures extending or reducing colonial territory. He asserted that the suspicion of German policy harbored by the British Government, which found expression in Lloyd-George's speech of July 21, was unfounded. Germany had frankly declared that she had no thought of a naval port on the Moroccan coast, and if the British Government was not satisfied it should have inquired further, instead of acting on rumors and newspaper reports concerning Agadir. In regard to the good will exprest by Sir Edward Grey, the Chancellor said:

"English Ministers and other speakers in the House of Commons have exprest a desire for the betterment of the relations between England and Germany. For myself, I am in accord with that wish, but I remember that the same wish has been exprest repeatedly by both sides for a series of years. Nevertheless, we have obtained experience thru what has occurred. My phrase 'A clean slate' has been taken up by England, but the slate of the recent past has been written on with a hard pencil, leaving permanent scratches, which cannot be written over in the future if suspicion wields the pencil.

"The English Foreign Minister rightfully sees that Germany's growing strength covers no aggressive plans. We wish sincerely not only for peace and friendship, but for the actual betterment of relations tending to keep the peace. This is our wish, only, so far as England is concerned, she needs to demonstrate her desire in a positive manner in her policy."

The suggestion of the Chancellor that England may have an opportunity of expressing her good will by deeds rather than words in the future refers doubtless to the question of the Bagdad railroad, which Germany will probably now bring to the front. This railroad is being constructed by German capital and is already well across Asia Minor on its way to Bagdad, but Great Britain bars the way to an outlet on the Persian Gulf. According to the recent agreement be-

tween Germany and Russia, the Bagdad railroad may be extended to the Persian border within the Russian sphere of influence, connecting there with the road which Russia is to construct across Northern Persia to Afghanistan. The Bagdad railroad will also connect with the Syrian-Arabian railroad, and it is pointed out by German jingoes that Egypt is no longer invulnerable thru isolation. It would be possible for a Turkish and German army combined to be transported rapidly from Europe by railroad down the eastern coast of the Mediterranean for the invasion of Egypt across to the Suez Canal. Then on the other side of Egypt is Tripoli, which is to come into the possession of Germany's ally, Italy. The foreign policy of Sir Edward Grey is being sharply criticised by members of his own party who question the wisdom of provoking Germany to the limits of endurance by checking her colonial aspirations in all possible ways. —— The Reichstag which was elected in 1907 was dissolved by imperial decree on December 8, and the general election for a new Reichstag will be held on January 12. This election will be watched with the greatest interest by the whole world, because the growing power of the Social Democratic party indicates that it will have a very large membership in the next Reichstag and not impossibly a majority.——The formal negotiations between France and Spain in regard to the division of Morocco have not yet begun, but there is already much speculation as to whether France will succeed in cutting down the Spanish claims to extensive territory in Northern Morocco based upon the Franco-Spanish treaty of 1904. It is rumored that President Caillaux, acting in connection with MM. Delcassé and Cruppi, has taken the unusual step of interfering directly in international politics by communicating thru an intermediary to King Alfonso that if Spain refused to show an accommodating spirit to France, the Spanish dynasty would be in danger thru the development of a republican movement in Spain. King Alfonso is said to have retorted, "Spain is not Portugal." The Foreign Minister, M. de Selves, is reported to disapprove of such tactics.

**The Persian Situation**

Persia still refuses to accede to the Russian ultimatum demanding the dismissal of W. Morgan Shuster as Treasurer-General, the payment of the expenses of Russian military movements and a promise to submit all future appointments of foreign advisors to Russia and Great Britain. The Parliament and people of Persia still stand by Shuster, but the Regent and Cabinet show a disposition to compromise with Russia on certain points on condition that the Russian troops do not advance further than Kasvin, which is about half way on between Resht and Teheran. Possibly the Russian Government may be consoled by the grant of the coveted railway franchises from the Caucasus to Teheran. The Mejliss, or Persian Parliament, has cabled to the American House of Representatives a plea for the support in the maintenance of popular government exprest in the following terms:

"The ultimatum of the Russian Government, threatening our independence, having been rejected with one accord by a country which, jealous of its liberties tries to preserve it at any price, the Russian Government would impose it upon us by armed force. Our one offence is, perhaps, that we have understood the necessity of a new regime and wish to enter upon an era of reform and organization. Convinced of our perfect innocence and of not being guilty of any aggressive act, we appeal to the humanitarian sentiment of the parliament of the United States in saying to them:

"You who have tasted the benefits of liberty, would you witness the fall of any people whose only fault was to sympathize with your system to save its future? Would you suffer that Persia should fall for having wished to preserve its national dignity and for having understood the sentiments so dear to a free people?

"Trusting in the sentiment of honor and justice of the generous people of which you are their representatives, we are sure that our appeal will penetrate directly to your ears and will gain for us your precious aid in a solution consistent with the dignity and independence of Persia."

It is not probable, however, that Congress will take up the matter, as there appear no legitimate grounds for our intervention in behalf of Persia. The American Government will confine its efforts to the protection of Mr. Shuster and his family in the case of war or rioting. ——Lord Curzon of Kedleston, former Viceroy of India, has spoken in the

House of Lords against the Persian policy of the Government. He admitted that Mr. Shuster had shown an unfortunate lack of tact and acquaintance with diplomatic usages, but he questioned whether his action was really an excuse for an armed occupation on the part of Russia, which would lead inevitably to a partition of the country. Lord Morley, in replying, said that Russia had given categorical assurance that such measures as had been taken were purely provisional and did not aim at a violation of Persia's integrity and independence. Great Britain had made representations to Russia against her demands for the payment of the expense of the Russian military expedition on the ground that this would involve a loan and make it more difficult for Persia to restore order on the southern trade routes. It was hinted by Lord Morley that Russia would make further proposals which would modify the demand for indemnity. This is understood to refer to the railroad concession.

*

**The Regent Resigns**

Prince Chun, Regent of China and father of the Emperor, resigned his position on December 6. A Manchu and a Chinese are appointed guardians of the child sovereign, namely, Prince Shi Hsu, formerly president of the Senate or preliminary National Assembly, and Hsu Shi-chang, who has been vice-president of the privy council. They have declined the honor, but doubtless merely in deference to Chinese etiquet. It is also one of the rules of Chinese etiquet that a resignation should be accompanied by an acknowledgment of incapacity and expressions of contrition. This accounts for the tone of the following paragraphs from the edict in which the Empress Dowager announces Chun's resignation:

"His administration has been unpopular, constitutional government has not been consummated and hence the people's hearts are broken and the country is in turmoil. Thus one man's mismanagement has entailed miserable sufferings on the nation. He regrets that his repentance is already too late. He wept and prayed to be allowed to resign.

"Living in the palace I am ignorant of public affairs, but I know that a rebellion exists and that fighting is going on which is causing general disasters, while our commerce with friendly nations is suffering. I must inquire into the circumstances and find a remedy. I will lead the Emperor, who is of tender age, and conduct audiences."

The Empress Dowager in this edict announces that the Premier and the Cabinet will control the administration and appointments and she adds that the people "must now realize that the court does not object to the surrender of the power invested in the throne." Prince Chun retires on a pension of about $30,000 a year. His brothers, Prince Tsai Tao and Prince Tsai Hsun have each contributed $600,000 for military expenses. An edict has been issued permitting the Chinese to cut off their cues. This style of hair dressing was imposed upon the Chinese by the Manchus at the time of the conquest as a sign of subjugation, and in recent years radicals have shown their opposition to the dynasty by cutting off their cues, sometimes privately and individually, sometimes collectively in a public demonstration. The rebels of South China, like their predecessors, the Tai-pings, are all cueless. The adoption of the calendar of Western nations is also approved by imperial edict.——Premier Yuan Shi-kai has now, by the resignation of the Regent and the appointment of one of his friends as the Chinese guardian of the Emperor, become the supreme power in Peking. He has opened negotiations with the revolutionists on the Yang-tse by despatching his trusted ally, Tang Shao-yi, to Han-kow to see if an agreement cannot be reached with General Li Yuan-hung. The armistice has been extended to December 21 for that purpose. The revolutionists still insist upon a republic, but perhaps now that the Throne has yielded everything essential they may be willing to compromise on a constitutional monarchy, either with the present incumbent or some Chinese as Emperor. Disorder and distress are increasing in the country at large. Business is at a standstill; bands of brigands roam thru the provinces, and thousands are on the verge of starvation. Neither revolutionists nor imperialists have funds for the support of administration or the payment of their troops, and foreign capitalists are afraid to make loans to either party, for fear lest the other prove victorious and repudiate payment.

"We had actually begun our Long, Long Journey."

Color illustration by Charles Pears from *Two Years Before the Mast*, by Richard H. Dana, Jr. Illustrated holiday edition with Introduction by Sir Wilfred Grenfell. Copyright, 1911, The Macmillan Company.

# A Classic of the Sea

BY JACK LONDON

[Thru the courtesy of The Macmillan Company we are able to include in this issue one of the beautiful colored plates illustrating their new edition of Dana's "Two Years Before the Mast." Jack London, who needs no introduction, writes the following characteristic description of the changes that have come in the seafaring world since the publication of this book.—EDITOR.]

ONCE in a hundred years is a book written that lives not alone for its own century, but becomes a document for the future centuries, Such a book is Dana's. When Marryat's and Cooper's sea novels are gone to dust, stimulating and joyful as they have been to generations of men, still will remain "Two Years Before the Mast."

Paradoxical as it may seem, Dana's book is the classic of the sea, not because there was anything extraordinary about Dana, but for the precisely contrary reason that he was just an ordinary, normal man, clear-seeing, hard-headed, controlled, fitted with adequate education to go about the work. He brought a trained mind to put down with untroubled vision what he saw of a certain phase of work-a-day life. There was nothing brilliant nor flyaway about him. He was not a genius.

He was overlorded neither by sentiment nor by imagination. Otherwise he might have been guilty of the beautiful exaggeration in Melville's "Typee" or the imaginative orgies in the latter's "Moby Dick." It was Dana's cool poise that saved him from being spreadeagled and flogged when two of his mates were so treated; it was his lack of abandon that prevented him from taking up permanently with the sea, that prevented him from seeing more than one poetical spot, and more than one romantic spot on all the coast of Old California. These apparent defects were his strength. They enabled him magnificently to write, and for all time, the picture of the sea life of his time.

Written close to the middle of the last century, such has been the revolution worked in man's method of trafficking with the sea that the life and conditions described in Dana's book have passed utterly away. Gone are the crack clippers, the driving captains, the hard-bitten but efficient foremast hands. Remain only crawling cargo tanks, dirty tramps, greyhound liners, and a somber, sordid type of sailing ship. The only records broken today by sailing vessels are those for slowness. They are no longer built for speed, nor are they manned before the mast by so sturdy a sailor stock, nor aft the mast are they officered by sail-carrying captains and driving mates.

Speed is left to the liners, who run the silk and tea and spices. Admiralty courts, boards of trade and underwriters frown upon driving and sail carrying. No more are the free-and-easy, daredevil days, when fortunes were made in fast runs and lucky ventures, not alone for owners, but for captains as well. Nothing is ventured now. The risks of swift passages cannot be abided. Freights are calculated to the least fraction of per cent. The captains do no speculating, no bargain-making, for the owners. The latter attend to all this, and by wire and cable rake the ports of the seven seas in quest of cargoes, and thru their agents make all business arrangements.

It has been learned that small crews only, and large carriers only, can return a decent interest on the investment. The inevitable corollary is that speed and spirit are at a discount. There is no discussion of the fact that in the sailing merchant marine the seamen, as a class, have sadly deteriorated. Men no longer sell farms to go to sea. But the time of which Dana writes was the heyday of fortune-making and adventure on the sea—with the full connotation of hardship and peril always attendant.

It was Dana's fortune, for the sake of the picture, that the "Pilgrim" was an average ship, with an average crew and officers, and managed with average discipline. Even the *hazing* that took place after the California coast was reached was of the average sort. The "Pilgrim" savored not in any way of a hell ship. The captain, while not the sweetest-natured man in the world, was only an average Down East driver, neither brilliant nor slovenly in his seamanship, neither cruel nor sentimental in the treat-

ment of his men. While, on the one hand, there were no extra liberty days, no delicacies added to the meager forecastle fare, not grog or hot coffee on double watches, on the other hand the crew was not chronically crippled by the continual play of knuckle-dusters and belaying pins. Once, and once only, were men flogged and ironed—a very fair average for the year 1834, for at that time flogging on board merchant vessels was already well on the decline.

The difference between the sea life then and now can be no better epitomized than in Dana's description of the dress of the sailor of his day:

"The trousers tight around the nips, and thence hanging long and loose around the feet, a superabundance of checked shirt, a low-crowned, well-varnished black hat, worn on the back of the head, with half a fathom of black ribbon hanging over the left eye, and a peculiar tie to the black silk neckerchief."

Tho Dana sailed from Boston only three-quarters of a century ago, much that is at present obsolete was then in full sway. For instance, the old word *larboard* was still in use. He was a member of the *larboard* watch. The vessel was on the *larboard* tack. It was only the other day, because of its similarity in sound to *starboard*, that *larboard* was changed to *port*. Try to imagine "All larboard bowlines on deck!" being shouted down into the forecastle of a present day ship. Yet that was the call used on the "Pilgrim" to fetch Dana and the rest of his watch on deck.

The chronometer, which is merely the least imperfect timepiece man has devised, makes possible the surest and easiest method by far of ascertaining longitude. Yet the "Pilgrim" sailed in a day when the chronometer was just coming into general use. So little was it depended upon that the "Pilgrim" carried only one, and that one, going wrong at the outset, was never used again. A navigator of the present would be aghast if asked to voyage for two years from Boston, around the Horn to California, and back again, without a chronometer. In those days such a proceeding was a matter of course, for those were the days when dead reckoning was indeed something to reckon on, when running down the latitude was a common way of finding a place, and when lunar observations were direly necessary. Very few merchant officers of today ever make a lunar observation and a large percentage are unable to do it.

"*September 22d* Upon coming on deck at seven bells in the morning we found the other watch aloft throwing water upon the sails, and looking astern we saw a small, clipper-built brig with a black hull heading directly after us. We went to work immediately, and put all the canvas upon the brig which we could get upon her, rigging out oars for studding-sail yards; and continued wetting down the sails by buckets of water whipped up to the mast head. . . . She was armed, and full of men, and showed no colors."

The foregoing sounds like a paragraph from "Midshipman Easy" or the "Water Witch" rather than a paragraph from the soberest, faithfulest and most literal chronicle of the sea ever written. And yet the chase of the brig "Pilgrim" by a pirate occurred on September 22, 1834—only two generations ago.

Dana was the thorogoing type of man, not overbalanced and erratic, without quirk or quibble of temperament. He was efficient, but not brilliant. His was a general all-around efficiency. He was efficient at the law; he was efficient at college; he was efficient as a sailor; he was efficient in the matter of pride, when that pride was no more than the pride of a forecastle hand, at $12 a month, in his seaman's task well done, in the smart sailing of his captain, in the cleanness and trimness of his ship.

There is no sailor whose cockles of the heart will not warm to Dana's description of the first time he sent down a royal yard. Once or twice he had seen it done. He had got an old hand in the crew to coach him. And then, the first anchorage at Monterey, being pretty *thick* with the second mate, he got him to ask the mate to be sent up the first time the royal yards were struck. "Fortunately," as Dana describes it, "I got thru without any word from the officer, and heard the 'well done' of the mate, when the yard reached the deck, with as much satisfaction as I ever felt at Cambridge on seeing a 'bene' at the foot of a Latin exercise."

"This was the first time I had taken a weather ear-ring, and I felt not a little proud to sit astride of the weather yard-arm, past the ear-ring, and sing out 'Haul out to leeward!'" He had been

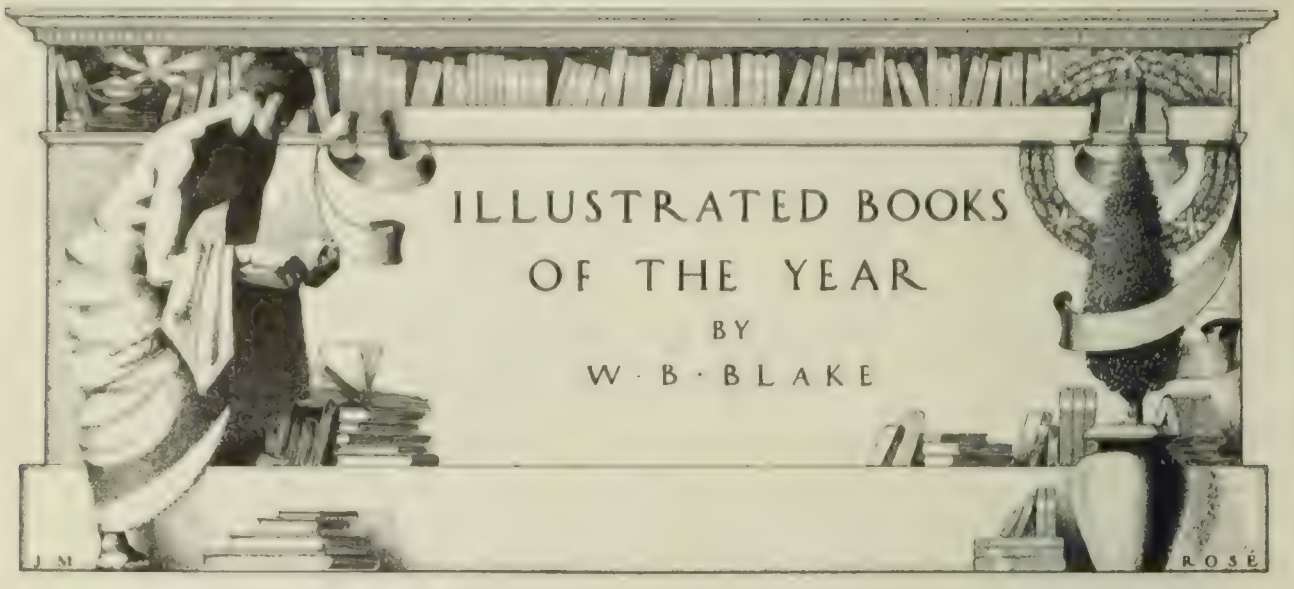
over a year at sea before he essayed this able seaman's task, but he did it, and he did it with pride. And with pride he went down a 400-foot cliff, on a pair of top-gallant studding-sail halyards bent together, to dislodge several dollars' worth of stranded bullock hides, tho all the acclaim he got from his mates was: "What a d—d fool you were to risk your life for half a dozen hides!"

In brief, it was just this efficiency in pride, as well as work, that enabled Dana to set down, not merely the photographic detail of life before the mast and hide-droghing on the coast of California, but of the unvarnished, simple psychology and ethics of the forecastle hands who droghed the hides, stood at the wheel, made and took in sail, tarred down the rigging, holystoned the decks, turned in all-standing, grumbled as they cut about the kid, criticised the seamanship of their officers, and estimated the duration of their exile from the cubic space of the hide-house.

GLEN ELLEN, CAL.

# A Christmas Hymn

BY JULIE M. LIPPMANN



'TWAS humble Mary bore God's son—
Hosanna! Hosanna!
Than He there was no lowlier one,
Hosanna!
Within a manger He was laid,
Where oxen lowed and asses brayed,
Where gentle Mary softly prayed,
"Hosanna! Hosanna!"

Afoot came alien travelers three,
Hosanna! Hosanna!
From distant lands the babe to see,
Hosanna!
Above their heads the night arched wide,
They took a star to be their guide,
And so trod Christward side by side,
Hosanna! Hosanna!

God chooseth thee—He chooseth me,
Hosanna! Hosanna!
However humble we may be,
Hosanna!
His will it is to manifest
Himself within each human breast,
So we may bear His image blest—
Hosanna! Hosanna!

The lords of life shall bend the knee,
Hosanna! Hosanna!
Before the heart of thee and me
Hosanna!
When Christ is born and cradled there,
What holier hostel anywhere?
Make haste, then, heart, such bliss to bear
Hosanna! Hosanna!

THE TWO CITY

WE may hold, with proximate truth, that the illustrated books of the season, into which publishers crowd too many of their books, are of two general sorts: the books we should welcome at any season at all, and those which we tolerate because Christmas is coming. And the books new in their matter as well as their manner have first innings.

Peter Pan is, in one sense, not precisely new; but a Peter Pan book written after the play—that at least is new, and very welcome. The playgoer will not find the drawings by F. D. Bedford altogether satisfactory; he will crave the Captain Hook of the stage, not the page; he will wonder if it is really better to have a Puck-like Peter instead of the inimitable Maude-Adams Peter; but, on second thoughts, he will be glad that Mr. Bedford did not try to inspire himself from either the American or the English theatrical performances. His style is airy and fanciful; not the inspired-fanciful of Arthur Rackham, but expressing an easily comprehended kind of fancy. Mr. Barrie himself has done more than "storify" a play.[1]

Better to read, however, than any warming over, even a sublimated rehash, is the thing itself. One who is not afraid of a published play cannot do better than take up Maeterlinck's *Blue Bird* in the new edition, with color pictures by F. Cayley Robinson.[2] Not that the pictures equal in beauty the Belgian poet's book, translated with success by Alexander Teixeira de Mattos, nor can anything rival the beauty of the staging of the *Blue Bird* as it is given in our own theaters. Yet there is beauty here. This edition differs from its predecessors, not in the pictures alone, and the big pages, but in the fact that the text contains the latest alterations and additions made by the author for the Paris production. Some of the scenes—not the same ones—have been omitted in the London and New York performances.

Since we are admiring works of the imagination, let us record the issue of *A Viking's Love and Other Tales of the North,* by Ottilie A. Liljencrantz.[3] This is not a translation; the author was born in Chicago. She died there, too, a year ago, and we welcome this somewhat elaborate edition of some of her best work. Neither is Mr. Rolleston's work a translation precisely; tho in the course of it some of the ancient tales, told in Gaelic once, and still so told, are rendered into English.[4] Mr. Rolleston's book is essentially a popularization; but

[4] MYTHS AND LEGENDS OF THE CELTIC RACE. *By T. W. Rolleston.* 64 full-page illustrations by Stephen Reid. New York: T. Y. Crowell & Co. $2.50.

See also THE KILTARTAN WONDER BOOK, *by Lady Gregory* (Dutton; $1.50): intended primarily for children, but capable of pleasing grown-ups, too.

it is, essentially again, an honest popularization. The writer has read widely, and a great deal of his reading has been given to the field of the present volume; but, being no specialist, he is at no pains to conceal his borrowings, telling us, instead, where we can study further into the myth and folk lore of the puzzling race—if it is a race—which he himself represents as well as describes. One is in danger of falling into enthusiasm (I use the cold old eighteenth century sense of the word) in examining Celticism, but it is a risk worth taking. What a glorious paganism it is—tho the word paganism is here to be taken literally, and not in the modern fashionable sense. Mr. Rolleston happens to be an Irish Celt, but you do not have to be a fellow Irishman to share his interest in studying this people that spread over all Central and Western Europe, out of no one knows where, coloring the language and civilization of every land they conquered and, in time, lost, and inspiring not a little of foreign literature, besides (in

FROM BARRIE'S "PETER AND WENDY" (SCRIBNER'S)

time, again) creating their own. I am glad that Mr. Rolleston takes a fling at the word Anglo-Saxon (he is not the first here, either), for the word should surely be Anglo-Celtic. Who indeed were the people who held Britain before the Angles and Saxons, the Danes and the Northmen, came? Whom did Cæsar conquer, if not Celts? And the legends Mr. Rolleston tells us of belong to us all, and not exclusively to those of us who are descendants of William the Conqueror's bullies, or the "Anglo-Saxon" contingent of blond beasts.

The Celts, you may remember, once sacked Rome, but they did not destroy quite everything they found there, leaving monuments and statues enough to furnish illustrations for H. B. Walter's *Art of the Romans*.[5] It is a handsome volume, without the fussiness of decoration that would be inappropriate to the theme. Solid merit is the characteristic here, and also in J. C. Stobart's *Greece*, with even finer illustrations.[6] We like the words with which Mr. Stobart prefaces his book: "With the progress of research," he writes, "classical scholarship tends more and more toward narrower fields of specialization. Real students are now like miners working underground, each in his own shaft, buried far away from sight or earshot of the public, so that they even begin to lose touch with one another. This makes an occasional survey of the whole field of operations not only necessary for interested onlookers, . . . but also serviceable to the scholars themselves." Mr. Stobart is fortunate in the moment of his book's appearance, for it is now possible worthily to illustrate the prehistoric culture of Greece, and to link it up in some wise with the classical periods. For both the Ashmolean Museum at Oxford and the British Museum have lately added to their collections magnificent models of the treasures of Crete and Mycenæ. These are reproduced in color.

It is a far cry from the Glory that was Greece to the Mystery that was Medievalism, but books can be found to bridge it. One of these is the very beautiful volume in the Connoisseurs' Library entitled *Illuminated Manuscripts*.[7] "An attempt is made," writes the modest author, "to sketch the history of the illumination of vellum manuscripts, from classical times down to the decay and virtual disuse of the art which resulted . . . from the introduction of printing"; an attempt which is richly served in the beauty of the many plates and of the ample letterpress. And if one wishes to breathe the ecclesiastical-esthetical atmosphere while reading of the illumination of the sacred books, let him read, synchronously, Mr. Collins's impressionistic *Cathedral Cities of Italy*.[8]

But there is also an art of the far East in which this western world takes a keen delight today, and we welcome Mr. Arthur Morrison's study of the Japanese painters.[9] Each of his volumes has fifty or sixty beautiful collotypes, many of them, especially those illustrating the earlier periods, introducing the reader to an art with which he is likely to be most unfamiliar. Mr. Morrison acquits himself with discretion and ability. "One is accustomed to hear the pictorial art of Japan spoken of as if it comprised nothing but the color prints, and even to hear the Japanese blamed for failing to esteem their prints at their proper value; which is precisely as tho an Asiatic should condemn us for our failure to exalt the work of Lancret and Lavreince above that of Titian and Michael Angelo." Mr. Morrison tells us much of the art of old Japan that will surely interest those who, at the Boston Museum of Fine Arts, or elsewhere, have had an opportunity to learn the rudiments of Japanese art, secular and religious.

Two books devoted to the history of the art of France have lately appeared in English, the admirable study of M. Hourticq in translation, and Mr. Caffin's *Story of French Painting*.[10] Mr. Caffin in his very first chapter emphasizes the

[5] The Art of the Romans. *By H. B. Walters.* 72 plates and 10 illustrations in the text. New York: The Macmillan Co. $5

[6] The Glory that Was Greece. A Survey of Hellenic Culture and Civilization. *By J. C. Stobart.* Philadelphia: J. B. Lippincott Co. $7.50.

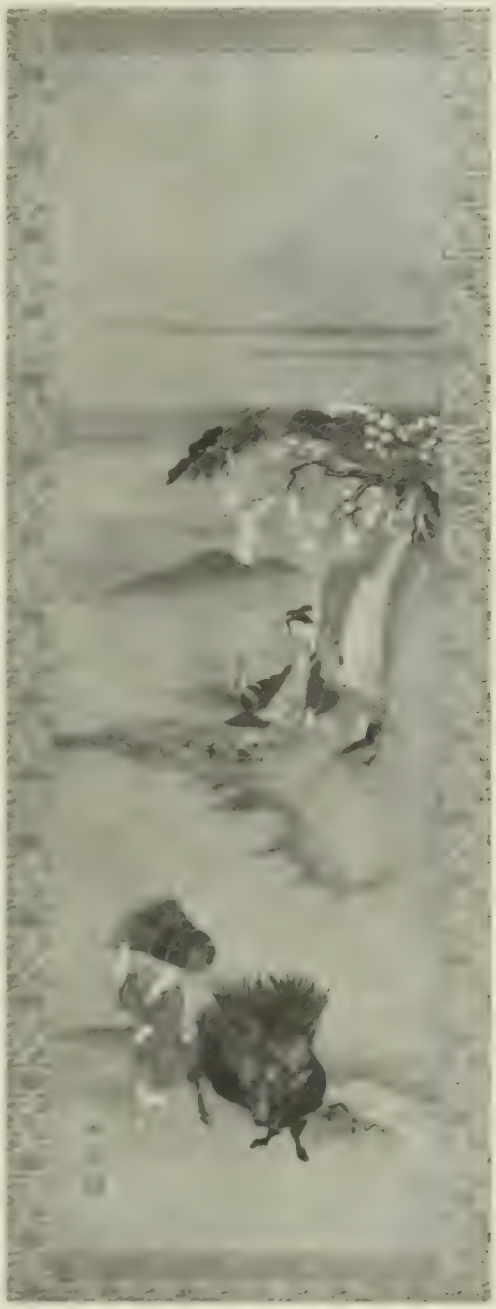
[10] Art in France. *By Louis Hourticq.* New York: Chas. Scribner's Sons. $1.50.



The Story of French Painting. *By Charles H. Caffin.* New York: The Century Co. $1.20

fact that France is (as M. de Maulde la Clavière has observed) a singular country, "slightly Greek, half Latin or Ligurian, very Gallic or very German, and in the West, the country of an intellectual gulf stream, dreamers—Celts. "In the study of French art it is well to remember that France is not a 'Latin' country, pure and simple, any more than America, or for that matter Britain, is 'Anglo-Saxon.'" And Mr. Caffin (tho he never writes profoundly) is not afraid of generalization. M. Hourticq's book has a far greater reference value than his—it is indeed a masterpiece of skilful condensation—but *The Story of France* "is primarily concerned with principles." Superficiality has no terrors for Mr. Caffin, and he writes very engagingly of native and exotic influences in French art from Francis I's time down to *le Cubisme.*

More profitable than the study of sensationalism, however, is the lesson we may learn from Winslow Homer, in whose death (tho he left no "pupils") America lost one of its prophets. To Homer the critic of the Boston *Transcript* now devotes a large and extraordinarily authoritative volume.[11] Mr. Downes goes into great detail; his leisurely monograph is scarcely intended for the kind of reader who wants to learn "all about" a subject from a ten-minute book review. The basis of Homer's art was, says Mr. Beatty, of the Pittsburgh Carnegie Museum, who furnishes a brief introduction, "simple truth." On the occasion of a visit paid to the recluse at Prout's Neck, the two of them were picking their way along the coast, over the shelving rocks familiar to all of us who know the painter's work, when Mr. Beatty suddenly asked:

"'Mr. Homer, do you ever take the liberty, in painting nature, of modifying the color of any part?'

"'Never! Never! When I have selected the thing carefully, I paint it exactly as it appears.' Turning toward his studio, and pointing to the gallery which hung along the second story, he added: 'When I was painting the Luxembourg picture, I carried the canvas, repeatedly, from the rocks below, hung it on that balcony, and studied it from a distance with reference simply to its simple and absolute truth. Never!' he reiterated."

A PUPIL OF HOPPNER

Such was the fidelity of this New England painter to the scene which had inspired the New England poets![12] "But it was the sea that

[11] The Life and Works of Winslow Homer. By William Howe Downes. With Illustrations. Boston: Houghton Mifflin Co. $6.50 net; postage 30 cents additional. [12] The Poets' Eye Exercise. By Helen Archibald Carter. New York: Baker & Taylor Co. $1.50. The book is illustrated with a frontispiece in colors, photographs, and many quotations of verse. The author is also the author of "Nature: From the Hills to the Sea," "Poetry," "Hours," "Friendship," and "Thought." Here she has made another of the

Homer loved." As Mr. Downes remarks, his brother, Charles S. Homer, said of him in Maine: "'He did not go in for expensive or elaborate tackle, but he usually caught the biggest fish.' One might make a parable of this and apply it to his art.

"In the little garden behind the [Scarboro] cottage, surrounded by a high board fence, topped with lattice work, the artist found recreation and solace in raising all sorts of old-fashioned garden flowers, such as roses, cinnamon pinks, English primroses, marigolds, pansies, heliotropes, petunias, etc.," writes Mr. Downes of Homer. I wonder if he would not have enjoyed the large square octavo written by a granddaughter of Nathaniel Hawthorne and entitled *The Lure of the Garden*.[13] Miss Hawthorne's book is well printed on thick paper, and is illustrated in color and in black and white—one of the latter we reproduce with this review. It is not a book for the professional gardener, and hardly for connoisseurs, but it is a handsome gift book, interestingly written in a somewhat gossiping way that makes pleasant reading, on a variety of subjects not unrelated to fancy horticulture. A second garden book that lies open on our table is called *The Joy of Gardens*, and is valuable for its appendix, with its lists of perennial plants for the seasons, its designs for formal gardens, and its numerous illustrations of American gardens. The text of the book is less instructive, but full of such enthusiasm as is suggested by the title.[14] Here, too, let us note the reissue of the optimistic meditations of an humble *Roadmender*,[15] with which Michael Fairless charmed us a

few years ago, now given the honor of a special edition, with eight color plates that, for a wonder, harmonize with the tone of the book instead of spoiling its effect. And no less successful color

nous, but we don't think the less of *The Vicar of Wakefield* on that account; nor yet of *The Ingoldsby Legends*.[17] What commonplace subjects Shakespeare chooses, questions like living and dy-

FROM BEN KING'S "SOUTHLAND MELODIES" (FORBES)

illustration distinguishes the new edition of the *Natural History of Selborne*.[16]

It is always good to welcome old friends—to walk with old friends—to read old books. That is a platitude; but some platitudes do not wear their welcome out. And some of the books which we count as friends are platitudi-

ing; and he draws analogies between life and the stage—an analogy ancient even in his day! It has been fashionable for a great while to disparage some of the masters of platitude—Longfellow, for example; yet we observe that Longfellow is read and enjoyed, all the same, and his much parodied *Hiawatha* comes to us in a much illustrated edition, the pictures being reproductions from photographs.[18]

We are not enthusiastic over photo-

[16] THE NATURAL HISTORY AND ANTIQUITIES OF SELBORNE IN THE COUNTY OF SOUTHAMPTON. *By Gilbert White.* With illustrations in color by G. E. Collins, R.B.A. New York: The Macmillan Co. $4.

[17] THE VICAR OF WAKEFIELD. *By Oliver Goldsmith.* With illustrations in color by H. M. Brock, R.I. Philadelphia: J. B. Lippincott Co. $1.50.

THE INGOLDSBY LEGENDS. Or Mirth and Marvels. With illustrations in color by H. G. Theaker. New York: The Macmillan Co. $2.

[18] THE SONG OF HIAWATHA. *By Henry Wadsworth Longfellow.* With an introduction by Dr. Frank W. Gunsaulus. And with illustrations of Wa-ya-ga-mug and the Indian Players from photographs by Grace Chandler Horn. The Players' Edition. Chicago, Rand, McNally Co. $2.

graphic illustrations; there are too many of them, and too many drawings nowadays resemble photographs — as do Sorolla's huge paintings that we lately praised with such exaggeration.[19] But in the case of a volume like Ben King's pleasing *Southland Melodies,*[20] or this *Hiawatha,* there are excellent reasons for photographic illustrations; in the latter instance the pictures were taken at performances of the poem as enacted by Ojibway Indians on the Michigan shore. Many of the illustrations are reproduced in color.

In color, too, but free from any suggestion of the photograph, are Charles Robinson's illustrations for *The Sensitive Plant.*[21] The book is a beautiful one, and the poem is preceded by an informing introduction of Mr. Gosse's contribution. The title page is wholly admirable; so, too, the end-papers. I mention these details because details are all-important where fine books are in point. But I cannot imagine any one preferring to read an illustrated Shelley!

The list of current reprints includes, also, more than one volume of Dickens: his *Holly Tree, Christmas Carol* (this time with jolly illustrations in pen-and-ink and color, by A. C. Michael), *The Chimes;* and, for those of us who insist upon a large page, with clear type and numerous illustrations in the text, and color plates as well, *Pickwick* is ready in two massive volumes.[22] Next year marks the centenary of Dickens's birth; there will, doubtless, be many celebrations of the occasion; but to me it seems that none of them will be worth more than the issue of his works in an illustrated edition, upon which THE INDEPENDENT has already commented: an ample-paged, moderate-priced edition, with numerous illustrations chosen from the work of the old timers.[23] Nor is Thackeray altogether forgotten at this Christmas season, for we have a new edition of *The Rose and the Ring,* with pictures redrawn from Thackeray's own.[24] No doubt Mr. Monsell's pictures will please youngsters as well as or better than Thackeray's incorrect drawings, but Thackeray had ten times the vigor and spontaneity of the gentleman who undertakes the thankless task of improving upon him. Other Christmas books, pure and simple, are *The Twelfth Christmas,* a Christ-child legend woven into dramatic verse; *The Boy Who Brought Christmas,* a pleasant tale for old and young, by Alice Morgan; *Christmas at Big Moose Falls,* a story of a Wisconsin mining camp and of French-Canadian lumbermen; *One Night in Bethlehem*—one night being *the* night; Mr. Tarkington's *Beasley's Christmas Party* (a less conventional but by no means less enjoyable interlude, if we compare it with most of these volumes), and the semi-devotional works entitled *Christmas in the Heart, Christmas Roses, Christmas Bells,* etc.[25] More attractive

why should we say what we think of him? Mr. Gib- Another popular illustrator, Howard Chanler Christy, laboration yields better results than one could fairly side.

than the last named albeit uncolored!—is Dr. Van Dyke's *Sad Shepherd*, a charming gloss upon Scripture, such as is rarely successfully compassed.[26] And, tho we already have it in another book, bound up with other tales, we are glad to receive O. Henry's *Gift of the Wise Men*, a masterly story by a masterly storyteller.[27] The illustrator in his frontispiece shows us the exchange of gifts between the devoted pair who are the characters of the tale, and it is pleasant to note that the heroine (who had sacrificed her hair to buy her husband a fob) has just as much hair as ever she had. Probably the illustrator is the only living person who has had a chance to read *The Gift of the Magi*, and has wasted his chance.

Mr. Wister's *Virginian* is another new-old favorite that comes to us decked out with new illustrations.[28] Mr. Wister lately had the pleasure of reading his own obituary, and learning how much this story of the plains has meant to the world; let us hope that he will, before he really does die, write another story almost as good.

If calendars are not books, some of them come nearer to so being than many of the *abiblia* published in time for the Christmas season of charity. We have received a number of calendars from Messrs. E. P. Dutton & Co.; calendars of many sizes, prices and series. Of the "Authors" type of calendar, there are both the new-quotation-every-day kind (Longfellow, Tennyson, Ruskin and "The Christian Year"; 40 cents each), and the turnover type, two months and one quotation to the sheet (a larger one). Certainly the Dickens calendar (75 cents) ought to prove popular in the novelist's centenary year. Then there is the "That Reminds Me" calendar, a sheet to a week, and plenty of space for jotting down engagements and a pencil to jot them with (75 cents). And there are so many art calendars, and travel calendars, and sentiment calendars (all of them that we have looked into well printed and tasteful) that there is no noting them all.

One lesson there is in the issue of all these Christmas books, and that is the lesson that they need not, in order to be attractive, be expensive. That is borne out in such a volume as Mr. Stearns's on *The Midsummer of Italian Art*.[29] It is borne out, too, in such a little series as that of the "Master Painters."[30]

NEW YORK CITY.

THE SHEPHERD. CHRISTMAS IN THE HEART. CHRISTMAS ROSES. CHRISTMAS BELLS, *ibid.*, 50 cents each. WHAT OF THE MERRY CHRISTMAS? and WHAT OF THE HAPPY NEW YEAR? *By Jane Ellis Joy*. New York: Duffield & Co. 50c each.

[26] THE SAD SHEPHERD. *By Henry Van Dyke*. New York: Charles Scribner's Sons. From another publisher, Frederick A. Stokes Co., comes THE SYRIAN SHEPHERD'S PSALM (the Twenty-third), with an illustration in color, and an introduction by Jules Guérin, and appreciations (that we could spare) by excellent "pulpit orators"; also metrical versions. 50 cents.

[27] THE GIFT OF THE WISE MEN. *By O. Henry*. Illustrated by Charles M. Relyea. Garden City, N. Y.: Doubleday, Page & Co. 50 cents.

[28] THE VIRGINIAN. *By Owen Wister*. New edition. With illustrations by Charles M. Russell, and drawings from Western scenes by Frederic Remington. New York: The Macmillan Co. $1.50.

[29] THE MIDSUMMER OF ITALIAN ART. *By Frank Preston Stearns*. Boston: Richard G. Badger. $2.

[30] MASTER PAINTERS. From the Works of *John Ruskin*. Van Dyck; Reynolds; Titian. 50 cents each. New York: George H. Doran Co. These little books are profusely illustrated in color. They open with a note which gives the bare outline of the career; there follow passages gleaned from various pages of Ruskin's works, bearing on the subject of the volume.

# My Little Boy

BY MAY PRESTON SLOSSON

THE other children grow so tall!
I would not wish it otherwise,
And yet—we mothers lose them all,
They grow to Men before our eyes—
My little, little boys!

But he, who slipped away in Spring,
Six summers on his shining head,
His baby eyes still wondering,
He only, tho long years have sped,
Is still my little boy.

NEW YORK CITY.

# THE CHILDREN'S CHRISTMAS BOOK-SHELF

~BY MONTROSE J. MOSES~

## Special Editions

**The Big Book of Fairy Tales.* Edited by Walter Jerrold, and illustrated by Charles Robinson. New York: H. M. Caldwell Co. $2.50.

**Treasure Island.* By Robert Louis Stevenson. Illustrated by N. C. Wyeth. New York: Charles Scribner's Sons. $2.50.

*All Shakespeare's Tales.* Tales from Shakespeare by Charles and Mary Lamb, and Tales from Shakespeare by Winston Stokes. Illustrated by M. L. Kirk. New York: Frederick A. Stokes Co. $2.

**A Child's Book of Stories.* Selected and arranged by Penrhyn W. Coussens. With pictures by Jessie Willcox Smith. New York: Duffield & Co. $2.25.

**Little Lord Fauntleroy.* By Frances Hodgson Burnett. Newly illustrated by Reginald Birch. New York: Charles Scribner's Sons. $2.

*The Treasure Book of Children's Verse.* Arranged by Mabel and Lillian Quiller-Couch. Illustrated in color by M. Etheldreda Gray. New York: Hodder & Stoughton. $5.

*The Book of Baby Beasts.* Pictures in color by E. J. Detmold. Descriptions by Florence E. Dugdale. New York: Hodder & Stoughton. $3.50.

**Aesop's Fables.* Illustrated by E. Boyd Smith. New York: The Century Co. $2.

**The Pied Piper of Hamelin.* By Robert Browning. Illustrated by Kate Greenaway. New York: Frederick Warne & Co. $1.50.

**The Song of Hiawatha.* By Henry Wadsworth Longfellow. With illustrations and designs by Frederic Remington, Maxfield Parrish and N. C. Wyeth. Boston: Houghton Mifflin Co. $2.50.

*Plutarch's Lives for Boys and Girls.* Being selected lives freely retold by W. H. Weston. With drawings in color by W. Rainey. London: T C. & E. C. Jack. 7/6.

*When Knights were Bold.* By Eva March Tappan. Boston: Houghton Mifflin Co. $2

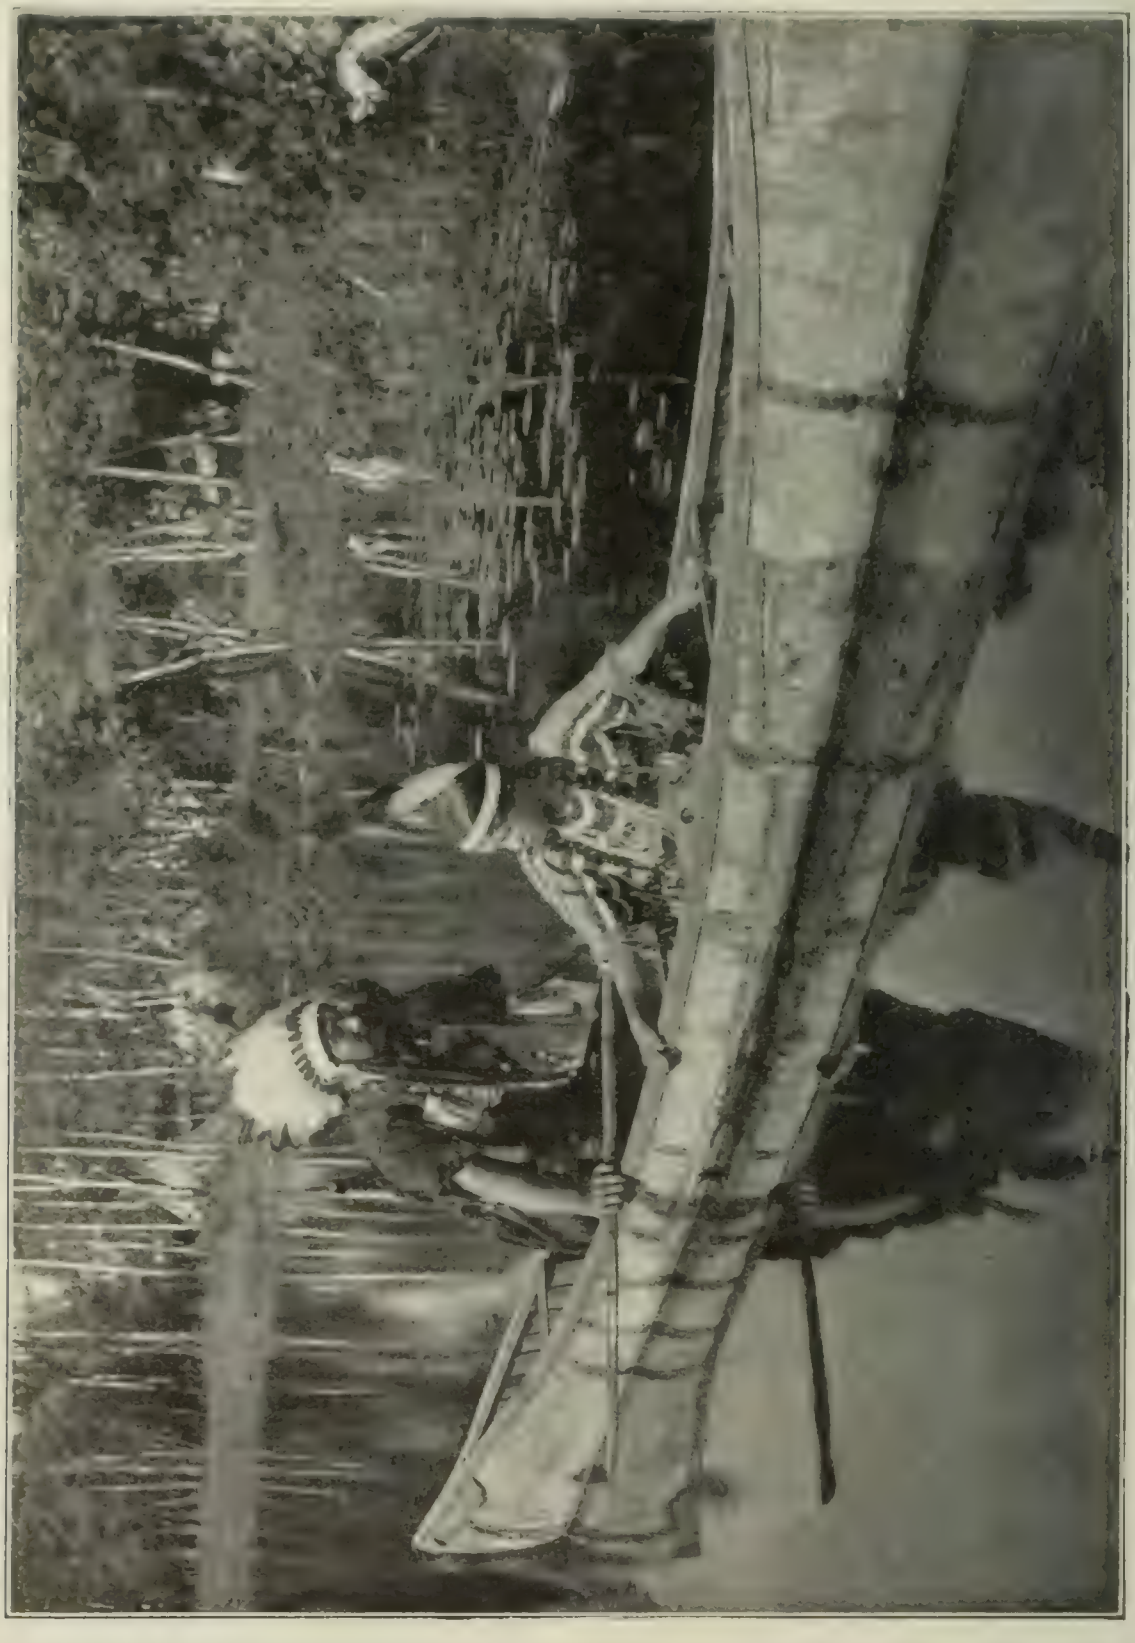
*King Arthur's Knights: The Tales Retold for Boys and Girls.* By Henry Gilbert. Illustrations in color by Walter Crane. London: T. C. & E. C. Jack. 7/6.

*The Children's Shakespeare: Being Stories from the Plays with Illustrative Passages.* Told and chosen by Alice Spencer Hoffmann. Illustrated in color by Charles Folkard. New York: E. P. Dutton & Co. $3.

*The Life and Adventures of Robinson Crusoe.* By Daniel DeFoe. Illustrated in color by W. B. Robinson. New York: Frederick A. Stokes Co. $1.50.

**Tom Brown's School Days.* By Thomas Hughes. With numerous illustrations made at Rugby School by Louis Rhead. With an introduction by W. D. Howells. New York: Harper & Bros. $1.50.

*Pinocchio: The Tale of a Puppet.* By C. Collodi. Translated from the Italian by M. A. Murray. Illustrated by Charles Folkard. New York: E. P. Dutton & Co. $2.50.



[Volumes marked (*) are of particular worth.]

Buyers of children's books have very little idea of classification, and they are more than likely to ask first for those books that are large and beautiful; those volumes recommended for their cover designs and for their illustrations. There are many such editions this year, among the most conspicuous being *The Big Book of Fairy Tales,* edited by Mr. Jerrold and illustrated in charming lines by Charles Robinson. This will prove a priceless treasure for the nursery, and owners of the *Rhymes and Jingles,* a companion volume, will welcome it. We know of no more royal gift for children. Stevenson's *Treasure Island* has such drawings by Wyeth as will surely add to the buccaneer spirit of the story. What a great privilege it will be for a boy to gain his first knowledge of this masterpiece with such incentives as these drawings. The book, in format and in color, is in the Parrish style.

What bid fair to be an excellent edition proved to be a disappointment, for in *All Shakespeare's Tales* Winston Stokes has added to the Lambs' tales prose versions of those plays wisely omitted by them. To aggravate us further, Miss Kirk has made illustrations in color which miss the beauty of the real characters, and reduce them to calendar fitness,—sweet, smooth and insipid. In manufacture, the publishers have shown some feeling, tho the book is heavy beyond measure.

The selections in *A Child's Book of Stories* have been wisely made, there being only a few hybrids included, and Miss Smith has done some of her best pictures; "Jack and the Beanstalk" is par-

tionally filled with the breath of youth. It is well to give young readers the rich heritage of fairy tales rather than to overburden them with folk-lore. The ful *Little Lord Fauntleroy*, which, since Mrs. Burnett first wrote it, has gone thru so many editions that this new one from new plates was necessitated. In

"THUS IT WAS THEY JOURNEYED HOMEWARD"
From the Players' edition of "Hiawatha" (Rand McNally, Co.)

compiler has wisely omitted historical and ethnological matter.

With much the same appearance, tho not of the same type, is that ever delight- order to celebrate the event, Mr. Birch, the originator of the Fauntleroy costume, has made new pictures, some of them in color. This story has lost none of its

charm for the present reviewer, even tho he has grown up. In fact, since reading "The Secret Garden," he is firmly convinced that Mrs. Burnett's powers have ripened into richer harvest.

Small children will like the histories of small animals contained in *The Book of Baby Beasts.* The artist, Mr. Detmold, has been fortunate in obtaining reproductions of his color plates that reveal all the pinkness of babyhood. There are some clever verses, and the text is simple; in addition, the type is splendidly large. Many pleasant stories may be culled from this portfolio volume.

The publishers have been wise in giving a rich cover of blue and gold and green to *The Treasure Book of Children's Verse,* but we must confess our disappointment when we saw the mediocre color plates and the haphazard arrangement of the poems. Notwithstanding a few commonplace inclusions, the Misses Quiller-Couch have not failed to gather into their sumptuous anthology much that is rich and much that is agreeable.

We would call attention to the Century's edition of *Aesop's Fables* from the DeVinne Press. The page is a delight to the eye, not a feature out of taste, and Mr. Smith's drawings are so reproduced and so placed that they look like fine originals, or as tho etched. Two hundred and three of the fables are used.

It is a pleasure to call attention to the reprinting of Kate Greenaway's books, which have been scarce for so many years. The quaint little figures will again be welcomed in the nursery, and we still believe that a general revival of the Greenaway books might lead to the revival of the Greenaway dress.

The new Houghton-Mifflin edition of *Hiawatha* is not primarily a child's book, tho I believe that our schools have almost monopolized the poem as their own. No matter where this volume goes, it is sure to attract. The birch-bark end papers are effective and the marginal drawings fully interpretative. The wide margins please us.

Plutarch has been retold so many times that it is simply a matter of choosing the best version; the editions are usually attractive in format, and there is an amount of care shown in the preparation of the text. Mr. Weston has exhibited much skill, and he has been faithful to the original as far as he could be with his object in view. The publishers have made an attractive volume.

The young reader interested in the medieval history tale will welcome Eva March Tappan's *When Knights Were Bold,* where are assembled many accounts of the life of the times—a life wherein page, squire and knight, hermit friar and pilgrim had each his several duties; wherein streets, houses and barter were different from what they are today. In an attractive manner, and with many illustrations of a unique order, Dr. Tappan has told her story, a blend of custom and economics—a social study which might prove an incentive for the rehabilitation of Scott.

Mr. Gilbert's King Arthur book is simply another volume added to the number of retold Malorys. Modernized, the text loses some of its flavor, but children would never wade thru difficult spelling, and, after all, the essential action and chivalry are what one most desires. The Walter Crane color plates are poorly reproduced, however romantic in conception.

Considerable novelty and originality distinguish Alice Spencer Hoffman's retelling of the Shakespeare plays. We have always thought it advisable to mingle illustrative passages with the narrative wherever such passages were simple enough to be understood without additional explanation. This is the policy adopted, and, therefore, we obtain much more of Shakespeare than usual.

In whatever form it is put, DeFoe's *Robinson Crusoe* is always welcome, and the Stokes's importation will find a ready market, tho we prefer some other editions we have seen. We pity the boy who grows up without having read this classic of adventure. And the same may be said of *Tom Brown's School Days,* which is this year illustrated by Louis Rhead in line, and sent forth with an introduction by W. D. Howells. A commendation from the latter is always a pleasant matter, but we doubt whether it is advisable to place such minute criticism—negative in a way—before an

PIRATES OF TREASURE ISLAND
From one of Mr. Wyeth's illustrations for the new Scribner edition

audience of children. Mr. Howells objects to the beer drinking which was the custom in old Rugby. His objection only emphasizes, and that is bad. It might have sufficed to stress the fact that the school life at Rugby since Tom's day has changed. Nevertheless, the Harpers' beautiful edition will be enjoyed as much as ever, tho the modern athletic story sometimes crowds it out.

Never a season passes but a new edition of *Pinocchio* appears. Even the characters in *The Wizard of Oz* have not the popularity of this small Italian puppet, whose adventures prove a never-failing delight to the young reader. The illustrations in black and white are admirable, and the color plates show the influence of Rackham.

## Nature and Animal Life

*The Land We Live In.* The Boys' Book of Conservation. Overton Price. Foreword by Gifford Pinchot. Boston: Small, Maynard & Co. $1.50.

**Animal Secrets Told.* A Book of Whys. Harry Chase Brearley. New York: Frederick A. Stokes Co. $1.50.

*The Monkeyfolk of South Africa.* F. W. Fitzsimons. New York: Longmans, Green & Co. $1.50.

*The Mahatma and the Hare.* H. Rider Haggard. New York: Henry Holt & Co. $1.

**Bird Stories Taken from the Works of John Burroughs.* Illustrated by Louis Agassiz Fuertes. Boston: Houghton Mifflin Co. 80 cents.

*A Book of Nimble Beasts.* Douglas English. Boston: Dana Estes & Co. $2.

*People of the Wild.* F. St. Mars. New York: Outing Publishing Co. $1.25.

*The Blue Goose Chase.* A Camera-Hunting Adventure in Louisiana. Herbert K. Job. New York: Baker & Taylor Co. $1.25.

*Secrets of the Hills;* and How Ronald Read Them. New York: T. Y. Crowell & Co. $1.50.

[Volumes starred (*) are of particular worth.]

The educational demand necessitates numberless nature books, and it would be

well were they all as interesting or as potent as *The Land We Live In*. Children cannot too early be made aware of our natural resources or of the manner in which we are squandering them. Both in text and in illustration, Mr. Price has produced an excellent treatise, tho the hasty buyer might pass it over because of the plainness of the cover.

There is a fascination in knowing the reason why certain animals are as odd as they are; why they have such peculiar forms and such peculiar habits. We, who spend days at the *Zoo*, *look* at many things, but we never *see*. This is the opinion of Mr. Brearley, who proceeds to show us what has always been evident, but has never been correlated in such an interesting way. We all have noses, tongues, eyes and mouths, but why it is that the eyes of a cat should be in the front of the head and a fish's or a bird's on the side, we have never given time to reason out. Such is Mr. Brearley's task. The book has many delightful secrets in it; the illustrations suggest excitement.

Primates are too much like people for people to ignore, and *The Monkey Folk*

*of South Africa* are queer things. They tell their own story in Mr. Fitzsimons's volume. Therein tales are narrated of queer habits and of treacherous enemies, and the book serves a double purpose—in being accurate and in being exciting.

This year, the rights of animals are supported by Rider Haggard in a fantasy which is partly story and partly sermon. It deprecates the chase as it is carried on in England, and the pathetic figure of the Hare easily wins our sympathy. The chapters on The Coursing, The Shooting and The Hunting are filled with action of an appealing kind. No guarantee needs to be affixed to the work of Mr. Burroughs, selections from whose books form a most attractive supplementary reader, written in a style that charms. It will serve as a vivid introduction to the study of birds in the Northeastern States.

The remarkable feature about Mr. English's *Nimble Beasts* consists in the two hundred illustrations, many of them taken by the camera under conditions which are rare. The text is filled with narrative and fact, but the photographs, reproduced on glazed paper, far surpass it in originality. The introductory note shows with what scientific accuracy the author went to work.

Both *People of the Wild* and *The Blue Goose Chase* are nature fictions, the one written with considerable vividness, the other attempting in its truthfulness to encourage the employment of the camera instead of the gun—a peace movement among the hunters.

Geology in one way is a hard subject; it deals with rocks. But when the scratches on the earth's surface, and when the veins beneath the outer crust are described thru the geologic ages, then romance predominates. Mr. Craig takes his young hero thru the lead mines of Scotland, and during his summer vacation he learns all the secrets of the hills. There is an artificiality about the style, but much information is carried in the dialog. On every occasion we repeat that if a story is worth telling at all it should be presented in direct fashion; the effect is much better. Had this book been simply told as a geology, it would have been more picturesque. Children's literature suffers from just this tendency to use fiction as a sugar-coating for fact.

## Inventions and Useful Arts

*Historic Inventions.* Rupert S. Holland. Philadelphia. George W. Jacobs & Co. $1.50.
**Stories of Useful Inventions.* S. E. Forman. New York. The Century Co. $1.
*Boat Building and Boating.* D. C. Beard. Illustrated by the author. Charles Scribner's Sons. $1.
*Handicraft for Handy Boys.* A. Neely Hall. Boston. Lothrop, Lee & Shepard Co. $2.
**The Romance of Aeronautics.* Charles C. Turner. Philadelphia. J. B. Lippincott Co. $1.50.
*The Boys' Book of Warships.* J. R. Howden. New York. Frederick A. Stokes Co. $2.

[Volumes starred (*) are of particular worth.]

The world seems to advance in epochs marked by invention. Gunpowder and the printing press revolutionized mankind; such is the popular saying. But after reading Mr. Holland and Mr. Forman, our opinion is slightly modified. For the telescope and the telephone, the arc light and the steamboat have opened many ways for us that gunpowder could never have blazed. Boys will find fascinating details in *Historic Inventions.* There is a decided self-help quality to the stories. The cover design shows Progress with a telescope in one hand and an airship in the other.

There are some who believe that civilization in the modern sense began when the savage, rubbing two stones against one another, became aware of fire which might be curbed by the will of man. Mr. Forman traces the history of many of our common blessings. The lamp, the stove and the match have romantic careers, as have also the house, the clock, the boat and the mill.

Mr. Beard is a boat-builder that boys will like. The land-lubber could study his book, build his craft by it, go out to sea under its direction, and then tie up in infinite ways, according to its graphic illustrations. No one need fear drowning if Mr. Beard's advice is followed; no one need bother about expense if his cheap designs are adopted. In other words, here is a book of practical value. The author is a man of the open who is a safe guide and a pleasant one.

There is a certain assuring conceit about handicraft books that always produces hope in the breast of every amateur carpenter in a household. The lightness and ease with which Mr. Hall and writers like him turn out tool-made things suggest the wizard's art. No one need go without furniture when boxes and barrels are plentiful; mechanical devices are easy to fashion; aeroplanes are fascinating to construct. With one twist.

"according to directions," brass may be changed into ravishing ornaments. There is truth in the statement that when one purchases a camera, the amount spent in *et ceteras* almost quadruples the cost. Mr. Hall and his brothers in trade offer tempting suggestions at the least cost possible. Parents will be thankful.

Life is so full of romance that we meet it at every street corner. No doubt boys have done much to perfect themselves in the science of aviation; they have built models that fly; they have suggested modifications of designs that have proven of service. Therefore, Mr. Turner's history of Aeronautics will be greedily devoured. And a most fascinating and timely romance it will prove, one that that brings the entire subject up to date, giving long flight feats, and recording the enormous death roll, added to almost daily now, as the distances traveled are increased. The grown reader will find this volume of particular interest.

Another distinctive record is *The Boys' Book of Warships,* written from the English standpoint, but considering the American situation. What is more essential is that it analyzes the progress of ship-building, which has now reached its greatest hight in the super-dreadnought. With its comparative tables, it is a useful volume that the Stokes have imported. Why do not the same publishers have prepared a companion volume treating more fully of the American navy, whose recent mobilization in the Hudson River shows it to be advancing rapidly toward the standard maintained by Great Britain? The book is splendidly illustrated.

## Indians

*Rolf in the Woods.* The Adventures of a Boy [illegible] with Indian Quonab and Dinis Dog [illegible] Thompson Seton and illustrated by Ernest Thompson Seton. Garden City: Doubleday, Page & Co. $1.50.

*The Indian Boys.* William Lees Hopkins. Boston: Houghton Mifflin Co. $1.25.

*The Wild Goose.* William W. Canfield. New York: A. P. Dutton & Co. $1.25.

*The Indian Boys.* [illegible] Boston: [illegible] & Co. $1.25. (A graphic account of the doings of a young scout.)

The boy-scout idea seems to have gained headway since last year, and its chief, Ernest Thompson Seton, is even more active in its behalf. *Rolf in the Woods* is a pleasant story of woodcraft, the hero having escaped the brutal tyranny of an uncle. Quonab, the Indian, is his guide, and he helps the boy to fathom all the secrets of hunting. So apt a pupil does Rolf become that he is chosen as a scout in the war of 1812. Mr. Seton, therefore, is now a fiction advocate as well as a nature "faker"—not such a faker, however, that he cannot fill the official post of Naturalist to the Government of Manitoba.

We may have treated the Indian badly, and his liberties may have been curtailed before the tide of white population. But the noble heroism of the red man always remains fascinating reading. Schools study *Hiawatha,* tho they refrain from Cooper, save in a few of the Leatherstocking series. We recommend Mr. Hopkins's book for the reason that it adopts a unique method of describing the habits and customs of the Indians in a story fashion. There is not much legend to the text. But it is saved from dryness by its graphic descriptions.

Mr. Canfield's *The White Seneca* is deserving of special mention, because it successfully combines faithfulness of Indian life with a story that has sufficient interest to carry the reader to the end. There is excitement from the very moment that the hero, captured by the Senecas, becomes a bone of contention, wins a friend and an enemy, adopts the Indian's ways, and fights in the Revolutionary War, perforce on the British side. For the reader of the "betwixt and between age" there is a romance, which, tho ending abruptly, terminates happily.

## Biography and History

*The Boy's story of Zebulon M. Pike. Explorer of the Great Southwest.* Edited by M. G. Humphreys. New York: Charles Scribner's Sons. $1.50.

*Life of Lee.* Frederick Trevor Hill. New York: D. Appleton & Co. $1.50.

*Life of Grant for Boys and Girls.* Warren Lee Goss. New York: T. Y. Crowell & Co. $1.50.

*The Real Captain Kidd:* A Vindication. Sir Cornelius Scale Dalton. New York: Duffield & Co. $1.25.

*The Boy's Life of Johnson.* William H. Meadowcroft. New York: Harper & Bros. $1.25.

*Colonial Dames and Their Girl Heroines.* Belle Moses. New York: D. Appleton & Co. $1.25.

*Life Stories for Young People.* Translated from the German by George P. Upton. The yearly volumes are: Eric the Red and Leif the Lucky; Christopher Columbus; Hernando Cortez; Francisco Pizarro; William Penn; George Washington; Benjamin Franklin; Maximilian in Mexico. Chicago: McClurg & Co. 50 cents each.

*The Dawn of British History.* Alice Corkran. New York: T. Y. Crowell & Co. $1.25.

*From Conquest to Charter.* Estelle Ross. New York: T. Y. Crowell & Co. $1.25.

*In Tudor Times.* I. L. Elias. New York: T. Y. Crowell & Co. $1.50.

*In Stuart Times.* I. L. Elias. New York: T. Y. Crowell & Co. $1.50.

*History of England.* C. R. L. Fletcher and Rudyard Kipling. Garden City: Doubleday, Page & Co. $1.50.

*The Story of France.* Mary MacGregor. New York: Frederick A. Stokes Co. $2.50.

*The First Passages of Glorious Memory.* Frank Elias. The Macmillan Co. London: Adam and Charles Black. $1.50.

*David Crockett: Scout.* Charles Fletcher Allen. Philadelphia: J. B. Lippincott Co. $1.25. (A narrative based on trustworthy data, the author attempts to dispel the clouds beneath which the frontiersman has been resting in most books.)

[Volumes starred (*) are of particular worth.]

Biography for children is still in an experimental stage; the short life stories are much in vogue; the distorted history lessons and ethical sermons of the "Self-Help" style have never failed of an audience. Tho many biographies are published, the field is barren as before.

Miss M. G. Humphreys believes that the way to follow a career is to make use of as much of the man's own record as possible. She has published before this an excellent account of Catlin—his own words slightly modified for juvenile understanding, the passages filled in with necessary data of her own. *The Boy's Story of Zebulon Pike* is based on his diaries and reports. We wish we could feel that it will have wide appeal in the children's rooms of the public library; but it is that type of juvenile book which the grown person will more likely read. The editing is well done, and the printed page agreeable to the eye.

Not for a long while have we read a more absorbing story than *On the Trail of Grant and Lee,* and we were like the little girl at school: we were surprised to find, after we were through, that it was a book of "non-fiction"; that it was a history. It was a distinctive idea of Mr. Hill's to entwine the careers of the Grant and Lee families. They are both considered as heroes—these two generals of opposite sides in the Civil strife—and there are no "rebel" arguments or prejudices in this new discussion. Lee is lauded as a national hero—as Mr. Alderman would say, one who knew the educative force of defeat. The text is based on authentic record, and the illustrations in color are founded on careful study at West Point and elsewhere.

The Crowells issue a Life of Grant written by a veteran soldier who served under him. Much of the material, therefore, is guaranteed to have come first hand. It is written with the object of pointing out the excellence of the General's struggle against odds—a wholesome lesson always, even tho we believe it to be a little overdone.

Tho intended for the grown-up, *The Real Captain Kidd* will fascinate the young reader, for whom pirates have always a thrill. The author claims that Kidd is suffering from a reputation which he never deserved. Give a man a bad name and it will stick to him for ever. But Sir Cornelius Dalton seeks to vindicate Kidd. What a disappointment to children!

What boy with electrical inclinations will not welcome Mr. Meadowcroft's *Life of Edison.* The wizard is shown in his true colors, and, to add to the aliveness of the account, Mr. Edison himself has contributed some autobiographical notes. The present reviewer heard Mr. Edison once remark that he hoped before he retired to contribute something of permanent value to science. After reading this short biography, such a remark seems all the more modest.

The Dickens Centennary has been productive of many new books about the author of "David Copperfield." No more appropriate study could be had than the one just written by Belle Moses, full of sympathy and understanding—very personal and containing the criticism that will serve best to increase the reader's love of the books that never stale.

Space will not allow us to do more than mention the *Life Stories for Young People,* translated in simple style by Mr. Upton. Evidently the series is as popular here as it is in Germany.

We are so apt to assume a matter-of-fact attitude toward history that the more vital social aspects escape us. This is true even for children. *The Dawn of British History* considers the customs, beliefs and legends of the ancient Briton at a time when the Druids held sway. The story stops at A. D. 410. T. Y. Crowell & Co. have been very fortunate in procuring from abroad a number of books of this excellent character. A companion volume is *From Conquest to Charter*—a period wherein the Crusades figure to a great extent. Each book has illustrations. *The Story of the Crusades* (Crowell) is fully told by E. M. Wilmot-Buxton.

Two admirable little studies are *In Tudor Times* and *In Stewart Times*, both of them by E. L. Elias. Particularly commendable is the arrangement of the material, for, instead of viewing the periods conventionally, there are different phases considered. Under each section, therefore, the personalities of the dominant figures of the times are analyzed—figures grouped under kingship, the church, the sea, the court, religion, science and the like.

Fletcher's *A History of England* is chiefly notable for the verses by Rudyard Kipling, which are scattered thruout the text. These verses have been considered in THE INDEPENDENT; it only suffices now to say that Mr. Kipling has lost none of his swing, however much his politics may flavor of imperialism.

Mary MacGregor's *Story of France* is a rich volume, and, with its spirited color illustrations, it is an interesting narrative. It does not deal with the nation as a republic; it is otherwise complete.

In the *First Voyages of Glorious Memory* Mr. Elias takes Hakluyt as his source, showing the courage and endurance of the men who sought the Northwest Passage, the Gold Coast and other places. In tone it is English.

## Music and Plays

*A Little History of Music.* Annette Hullah. New York: Longmans, Green & Co.

*Little Songs for Little People.* Pictured by Millicent Sowerby, and selected by Githa Sowerby. New York: Hodder & Stoughton. $1.25.

*Brownikins and Other Fancies.* Ruth Arkwright. Music by J. W. Wilson. Pictures by Charles Robinson. New York: F. A. Stokes Co. $1.50.

*The Silver Thread: and Other Folk Plays for Young People.* Constance D'Arcy Mackay. New York: Henry Holt & Co. $1.10.

*Little Plays for Little People.* Pictured by Millicent Sowerby, and written by Githa Sowerby. New York: Hodder & Stoughton. $1.25.

THE LEOPARD AND THE FOX
From an illustration for the Century Company's new edition of "Æsop's Fables"

*Scenes from Dickens:* For drawing-room and platform acting. Adapted by Guy Pertwee and edited by Ernest Pertwee. New York: E. P. Dutton & Co. $1.25.

*College Comedies.* Edwin Bateman Morris. Philadelphia: The Penn Publishing Co. $1.

*Home Games.* George Hapgood. Philadelphia: The Penn Publishing Co. 50 cents.

In *A Little History of Music* we find, not a book partaking of the nature of a biography, but one concerned with the development of the music itself, tracing the instruments of different ages and the varying forms of musical expression, and leaving to others the task of picturing the musicians. The book, therefore, will appeal more strongly to the musical student. The narrative is clear and the advice practical.

A fragile looking gift-book is *Little Songs for Little People*, in which Miss Sowerby treats us to her china-blue-eyed girls and boys, and in which the other Miss Sowerby gathers together some of

the familiar jingles with familiar tunes. The book is decorative and dainty. Those, however, looking for a series of Mother Goose rhymes lightly and charmingly set to music are referred to Edmond Rickett's thin volume, many of the lyrics (Ditson) having been sung by Kitty Cheatam.

One instinctively turns to anything illustrated by Charles Robinson; while he is not so successful in his full page color work, his small sketches are characterized by light touch and graceful conception. *Brownikins and Other Fancies* deserves due consideration because of its originality and because of the ease with which the playlets might be given in a school or parlor. There are not many books of plays, and teachers will find Ruth Arkwright's suggestions excellent. Constant Mackay's *Silver Thread* contains dramatizations of folk tales which have already stood the test of actual presentation by social settlements. In most of these collections the chief idea is the same as that which prompted Miss Herts to found the Children's Theater in New York City. Any play serves to train children in self-expression. Githa Sowerby, with the assistance of her sister as artist, has dramatized such stories as *The Rose and the Ring;* but the results are not as practical as the previously mentioned volume.

For parlor fun during this period of the Dickens Centenary, Guy Pertwee's *Scenes from Dickens* will be welcomed.

Mr. Morris's *College Comedies* are filled with the usual mischief to be found in high school and university, and it consists of four plays dealing with the four periods of a college man's life.

*Home Games* is a small manual, practical in scope and taking up concisely recipes for parlor fun.

## Fairy Tales

**The Princess and the Goblin.* George MacDonald. New York: H. M. Caldwell Co. $1.50

*The All Sorts of Stories Book.* Mrs. Lang. Edited by Andrew Lang. New York: Longmans, Green & Co. $1.60.

*Honey-Bee.* Anatole France. Translated by Mrs. John Lane. New York: John Lane Co. $1.50.

*The Runaway Equator.* Lilian Bell. Illustrated by Peter Newell. New York: Frederick A. Stokes Co. $1.25.

*The One-Footed Fairy and Other Stories.* Alice Brown. Boston: Houghton Mifflin Co. $1.25.

*Königskinder; or, The Royal Children.* Anna Alice Chapin. New York: Harper & Bros. $1.25.

*The Enchanted Mountain.* Eliza Orne White. Boston: Houghton Mifflin Co. $1.

*Stories Lasses.* Constance Armfield. Illustrated by Maxwell Armfield. New York: E. P. Dutton & Co. $1.50.

*Fox Fairies.* L. Frank Baum. Chicago: Reilly & Britton Co. $1.25.

*The Witch's Kitchen; or, The India Rubber Doctor.* Gerard Young. Illustrated by Willy Pogany. New York: J. Y. Crowell & Co. $2.

*Little Stories for Little People.* Pictured by Millicent Sowerby, and told by Githa Sowerby. New York: Hodder & Stoughton. $1.25.

*The Reign of Old King Cole.* Edited by J. M. Gibbon. Illustrated by Charles Robinson. New York: E. P. Dutton & Co. $1.50.

*The Reign of King Oberon.* Edited by Walter Jerrold. Illustrated by Charles Robinson. New York: E. P. Dutton & Co. $1.50.

*The Reign of King Herla.* Edited by William Canton. Illustrated by Charles Robinson. New York: E. P. Dutton & Co. $1.50.

*The Kiltartan Wonder Book.* Lady Gregory. New York: E. P. Dutton & Co. $1.50. (Irish legend. The illustrations are by Margaret Gregory, and are in crude color.)

*Edda and the Oak.* Elia W. Peattie. New York: Rand, McNally & Co. $1.25. (A story in which country richness and city poverty are contrasted, in which the green field is lauded above the comforts of a top flat.)

[Volumes starred (*) are of particular worth.]

No better introduction to *The Princess and the Goblin*—which long ago won an audience for itself—than the exquisite, kindly face of George MacDonald which adorns the wrapper. We welcome the reprint of this story, with its quaint black and white pictures, beside which the modern color plates are artificial. We felt assured that Mr. Lang would eventually run out of ideas for his variegated fairy tale books. Hence, his new volume lives up to its inconsequent name, tho children will flock to it because it is issued in the familiar and rich format, which makes it a familiar object for the Christmas season. Mr. Lang's introduction is enticing; it reveals his wife and himself as most persistent hunters in the literary field. The stories are all full of the adventurous quality, and have an element of historical truth. But we doubt whether the *Story of the Gold Beetle,* as Mrs. Lang narrates it, is as effective as *The Gold Bug,* which Poe made famous. And I believe that boys would rather meet D'Artagnan for the first time thru the original novel.

Anatole France's *Honey-Bee* should be most welcome to readers of the grown-up world, as well as to children. The text, full of subtle humor, will appeal to all lovers of the French satirist. We doubt whether, as Mrs. Lane, the translator, trusts, this dainty conception, with its love element, will take a place by the side of *Cinderella,* but we do believe that it will serve to stimulate the imagination of the little girl whom M. France found

with a book which lauded the glories of the *cephalopodic* mollusc. The illustrations aim to be greater than they are.

Peter Newell's wide-eyed people would liven any text, however imitative it might be of Lewis Carroll. It is to be regretted that Lilian Bell's *Runaway Equator* is not more delightfully funny to be in accord. Her hero is a youth chock full of geography, and equinoxes, meteors and the equator mix themselves up in his dreams. He takes a voyage with Nimbus, named after the clouds, and the two capture a trolley car, carrying it into the air with them, much to the surprise of the passengers who drop off and to the consternation of the gripman and the conductor, who remain. After many facetious adventures, Billy wakes up, with a lemon stick in his mouth—a good substitute for the Pole.

There is an element of daintiness in Alice Brown's book of fairy tales, and there will be found many ethical lessons, such as the one in *The Gradual Fairy*, which is followed by a playlet of simple scope. F. Richardson's illustrations in line are filmy and agreeable.

On its first presentation, *Königskinder* was recognized as an opera story suitable for children. This prose rendering has received the sanction of Humperdinck himself. Thruout the text musical motives are scattered. Even for grown people, it might prove an excellent guide to the opera.

Eliza Orne White's *Enchanted Mountain* carries four children thru many experiences which strengthen their characters. The High Wall Lodge, the No-work Castle and the Fare Well Palace—each has improving effect on these children, who, when they return home, see wherein they have been small about their daily duties. The story is mildly entertaining. Attractive features of *Sylvia's Travels* are the cover design and the illustrations. A woodcutter's daughter is the heroine of adventures almost as remarkable as those of *Alice in Wonderland*.

The great fault with most of these fairy tales is that they attempt to be funny, and therefore they lose much of their freshness and spontaneity. After the first Oz book Mr Baum simply varied the model set, and the consequence was that he became monotonous. Nevertheless, he was entertaining, and his children audiences demanded more and more from his prolific pen. To satisfy this demand—now that he refuses to write any more Oz books—this author takes a heroine, with an excellent old salt companion, into the briny deep, where they hobnob with the mermaids and are introduced to salt-sea wonders. These bid fair to rival the events befalling the Tin Soldier and the Scarecrow. We cannot understand why the publishers persist in such a commonplace make-up.

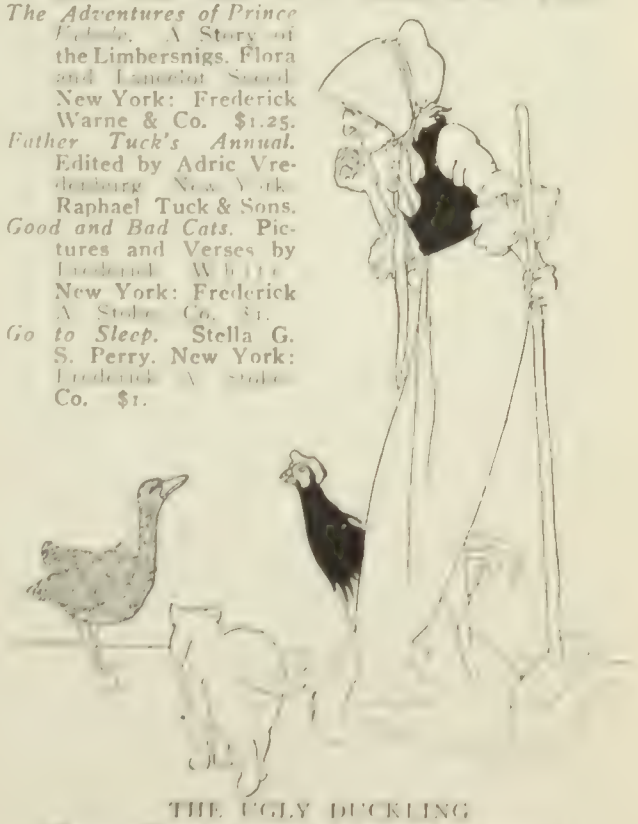
Three collections of fairy tales that will prove attractive compilations are those which are grouped under the fanciful jurisdiction of Kings Cole, Oberon and Herla. They will, in some ways, prove healthy competitors to Andrew Lang's anthologies.

## A Few Books for the Nursery

*The Pied Piper of Hamelin.* Robert Browning. Illustrated by Kate Greenaway. New York: Frederick Warne & Co.

*The Regatta in Animal Land.* Pictured by G. H. Thompson and described by Clifton Bingham. (Nister.) New York: E. P. Dutton & Co. $1.50.

*The Adventures of Benjamin and Christabel.* Pictured by Hilda Austin and written by Cyril F. Austin. (Nister.) New York: E. P. Dutton & Co. $1.50.



*The Life and Adventures of General Spudley.* A Story of a Toy Soldier. D. W. C. Fails. (Nister.) New York: E. P. Dutton & Co. $1.25.

*The Adventures of Prince Pickle.* A Story of the Limbersnigs. Flora and Lancelot Speed. New York: Frederick Warne & Co. $1.25.

*Father Tuck's Annual.* Edited by Adric Vredenburg. New York: Raphael Tuck & Sons.

*Good and Bad Cats.* Pictures and Verses by Frederick White. New York: Frederick A. Stokes Co. $1.

*Go to Sleep.* Stella G. S. Perry. New York: Frederick A. Stokes Co. $1.

THE UGLY DUCKLING
From "The Big Book of Fairies." (Caldwell)

*The So-and-So Family.* Ethel C. Brown. Introduction by Alice Farwell Brown. New York: E. P. Dutton & Co. $1.25.

**The Dutch Twins.* Lucy Fitch Perkins. Boston: Houghton Mifflin Co. $1.

[Volumes starred (*) are of particular worth.]

There is no artist more welcome to the nursery than Kate Greenaway, and this reprint of her *Pied Piper of Hamelin* gives us the hope that the publishers will rapidly put upon the market all of her gay pictures—some of them out of print for many years. The joyousness of childhood never had a better illustrator.

*The Regatta in Animal Land* is a very humorous pictorial account of boat-racing and water contests among the animals. Place these clumsy creatures in positions familiar to human beings, and the humor is all the more effective. La Fontaine after all was not so far wrong. The color plates and sketches are excellent. *The Adventures of Benjamin and Christabel* thru Alphabet-land is not very thrilling, and the pictures are more stilted and bold in color than bright in conception.

DeWitt Clinton Falls has a clever idea in his *Adventures of General Spooley,* the toy soldier cut from a tree in the forest. All youngsters, to whom soldiers —lead, wood or real—are an attraction, will find excitement of a quiet order in this picture book.

The Limbersnig adventures escape being cleverly original, tho there is interest in the fate of Kebole, who had to take Gogo's medicine to make him grow, and who for ever after had to avoid the schemes and plots of the evil-faced and black-hearted wretch. The pictures are imaginative, and the cover will attract.

*Father Tuck's Annual* contains the usual assortment of stories and verses to be found in all collections of the kind. For quite young people it fills a field supplied to older readers by the perennial "Chatterbox."

There are all kinds of felines in Mr. White's *Good and Bad Cats,* and some of the Puzzling Problems are clever. The contrast of tempers in some of the verses reminds us of the ever famous "Goops."

The *Go to Sleep* stories might also be called humdrum narratives, and the humdrum is done on purpose to put the reader to sleep. Every motion, every word value, is selected for its somnolent possibility. Here is a book that warrants to put to sleep any fretful child, and pleasant dreams are promised.

We recommend Miss Brown's *So-and-So Family* for its brightness and for its graphic and realistic manner. When the artist was nine years old, she invented this prolific family, and she pictured their doings in drawing books. These books have now been hauled from their shelves, and form the whole of the story now given to young readers. It is, therefore, something for nine-year-olders by a nine-year-older, and the grown-up who does not laugh over this book is difficult to please.

Another book we cheerfully recommend is Mrs. Perkins's *Dutch Twins,* pictured and told by her. Much of Holland, and much of child nature and much of sweetness are crammed into this nursery story, and what makes it all the more attractive is that most of the adventures befalling this tiny couple are softly sketched—so simply, indeed, that they might be easily copied by the reader, even traced over tracing paper. Here is a good bed-time treat.

## Miscellaneous

*One Thousand Books for Children.* Penrhyn W. Coussens. Chicago: A. C. McClurg & Co. $1.

**The Children of the New Forest.* Captain Marryat. Illustrated by E. Boyd Smith. New York: Henry Holt & Co. $1.35

*Stories of Shakespeare's Tragedies.* H. A. Guerber. New York: Dodd, Mead & Co. $1.25.

*Children's Stories from Shakespeare.* E. Nesbit. With an essay by the late Dr. Furnivall. London: Raphael Tuck & Sons.

**Gulliver's Travels.* Dean Swift. Illustrated by Albert E. Jackson. New York: E. P. Dutton & Co. $2.50.

*The Sunset of the Heroes: Last Adventures of the Takers of Troy.* W. M. L. Hutchinson. New York: E. P. Dutton & Co. $2.

*The Story of Parzival: The Templar.* Mary Blackwell Sterling. New York: E. P. Dutton & Co. $1.50.

*A Chevalier of Old France.* John Harrington Cox. Boston: Little, Brown & Co. $1.25.

*Stories of India's Gods and Heroes.* W. D. Munroe. New York: T. Y. Crowell & Co. $1.50.

*The High Deeds of Finn: and other Bardic Romances of Ancient Ireland.* T. W. Rolleston. New York: T. Y. Crowell & Co. $1.50.

*Stories of the Scottish Border.* Mr. and Mrs. William Platt. New York: T. Y. Crowell & Co. $1.50.

*The Children's Book of Christmas.* Compiled by J. C. Dier. New York: The Macmillan Co. $1.50.

*One Hundred Bible Stories for Children.* Robert Bird. New York: Charles Scribner's Sons. $1.50.

*The Story of the Roman People.* Eva March Tappan. Boston: Houghton Mifflin Co. $1.50.

*Stories from the New Testament for Children.* Elsa Barker. New York: Duffield & Co. $2.

*The Heart of Youth. Poems Gay and Grave.* Jeannette Gilder. Introduction by Frances Hodgson Burnett. New York: Sturgis & Walton Co. $1.25.

*Little Folks' Book of Verse.* Edited by Clifton Johnson. New York: Baker & Taylor Co. $1.

*The Listen To Me Stories.* Alicia Aspinwall. New York: E. P. Dutton & Co. $1.50. (A collection of simple tales, suitable for reading aloud.)

[Volumes starred (*) are of particular value.]

However much we may disagree with a bibliography, it is always sure to be suggestive in some directions. *One Thousand Books for Children* is not over-selective, and it is more inclusive than a library of the present would allow. It does not disdain the series; it countenances the *Little Colonel*. In other words, it is up-to-date, leaving to more conservative authorities the privilege of excluding what the average boy likes to read in these modern public school days.

The Holts are doing a very wise thing in reissuing some of the boys' old favorites, and the delicacy of E. Boyd Smith's illustrations, in which blues and yellows and reds predominate, does much to add to the attractiveness of the volumes. Captain Marryat is an author of the ancient régime; most libraries frown upon him. His stories, however, *The Children of the New Forest* among them, contain the essential romance and action.

The painstaking work of Mr. Guerber is very evident in every page of *Stories of Shakespeare's Tragedies*, but the results are lacking in spontaneity. Much rather would I have children reach an understanding of Shakespeare from the original—taking it for better or for worse—and reward the mental effort with a worthy result. It is one thing to study Shakespeare; another to enjoy him.

The general scheme and the illustrations of the Nesbit Shakespeare retold are commendable, and the young reader will enjoy Dr. Furnivall's chapter, "When Shakespeare Was a Boy." We doubt the advisability of *Cymbeline* for tiny lovers of the Bard of Avon; the other stories are fairly well interpreted, while the illustrations have a live quality that is pleasing.

*Gulliver's Travels* is always welcome, but it is surprising the manner in which publishers follow close upon each other's footsteps. There must be a constant sale for the many editions of the same things. Never a year passes without the duplication of volumes. This reissue is very attractive, but there are so many of the kind to choose from that the buyer cannot fail to reach something good in the way of edition.

The heroic souls of young readers will thrill over the *Last Adventures of the Takers of Troy*. Priam's deeds, Achilles's invincibility, the taking of Troy—all of these are treated in a narrative and in pictures that are effective. American boys do not find much time for Greek in these days of electives at college; therefore, in whatever way they obtain some knowledge of the ancient golden days may be considered a blessing.

The author of the *Story of Parzival* goes back to the manuscript of Wolfram von Eschenbach for her material, and, furthermore, she explains the meaning of the story as it applies to the present. She proceeds, in an appendix, to construct a key for Parzival, and besides supplying notes for the text, she outlines the ethical teaching of the story and other sundry matters. In spite of all this popular scholarship, the story of the Holy Grail loses nothing of its pure idealism, and it should find ready audiences. The story-teller will assuredly make use of the book.

It is the fashion to offer in English form and in simple version out-of-the-way stories which constitute either the tradition or the religion of a people. How much such stories are read is a question. India's gods and heroes are not as important for culture as the stories of the Greek gods. Notwithstanding, Mr. Munro's tales are entertaining. The sources are the Ramayana and the Mahabharata. In its handsome form and rich cover design this volume will find more ready readers among older people. There is much in it explanatory of Indian worship and caste.

Every country has its hero tales, and Roland is as necessary to the ideal France as Arthur is to Great Britain. Professor Cox has very commendably adapted from the old French text the *Chanson de Roland*, in which valor and treachery are rampant. In his preface the author explains how the legend grew thru exaggeration from actual fact.

In scope, the *Stories of the Scottish Border*, based on distinctive ballads, will furnish many an absorbing hour to the imaginative reader. Not only that, but a book of this character will aid the librarian in reaching the true spirit of the originals. The same is to be said of *The High Deeds of Finn*. The material is explained in ample prefaces, and pronouncing indexes are included.

JACK AND THE BEANSTALK
From "A Child's Book of Stories" (Duffield)

It is rarely that we have sent to us a Christmasy-looking volume. People seem nowadays to have a prejudice against the jovial countenance of Santa Claus. But not so in the *Children's Book of Christmas,* filled with selections and poems and words of cheer about the Yule-tide season. The text only reminds us that everywhere peace and goodwill reign supreme despite the efforts to crush Kris Kringle and to turn his reindeer into motor car or aeroplane. It were well to ponder the editorial from the *Sun* anent whether there is a Santa Claus, and to read about the manner in which old Christmases were kept.

The usual assortment of *Bible Stories from the Old Testament* have been issued by the Scribners, and the format and the illustrations are old-fashioned. The book aims to reach very young folk, who are too immature to understand the Bible. The stories are suitably told.

But that the Bible may be retold with some spirit is well illustrated in Mrs. Elsa Barker's narrative of the New Testament, written with great feeling and with surprising originality. It is a pleasure to commend her book.

A useful as well as an entertaining gift book is Eva March Tappan's *Story of the Roman People.* In these republican days there is much to learn from a record such as this. Dr. Tappan is reliable as well as agreeable in style. The illustrations are copious.

Of anthologies there is no end. Miss Gilder has done a conscientious piece of work, perhaps more thoro than any of her competitors this year. Mr. Johnson destroys our belief in him by confessing that where it has been necessary, he has edited for the sake of simplicity and interest. But as we have said before, it is an easy matter to gather poems from a rich harvest; it is not so easy to be an anthologist. Yet poetry is ever popular among the young, so that there is always a market for this class of publication.

## Historical Stories

*Scouting for Light Horse Harry.* John Preston True. Boston. Little, Brown & Co. $1.50.

*Tom Strong: Washington's Scout.* Alfred Bishop Mason. New York: Henry Holt & Co. $1.25.

*The Champion of the Regiment.* Everett T. Tomlinson. Boston: Houghton Mifflin Co. $1.50.

*Rocky Fork.* Mary Hartwell Catherwood. Boston: Lothrop, Lee & Shepard Co. $1.25. (The reprint of a story which deals with a rural school of the Middle West at a time just before the Civil War.)

The mixture of history and fiction is always an effective way of reaching the juvenile interest. Since the death of Henty, England has not figured so much in the stories issued by the American publisher. There is only one that has come to us this year with a foreign atmosphere. The others are strictly local and patriotic.

Evaleen Stein has been known before for her historical work, and she deals now with Raoul, who lived in the time of the French King Charles VI. From the moment the young hero is stolen by a band of robbers, the story moves with spirit, a falcon proving no mean aid to the captive, and an uncle proving a very satisfactory character.

Peggy Owen figures for the third time in a story of the Revolution. She is a Quaker, and daughter to a man who has defied the principles of his sect for the sake of patriotism. Peggy now turns toward Virginia to nurse an English cousin, and her adventures not only make her a captive, but bring her in touch with various historical personages. The author is Lucy Madison.

*The Young Continentals at Trenton* is the fourth in a series. To any one who would like to know who started Washington on his famous trip across the Delaware, this bit of fiction will prove entertaining. The spirit of such a story is of the right sort and there is always a streak of the feminine element to suggest romance. Especially to be praised are the illustrations by Ralph L. Boyer. The wrapper cover is better than the inner cover design.

Eliza Pollard's *New England Maid* is, strange to say, an importation; that is why the sub-title reads, *A Tale of the American Rebellion.* From the standpoint of historical perspective, the book has interest. The heroine is a Puritan maid whose brother is a treacherous Governor of Philadelphia, intent on gain. Major André figures in the scenes.

John Preston True is a seasoned writer for children. This new story of

In *Scouting for Light Horse Harry*, is the fourth in a series dealing with the Revolution. Our fictional heroes rise rapidly in the records of these past days, and young Thomas Ludlow advances from Bunker Hill experience to command of scouts at grave moments. There is small doubt that the juvenile reader will gain an excellent knowledge of historical fact by means of such literature.

In *Tom Strong* Alfred B. Mason has written a history of the Revolution; in fact, despite the dialog and in spite of the adventurous spirit of the story, well typified in the cover design, the illustrations and the detailed maps and diagrams scattered thru the book only serve to emphasize this other impression. We see no reason why such stories should not prove useful in a school. Our only contention is that real history is thus being discounted; the textbook only cares for date and name, not for cause and effect.

Mr. Tomlinson is a most successful writer of this type of book. Without him the season's output would seem strange indeed! *The Champion of the Regiment* is the usual variation of incident befalling the hero during a period, this year confined to the siege of Yorktown.

## A Few Specials

It is almost impossible for the present reviewer to have a division in an article like this, devoted to distinctive fiction, since there is no book which deserves absolute condemnation. In no department is he more at a loss for a critical perspective since there are elements of worth in every story he has examined. There is no one writing with any art these days; the fiction is all commercialized in its form—made to sell largely, to cater to special tastes. We have no right to place Arthur Stanwood Pier's *Jester of St. Timothy* (Houghton; $1 net) above Barbour's descriptions of college and school sport. More reason have we to emphasize the excellence of Hayden Carruth's *Track's End* (Harper; $1), a tale original in its idea. For therein a boy is left for the winter period the sole inhabitant of a town, and his adventures are many and varied and entertaining.

There is small doubt that any young reader who has heretofore become acquainted with James Otis's "Toby Tyler" will eagerly take hold of *Old Ben* (Harper; $1.25), which continues some of the circus experiences already made famous. Stewart Edward White, well known in other fields, now essays a book in the realm of juvenile fiction (Doubleday; $1.20). The book is illustrated by that very excellent artist of boy life, Worth Brehm.

As a record rather than as a piece of fiction, comes Miles Abernathy's account of the *Ride of the Abernathy Boys* (Doubleday; $1.20). The daring venture of these brothers will thrill many a boy, but we doubt whether there are many parents who would allow their sons to risk such a trip, even for a sight of Colonel Roosevelt.

As a notable reprint we recommend George MacDonald's *Ranald Bannerman's Boyhood* (Caldwell; $1.50), the kind of story which will find readers among the older as well as among the younger members of a household. Together with the old-fashioned woodcuts, there are included some very poetic full page color drawings.

## Pioneer Stories, and Others

*With the Flag at Panama: A Story of the Building of the Panama Canal.* Hugh C. Weir. Boston: W. A. Wilde Co. $1.50.

*The Hero of Panama. A Tale of the Great Canal.* Captain F. S. Brereton. New York: H. M. Caldwell Co. $1.25.

*Chased Across the Pampas; or, American Boys in Argentina.* Edward Stratemeyer. Boston: Lothrop, Lee & Shepard Co. $1.25.

(The first of these stories is most of it based on fact, and the text aims to give to the American boy reader some conception of the engineering feat now nearing completion. The author claims to have been in touch with the activity in Panama. Brereton's story is an importation of the Henty type. In the South American country, Stratemeyer finds ample opportunity for excitement in the sixth story of his Pan-American series. Fire, cattle stampeding, and encounters with wild beasts supply sufficient action to the conventional tale which Mr. Stratemeyer knows so well how to write.)

*The Quest of the Four.* Joseph A. Altsheler. New York: D. Appleton & Co. $1.50. (A story of the Comanches and Buena Vista. Herein is told of the strange meeting of four persons, each intent on some mysterious quest; all of them are excellent friends during exciting experiences.)

*The Scouts of the Valley.* Joseph A. Altsheler. New York: D. Appleton & Co. $1.50. (This is the fifth story in a series. Boys interested in Indians will find this pioneer tale of Wyoming and the Chemung entertaining.)

*The Cave of Gold.* Everett McNeil. New York: E. P. Dutton Co. $1.50. (This is a story of the California of '49; it contains many stirring events of gold camp life. The characters of a previous story, "Fighting with Fremont," figure in it.)

*The Yellow Magnet* and *The Jaws of Death.* Both by Edwin J. Houston. Philadelphia: The Griffith & Rowland Press. $1.25 each. (These vo

umes comprise the third and fourth of a series known as "The Young Mineralogist." In the former, there is an attempt to convey to the young reader some idea of the many forms in which gold is found; in the latter, the scenes are laid in and around the cañons of the Colorado. Professor Houston received his Ph.D at Princeton.)

*Four Boys in the Yosemite.* Everett T. Tomlinson. Boston: Lothrop, Lee & Shepard Co. $1.50. (The author's object seems to be to arouse an enthusiasm for the beauties of America, thereby encouraging travel in this country. The heroes have certain adventures consequent upon mountain climbing.)

*The Young Lion Hunter.* Zane Grey. New York: Harper & Bros. $1.25. (The Grand Cañon is the scene for these adventures. It is not an easy matter lassoing mountain lions.)

*The Young Alaskans on the Trail.* Emerson Hough. New York: Harper & Bros. $1.25. (The second member of a series On a summer vacation, four boys follow the trail of the route taken by the old trans-continental explorers. Many lessons in camp and in wild life "craft" are learned.)

*The Forest Castaways.* Frederick Orin Bartlett. New York: The Century Co. $1.50. (An escaped convict, unjustly sentenced, befriends two boys lost in the Maine woods during a winter holiday. Our heroes' rough comrade proves an Admirable Crichton where forest lore and wisdom are concerned, and he serves them in great need, especially when a wild cat attacks one of them.)

*The Boy Scouts of Birch-Bark Island.* Rupert Sargent Holland. Philadelphia: J. B. Lippincott Co. $1.25. (This book is dedicated to Dan Beard, pioneer Scout. It is a story of outdoor life, with maroon adventures and healthy contests.)

*Great Bear Island.* Arthur E. McFarlane. Boston: Little, Brown & Co. $1.50. (The publishers' assurance that this book is packed with action will satisfy the general reader. The author has already proven himself a storyteller of no mean worth in his "Redney McGaw." This story originally appeared in "The Youth's Companion." The scenes are largely placed in a lumber and logging camp.)

*The Scout of Pea Ridge.* Byron A. Dunn. (The Young Missourians Series.) Chicago: A. C. McClurg & Co. $1.25

*What Happened at Quasi.* The Story of a Carolina Cruise. George Cary Eggleston. Boston: Lothrop, Lee & Shepard Co. $1.50.

*The Young Timber-Cruisers; or, Fighting the Spruce Pirates.* Hugh Pendexter. Boston: Small, Maynard & Co. $1.25. (The first of a Camp and Trail series.)

*Pioneer of the Last Frontier.* Eric M. Dean. New York: T. Y. Crowell & Co. $1.25

## Stories of College Life for Boys

They are all the same—these experiences of college days, and the cover designs give the themes away. In fact, the authors of this type of literature content themselves with lauding a certain sport, and entering into the details so graphically that the boy expert will be interested. The writing is usually satisfactory in these books and the spirit healthy and democratic. We do not believe that any of them are exceptional or sufficiently original to stand apart from the rest. They are to be taken as faithful reproductions of the spirit now manifest in most of our schools—a spirit of manliness and of honest enthusiasm. We can only epitomize the best of the class

*Team-Mates.* Ralph Henry Barbour. New York: The Century Co. $1.50. As the publishers say, "What would a story of Mr. Barbour's be like if it did not glorify football!"

*Old Ryerson.* Walter Camp. New York: D. Appleton & Co. $1.50. And we might add, "What would Mr. Camp's worship of outdoor sport be without Yale as a background!"

*Finkler's Field.* Ralph Henry Barbour. New York: D. Appleton & Co. $1.25. Mr. Barbour, however, is just as happy on the diamond. The cover design of this book is a measure of the author's enthusiasm.

*The Last Lap.* Alden Arthur Knipe. New York: Harper & Bros. $1.25. A mixture of hockey and the track.

*On the Cinder Path.* Arthur Duffey. Boston: Lothrop, Lee & Shepard Co. $1.25. This story is written by a champion sprinter. The school described, however disguised, is a real one.

*The Stroke Oar.* Ralph D. Paine. New York: Charles Scribner's Sons. $1.50. The story of a shanghaied stroke who, after various adventures, wins his place in the great race.

*Larry Burke, Sophomore.* Frank I. Odell. Boston: Lothrop, Lee & Shepard Co. $1.25. The second of a series. The illustrations and the cover design proclaim the action.

*Dave Porter and His Rivals.* Edward Stratemeyer. Boston: Lothrop, Lee & Shepard Co. $1.25. The seventh in a series. In this story, Dave meets with a gang who take the upper hand for a while, only to meet defeat. Of course Dave soon finds himself in power again.

*A Graduate Coach.* T. Truxton Hare. Philadelphia: Penn Publishing Co. $1.25. The hero is in the law school, having figured in four other stories. Here is a tale of plotting, wherein the coach finds enemies, but eventually wins out.

*The Captain of the S. I. G.'s.* Etta Anthony Baker. Boston: Little, Brown & Co. $1.50. The first of a series dealing with the Staten Island Giants, an organization for the "preservation" of football and other sports.

*Winning the Junior Cup.* Norman Brainerd. Boston: Lothrop, Lee & Shepard Co. $1.25

*Freshman Dorn, Pitcher.* Leslie W. Quirk. New York: The Century Co. $1.50.

*Sandy Sawyer, Sophomore.* Ralph D. Paine. New York: Charles Scribner's Sons. $1.50.

*The Pecks in Camp.* A. T. Dudley. Boston: Lothrop, Lee & Shepard Co. $1.25. The eighth in the Phillips-Exeter series.

*The Likable Chap.* Henry McHarg Davenport. New York: Sturgis & Walton Co. $1.20. A story of Prep. school life.

*For Yardley.* Ralph Henry Barbour. New York: D. Appleton & Co. $1.50.

## Newspaper Timeliness and Boys' Fiction

*Roger Paulding, Apprentice Seaman.* Commander Edward L. Beach, U.S.N. Philadelphia: The Penn Publishing Co. $1.20. Being in the service, the author knows something of the Navy. His object in this series is to show how a man may rise to high rank thru personal ability.

*A West Point Lieutenant.* Capt. Paul B. Malone, U.S.A. Philadelphia: The Penn Publishing Co. $1.25. The fifth of a series, wherein the hero finds fraud in a proposed Government purchase of supplies.

*U. S. Midshipman in Japan.* Lieut. Com. Yates Stirling, Jr., U.S.N. Philadelphia: The Penn Publishing Co. $1.25. The fourth of a series; in this there is an effort made to push the United States and Japan into a war over China.

*Ensign Ralph Osborn.* Commander Edward L. Beach, U.S.N. Boston: W. A. Wilde Co. $1.50. The engineer room of a battleship figures prominently in this story.

*Captain Polly of Annapolis.* Gabrielle E. Jackson. New York: E. P. Dutton & Co. $1.50. We mention this girl's story here to emphasize that the feminine element is as interested in the Navy as boys, tho not in the same manner.

*Contraband Tommy. A Tale of the Dreadnought Sea.* Charles Gleig. London: Jack

*A Captain at Fifteen.* Gilbert Payson Coleman. New York: D. Appleton & Co. $1.50. A story which does not do the rights, in fact during 17-1

*The Wireless Message.* Ralph D. Paine. New York: Charles Scribner's Sons. $1.25

*The Keepsake at Silver Fox Farm.* James Otis. New York: T. Y. Crowell & Co. $1.50. That farm is quite remarkable—everything of the latest style comes to it. Last season the book dealt with the wireless station. Now that we have received a message from Marconi, stationed in Italy, last year's story will have to be revised. In fact, every modification of invention figures in juvenile fiction.

*Young Cruisers of the Sky.* F. Lovell Combs. New York: The Century Company. $1.50. Balloon adventures.

*Two Boys in a Gyrocar.* Kenneth Kenneth Brown. Boston: Houghton Mifflin Co. $1.20. The heroes invent a two-wheeled motor car and enter a world-famed race.

## Some Fiction for Girls

We have before called attention to the minuteness of feeling made manifest in books for girls—an element more often met with here than in books for boys. And there are a number of writers in this field who compare favorably with Louisa May Alcott. Examining the output for this season you will also find that the titles for the girls' books are more attractive and less likely to give away the plot than the boys' fiction.

We have already mentioned Mrs. Burnett's *Secret Garden* (Stokes; $1.35 net) as being of any age appeal and for any sex; we have elsewhere praised Mrs. Wiggin's *Mother Carey's Chickens* (Houghton; $1.25 net) for its wholesome atmosphere and home spirit. We have now but to mention a few of the stories not so distinctively of the "series" class as to be already familiar to the readers of last year's books:

*Paramount Girls in School and Camp.* Etta Anthony Baker. Boston: Little, Brown & Co. $1.50. This happens to be of the "series" class, but the story is worthy in itself as a gay record of school life.

*Strawberry Acres.* Grace S. Richmond. Garden City: Doubleday, Page & Co. $1.20. A "flat" family decides to move to the country.

*Just Patty.* Jean Webster. New York: The Century Co. $1.20. A sparkling story with not much substance, but just full of humor and innocent pranks. This story is laid at St. Ursula's, as is also

*Carey of St. Ursula's.* Jane Brewster Reid. New York: The Baker & Taylor Co. $1.25.

*Six Girls and Betty.* Marion Ames Taggart. Boston: W. A. Wilde Co. $1.50. The author knows how to depict her youthful characters, tho at times she is careless—the haste no doubt due to overwork.

*When Margaret Was a Freshman.* Elizabeth H. Hunt. New York: Moffat, Yard & Co. $1.25.

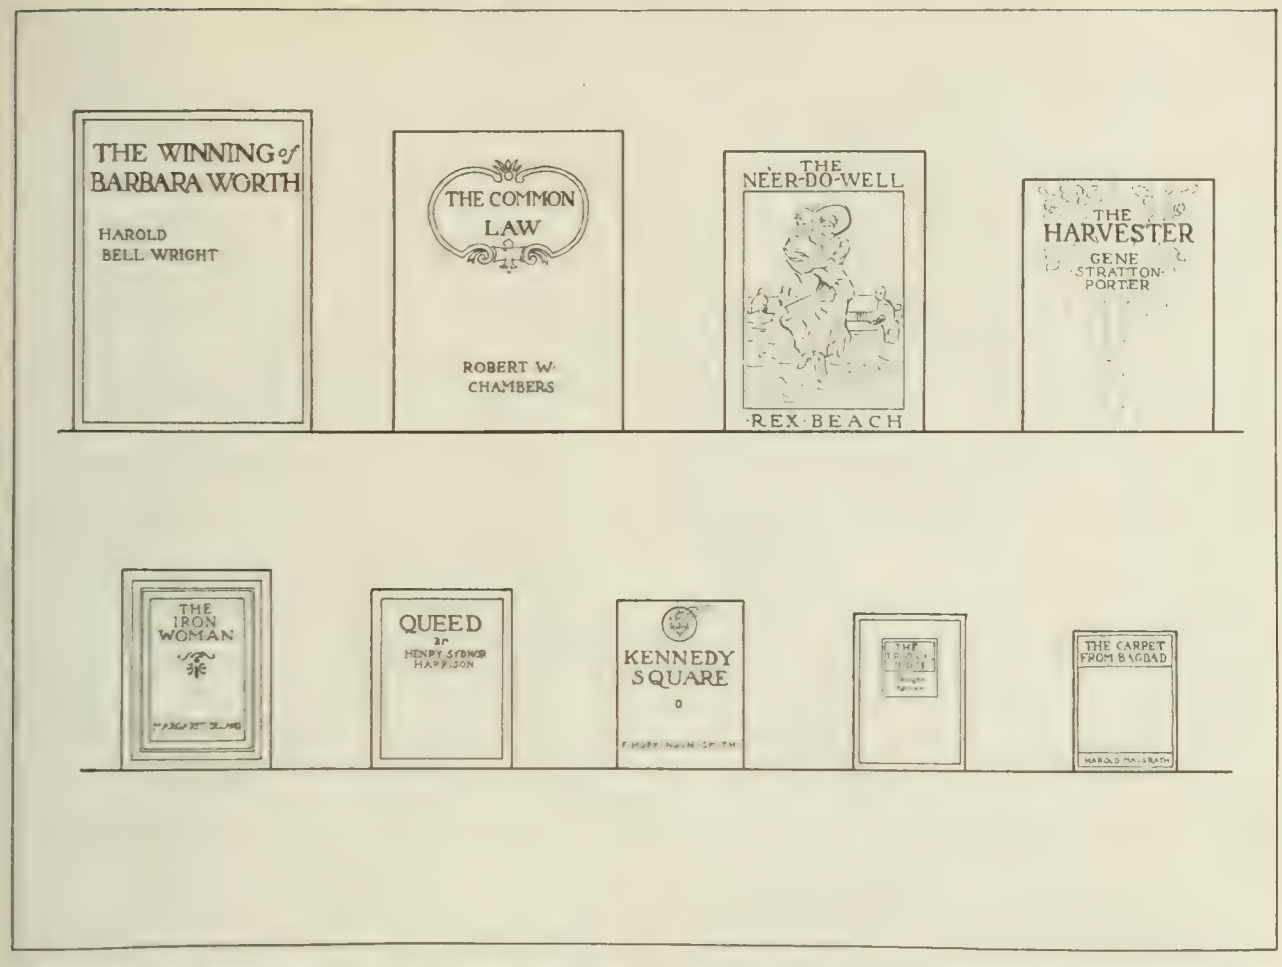
*Joan of Rainbow Springs.* Frances Marian Mitchell. Boston: Lothrop, Lee & Shepard Co. $1.35. A juvenile novel for older girls, in which adventure and bravery figure.

*Friends in the End.* Beulah Marie Dix. New York: Henry Holt & Co. $1.25.

*Janey.* Inez Haynes Gillmore. New York: Henry Holt & Co. $1.25. The title page is rather forbidding in its suggestion of the scope of the book.

*Harmony Hall.* Marion Hill. Boston: Small, Maynard & Co. $1.10.

THE INDEPENDENT regrets that space will not allow an extensive *résumé* of the fiction which has been received. We strongly advise all prospective buyers to examine all books before purchasing them. In fact, a gift book should not be presented merely on the recommendation of its physical appearance. Yet we have to confess that even haphazard purchase of the books that have been sent to our desk would not lead to bad results. This is to the credit of the American publisher.



NEW YORK CITY.

FROM "THE PRINCESS KALLISTO" (HARPER'S)

# The Best Sellers

BY WILLIAM B. BAILEY, Ph.D.
ASSISTANT PROFESSOR OF POLITICAL ECONOMY IN YALE UNIVERSITY.

IN *The Bookman* for November is given a list of the best selling fiction in thirty-seven cities in this country for the month of October. In our chart are reproduced the cover designs of the nine novels which show the largest sales during this month, and these are drawn on such a scale that the area of the covers varies according to the popularity of the novels. A novel which was in the lead in any city was given a rating of ten points, the second on the list in any city eight points, the one third received even points, and so forth. The sum of the credits gave magnitudes which have been reproduced in the chart.

Over a million copies of these novels have already been printed, and over five hundred tons of paper have been required for the different editions. If these novels were placed in a bookcase four tiers high, this piece of furniture would need to be over seven miles in length to accommodate these books, or if the same volumes were placed end to end, they would go farther than from New York to Philadelphia.

Some idea of the magnitude of the book publishing business in this country may be gained from the fact that in 1910 there were 13,470 books published, and 9,209 of these were by American authors. The classes of literature in which more than 500 books were published in this country during 1910 are as follows:

| | |
|---|---|
| Literature and collected works | 1,352 |
| Fiction | 1,303 |
| Juvenile | 935 |
| Theology | 804 |
| Political and social science | 748 |
| Poetry and drama | 721 |
| Useful arts | 721 |
| Physical and mathematical science | 644 |
| Biography | 631 |
| Law | 620 |
| Description and travel | 544 |
| History | 526 |
| Education | 504 |

If the adult population of the United States and Europe worked ten hours a day with the processes in use before the discovery of movable type, they could not accomplish the work done by the printing presses of this country alone.

NEW HAVEN, CONN.

# A Book List for a Small Library

BY EDWARD PRIME-STEVENSON

[It seems to us that a book list made by an individual has, in its personal character, more interest than a collaborated list, however admirable that may be. The present suggestions for a library are made by a long-time contributor to THE INDEPENDENT, equally well known as journalist, traveler, linguist and lecturer. EDITOR.]

THE literary outline here offered is drawn on lines of general information *with* entertainment. As a rule, the household bookcases and the shelves of even a good-sized town-library must follow that model. Hence I do not include much distinctively serious or specialistic literature, even if within the bounds of belles-lettres. Again, several branches of lighter literature can be represented only sparingly—such as biography, social history, travel, the drama, verse and so on; lest the list enlarge to many hundreds of books instead of a very few. A limited group of reference books is, however, given; for tho such are not to be considered as "reading," their casual consultation is often wished by a member of a family, a subscriber to a village-library, or an hotel-guest. Hence a few handbooks of a popular kind are always timely. Specialistic works of other kinds are not available in such a small collection.

*Fiction* is made an important element; for two-thirds of our reading has been, is and always will be for that sort of pleasure. The great matter is its choice. Each work of the fiction I select here follows, as far as possible, certain strict rules, viz.:

1. It must be either a classic, of which one should not be ignorant, a work always readable in its field; or,

2. It must be so standard in its class that re-reading it should not come amiss;

3. It must *represent* its author clearly;

4. It must have no social or ethical quality that would make it inadmissible to adults of moral discernment and good sense, in a public library, when its literary value and acceptance be considered;

5. Inasmuch as in so small a library the full series of works from one or another author who is prolific and highly esteemed cannot be included, lest space be exceeded, the choice here made is of only such author's "best" book, or of a few of his "best" books. Naturally, this choice can be often questioned or even rejected, but in most cases I think it will be found entirely defensible.

Incidentally occur many books for the young—for the intelligent lad or girl, yet in school. Literature for adults has no greater masterpieces than are those that always will appeal also to intelligent youth.

The matter of *translations* from the French, German, Italian, Spanish, Magyar, Russian, Polish and other languages, as of Latin and Greek authors, is another troublesome element, in an English library; as qualities so differ. In this list, the best English version, older or newer, is aimed at, even if not the best-known one. It must always be remembered as to verse (lyric or dramatic), that, except as to German and Dutch writers, no English translations, really satisfactory in conveying the art, style, flow and beauty of poets or poetical dramatists, ever have been made nor ever can be made. It is absolutely impossible to convey thru any English the real Dante, the real Calderon, Corneille, Racine, Molière, Carducci, Hugo, Verlaine, and so on. Their phonetic beauty, rhyme, measure, can never be transferred, no matter how pretentious or capable the translator. In prose it is otherwise. A small selection of standard works in fiction in their originals is added.

Generally speaking, I have selected here what may be called "the world's best five hundred books" in most categories—those that all educated and intelligent men and women know, or know of, should know or should know of, and should find ever enjoyable or valuable or both—the books accepted by the criticism and affection of generations. In such a choice, I have—necessarily—drawn much less on strictly *contempo-*

*rary* authors, those still producing—than on those men and women who are in literature—as Whitman's phrase puts it—"spirits whose work is done." In fact, in making such a list one of the wisest limitations is the rule to omit as far as possible all authors "still living and writing"—no matter how high their esteem. Vogue, too, has little or nothing to do, helpfully, with literature, nowadays at least. In these years, when almost every single form of literature is in a state of over-production, we are, like the wife of Alah-ed-Deen, in daily danger of changing our valuable old lamps for glittering new ones, far less of worth—wares of which one may say truthfully that they have indeed no genius whatever hanging about them. In the rush of inconsiderate publishers, to whom to make and to sell books is a mere business, and in our realizing the doubtful trustworthiness of what passes too largely for literary criticism and guidance, especially by overhurried, overworked—often overenthusiastic and underlearned reviewers—we may quite wisely say to our bookcases—*"Place aux grands morts!"*

A Few Books of Common Reference

A good dictionary of the English language—one not too voluminous, but adequate for consultation by "the average reader," letter-writer, etc., as to spellings and definitions, and not in too fine print. A good French-English and English-French dictionary; not in too small print. A good English-German and German-English dictionary—of similar aspects. A good Latin-English and English-Latin dictionary. A good geographical atlas. A good astronomical handbook (with *clear* star-maps) in atlas-shape. A good general encyclopedia. A good general work on botany. Bartlett's "Familiar Quotations." A small group of books on natural science, outdoor knowledge, etc. It also will worth adding, begun, say, with White's "Selborne." As many smaller, annual, etc., handbooks of reference as can be conveniently added will not be amiss.

History

The history of England, France, Italy, Germany and United States all in the "Stories of the Nations" series. Green, "A Short History of the English People"; Lecky, "A History of European Morals"; Geoffrey of Monmouth; Froissart; MacCarthy, "A Short History of Our Own Times"; Smith, "History of Greece" (Students' Series), "Rome" (Student Series); Gibbon, "The Decline and Fall of the Roman Empire" (any good, cheap edition); Dill, "Roman Social Life from Augustus to Nero"; Ferrari, "The Grandeur and Decadence of the Roman Empire"; Prescott, "The Conquest of Mexico," "Ferdinand and Isabella"; Taine, "The Old Régime" (if possible the other volumes of Taine as to the causes and beginnings of the French Revolution); G. Lenôtre, "A Conspirator During the Terror" (Baron de Batz), "The Tribunal of Terror," "Old Houses and Old Papers"—being the recent English translations of the invaluable series of books as to the French Revolution by this high authority and delightful writer—some other books by whom will be mentioned; Parkman, "The Jesuits in North America," "The Conspiracy of Pontiac," "The Discovery of the Great West" (these three are selected representatively); Burckhardt, "The Italian Renaissance"; Oliphant, "The Makers of Florence," "The Makers of Venice"; De Joinville, "The History of the Crusades"; Motley, "The Rise of the Dutch Republic"; McMaster, "A History of the People of the United States"; Masson, some of the authoritative studies of Napoleon I and of his epoch, by this eminent French specialist and charming writer.

Biography (modern epochs).

(See also later, "Greek and Latin Classical Authors"—under which occur Plutarch, Xenophon, Suetonius, etc.)

Vasari, "Lives of the Painters" (the newest and fullest translation with notes, is preferable. Otherwise that in the "Bohn Library" Series is to be selected); Saint Simon, "Memoirs"; Benvenuto Cellini, "Autobiography" (Symonds's translation); Benjamin Franklin, "Autobiography"; Boswell, "The Life of Johnson"; Pepys, "Diary" (Wheatley edition); Evelyn, "Diary" (Wheatley edition); G. and P. Wharton, "The Wits and Beaux of Society"; Strickland, "Lives of the Queens of England"; Sparks, "The Life of Washington"; Pardoe, Works; Barine, "La Grande Mademoiselle"; G. Lenôtre, "The Captivity and Death of Marie-Antoinette"; "The Daughter of Marie-Antoinette," "Old Houses and Old Papers" (Series), "Revolutionary Paris" (during the Revolution, with sketches of Marat, Danton, Robespierre, Maillard, Charlotte Corday, etc., from the newest considerations and sources); Scott, "Journal"; Lockhart, "The Life of Scott"; Moore, "The Life of Byron"; Lady Burton, "The Life of Sir Richard Burton"; Rosebery, "The Last Phase" (Napoleon I); Forster, "The Life of Dickens"; Madame Roland, "Autobiography"; Schindler, "Beethoven"; Comtesse de Boigne, "Memoirs"; Duchesse de Dino, "Memoirs"; Princess Belgiojoso, "Memoirs"; Greville, "Memoirs"; Crabbe Robinson, "Diary"; Smiles, "Self-Help."

It is hardly needful to point out how largely this list might be lengthened, nor how difficult the question of rejections or inclusions, where so small a number of books is to be admitted.

Classic Latin and Greek Authors

Cicero—a volume containing his most works (the Essays), also his "Orations"; Plutarch, "Lives of Illustrious Men" (the edition

in the Bohn Library); Æschylus, Headlam's translation, Bohn Library; Sophocles, Coleridge translation, Bohn Library; Euripides, none of the versified translations but a good, recent one in prose; Homer, "The Iliad," "The Odyssey"; Xenophon, "The Anabasis"; Plato (unless Jowett is selected as a translator, then the first volume of the series of versions in the Bohn Library; Tacitus; Seneca, "Tragedies" (Bradford translation only); Lucretius; Suetonius; Herodotus; Lucian, "Dialogues of the Dead."

Various authors of high importance have been omitted in the foregoing list, lest it be too long.

### Travel and Discovery

Beginning with such names as Marco Polo, Captain Cook, Burton, Du Chaillu, Livingstone, Stanley, Speke, Nansen, Lane, etc., this category can be extended only too easily, with material of the highest interest and value. Under the same list can be added whatever in the way of books as to special places—cities, small districts, etc.—studies of social life—may be practicable, that are not more distinctively historical. There is wisdom in adding for reference a selection of the invaluable Baedeker's "Handbooks"—always a mine of careful data as to localities.

### Religious and Philosophical Works.

"The Bible" (Oxford Revised Version); a good Biblical Concordance; a good (recent) dictionary of the Bible; The Koran (either the Sale or Palmer version); "The Dhammapáda" (Max Müller version); Marcus Aurelius, "Thoughts" (Long's translation); Epictetus; St. Augustine, "Confessions"; St. Francis of Assisi, "Little Flowers"; Thomas-à-Kempis, "Of the Imitation of Christ"; Bunyan, "The Pilgrim's Progress"; Taylor, "Holy Living"; Keble, "The Christian Year"; Farrar, "The Life of Christ," "Early Days of Christianity"; Pascal; Spurgeon, representative sermons of (one volume); Beecher, representative sermons of (one volume); Robertson (of Brighton), representative sermons of (one volume); Spinoza, a good representation, in one volume, if possible, of this great ethical philosopher. There are several new English versions, selections, etc.

### Essayists—Special Studies—Familiar Letters, Reminiscences, Arts, Etc.

Bacon; Montaigne; Johnson; Steele; Addison; Lamb; Hazlitt; Macaulay; Thackeray; Irving; Emerson; Carlyle, "Sartor Resartus," "Heroes," etc.; Thoreau; Warner, "My Summer in a Garden"; Jules Lemaître, "Racine," "Fénelon"; Donnay, "Molière"; Byron, "Letters" (selected); Sévigné, "Letters" (selected); Lady Mary Montagu, "Letters"; Amiel, "Journal"; Miss Burney, "Diary"; Bellaigue, "Verdi"; Newman, "Wagner," "Gluck"; Huneker, "Liszt"; Hadow, "Studies in Modern Music"; Frederic Harrison, "Essays."

### Poets, Dramatists, Etc.

(See also—earlier—Classic Authors.)

Shakespeare, preferably an edition of good, clear type in some three or four classified volumes. The best one-volume edition is in the recent "Cambridge Series"—Boston: Houghton Mifflin Co.; Beaumont and Fletcher, selections from, in the Bohn Library; Dante, "The Divine Comedy" (Longfellow version); Goethe, "Faust" (Bayard Taylor's version); Milton; Pope (the recent "Cambridge Edition," from Boston: Houghton Mifflin Co., is the best in its form); Scott; Wordsworth; Byron; Tennyson; Robert Browning, the selection of his poems, in two volumes (Macmillan), is adequate for general use, "The Ring and the Book"; Mrs. Browning; "The Legendary Ballads of England, Ireland and Scotland" (Routledge edition); "The Ingoldsby Legends"; Arnold, "The Light of Asia"; Whitman, "Leaves of Grass" (a selected portion only); several of the Elizabethan dramatists—Marlowe, Webster, etc., as now obtainable in abridged and well-selected editions; Sheridan, plays; Wilde, plays; Ibsen, plays; Corneille, works (in the French, and also a prose translation); Molière, works (in the French, but also preferably in the old Bohn Library edition, probably the most useful translation); Racine, works (prose translation only, but also in the original French); Schiller, dramatic works; Metastasio, in the Italian, and with a standard English version; Alfieri, same adjustment, prose version only.

### Fiction.

Malory, "Mort d'Arthur," "The Mabinogeon" (Guest translation); "The Thousand and One Nights" (in at least the much-abridged version by Lane, but far preferably in that made by Lady Isabel Burton from her husband's famous and definitive translation. The latter is not available for a small public library (even when procurable), any more than is the translation by Payn, etc.); Antar; Boccaccio, selected tales from the "Decamerone"; Defoe, "Robinson Crusoe," "History of the Plague in London"; Fielding, "Tom Jones"; Smollett, "Roderick Random"; Cervantes, "Don Quixote" (Ormsby version only); Le Sage, "Gil Blas"; Galt, "Chronicles of the Parish"; Scott, works; Dickens, works; Thackeray, works; Poe, selected tales; Pushkin, selected tales; Lytton-Bulwer, "Harold," "Last Days of Pompeii"; Disraeli, "The Young Duke," "Lothair"; Fouqué, "Undine" and "Sintram"; Stevenson, "Treasure Island," "Dr. Jekyll and Mr. Hyde"; Goethe, "Wilhelm Meister's Apprenticeship"; Manzoni, "The Betrothed" ("I Promessi Sposi"); Tolstoy, "Anna Karenina," "War and Peace," "Sebastopol"; Cooper, The "Leatherstocking" series, "The Water Witch"; Mrs. Stowe, "Uncle Tom's Cabin"; Goldsmith, "The Vicar of Wakefield"; Beckford, "Vathek" (new and complete edition only); Hauff, tales ("The Caravan," etc., Bohn Library edition); Irving, "The Sketch Book," "The Alhambra," "Knickerbocker's History of New York"; Miss Edgeworth, "The Absentee," "Patronage," "Helen," "Castle Rackrent"; Jane Austen, "Pride and Prejudice," "Sense and Sensibility"; Lady Morgan, "The Beguine"; Charlotte Brontë, "Jane Eyre," "Shirley"; Maryatt, "Midshipman Easy"; Lover, "Handy Andy"; Hawthorne, "The Marble Faun"; Balzac,

"Père Goriot," "Eugenie Grandet," "Cousine Bette," "The Wild Ass's Skin," etc; Burney, "Evelina"; Gaskell, "Cranford," "North and South," "Sylvia's Lovers"; Kingsley, "Hypatia"; Warner, "The Wide, Wide World"; Howells, "The Rise of Silas Lapham"; Henry James, "Daisy Miller," "The American"; Dana, "Two Years Before the Mast"; Dana (R. H.), "Paul Felton, and Other Tales"; Borrow, "Lavengro," "The Romany Rye"; Hugo, "Les Miserables," "Ninety-Three"; Dumas (complete series of the historical romances, but in the most recent versions only. Some of the many old editions in reprint are far from correct or complete). Ainsworth, "The Tower of London"; G. P. R. James, "Mary of Burgundy," "Darnley"; G. W. Melville, "The Gladiators"; Hermann Melville, "Typee," "Omee"; Mitford, "Our Village"; C. F. Woolson, "East Angels," "Anne"; Le Fanu, "Darrel's Hand"; H. C. Andersen, tales (Bohn Library edition), "The Improvisatore," (of Andersen's tales no good, complete English version exists); Hoffmann, tales (Bohn Library edition); Shorthouse, "John Inglesant"; Braddon, "Lady Audley's Secret," "Mohawks"; Mrs. Wood, "East Lynne"; Du Maurier, "Trilby," "Peter Ibbetson"; Eliot, "The Mill on the Floss," "Romola"; Kipling, "The Jungle Book," "Plain Tales from the Hills"; Crawford, the "Saracinesca" group of novels; Black, "McLeod of Dare"; Trollope, the "Barchester" group of novels, "Is He Popinjoy?" "An Eye for an Eye," "The Duke's Children"; Blackmore, "Lorna Doone," "Alice Lorraine," "Christowell," "Springhaven"; Hardy, "A Pair o' Blue Eyes," "Far From the Madding Crowd," "Tess of the D'Urbervilles," "Jude the Obscure"; Reade, "Peg Woffington," "Put Yourself in His Place," "The Cloister and the Hearth"; Meredith, "The Ordeal of Richard Feverel," "Diana of the Crossways," "Rhoda Fleming"; Hoppus, "A Great Treason"; Steele, "The Potter's Thumb"; Norris, "Matrimony," "Adrian Vidal," "My Friend Jim," "No New Thing"; Gissing, "Democracy" (Some volumes of the series "Tales from Blackwood's" can be included, for those readers liking "short stories"); Palgrave, "Hermann Agha"; Mark Twain, "Huckleberry Finn," "Tom Sawyer," "The Prince and the Pauper"; Wilkins, selected volumes of her tales of New England life; Bret Harte, a selection of the short tales of early days in the West.

Among novels by Continental authors, which have attained an international reputation, the following are suggested. They are nearly all obtainable in excellent English translations:

Auerbach, "On the Heights"; Scheffel, "Ekkehard"; Heyse, "In Paradise," "Children of the World"; Eckstein, "Prusias"; Ebers, "Uarda," "An Egyptian Princess," "Serapis," "Gred"; Merejkowski, "The Death of the Gods," "Peter and Alexis"; Jokai, "Golden Days in Transylvania," "An Hungarian Nabob," "Szoltan Kârpáthy," "Eyes Like the Sea"; Mérimée, "Carmen," "Colombia"; De Vigny, "Cinq-Mars"; Sand, "Consuelo"; Flaubert, "Salammbô," "Madame Bovary"; Daudet, "Jack," "Kings in Exile," "The Nabob"; Zola, "The Downfall" ("Le Debâcle"), "Rome"; D'Annunzio, "The Virgins of the Rocks"; Sienkievicz, "With Fire and Sword," "The Deluge," "Pan Michael"; Dostoievsky, "Crime and Punishment"; Caritu, "Margherita Pusterla"; Barrili, "Castel Gavone"; Eötvos, "The Village Notary."

# The Road of the Soul

BY MARJORIE CHARLES DRISCOLL

The night pressed close to the window and its blank eyes stared at the dead,
And the dead man lay on his bier with candles at foot and head.
The wee soul crept from the lips of him, for it might no longer bide,
But it failed when it came to the open door for fear of the dark outside.
And once came the wee soul back to him and fluttered beside the bier,
For the dark and the cold of the waiting night they filled it with deadly fear
And twice came the wee soul back to him and hovered above his face.
"I have sheltered me warm in the body," it cried, "and I fear the naked space."
And thrice came the wee soul back to him and kissed him upon the brow:
"There is no light on the road I go, but I may not tarry now."
The black night clung to the threshold and the wind shrieked loud and wild,
And the wee soul slipped thru the open door with the wail of a frightened child
The candles flared in the gusts of wind and the dead man lay there stark,
But all alone the little soul went out on the road of the dark.

RUINS IN NANKING AFTER ITS CAPTURE BY THE REVOLUTIONISTS

# The Revolution in China

BY REV. CHARLES BONE

[The author of this article has been a missionary in South China for the last thirty years, speaks Chinese like a native and is considered one of the best informed of living Europeans in Chinese affairs.—EDITOR.]

THE revolution which is being wrought out in China today seriously threatens to overthrow the present dynasty and generously promises to enthrone a republic in its stead. What success will crown the efforts of its leaders cannot yet be tabulated, seeing that up to the present no serious encounter has occurred between the insurgents and the Imperialist troops. The general opinion, almost amounting to a belief, is that the former will be the victors, tho this depends upon the military skill of the leaders, as yet unproved, and the enthusiasm of their followers. On the other hand, and most of all, perhaps, upon the devotion and reliability of the Imperialist troops, whom the Government are sending to quell the tumult and terrorize the dissatisfied. While, however, we cannot draw aside the veil that hides the future, it may be possible to follow some of the cross currents which have led to this confusion, and describe the causes of the present overwhelming catastrophe. The causes that have changed what was a submissive acquiescence in the decisions of the Son of Heaven into utter contempt and bitter hatred are many; they can only be stated here in the barest outline.

First, there was the unthinkable humiliation of an unconscionable haughtiness, wherein he whom the people looked up to as Heaven's vice-regent, has been compelled once and again to flee for his life before the bayonets of the despised barbarian, and afterward grovel in the dust for rehabilitation and reinstallation. The people looked with wonder and amazement on such a "providence." He had been accustomed to command; now he is compelled to obey. It had been his prerogative to behead; now he must behead at the nod of others. The crown and gaudy decorations have been torn from the idol, and, behold! it is wood. The cherished superstition of the people has been rent, not pricked, and no earthly hand can repair the harm.

The repeated dismemberment of parts of the empire can neither be forgotten nor forgiven. To Great Britain, France, Germany and Japan limbs of the empire have been relinquished, which were torn from the body by ruthless hands, so that to the Chinese today their country is both maimed and halt. China has been accustomed to accretions, not curtailments, to snatch from, not to confer on others. These repeated wrenchings have caused unutterable pain, which time has not assuaged nor peace healed.

There is a widespread suspicion that

the Manchu rulers are yet as impotent as ever and quite as incompetent as before even to defend what remains. Hence, while there is pent-up rage and banked fires, because of the past, there is yet a throbbing pain and lurking suspicion in regard to the future. The people fear further complications with foreign governments, thru the ignorance or incapability of their rulers at Peking, and dread that any day the country may be involved in another imbroglio, which will eventuate in the loss of territory and the ignominy of a further humiliation.

The indemnities demanded by the victors could not be paid out of an empty exchequer. Hence, during the years that have passed since the defeat of China at the hands of Japan, yearly indemnities have drained the country of its wealth, which indemnities were heavily increased after the Boxer uprising, until the burden of taxation has become unbearable. Probably, therefore, the most potent factor in the present discontent is resentment at the widespread system of taxation which has been pressed down upon the shoulders of the people during the last ten years. As the Chinese put it: "The Manchus are like fishermen throwing out nets in ponds and rivers; like gold-seekers digging for the precious metal." But money has been expended in other ways. Many modern inventions have been introduced into China and the people compelled to pay for them. One instance will illustrate what we mean. In Canton there is a fine wireless installation, attached to some very imposing new offices. This has to be paid for. The people do not understand the utility of such things; moreover, the wealth of the people has not increased in proportion to the increased expenditure on such innovations. Yet money must be had to meet the foreign bills. But most exasperating of all, perhaps, is the conviction that myriads of dollars have been and are scandalously wasted by the Court or piled up by rapacious officials, to serve their own ends and gratify their own passions.

The influence of the newly established native press must not be overlooked nor the readiness of the thousand students who have recently returned from foreign countries. The former has persistently enlightened the reading public in regard to the systems of government obtaining in the West. The Chinese here are told that in the West the people hold the control of the purse, and that they enjoy the liberty of choosing their own representatives, who will do their bidding. The bare grimness of China's system seems revolting in comparison. Further, the many students educated in Germany, France, Great Britain, America, and, most of all, in Japan, have returned to their homes with new ideals and fresh ambitions, which are soon shriveled into white, weakly leaves under the baneful influence of the shade of China's autocratic unlimited monarchy.

Last of all, the Manchus are an alien race of northern nomads, and this fact is heralded thruout the country with stentorian lungs and bitter hatred. Enough has been said to show that this great revolution is the effect of many causes. The cry of the insurgents, from the heart and from their brain, is: "The people within the four seas have been scattered and peeled; they are rolled over into ditches and watercourses, where they are left to die."

It may not be altogether uninteresting to trace the origin and development of this revolutionary movement during the last twenty-five years. Many abortive attempts have been made, which have failed thru lack of preparation and organization on the one hand, and insufficient ammunition on the other.

In 1886 a foolish and crude attempt was made to capture Canton under the leadership of Sun Yat-san. Some barrels, said to contain cement, were landed at the wharf. They were consigned to a Chinese. He, however, was unequal to the task, and his courage failed. Before the barrels could be delivered he had fled, and the consequence was that the barrels were left some time at the Custom House unopened. Meanwhile, this Chinese was connected in some way with the Presbyterian Mission, and word was sent to Dr. Kerr, the esteemed head of the Canton missionary hospital, who, however, replied that as far as he knew no cement was either ordered or expected. The barrels were then opened, and

AMERICAN MARINES LANDED AT SHANGHAI, NOVEMBER 4, 1911

were found to be full of revolvers and cartridges. I have said that the man to whom the barrels were consigned could not be discovered. I accidentally met him some years afterward. The episode opened the eyes of the Manchus.

During the confusion that followed the collapse of the Boxer outrage, attempts were made to raise the standard of revolt in the central Provinces. The center of the storm was in Hunan, and the leader Tong Tsoi-sheung. This man ostensibly espoused the cause of Hang Yau-wei, and publicly advocated a reformed Manchu dynasty; really and at heart he was a revolutionist. The plot was soon discovered by Chang Chih-tung, who arrested Tong, and with the smallest possible formality, executed him. The threatened whirlwind became a dead calm.

On one occasion one Tsui Pak-sun entered the ranks of the Imperial Guards in the Kiangsu Province. He was able to do this only in the face of great difficulty and danger. He embraced every occasion to inoculate the troops with whom he associated, and some success attended his efforts. But the affair was too precipitate and was followed by a collapse. In the spring of 1910 there was a very serious rising at Yam Chau. On this ocasion there was some severe fighting and the rebels won some considerable successes. They captured Ho Hau, and after a three days' truce, during which some of the Imperialist soldiers joined the opposite party, the rebels captured one after another both Man Ho and Sam Mang. They then determined to secure the railway, which was guarded by Imperialist troops; these latter fled before the former. But thru bad management the movement could not sustain itself.

There was a serious rising in Canton at the beginning of 1910. During the preceding autumn a man named Ngai had conferred with the revolutionists, and they thought that the hour was ripe for an organized attack upon the Manchu dynasty. The attack was made. There were at that time in Canton some regiments who had been drilled on Western models, and these were at feud with the old Manchu garrison. The new troops were induced to take part in the rising. Ngai was a man of energy and was the soul of the movement. On the last night of the old year, before the preparations were completed, there was an open rupture between the old and the new soldiers. Then Ngai knew that all would be discovered. He boldly entered the barracks and called upon the soldiers to follow him, which they did as far as

the Wong Ngai temple outside the city. Here they met the Imperialists. In the fight they were mowed down. It could not be otherwise, for it was found that their rifles had been tampered with, so that they were useless. Ngai was early wounded. He was dragged before the Imperialist colonel, who killed him on the spot. More slaughter followed.

There is little space for more. In the third Chinese month of this year there was a determined attempt made to capture the Viceroy's yamen at Canton and assassinate the Manchus. It failed. Further, during the year in Canton, two Tatar generals have been assassinated. The one was shot; the other was assassinated on the day he landed, this week, by a bomb thrown from the roof of a house.

Everybody knows of the outbreak in Szechuen, during the last two months, because the Government has assumed ownership of the railways, and further, must negotiate foreign loans in order to pay for them. Even then the proposal is to pay back the shareholders only three-fifths of their outlay; the other two-fifths is to be paid for in bonds that are redeemable when the railway is flourishing enough to furnish the funds to meet them.

It will be seen from this brief digest that China has been in a ferment during the last quarter of a century, like a volcano ready for activity at any hour.

It may not be amiss here to say a few words about the leader of the present revolution. His name is Li Yuan-hung. He is forty-seven years of age, and is a native of the Hupeh Province. He graduated at the Peiyang Naval College and was appointed artillery officer of the cruiser "Chen-yuan." He was in the famous battle when China's fleet was smashed by Japan and jumped overboard. His life, however, was spared. Afterwards he joined himself to Chang Chih-tung in Hupeh. Chang liked him because he was strong enough to withstand all temptation and influence. We need not feel our way thru the mazes of official life during the next few years. Notwithstanding his recognized ability he could not rise to the highest position the army could offer him, because of the jealousy and intrigues of Chang Paio, his superior officer, tho the latter was much inferior in general ability and general knowledge. Before the Boxer troubles he had foresight enough to see the value of a competent knowledge of outside politics, so he went to Japan to study. He also took with him twenty colleagues from the Hupeh army. When he returned to Hupeh he urged Chang Chih-tung to send young military students to Japan that they might finish their military education. But with his additional knowledge and experience he was still blocked by his fossilized rival and was never able to reach the hight of his ambition, viz., the generalship of a provincial army. Great influence he had, but not *that*. Li's treatment of men has generally been generous and sympathetic; that of Chang Paio harsh and capricious. He was jealous of men of ability. Hence Li has many friends thruout the province, Chang few. I understand also that Li speaks English fluently, for he graduated at a Western college, and also studied in Japan. It is obvious, therefore, that China could furnish no better equipped leader than Li Yuan-hung. He knows both native and foreign life; he has served in both the army and navy; he is thoughtful for others and resourceful in the face of difficulties. The revolutionists cannot be under better guidance nor can they expect to evolve a better and safer leader.

We have already said that it is difficult to anticipate the future with any certainty, because there has yet been little determined fighting between the insurgents and the Imperialists. Moreover, the temper of the northern army has yet to be tested. Meanwhile the situation seems to be as follows: The three great cities, Wuchang, Hanyang and Hankow, the real heart of China, have been captured and are held by the rebels. There has not been for this result much trouble, tho some desultory encounters took place in the streets.

The insurrection, unlike that attempted in Canton some six months ago, broke out among the military. The artillery was the first to hoist the insurgents' flag; the infantry immediately followed. The mutinous troops at once joined hands with the revolutionists,

who were ready for the outbreak, and so the work of bloodshed began. All the important buildings of the great capital were soon in the hands of the rebels. When Wuchang was captured, both the Viceroy, Jui Cheng, and the General Chang Piao escaped. The latter was shot at and wounded by Li Yuan-hung, the revolutionary leader, but managed to escape to the Japanese Concession. The whereabouts of Jui Cheng is at present unknown.

The arsenal at Hangyang was cleverly captured by a ruse. About a hundred of the rebels disguised themselves as Imperialists and clamored at its gates, announcing themselves to be fugitives from Wuchang. From this city they professed to have escaped from the rebels. Not suspecting any danger the gates were thrown open and the men entered. They were no sooner within than they revealed their identity and their purpose, and the Imperialists yielded almost without a blow. This gave the rebels a splendid haul. It is reported that therein they secured forty guns, ranging from five to seven centimeters, as well as a number of small mountain guns. They also seized 23,000 rifles and 3,000,000 rounds of cartridges. Hanyang Arsenal had furnished weapons and ammunition for the whole of the Hupeh Province, and, therefore, there was plenty in stock. The seizure was a godsend to the rebels.

There was little or no opposition evidenced by the people of Hankow, because this is the business center, and when the capital, Wuchang, and the great military center, Hanyang, had fallen, it could offer no resistance worth the name. So much for the first act of this great drama.

What has been repeatedly foretold has come to pass. It has always been said that when the revolutionary party should come into power, the utmost deference would be shown to foreigners, and the utmost care would be taken to protect their property. This has come to pass. It is true that all foreigners were advised to seek refuge in Hankow, and most of them felt it their duty to obey and follow the instructions given. All the women and children from the three great cities at once took refuge on the foreign concessions, and some of them have already taken passage down the river to Shanghai. On the other hand, some men still remain in Wuchang, where they will be unmolested and will be able to offer some assistance to the wounded and dying. It may be safely affirmed that no harm will come to foreign residents thruout China from either the insurgents or the Imperialists. The former heartily seek the good will of foreign Powers, tho these may remain neutral; the latter fear to be involved in any trouble with any other nationality, as their hands will be more than full.

What perhaps may be feared is some local outbreaks of the rabble and hooligan class. It is said that there are 40,000 refugees in Hankow alone, and these are for the most part living on the verge of starvation. No one, therefore, can be surprised if these should be a danger which may burst all bounds, and rush forth to pillage and perhaps bloodshed. Meanwhile the insurgents are extremely severe in their administration of their laws. They behead almost without a trial any one they suspect of looting, and this severity is a salutary influence upon all parties. People are hardly willing to barter their heads for a mirror or some other knick-knack looted from a foreign residence.

The difficulties confronting the Manchus are fourfold. First, the entire population thruout the empire hates them and are ripe for any change. Secondly, the Manchus cannot trust their own troops. Already there has been mutiny in many places, and the foreign drilled army is honeycombed with discontent and is ready to use its weapons against the Manchus and on behalf of a republic. The Manchu bannermen are moribund, if not defunct. Thirdly, there is the financial question. Whatever funds the insurgents may be able to command, it is certain that the Imperialists are badly prepared for a long struggle. They may attempt to borrow money, but that will further embitter the people, and make their task harder. If provincial governments like Canton decide to send no more funds to the capital, the financial crisis will become more acute. The confusion of the currency in China is chaotic and appears to be

FOREIGN WARSHIP LYING IN THE YANG-TSE RIVER OFF THE CITY OF HANKOW, FIRED BY THE CHINESE REBELS

chronic. Both Government and provincial banks have recently been issuing notes, and the people have accepted them. Now, however, the holders of these notes are clamoring for silver, and already several banks have been compelled to close their doors. These stoppages are said to be temporary, but amid all this chaos it is difficult to believe that order can be evolved. Lastly, there is the burning question of the generalship of the Imperialist army. In the last great struggle for the supremacy of China, the ruling house was assisted by some able generals. But even then it is likely that the Tai Pings would have wrested it from them were it not for the assistance of General Gordon. At present all eyes are turned toward Yuan Shi-kai. The one fact above all others is that the Manchu Government wants a general whom the troops will trust and follow, and the one man in China who can wield any influence over the army is the ex-Grand Chancellor. Before Yuan, however, will undertake this arduous task he is bargaining for freedom from all restraint, either military or civil. But the question now arises, Will he be true? The recent treatment, not unmerited, which he has received at the hands of the Throne cannot be forgotten; on the other hand, there are millions, we believe, thruout the empire, who would hail him President of the republic with loud acclamation. He is moving slowly and professing to be removing obstacles out of the way. Perhaps he is considering the pros and the cons of the problem. He who has been a traitor once may yield again when confronted with the temptation and betray the trust reposed in him. Anyway, he appears to be the hope of the Manchus, and we are sure they are hard pressed to place so much power in his hands at this juncture.

Meanwhile, it may safely be affirmed that it is the beginning of the end of Old China. If the insurgents win there will be changes radical, reasonable and salutary; if the Manchus again, tho blood-stained, emerge from the conflict and carry the crown with them, we think that it is impossible for the great Powers to allow things to drift on as they have been drifting. Changes, reforms, improvements must be initiated and supported, so that in any case, except for the loss of life and property in the districts actually involved, there must emerge from this chaos something like order, and things will be adjusted so that there will be progress and development.

HONGKONG, CHINA

# To Jane Austen

The novelist was born December 16, 1775, at the parsonage of Steventon, Hampshire, England

By Charlotte Leech

You were a wondrous child,
And your praises ran as wild
  In those days
As when you graced the halls
Of the gentry, with their balls
  And their plays.

But I'll whisper, lady dear,
That you seem a trifle queer,
  *(S'il vous plait)*
To the woman novelist
And the lady suffragist
  Of today.

You've a pretty little prattle,
And a petty tittle-tattle,
  Yet again
For a child you know too much
And you've just a worldly touch
  That gives pain.

You're a gossip and wiseacre,
A little town dressmaker,
  And a wit.
With your mouth quite full of pins,
You fasten neighbors' sins
  'Till they fit.

If you chronicled small beer,
It really would appear,
  Would it not?
That you'd nothing else to show,
And you surely are, you know,
  Unforgot!

C B KEELER JR 1911

# The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

## The President's Trust Message

Mr. Taft says, in his message about Trusts and the Sherman act, that the recent decisions in the oil and tobacco cases "serve to advise the business world authoritatively of the scope and operation" of this law. Many complain, however, that the advice is insufficient. Mr. Nagel, a member of the President's Cabinet, pointed out, a few weeks ago, that a group of capitalists, desiring to organize a new and strong corporation, could not ascertain from the Department of Justice whether their plans would expose them to prosecution; and Mr. Prouty, a member of the Interstate Commerce Commission, said, a few days later, that no lawyer could "advise his client with certainty" whether he was "within or without the inhibition" of the statute.

Since the remarks of these prominent Federal officers were published, certain men who desired to form a large corporation by combining several small corporations or firms have been restrained by their failure to obtain at Washington an official opinion as to the legality of their project. It was proposed that a considerable number of lumber mills in Oregon and Washington should be associated in one new company. The experience of the organizers is related in the following dispatch from Washington to an Oregon newspaper:

"Washington, November 27.—Attorney General Wickersham today declined to give any opinion, officially or privately, as to the legal right of tidewater lumber mills of Oregon and Washington to form a merger, as has recently been proposed, and also refused to indicate whether such a merger, if formed, would be attacked by the Government as being in violation of the Sherman Anti-Trust law. His refusal was exprest in a letter to Ex-Senator S. H. Piles, who, with H. J. Pierce, came to Washington for the purpose of learning the probable attitude of the Administration. Ex-Senator Piles and Mr. Pierce left for New York tonight. They intend to call upon capitalists whose financial aid is sought and to explain to them the attitude of the Attorney General. They were not in an optimistic frame of mind."

It could not be expected, of course, that the Attorney General would give an opinion as to the legality of the business practices and competitive methods of a corporation not yet formed. He was asked to say whether in the manner of forming it, as shown by the articles of incorporation and the plans of the organizers, there was anything unlawful. This he declined to do, and we do not criticise him for declining. The organizers think, we presume, that they cannot find out, before incorporation, whether the merger violates the law, and that after organization they can find out only at the end of a law suit brought by the Government.

Mr. Taft says "there is nothing in the statute which condemns combinations of capital or mere bigness of plant organized to secure economy in production and a reduction of its cost":

"It is only when the purpose or necessary effect of the organization and maintenance of the combination or the aggregation of immense size are the stifling of competition, actual and potential, and the enhancing of prices and establishing a monopoly, that the statute is violated. Mere size is no sin against the law. The merging of two or more business plants necessarily eliminates competition between the units thus combined, but this elimination is in contravention of the statute only when the combination is made for the purpose of ending this particular competition in order to secure control of and enhance prices and create a monopoly."

But Mr. Taft is not the court, altho it may be that the court would so inter-

prest the law. Not long ago passages in his public addresses, as well as remarks made by Mr. Wickersham, indicated that the Administration's view was that competition among the parts of an incorporated combination must be restored. At that time the Attorney General was talking about a list of one hundred companies that, in his judgment, existed in violation of law, because a book of reference showed that each one of them had been formed by an association of several companies or firms, competition among which had thus been suppressed.

But the President admits that there is need of supplementing the statute by specific prohibitions which will "point out more in detail to the business community what must be avoided," and in other ways. What he says about these additions is the most important part of the message. He would have the law specifically forbid "the attempt and purpose to suppress a competitor by underselling him at a price so unprofitable as to drive him out of business, or the making of exclusive contracts with customers under which they are required to give up association with other manufacturers, and numerous kindred methods for stifling competition and effecting monopoly," all of which, we presume, are now known to be unjust and probably unlawful by those who use them. He also renews his recommendation that provision be made for the Federal incorporation of companies engaged in interstate business. He goes further, and, somewhat unexpectedly, asks for the creation of a commission.

This recommendation he approaches gradually. The courts, he says, are not properly equipped for the work of reorganizing combinations which have been condemned, and they should be empowered to invoke the aid of the Bureau of Corporations. There might be a new statute "permitting and aiding the formation of combinations of capital into Federal corporations":

"They should be subject to rigid rules as to their organization and procedure, including effective publicity, and to the closest supervision as to the issues of stocks and bonds by an executive bureau or commission in the Department of Commerce and Labor, to which in times of doubt they might well submit their proposed plans for future business."

This, he continues, would not exempt a company from prosecution under the Sherman act, but "the publicity of procedure and the opportunity for frequent consultation with the bureau or commission in charge of the incorporation as to the legitimate purpose of its transactions would offer it as great security against successful prosecution as would be practical or wise." And then he says:

"Such a bureau or commission might well be invested also with the duty of aiding courts in the dissolution and re-creation of Trusts within the law. It should be an executive tribunal of the dignity and power of the Comptroller of the Currency or the Interstate Commerce Commission, which now exercise supervisory power over important classes of corporations under Federal regulation."

But "an executive tribunal" of such "dignity and power" ought not to be a mere bureau of one of the Departments.

Our readers know that for a long time we have favored the creation of an Interstate Trade Commission. We have believed that eventually provision for such a commission would be made by Congress. We are glad to see the President now asking for such an "executive tribunal" and showing why it is needed.

## The Passport Question

A LARGE and important meeting was held in this city last week, addrest by prominent Jews and other leading public men, nearly all of whom demanded that Russia should be punished by denouncing and annulling the treaty of 1832, on the ground that she has failed to live up to its engagements. She has refused to allow American citizens who are Jews by birth or naturalization to visit Russia. When a man applies to a Russian consul and shows his passport the consul asks him, among other questions, what is his religion, and if it is the Jewish he is told that his passport cannot be accepted; he is excluded.

It may be well that the reader should have before him Article I of the treaty, which gives this right of travel and which makes no specific exception of Jews:

"There shall be between the territories of the high contracting parties, a reciprocal liberty of commerce and navigation. The inhabitants of their respective States shall mu-

tually have liberty to enter the ports, places and rivers of the territories of each party, wherever foreign commerce is permitted. They shall be at liberty to sojourn and reside in all parts whatsoever of said territories, in order to attend to their affairs, and they shall enjoy, to that effect, the same security and protection as natives of the country wherein they reside, on condition of their submitting to the laws and ordinances there prevailing, and particularly to the regulations in force concerning commerce."

It will be seen that the interpretation of the treaty is not quite clear. We can say that Jews are not excluded in terms, and that inhabitants of each country are to be freely admitted into the other. On the other hand, Russia may say and does say that American Jews visiting Russia under the terms of the treaty must "submit to the laws and ordinances there prevailing," which would limit their travel precisely as it does that of native Jews. We reply that the clause does not refer to such matters of discrimination against native Jews, and that, under accepted rules of interpretation, the broader and more generous interpretation must prevail; and, further, that we cannot consent to any interpretation that gives privileges to one citizen which it forbids to another.

We know of but one other fair sort of answer that Russia could make, namely, that our laws exclude from admission inhabitants of Russia of Mongolian race. We have such a law, as invidious as the Russian law, but we are not aware that such a case has ever occurred of the exclusion of a yellow Russian. If such a case should occur, if a man of Chinese or Mongolian race, born or resident in Russia, should land on our shores armed with a Russian passport, we do not believe he could properly be excluded. The treaty would override the act of Congress. Indeed, this was asserted by a Jewish advocate in the hearing of this whole matter before a committee of Congress.

In his second message President Taft expresses sympathy with the complaint of the Jews and tells us, as Secretary Knox had told their representatives before, that an effort is now making to replace the present old treaty with a new one which will be more explicit. This is greatly to be desired. The present treaty can be and is interpreted ungenerously and injuriously. At the same time it is not easy to see how the annulling of the treaty can do any good, while it might do harm. We do not refer to the financial loss in our trade, for the representative Jews are very explicit in telling us they do not put dollars before honor. We fear, rather, what Andrew D. White warned them of in his address at the mass meeting, which found but slight sympathy. Russia, he told his hearers, is a proud nation, yet one that wants the good opinion of the world. The radical breaking off of all treaty relations would provoke resentment and would be likely to postpone any plans for relieving the condition of Jews in Russia. A better way, he thinks, would be to continue and press negotiations, and it may be that a new treaty might be secured which would not only grant relief to our own Jewish citizens wishing to visit Russia, but, which is very much more important be the occasion for lifting burdens from Jews in Russia itself. That would be a boon indeed, and might also relieve us from the excessive immigration of Russian Jews, which puts to a severe strain the benevolent care of their brethren here. And we add that we sincerely hope that the severe criticisms here made by Jews, and repeated in Congress by their representatives and friends, may not provoke violence and even massacre. The President and the Department of State understand the wrong and the general feeling which it excites, and we may be sure will do what they can to secure a remedy. But so long as we can not and will not go to war over this injustice it would appear that the way recommended by Dr. White, tho somewhat slow, is the right way.

## Social War

The happiest, indeed the only happy phase in this shocking McNamara tragedy is the unanimity of condemnation and detestation exprest by the representatives of the labor organizations from President Gompers down. That this represents the prevailing feeling, we do not doubt. The overwhelming majority of combined labor is certainly law abiding. They understand the purpose of their organizations for mutual protec-

tion, and they are ready to strike for mutual aid, but they do not wish to dynamite buildings or to kill scabs. Yet that there are among them those who are willing to do this we have all seen. The advantage of this exposure is, that even those who have sympathized with violence and who have contrived and aided this very series of outrages have been compelled to give their support to the cause of law and order and to denounce these confest assassins.

Yet we must not blink the fact that the representatives of anarchism, now happily silenced, are not few. It is a shocking crime to blow up a building and kill its occupants; but it is precisely the same crime to waylay and beat or kill a so-called scab; and many such cases there have been in many strikes. Thousands of people believe this to be justified. It is because they do that the police have to protect cars and carts when street-car men or street-cleaners are on strike. And a multitude of people who would not themselves shoot or club one who persists in working during a strike will yet defend, or at least apologize for, these assaults or murders, saying that this is a social war, and that in war violence cannot be avoided.

But what is social war? It is not actual warfare. To call it war is a figure of speech. It is war no more than real war is Hell, or the marriage state is Paradise. We may properly call social unrest and difference war rhetorically; but wo to the man or the community that does not know the difference between fact and figure, and who, when disagreeing with comrades, proceeds to act after the manner of real war with rifle or dynamite or any deadly weapon. In social war the only weapons that can be used are argument and the ballot; thus one can keep within the law and reason. One can use argument freely, with pen or voice. If strike-breakers come to take the place of strikers one can argue with them, urge them, promise them, but not threaten them with violence. And men may draft bills and try to get them enacted and then vote in a legal way. In the end these methods will succeed so as to reach the ends best for society, for man is a reasonable being, and truth is mighty, and will prevail. To use force instead of argument and the ballot shows either great lack of patience or great lack of faith in the justice of one's cause.

There is no more dangerous symptom in our social conditions than the prevalence of violence in labor disputes and its very general condonation. Of course, the police endeavor to limit or prevent it, but in the great crowds that gather the sympathy is with the rioters and not with the police, with violence and murder and not with reason and law. It is out of this sentiment of anarchism that dynamite outrages grow; the McNamaras are spawned from these mobs. We believe, as we have said, that the great majority of union men condemn the methods which all of them declare they condemn now, but with too many of them it is their sober second thought which they thus express, while others wished the two brothers hanged, really because they had confest their guilt, to save their lives, to the injury of the cause of union. Really this confession is a blessing to unionized labor, because it puts labor by its unanimous voice against such murders and destruction of property; and this implies the condemnation of violence in all the varieties of social war, and because for a while there will be some purging of the ranks.

## A Municipal Newspaper

THE recent election at Los Angeles has attracted widespread comment, chiefly because of the emphatic defeat of socialism and prohibition, two issues which it had been variously and confidently hoped or feared by the opponents or advocates of equal suffrage that the women would or would not favor. But it is in vain to try to determine just how the women voted, because the ballot is secret and women can keep it, and, secondly, it is still vainer to try to determine why the women, individually or collectively, voted as they did. It is more profitable to consider the results of the election, one of which has unusual interest and novelty, that is, the establishment of a municipal newspaper. If we were to fall in with the prevailing tone of current comment we should say that this was a conspicuous example of women's influence,

for the collection and retailing of news has from the earliest times been regarded as a feminine function in society, and it was to be expected that the entrance of women into the political world would be marked by a transference of that function from the individual to the government.

But such speculations are too facile and fascinating to be safe, and it is doubtless more reasonable to regard the government newspaper as the logical accompaniment of the movement for greater democracy now making itself felt in the West. If the people are to rule they must be educated, consequently we find a larger proportion of the eligible population attending the schools and especially the colleges than in the East. If the people are to vote on specific measures in State and municipal government they must receive specific instruction on the questions at issue. If an officeholder is subject to recall by popular vote it is important that he should have an opportunity of stating his case to every voter.

Something of this kind is already done in the States having the referendum, such as Washington, Oregon and California, by the official broadsides or books of instruction sent out to the electorate, giving biographies, appeals and pictures of candidates, the full text of proposed laws and arguments pro and con. From this to the publication of a State periodical is but a step, and it is a step that will likely be taken in the future now that a municipality has led the way.

The ordinance of which the voters of that city have exprest their approval provides for the publication of a weekly or daily to be called *The Los Angeles Municipal News*. It will be mailed at the rate of a cent a copy to subscribers in advance, sold to newsdealers at ten cents a hundred, and given free to every registered voter or taxpayer who applies for it in person at the office. The management of the paper is entrusted to a Municipal Newspaper Commission of three members appointed by the Mayor, subject to referendum, and serving four years. They receive no compensation but hire a salaried secretary. For the support of the paper, in addition to its receipts from subscriptions and advertising, an appropriation of $36,000 a year is provided.

This periodical is not to be a mere dry bulletin of official notices, but is to include all three departments of the modern newspaper, news, comment and advertising. In the matter of news "it shall give particular attention to municipal news," and in the publication of all news it "shall endeavor to publish the facts with the strictest available accuracy without bias."

Editorially the policy of the paper will be that of the Administration; that is, it will support the principles and measures approved by the voters at the last election. To avoid the danger of extending its editorial power to wider fields it is provided that:

> "It shall refrain from any argument, presented as its own, concerning any religious question, or any political question pertaining essentially to national or State political issues, or concerning the candidacy of any candidate for any public office, but shall treat the candidacies of all candidates for public office solely as matters of news."

But in order to prevent the newspaper from becoming a purely partisan organ it is allowed to publish speeches, interviews and signed articles as matters of news, and it is required to place at the disposal of each political party that polled more than three per cent. of the total city vote in the last election a space in every issue of 45 square inches, that is to say a column of ordinary newspaper size. The mayor and any member of the city council is entitled to 20 square inches, and any independent candidate may purchase 5 inches at advertising rates, and if he gets more than three per cent. of the votes the money he paid for it will be refunded to him.

This arrangement ought to insure some lively debating at close quarters during a campaign, and the municipal newspaper has a chance to be much more interesting as well as more instructive than the ordinary newspaper. As it is now, reading a single party organ is as dull as listening to half of a telephone conversation or watching a man fighting a boxing bag. When a mayor's official acts are criticised from week to week or from day to day by all his defeated opponents in the same journal in which they are explained and defended, there

a good chance of finding out the truth about them. Then, too, the municipal newspaper will afford a better opportunity than exists at present for a new cause to gain a hearing. As it is now, a reform, however worthy, has to struggle along for years, supporting at great sacrifice weak and unattractive organs, which for the most part circulate only among those who are already converts. The ordinary newspapers and magazines will rarely refer to it except when there is something sensational about the manner of its advocacy. This discourages progress and tempts propagandists to all manner of excesses in the effort to get their cause before the people as a whole. In order to secure this important advantage the Los Angeles ordinance, in addition to its elaborate provisions for freedom and impartiality in political argument as news, should also have declared for an equal freedom and impartiality in the advertising, both commercial and political. There is a growing tendency among our newspapers and magazines to restrict the advertising to that of which the management personally approves. This illegitimate extension of editorial domination over the pages which are contributed by the people is sometimes due to the best of motives, sometimes to the worst, but in any case it results in a serious infraction of one of the most necessary forms of modern freedom of speech; that is, freedom of advertising. The Municipal Newspaper Commission, at their first meeting, should remedy this deficiency of the ordinance by a broad declaration of policy, announcing their willingness to accept as advertising any contribution, whether it has a personal or political aim, subject, of course, like everything else in the paper, to the contingencies of space and the requirements of propriety.

The Los Angeles scheme is not an impossible one. Whether it is a success or not will depend, like any private paper, on how it is managed. Also, it depends, like any private paper, on whether its owners, which are its subscribers, will allow the management sufficient latitude and freedom from petty criticism to develop the full possibilities of the venture. After all, a municipal newspaper is not an absolute novelty. It is, on the contrary, the oldest form of journalism. Our esteemed contemporary, the daily *Ching-pao* or *Peking News*, was also the contemporary of Charlemagne and has missed few days in the 1,200 years. We wish the *Los Angeles Municipal News* an equally long and prosperous career.

## Missionaries for Literary Work

No missionary in China has a higher reputation for wisdom than Timothy Richard, and it is worthy of note that he calls for one hundred missionaries who shall devote themselves entirely to literary work. The purpose is to reach the higher class of the Chinese, the scholars and leaders. In this he agrees with the Rev. Gilbert Reid, who has made himself a missionary to the literati and officials, believing that thru them the people as a whole are to be reached.

This is a serious question in missionary policy. There are in China 1,500 foreign priests and sisters working for the Roman Catholic Church and 4,500 men and women (including wives of missionaries) as workers for the Protestant Church in China. Protestant missionaries have been in China for a full century and the Catholic for three centuries, and the total number of converts in all is only about a million and a half. This is a considerable number, but it is not all that might have been expected; and it is to be considered that they belong mainly to the illiterate class. Converts from the educated classes are very rare, and there are practically none from the official class, altho during the reform movement of 1898 a number of such were cruelly put to death.

The progress of China in Western learning and industry, in railways, steamers, telegraphy and the new industries has proceeded very rapidly of late and entirely at their own expense, because the Chinese are convincel that these new institutions and methods are better than the old. The Chinese have proved themselves not utterly and blindly attached to their old ways. They can change when they see good reason for it. They can even adopt, or try to adopt, a republican form of government and overthrow the imperial system of thousands of years.

But the leaders, the influential men among them are not convinced of the superiority of Christianity over Confucianism or Buddhism. To be sure, the prejudice against foreign missionaries has largely vanished. They are no longer confounded with the political agents of the European governments which have robbed them of their territory and which were only a dozen years ago planning how to divide all China into spheres of foreign influence. That phase of Chinese history is all past now, and England and France and Germany and Russia are reckoning how short the time will be before they will have to give up their ports and concessions and even provinces. In the present revolution, while tens of thousands of Manchus and Chinese have been slaughtered, only in one city have the missionaries suffered. Great pains has been taken to protect them. They have covered the empire with their schools and hospitals, and in time of plague or famine have been foremost in relief.

While prejudice has thus been removed there is as yet no great movement among the leaders of China to accept the Christian faith. The missionary labors have not been directed to them very much. The literature has been chiefly meant for the instruction of converts in schools and churches. Mr. Richard and other thoughtful missionaries believe that a chief reason for the failure of Christianity to attract the leading classes in China is because it has not been presented to them in the right way. Mr. Richard says:

"They think that there is one great lack in our mission methods now, viz., men who have [illegible] the religion and literature of China and know what its strength and weakness are on the one hand, and who also on the other hand have so studied the deep philosophical and historical basis of Christianity in other lands as that they can clearly point out where Christianity excels the best the Chinese have in Confucianism or Buddhism. Moreover, Christians have not come to deserve [illegible] Mere assertion will not convince. The superior ideals will have to be made clear and definite, so as to win the admiration of the best.

Mr. Richard is one of a number of thoughtful missionaries who believed that if a hundred men were to devote themselves to this kind of work they might succeed in a comparatively short time in attracting large numbers of the leaders in the Chinese Empire to accept Christianity, in which case the mass would follow. Buddhism won its way thru its high literature. It would be well if every mission should set aside one or two of its best literary men for this task.

We gather from Mr. Richard's words, and from a late effort made by him to show the better side of Buddhism, that he would have his hundred literary missionaries follow a conciliatory and constructive policy rather than one of hostility. He has lately translated a Buddhist work of the more spiritual class for the very purpose of showing how Buddhism has, by some of its disciples, been made to harmonize with theism, and how the term for the supreme power can fairly be translated as *God*, while the doctrine of incarnation is definitely foreshadowed. The veteran and learned Bishop Moule has taken part sympathetically in the discussion aroused in Chinese missionary circles. St. Paul's missionary labors were directed to the more intelligent classes wherever he went; and while it must always be to the poor that the Gospel is preached, yet mission labor must not neglect, as it does not in Japan, the most intelligent and influential classes.

## Agricultural College Extension

It was about 1870 that we first heard of manual training in our common schools. The struggle began in St. Louis, and about the same time the kindergarten movement was grafted on the common schools of that city. A true evolution is so unlike a revolution that it may change the whole aspect of society without observation. The educational change from 1860 to the present time has been a genuine evolution. We have moved quietly along, until our town schools have everywhere displaced the old district school system, allowing a stronger teaching force and a progressive curriculum. The establishment of agricultural colleges, or industrial colleges as they were termed, has fitted to the new thought, and completed the system.

The movement to industrialize educa

tion has gone so far as this, that the central colleges are now reaching out into every nook and corner of our States, to distribute both training and education. The means adopted are short-course schools in dairying, horticulture, corn growing, live stock and domestic science. Farmers' institutes and other meetings are held systematically, and recently corn meetings in corn season and orchard meetings in orchard season. In a large number of the States the railroads have joined hands with the colleges to send out special trains, equipped to teach domestic science, improved dairying and improved corn culture. Work has been done thru the schools quite extensively, and the granges and farmers' clubs have evolved into women's clubs, commercial clubs, corn clubs and other practical methods of studying the farmer's problem. Bulletins, circulars and leaflets are flying everywhere, and are finding their way very generally into country homes. These are now supplemented by traveling libraries, consisting of books on household arts and field arts.

Besides this there are many special methods, such as distributing valuable seed, making special tests of alfalfa, helping the farmer to largely increase his hay product, harvest festivals, farmers' picnics and other gatherings where our agricultural professors are found leading the way. A definite extension course, leading from one degree to another, logically, has not yet been devised. The work has been rather sporadic and stimulative, and up to the present lacks a logical fullness. This may be all the better, for in many cases our boys and girls need rather to be set in motion than to be led along a prescribed path. The mission of agricultural extension is to get right at the *working* farmer, especially at the young fellows, and get them to do the best possible work for themselves and the country.

The preparation of teachers to fill this work has been the hardest part of it. It was the hardest part of the work in establishing agricultural colleges altogether. One of the curious results is that we are breeding a class of men of an entirely new sort. It can best be described as the creation of poets of labor. You can make nothing else of the enthusiasm thrown into labor and the joyous song that accompanies it. An agricultural college differs from any other college with just this, that it boils over with enthusiasm. The fact is the farmer's work, rightly handled, is a poem.

This new extension work does not, however, confine itself to the country. It has to do with the whole of that Back to Land movement which is stirring our towns to a new sort of life, and is reversing the drift toward congestion of population. Thousands of homeless people, who are thus being roused to a desire for creating homes in the country, have really nothing in their training, nor in their instincts and heredity, that fits them for making an intelligent start on the land. So it is that our agricultural teachers have a very important mission among the congested crowds that have never touched a plow. The ignorance of a large portion of our city residents concerning Nature is complete. Even those who will remain as urban dwellers, owing to the possession of wealth, need to have the avenues opened for them, whereby they shall have some rational apprehension of the world about them.

The economy of this movement is not remote. It costs a farm boy two thousand or more dollars to get thru college. It may pay him well to spend this sum; but an agricultural course brought directly to his door, opening the realms a nature to his senses, and teaching him how to improve the world about him as well as himself, and to double the products of his fields, that is something worth the while—and it costs him practically nothing. To spend one hundred dollars a year on books and experiments would probably cover his earlier needs. Later he will require some special training, and he may make his farm more thoroly experimental.

The success of this kind of education depends upon how much it teaches the young farmer that he can put into immediate practice. It ought to give him the truth as to what crops fit his soil and what varieties of apples are best adapted to his climate. It surely will tell him the truth about composts and commercial fertilizers. It will tell him that there is no need of wearing out soils, but that on

the contrary the new culture will make soil constantly better in quality and increase its quantities. Country life at the same time will be elevated and ennobled. The farm begins to be boastful over the city. Rural schools are getting inspiration. Reaching both sexes, it gives country girls a taste for home making, touching all affairs of health, economy and the education of children.

This movement is not due to temporary and casual conditions, but is demanded by the times and is propelled by economic necessities. In fact, we are just beginning a new national era. Among the new features of importance are the use of electricity, the use of automobiles, soil making, especially thru the use of legumes, migratory farming, creating new sorts of food as a part of regular farm work and greatly advancing the value of those we have, these are some of the problems that are now crowding upon the farmer. There is to be a closer union of agriculture and mechanics thru farm shops and the use of electrical power, at the same time making land culture a real science, and so educating the workman while it gives to him a good living from the soil. The new education takes a grip on every home as well as on every school, and on every department of work as well as on every phase of thinking and life.

**The Postal Surplus**

Instead of the old deficit of millions the Post Office Department shows for the past year a surplus of $219,118 to the credit of Postmaster-General Hitchcock. A Congressional critic complained of the estimates sent in for next year that they contained no appropriation for the Post Office. The reason was that it would want no money. When Mr. Taft entered in his term the deficit was over seventeen millions, and it has been turned to a source of revenue with no curtailment of postal facilities, but, on the contrary, with important extensions. During the present administration there have been established 3,736 new post offices; delivery by carriers has been provided in 186 additional cities, and 60,670 new miles of rural routes have been added. There is an increase of 8,000 employes and $14,000,000 of salary list. Mr. Hitchcock rejoices in his ability to establish postal banks in the 7,500 presidential offices, and expects to add the 40,000 fourth class offices. They are a great success. At the end of the first month the forty-eight experimental offices had received only $60,252 deposits; and now after eleven months the amount is $11,000,000. Parcels post is again recommended, and the addition of one cent a pound on second class matter (magazines), which are now carried at a serious loss. This adjustment would make it possible to give us one cent postage on letters, which now produce a large profit. We have for years looked forward to one cent letter postage as the sure ultimatum. The report is one that gives great honor to the Taft Administration and to the Postmaster General.

**Woodrow Wilson's Pension**

We do not see but that President Woodrow Wilson, on leaving Princeton University, had the right to ask the Carnegie Foundation for a pension, if he was entitled to it. He had served as a teacher for twenty-five years, the period which, under the earlier rules of the foundation, would give a claim for such pension. But meanwhile the rules had been changed in such a way that he would not be automatically entitled to it, and we judge that the trustees did not think him in financial need. When he made application, at the age of fifty-four, he had just entered upon the doubtful career of politics, but when he had been elected Governor of New Jersey his financial support was provided for by the State, and there seemed no present need to make provision for his support. The purpose of this admirable foundation is to provide support in their old age for teachers who have spent their active life and exhausted their powers in a profession of the highest value to the community, but of very moderate compensation. A majority of college professors cannot live within their salaries. President Wilson had accumulated no property and cannot be blamed for making application, but the fact that he did so may be used against him by those who take advantage of any pretext to express ill will.

**Fanaticism**

The Rev. Frank W. Sandford, the Elijah of the "Holy Ghost and Us" fanaticism, was convicted last week of causing the death of six of his followers by scurvy and starvation in their seventeen months' voyage, which was directed, as he declared and believed, by the direct command of God. We do not take it that he is a fraud, but simply a self-deceived fanatic whom other fools and fanatics believed and followed. To punish such a man, who has meant no wrong, seems hard, but it is right, altho perhaps he should be committed to a penal asylum rather than to a prison. Some people must be protected against their wills to avoid death by such crazy zealots. We do not see that such religious monomania is any different from other kinds. Equally innocent of evil intention, and equally submissive to what she believed the will of God, was that mother convicted the other day of letting her child die of diphtheria, because she believed that prayers and present and absent treatment of Christian Science are God's ways of healing. Now her second child has diphtheria, but she has learned the law and reason and has called in a physician as well as a healer. Better is the way of a seceding Christian Science church in East Orange, N. J., which ceases selling Mrs. Eddy's book on Sunday, but puts the Bible in its place, and calls in the aid of medical science in case of sickness. We may expect many such secessions.

**The Knights of Columbus**

The official religious weekly of Chicago, strongly recommended by Archbishop Quigley to all families in his diocese, indulges in a warning and threat which we do not like to see. Congressman Stephens, of Texas, is, under the present Democratic control, chairman of the Committee on Indian Affairs in the House of Representatives. We judge that he does not like it that certain Indian schools previously supported by the gifts of Miss Drexel have been leased by the Government and are maintained with their corps of teachers. He has presented to Congress a resolution asking for full particulars as to whether in any Government Indian schools the teachers are allowed to wear religious emblems, symbols or garbs to influence their pupils, and we may gather that he would prohibit nuns or members of teaching orders from wearing such garbs or emblems. We are by no means in a hurry to object to the wearing of crosses, Christian Endeavor pins or the dress of the sisters, but we do object to requiring the Knights of Columbus to enter into a political conflict to defeat Mr. Stephens for re-election, or to defeat his party if it should follow his lead. We had been assured that the Knights of Columbus are a patriotic and religious and not a political organization. The organ tells them what to do and concludes:

"It is quite certain that Representative Stephens, of Texas, is a bigot and bigots must not be allowed to run at large without at least being branded, especially if they dwell under the open skies of illimitable Texas."

**The Art of Omission**

As we survey the quantity of new books which have accumulated upon our table for review, we are reminded of a letter which Stevenson once wrote to his cousin the painter, and its instructive remarks concerning Balzac:

"He was a man who never found his method. An inarticulate Shakespeare, smothered under forcible-feeble detail. It is astonishing to the riper mind (on a re-reading) how bad he is, how feeble, how untrue, how tedious. . . . He would not consent to be dull, and thus became so. He would leave nothing undeveloped, and thus drowned out of sight of land amid the multitude of crying and incongruous details. There is but one art—to omit!"

An overstatement, yet welcome all the same. Would that Balzac's modern offspring could be persuaded to con this passage and apply it! Knowing how and what to omit is a part of the knowledge that makes great painters, great dramatists, even great newspaper reporters. Omitting is as essential for the artist as forgetting is for the statesman and the woman of tact. Stevenson is right in saying: "A man who knew how to omit would make an 'Iliad' of a daily paper." But since most editorial articles, like most novels and most sermons, are too long, we do well to cut short this gloss upon an excellent text.

**A New Discovery of America**

Dr. Bode, like every one else who has held a responsible position and distinguished himself therein, has made his mistakes, but he has never lost the respect of artists and fellow-critics. The Director General of the Prussian Royal Museum has lately toured the United States and its art galleries, and his comment upon these last, now that he is safely home again in Berlin, is enthusiastic. The private collections had additional interest for him, he says, because "their owners, in practically every case, intend eventually to turn them over to municipal or national institutions." Dr. Bode singles out for praise, among our collectors, Mr. Morgan; Mr. Johnson, of Philadelphia; Mr. Freer, of Detroit, and Mrs. Gardner, of Boston. As to the forgeries with which our galleries are stocked, according to Henri Rochefort and other experts who have never crossed the Atlantic, our collections "are not wholly devoid of inferior old masters and forgeries, but they are no worse off in this respect than the collections of Europe." And the German critic adds that he saw enough on this his second American tour "to explode the myth cherished so commonly in Europe that Americans are actuated by sheer snobbery in seeking to possess themselves of old masters." A Daniel come to judgment! Another transatlantic Daniel is Mr. Bennett, the English novelist, who says of us that we are not "the boastful, vulgar people" we are represented as being, altho we "have much to boast of."

**Against Woman Suffrage**

Mrs. Humphry Ward, as is well known, is no friend of woman suffrage, but that so able a woman could see such political chaos following it one could hardly have expected. In a long letter to the London "Thunderer" she replies to a speech by Lloyd-George in favor of equal suffrage, and calls upon the other anti-suffrage members of the Cabinet—Mr. Asquith, Mr. Harcourt, Mr. McKenna and Mr. Hobhouse—to come to "our aid," as the matter is far above party.

"It is simply *stantis vel cadentis rei publicæ*. The addition of either eight or eleven millions of women voters to the English electorate means an immediate alteration of our place and prestige in Europe, an immediate weakening of our Imperial power, an immediate diminution of security for every man and woman in these islands. Moreover, the whole future of legitimate and slowly developing power that now lies before English women of every class will have been endangered; the 'wild women' of these latter days will have become an institution, and English politics will have begun to drop to the window-breaking level.

"All this our Welsh Chancellor risks with a light heart. One is reminded of a famous saying of Mommsen: 'The Celts have shaken all States, and founded none.'"

Then woman suffrage is an article of the country. *"stantis et cadentis!"* She would consent, she tells us, to allow a million or two of the wealthy upper class women to vote, for they are Unionists; but not eight or eleven million of the middle class and common people. Women as a whole are dangerous, would weaken Imperial power and ruin the state. We suspect that the Imperial power would be as safe with plebeian women as with the patrician. A Hungarian noble who claims to have seen a good deal of England thinks that it is already falling in power and quality, but he puts the blame on the American women of wealth who have become duchesses or otherwise ladies of rank. And these "wild women," we are told, if we observe, are of the class that has wealth and position, and not the lower stratum of the eleven million. It is the ladies of rank and wealth that smash windows.

**Ethics and Statesmanship**

Mr. E. J. Dillon, who writes the international notes for *The Contemporary*, is one of the most intelligent and capable observers and reporters of the movements in foreign affairs that we know. In the last issue he gives his main attention to the declaration of war by Italy against Turkey. It is particularly striking that he defends the political necessity of Italy's action. It was her last chance. It had been agreed with France and accepted by the other European Powers that Tripoli was to be assigned to her sphere of influence. She saw France helping herself to Morocco, after having previously taken Algeria

and Tunis, and Germany taking a big piece of the Sudan, while she had nothing, and Tripoli might escape her and be seized elsewhere; and she was justified in cashing the promissory notes made her. To be sure, Italy's conduct cannot be called ethical, he says, but ethics do not count in such matters of high statesmanship. It was not ethical for Austria to take Bosnia, or France to take Morocco, or Germany to take her fresh slice of Africa; but ethics has nothing to do with the matter, and it would have been a discredit to Italian statesmanship to let ethics stand in the way. Such appears to be Mr. Dillon's judgment in the case. We fear he has associated too much with Macchiavellian diplomats. We used to hear not so very long ago in our own country the doctrine that politics is not a Sunday school sort of business.

It is to be noted of the Bridge and Iron Workers' Union that their work is one that attracts reckless and daring men who are ready to risk danger. A misstep and fall will mean injury or death, and their union has to provide aid for an unusual number of hospital cases and widows. It is such a union that might be expected to develop more than its share of dynamite cases. Their secretary, John J. McNamara, wrote to their organ, *The Bridgeman's Magazine,* while in prison in July:

"I deem it wise to warn our readers to take lots of salt with the ordinary newspaper reports coming from Los Angeles from this time on, as far as our cases are concerned. They will be highly colored. Depend upon official reports and the Socialist press. At the same time Milwaukeeize your own town."

It would seem that this union had come to be quite Socialized.

China and India are lands of famine, where population is congested, but where transportation is limited. When food fails birds can fly to more fertile fields, but men cannot flee. While attention is now turned to the sufferers in China, to be somewhat relieved by the Red Cross, we hear of a region of famine in the northern part of the Bombay Presidency that will be too extensive to be met by the Government and will need all the help the benevolent world can give. We shall hear of the magnificent durbar in honor of the Emperor and Empress of India, but too little of the death and misery of the neighboring famine. The last great famine was in 1900.

It may be noticed that the Oscar Lawler who has been selected assistant United States attorney in charge of the investigation of the dynamite conspiracies is the same Lawler who was connected with Secretary Ballinger and who wrote the report condemning Mr. Glavis and Mr. Pinchot as to the Alaska coal deals, which the President used as the basis of his severe decision which dismissed Glavis from the service. When Secretary Ballinger was obliged to resign following the Congressional investigation Mr. Lawler also resigned. His testimony before the committee showed no little temper.

Some of the French and Italian papers mention the fact that in passing from the chair in which he was carried into the hall to create the new Cardinals, the Pope fell, and the Cardinals rushed forward in anxiety to lift him up and place him on his throne. In delivering his address his voice was so feeble that reporters could not gather what he said. Other papers simply say that he moved slowly from the chair to the throne. It is feared that a new Pope will have to be chosen before long. The nine years he had allowed himself are now nearly ended.

It is a new wrinkle in municipal politics that has followed the election of a Socialist mayor in Cœur d'Alene, Idaho, and the vote in favor of a "wet" city. The mayor wants a municipal saloon, and has a large plan for it, with salaries for manager, cashiers and bartenders and rent at $6,000 a year. No wonder the city is stirred up over it, but if the city wants saloons why should not the city make the profit?

The machine defeat in Philadelphia at the November elections cost the victorious fusionists $72,000 and the Republicans almost three times that sum. It was, from the Penrose-McNichol standpoint, a costly election all round.

# Insurance

## Investments in Mortgage Loans

THE investment of the funds of the leading life insurance companies has been given a new aspect by the New York law prohibiting their holding stock in other corporations. The funds at their disposal amount to an enormous sum and the investment or withdrawal of these sums has a marked effect on the financial markets. An interesting report has been issued by the New York Life Insurance Company, telling of their method of investing their assets in mortgage loans. This form of permanent investment is more suitable for a life insurance company, that can calculate on its future financial obligations, than for savings banks and trust companies, that must have quick assets to meet financial stringencies or even runs on their institutions. On January 1, 1906, the New York Life had $25,000,000 invested in mortgages. This sum has, in less than six years, increased over four times, the total now reaching $110,000,000. The judicious placing of this large sum of money is a problem in itself. All the mortgages are on improved and unincumbered property. Almost every State in the Union is represented in the list. In summarizing the benefits that our life insurance companies have brought about, such as encouragement of thrift, relief for dependent families and free care for the sick, this indirect feature of placing large loans at reasonable rates for building up the prosperity and usefulness of our cities and towns should not be overlooked.

## Children's Endowment Policies

THE Germania Life Insurance Company has just issued a children's endowment policy. The usual case is where the father pays a stipulated sum every year. The face of the policy is payable to the child if it is living at the end of the endowment period. If the child dies within the period, all the premiums will be returned. If the father dies or becomes disabled before he reaches sixty, the face of the policy will be payable at the end of the endowment period, without payment of further premiums.

The following example will serve as an illustration: A father thirty-five years of age has a son five years old. He wishes to provide the sum of $2,500 on his son's attaining his twenty-fifth birthday. The father applies for a twenty-year children's endowment policy for $2,500 and agrees to pay to the company $118.05 (less dividends) each year. When the son reaches twenty-five years of age the company pays to him $2,500. If the father dies before his son reaches his twenty-fifth year, or becomes permanently incapacitated, the policy becomes paid up for its face amount, and at the son's twenty-fifth birthday the company pays to him $2,500.

A medical examination of the father only is required. After the policy has been in force three years it has a cash surrender value and a loan value. By saving a small sum from his yearly income a father can without fail provide a fund available for his son's higher education or business start.

THE New York City Fire Department has prepared and is distributing cards containing these timely "Don'ts" for housekeepers. The following of these useful suggestions would reduce the fire loss by one-half:

Don't block the fire escapes; you may need them yourself tonight.

Don't leave everything to the landlord; inspect your own house from cellar to garret, and locate all exits.

Don't throw cigars or cigarets out of windows. They drop on awnings and set them afire.

Don't allow children to play with matches.

Don't use matches or candles in dark closets or cellars.

Don't keep matches except in a tin box with cover attached.

Don't toss away a match unless completely extinguished, and then toss it into a metal or porcelain receptacle.

Don't fill lamps or oil stoves while lighted.

Don't use kerosene oil to kindle fires.

Don't use naphtha or gasoline for cleaning purposes where there are open lights or fires.

Don't put hot ashes on a dumb-waiter.

# Financial

## The Cost of Living

Resolutions which are now before the New York Chamber of Commerce call for an international commission instructed to inquire and report as to the causes of the increased cost of living. It is proposed that the commission shall be called together by our Government. The project was first suggested, we think, by Prof. Irving Fisher, of Yale University, and has been promoted by him here and in Europe, where it has the approval of many of the leading economists, financiers and statesmen. It seems to us that the resolutions ought to be adopted by the Chamber of Commerce. Such an inquiry as the one proposed is needed for the enlightenment and guidance of all civilized countries. The commission would, of course, give due consideration to the effect of the increased output of gold. Here we may point out that the record at the Rand mines was again broken in November, when the product was £3,060,000, against £2,729,554 in November a year ago, and a monthly average of about £2,600,000 for the year 1910. There is much talk in this country about the influence of the middleman, of cold storage and of the tariff revision of 1909; but little if any concerning the effect of a greatly enlarged and steadily increasing supply of gold.

## Currency Reform

The National Monetary Commission has appointed a subcommittee to draft a currency reform bill, which will be submitted with the commission's report. It is understood that in this bill will be embodied the so-called Aldrich plan, with some modifications. All the members of the commission, it is said, favor any change that will more surely tend to prevent control of the proposed National Reserve Association by a few large banking institutions or a small group of powerful financiers. But it is held by at least a majority of the commission that the plan as it stands provides safeguards against such control.

Among those who are well informed as to the situation at Washington, however, there is no expectation that the commission's bill or any other of similar scope and purpose will be passed at the present session of Congress. In fact, there is said to be no ground even for hope that there will be currency legislation. The attitude of a majority of the Democrats may be indicated by the revival of the project for an investigation of a Money Trust which is said to exist in violation of law. Plans for needed reform of the currency system should be considered on their merits. Both discussion and action should be kept out of partisan politics. Evidently there must be a long campaign of education. As we have said before, contributions to meet the cost of it should be procured from business men and firms and from the people at large, rather than from the banks or from capitalists who are bank directors.

....A recent official report shows that deposits in all of the country's savings banks on June 7 amounted to $4,212,583,598, of which $3,353,896,422 is assigned to the eleven New England and Eastern Middle States. The increase during the year preceding had been $142,097,000.

....A Census Bureau report issued recently, indicating growth of manufactures by comparing the figures for 1909 with those for 1904, shows that the value of products increased from $14,763,903,000 to $20,672,052,000, or 40 per cent.; the capital invested from $12,675,581,000 to $18,428,270,000, or 45 per cent.; the cost of materials from $8,500,208,000 to $12,141,291,000, 43 per cent., and the salaries and wages from $3,184,884,000 to $4,365,613,000, 37 per cent. The number of salaried officers and clerks rose from 519,556 to 790,267, this increase being 52 per cent. New York State's share was a large one in 1909, being then nearly one-sixth of the value of products, more than one-seventh of the invested capital, more than one-sixth of the salaries and wages, and almost one-fifth of the number of salaried officers and clerks.

# The Independent

VOL. LXXI NEW YORK, THURSDAY, DECEMBER 21, 1911 No. 3281

## Survey of the World

**The Passport Question**

The Sulzer resolution, providing for the abrogation of the treaty of 1832 with Russia, because of discrimination by the Russian Government against Hebrews of American citizenship in the honoring of American passports, was passed by the House of Representatives, December 13. The vote was 300 to 1. At the same time the Senate Committee on Foreign Relations gave a hearing to the Jewish committee recommending abrogation. The Sulzer resolution had the unanimous support of the House Committee on Foreign Affairs. Under the terms of the treaty a year must pass before actual abrogation can take place. The one negative vote was cast by Representative Malby, of New York, a Republican, on the ground that the wording of the resolution is undignified and insulting to Russia. The resolution will not be taken up by the Senate until after the holidays. This gives the President time to send a supplemental message to Congress on the subject. Negotiations on the subject are in progress with the Russian Government. The Sulzer resolution follows:

That the people of the United States assert as a fundamental principle that the rights of its citizens shall not be impaired at home or abroad because of race or religion; that the Government of the United States concludes its treaties for the equal protection of all classes of its citizens without regard to race or religion; that the Government of the United States will not be a party to any treaty which discriminates or which by one of the parties thereto is so construed as to discriminate between American citizens on the ground of race or religion; that the Government of Russia has violated the treaty of 1832, refusing to honor American passports, duly issued to American citizens, on account of race and religion; that in the judgment of Congress the said treaty for the reasons aforesaid ought to be terminated at the earliest time; that for the aforesaid reasons the said treaty is hereby declared to be terminated and of no further force and effect from the expiration of one year after the date of notification of the Government of Russia of the terms of this resolution, and that to this end the President is hereby charged with the duty of communicating such notice to the Government of Russia."

——The Russian Government has informally informed the State Department at Washington that the Sulzer resolution is offensive to Russia. That Government is incensed at the wording of the resolution; the right of the United States to abrogate the existing treaty is not questioned. The Russian Government is ready to point out, however, the inconsistency of the United States, which does not hesitate to exclude Orientals as "undesirables." The Senate Committee on Foreign Relations may not accept the resolution in its present "unnecessarily harsh" form.——On Sunday the President called an evening Cabinet meeting to consider the advisability of sending a special message to the Senate on this subject.

*

**The Pension Bill**

The Sherwood dollar-a-day pension service bill, which, if it becomes a law, will add about $75,000,000 a year to the annual expenses of the Government, was passed on the evening of December 12 by the House of Representatives. The final vote was 229 to 92. Eight Republicans voted against this Democratic measure, as follows:

Gardner, McCall and Millett (Mass.); Hill (Conn.); Kent (Cal.); McCreary (Pa.); Payne (N. Y.), and Utter (R. I.).

The a Democratic bill, and voted for by Speaker Clark, Chairman Fitzgerald (New York), of the Appropriations Committee, and Chairman Underwood (Alabama), of the Ways and Means Committee, were among the Democrats who remembered their caucus pledges to follow a policy of strictest economy. Representative Fitzgerald said:

"Retrenchment and economy will not result from idle phrases. . . . Thruout the land there is a widespread demand for increased expenditures for many objects, some legitimate. . . . It will take resolution and courage to resist successfully these demands. . . . The enactment of this bill will sound the death knell of the Democratic party's promise successfully to reduce expenditures and substantially to lower tariff taxes."

Mr. Fitzgerald presented a comparison of the pension roll totals of this and other countries. He showed that last year the United States spent for pension purposes $162,631,729, while Great Britain spent $29,397,268; France, $31,960,607; Germany, $40,805,814; Austria, $20,531,668, and Hungary, $6,498,737. "All combined," he said, "they spent $33,000,000 less than the United States." ——There were loud cheers from both sides of the House when the vote was announced. Former Speaker Cannon had made a fiery speech in support of the principle of increased pensions, tho he exprest a preference for the Sulloway bill, which takes in the ninety-day men, prescribes no income restriction, and is so framed as to require less administrative machinery than the Sherwood bill. Tho many attempts to amend the bill were made it passed in much the same shape as reported from the Invalid Pensions Committee. Only two changes of importance were made. One eliminated the provision that no veteran receiving $25 a month under the measure should be eligible for admission to a soldiers' home and the other struck out the paragraph restricting the benefits of the pension to veterans whose annual net income is less than $1,000 a year. The House was in a generous mood, and all attempts to limit the bounty of the bill were voted down, altho when Representative Berger, the Milwaukee Socialist, offered his old-age pension bill as an amendment to the Sherwood measure, on a point of order by Representative Bartlett, of Georgia, it declared this proposition not germane. Mr. Berger's amendment if enacted into law would have increased the annual expenditure for pensions by $500,000,000. The rates in the Sherwood bill are: For service of ninety days up to six months, $15 a month; from six to nine months, $20 a month; nine months to a year, $25 a month, and for one year or more, $30 a month.——At Washington it is believed that President Taft will veto the Sherwood pension bill if it is passed by the Senate. It is likely, however, to be modified by that body. The Sulloway (Republican) pension bill of the last session died in the Senate; it was freely predicted at the time that it would be vetoed if passed.

**The Dynamiting Cases**

Hearsay evidence has brought the name of Clarence S. Darrow, chief of counsel for the McNamara brothers, into the Franklin bribery case now on trial at Los Angeles. It was Darrow who defended Moyer and Haywood in their trial for the murder of Governor Steunenberg.——It is stated at Los Angeles that President Taft was fully informed of the evidence in the McNamara case, when he visited that city last October, and ordered the Federal authorities to push forward a thoro investigation both there and in Indianapolis. There was a disposition on the part of Pacific Coast business men to suppress the investigation, comparable with the attitude of many San Franciscans at the time of the prosecutions by Mr. Heney. ——Delivering a speech before the Cleveland, Ohio, organization of the National Metal Trades Association Detective William J. Burns savagely attacked Samuel Gompers, president of the American Federation of Labor. This was on December 15. He declared that he would not rest until all those guilty of dynamiting outrages in this country had been brought to justice.

"Gompers is unfit to be at the head of organized labor," he continued. "Gompers and his associates, the corrupt political crowd that controls organized labor, fought us at every turn in the McNamara case to prevent justice being done. Before the trial came up I told Prosecutor Fredericks in Los Angeles every

move that would be made against us. I told him that attempts would be made to bribe the judge, to bribe me, to frighten or bribe or kidnap witnesses and to buy the jury. Every one of those things was tried, with the possible exception of attempting to bribe the judge.

"Did it ever strike you as significant that all this money which was raised to defend the McNamaras was to be paid out under the orders of Gompers, Morrison and Clarence Darrow? I have been attacked for making charges against Gompers. I shall keep right on attacking him and the other demagogues in his organization. There are many McNamaras in organized labor.

"Don't understand me as attacking the labor unions. They are all right and they are here to stay. They should be boosted and not hindered. But violence must end. Many more arrests may be expected in the McNamara case and very soon," Burns concluded. "The work is getting to a point now where the climax is imminent."

**Republican Politics**

The Republican National Convention of 1912 will open in Chicago, June 18. This was decided at a meeting of the National Committee at Washington, December 12. Disappointment has been exprest by progressive politicians at the decision against "Presidential primaries." At the close of the National Committee meeting, E. F. Lee chairman of the Indiana State Committee, issued a formal statement, "with extreme reluctance," to the effect that "Mr. Taft cannot carry Indiana." This is contradicted by Harry New, National Committeeman from the State and newly elected chairman of the Republican Committee on Arrangements. Mr. Lee's personal views are to be regarded as colored by the fact that he is a disappointed office seeker. But he is ex-Senator Beveridge's right hand man.——An unusually large proportion of the Republican delegates who arrive in Chicago next June will be uninstructed if one may accept present indications. The supporters of Colonel Roosevelt argue that while he is "not a candidate," he has not stated that he would decline the nomination. They are lying low.——The resignation of Postmaster-General Hitchcock as chairman of the National Committee was accepted at the Washington meeting. This resignation was presented March 5, 1909, but had not been acted on. Ex-Governor Hill, of Maine, who has been acting chairman since 1909, was elected chairman to bridge over the time until the selection of Mr. Taft's 1912 campaign manager is chosen—if the President is renominated.——William L. Ward, Republican National Committeeman from New York, was quoted at Washington as saying that President Taft could not carry his State. William Barnes, Jr., boss of Albany and Republican State Chairman, followed this up by attacking both Mr. Taft and Colonel Roosevelt. Prophecies he declined to make, but he deplored the "tendency toward a pure democracy, . . . a condition approximating anarchy." He rapped the Taft trust policy, and repeated his warning that "Roosevelt is scheming to become a dictator."——The fight for the control of the Chicago convention will begin early in January.——Senator Bristow, of Kansas, said, December 14:

"I am for La Follette. Colonel Roosevelt . . . made a great President and would again. But . . . I regard Mr. La Follette as the greatest constructive statesman now in public life."

——According to Gifford Pinchot, who addressed a meeting of progressive Republicans in Boston, December 16,

"the developments of recent months have made impossible the renomination of Mr. Taft,"

and the party finds its new leader in

"that pioneer among progressives, a constructive statesman, full of courage and common sense, Robert M. La Follette of Wisconsin."

**The Railways**

The report of the Railroad Securities Commission authorized by Congress more than a year ago to investigate the question of government regulation of railway stock and bond issues was sent to Congress December 11. President Hadley, of Yale University, is the chairman of this commission, whose investigations have included European as well as American systems. The only measure of immediate relief recommended is full publicity in regard to all stock and bond issues by railroads, under statutory regulations enforceable by the Interstate Commerce Commission, which would have the power to make physical valuations. The Securities Commission further recommends that an effort be made to harmonize existing requirements between the States, and suggests inquiry into the advisability of

Standing, left to right: President Butler of Columbia University, William H. Bliss, Chancellor Brown of New York University, Isaac N. Seligman, Francis B. Loomis, Henry Clews. Sitting, left to right: Joseph H. Choate, chairman; Andrew Carnegie, Henry Watterson of the Louisville *Courier Journal* and F. R. Coudert.

allowing railways engaged in interstate commerce to incorporate under a Federal charter. It is, however, too early to decide as to this. No restrictions other than those of publicity should, the commission adds, be placed upon the power of directors to issue new stock pro rata to their stockholders.

**The Wreck of the "Maine"**

The Cuban Veterans' Association asks President Taft to leave in the harbor of Havana the cofferdam which surrounds the wreck of the "Maine," in order that the association may use it in making an island. Upon this island the veterans would erect a monument in memory of the victims of the explosion. ——The Deficiency bill recently reported in the House at Washington adds $250,000 to the sum ($650,000) heretofore appropriated for raising and removing the wreck, and also authorizes the Secretary of the Navy and the Secretary of War to donate parts of the wreck to municipalities, naval associations or societies, or to former officers or members of the crew of the battleship, their heirs or representatives. On the 16th Mr. Sisson, of Mississippi, moved an amendment permitting the sale of parts of the wreck to persons desiring to exhibit them for profit. Having been rebuked by Mr. Mann, the Republican leader, he replied angrily, expressing regret that Mr. Mann was protected by the rules. The amendment was rejected. It is admitted that offers amounting to about $1,000,000 have been made by persons who would like to exhibit that part of the wreck which is to be towed out to sea. ——A. C. Brice, of Bedford, Ia., who was consul at Matanzas when the explosion took place, says that he was told two days

earlier that the ship was to be destroyed, that he sent warning to Consul-General Fitzhugh Lee, and that the latter gave no weight to it. He adds that some time later he told the story to President McKinley, who asked that it should be withheld from the public.——It is said that in addition to the suspension of Cuba's civil service law for six months (to facilitate the removal of Spanish officeholders), the Cuban Congress will enact a law excluding from office all persons except Cubans of approved patriotism. The war veterans ask for the removal of two members of the Cabinet.——A revolutionary force acting in the interests of ex-President Morales has been defeated in Santo Domingo. ——On the 14th forty-two Moros were killed by the army in an engagement at Lanao, on the Philippine island of Mindanao. General Pershing insists that all Moros in Mindanao and Jolo shall give up their arms. An order to this effect was issued three months ago.

**Plots in Mexico**

It was reported last week that an uprising in Mexico was to take place on the 17th. The story was that Reyes was to be the leader, that General Orozco was to assist him and that the movement would have the support of Diaz and Limantour. It was said that our Government had the news. Reyes, who disappeared some time ago, is said to be at Galeana, in Nuevo Leon, and to be watched there by agents of our Department of Justice and of Madero. General Trevino has 10,000 soldiers in northern Mexico, and says he is prepared to suppress any rebellion there. On the 13th, Federal soldiers attacked revolutionists who were smuggling arms across the boundary, near El Paso, killed five of them and captured the guns. Bandits are at work in many parts of the country. They have attacked trolley cars and steam railway trains near the capital. In Morelos, on the 12th, Zapata overcame a force commanded by General Figueroa, captured the town of Tlaquiltenango, sacked it and then destroyed it by fire. A story about an American named John W. Wilkinson has been published at the capital. It is said that when twenty-eight bandits attacked the Bullion Galondrina mine, where he was in charge, he awaited them in a protected place and killed seventeen of them with buckshot cartridges. A newspaper in Spain asserts that ex-President De la Barra bore to Diaz a message from Madero, asking him to return and assuring him that he would be protected.——Revolutionists plotting against the Government of Ecuador have been using Panama as a base. Their plans have been exposed.——Paraguay's revolutionists have formed a provisional Government and elected General Navere President. Brazil has sent five gunboats to Asuncion. Argentina and Brazil have given notice that they will not permit bombardment of that city.

**The Insurance Bill**

The passage by both Houses of Parliament of the bill insuring working men and women against illness and unemployment marks an important stage in the program of social legislation now being carried out by the Liberal Government. The opposition in the final discussion in the House of Commons was vociferous, but feeble, because the passage of the bill was a foregone conclusion and the Unionists had approved it in principle and were afraid to criticise it much in detail when it is uncertain how the measure will work and whether it will prove popular. Consequently, the efforts of the Opposition were confined to an amendment asking for more time for consideration and to attacks upon the Government for misrepresentation and the drastic use of the guillotine or closure. Lloyd-George in his reply declared that another year or two of debate would not throw any light on how the scheme would work and the only thing to do was to try it and see. The Laborites were all in favor of non-contributory insurance, and six of them, including Kier Hardie and Snowdon, joined in a protest containing the following paragraphs:

The attempt to impose a contributory system of national insurance is against the true principles of social reform, it is a discredited, irritating, unjust and wasteful method of financing a great national scheme, and we believe it is a plan which is disapproved by the

thoughtful portion of the working class opinion in the country.

"The bill proceeds on the principle that the evils of poverty can be cured by the State organization of the present expenditure of the wage-earning classes. The poverty of the wage-earners can only be remedied by securing for them the use and enjoyment of that portion of the national wealth which is now appropriated by others in the form of unearned incomes. This bill does not tax rent and profits to any appreciable extent to provide additional comforts for the poor, but places new and heavy burdens on small and inadequate wages. The poverty of the workers can never be cured by taxing their poverty."

Most of the Labor members, however, as well as many of the Unionists, voted for the bill on its third reading, when it was carried by 324 to 21. In the face of such a majority of course the House of Lords could not take upon itself the responsibility of rejecting it, so it was promptly passed without attempting to amend it. Many changes have been made in the bill since its provisions were summarized in these columns, but none of its essential features have been changed. The plan is in brief that each wage earner shall be required to contribute eight cents a week and his employer four cents, and this sum, supplemented by six cents from the State, constitutes the insurance fund. Persons earning less than 30 cents a day are not obliged to contribute, and those paid less than 62 cents a day have reduced contributions. Besides the sick relief, generous provision is made for preventive measures and sanatoria for consumptives. The most difficult question was how to provide for women, and this is admittedly the most unsatisfactory part of the measure. It applies only to self-supporting women, and the case of domestic servants is particularly embarrassing. A petition objecting to their inclusion was signed by 11,000 mistresses and servants, and many have declared that they will refuse to comply with the provisions of the law.

*

**The Durbar**

The coronation proclamation of King George as Emperor of India was the most extensive and imposing pageant that has ever been seen in that country. Orient and Occident vied with each other in magnificence of costume and gorgeous coloring, and made a magnificent scene in the tropical sunshine. The city of tents in the Delhi plain covered about twenty-five square miles, carefully laid out with paved streets, waterworks and electric lights. Fifty thousand troops and 150 native princes, with their suites, were encamped about the imperial pavilion. On the crimson dais in the center of the amphitheater were four thrones, for the Emperor, Empress, Viceroy and Vicereine. As soon as they were seated the imperial herald, clothed in purple and gold and mounted upon a jet-black charger, appeared upon the scene, followed by a drummer and sixteen trumpeters, eight British and eight Indian. After three blasts from their silver trumpets the herald wheeled his horse about and read the proclamation in English and Urdu. The massed bands played the national anthem, the royal standard was unfurled from the central flagstaff and a salute of 101 guns was fired, while spectators from all parts of India, numbering over 100,000, assembled about the great amphitheater manifested their loyalty by enthusiastic cheering. After the governors and native rulers of India had offered homage to the Emperor, the Viceroy, Lord Hardinge, announced the imperial gifts and favors. These included 50 lakhs of rupees (about $1,500,000) to be devoted immediately to the cause of popular education and to be followed by more generous sums; a half month's extra pay to all native soldiers and non-commissioned officers and subordinate civil servants; the release of certain classes of prisoners, the remission of debts due to real poverty, and the admission of native officers and men to eligibility for the Victoria Cross for bravery on the field of battle. It was also announced in the name of the King-Emperor that the capital of India should be removed from Calcutta to Delhi.——This announcement caused a great slump in Calcutta real estate. The transfer will be made as soon as possible and is expected to cost $20,000,000. A cornerstone of the new Government buildings was laid by the Emperor and Empress on December 13, the day after the Durbar. The removal of the capital from Bengal may be regarded as a punishment for the

sedition manifested there since the partition of the province by the former Viceroy, Lord Curzon. This act will now be undone and a single governorship for Bengal created.

**Other English News**

A second general railroad strike has been averted thru the signing of an agreement by the representatives of the four great railroad companies, by the representatives of six of the unions, and by G. R. Askwith for the Board of Trade. The basis of the agreement is the plan recommended by the recent report of the Royal Commission. This was at first declared by the union leaders to be unacceptable, but at the suggestion of the Board of Trade conferences have since held by the representatives of the employers and employees, resulting in some further concessions to the men. The unions are not formally recognized, but the companies agree to receive deputations of the men within a fortnight after the receipt of a petition from them for increase of wages. In the event of an alteration of rate of wages or hours of labor the employees are to be notified by circular at least a month before the proposed change. Extra and casual men employed in the freight service are to be paid not less than the minimum standard rate.—— The naval prize bill, which passed the Commons by a majority of only 47, was rejected in the House of Lords by 145 to 53. The objections raised by Lord Selborne to the bill were that in the proposed international Prize Court the British Empire had no greater representation than a petty central American republic; and, further, that representatives of the United States would allow of no appeal to the Prize Court from the American Supreme Court, while the bill permitted an appeal from the British Privy Council to the Prize Court. It was therefore possible, he claimed, to get conflicting judgments. The rejection of the prize bill by Parliament prevents the ratification of the Declaration of London, which was authorized by the Hague Conference to secure an international agreement on questions of neutrality in time of war. —— The P. and O. liner "Delhi" went ashore off Cape Spartel, on the Moroccan coast, in a storm. Among the passengers were the Duke and Duchess of Fife and their daughters, and the cutter carrying them ashore was swamped in the surf and they were rescued with difficulty. A valuable jewel case was lost by the upset. The French cruiser "Friant" responded promptly to the wireless call for help from the stranded vessel, but the Gibraltar station ignored the plea because it is against the rules of the British Admiralty to answer calls from merchant vessels. But as soon as the officials at Gibraltar heard from Cadiz that the King's sister was on board, warships were sent to the aid of the "Delhi." Some of the French sailors lost their lives in rescuing the English women and children.

**The Chinese Rebellion**

The past week has been relatively quiet and uneventful, but the next promises to be the turning point in the history of the empire, for the leaders of the imperial and republican parties are to hold a conference at Shanghai. Yuan Shi-kai, premier and virtual dictator at Peking, has sent as his personal representative Tang Shao-yi, an American-educated Chinese. He first went to Hankow, and after a conference with General Li Yuan-hung and other revolutionary leaders at Wuchang he embarked on a chartered river steamer and went down the Yang-tse 800 miles to Shanghai. He is accompanied by fifty Government officials and eighty assistants and servants. Four representatives of General Li went down the river on the same boat. The revolutionists of Shanghai and Nanking form a group quite distinct from those of the upper Yang-tse, so there are really three factions to harmonize. Wu Ting-fang, former minister to the United States, is the leading spirit in Shanghai, or at least is most prominent in foreign eyes. The arrival of Dr. Sun Yat-sen at Shanghai is awaited with great eagerness and curiosity, since he has for many years been the missionary of the revolutionist cause in Europe and America, and is the favorite candidate for first president of the republic among the younger element of the republicans. The older men are

skeptical of the advantages or stability of a republic and would prefer a limited monarchy with a Chinese on the throne instead of a Manchu. It is asserted by the imperialists that the European monarchies have intimated that they will never consent to recognize a republican government. Great Britain and Japan have offered to mediate between the imperialists and revolutionists, and it is hinted that if such mediation is refused other steps will be taken to put an end to the present chaos.——One unfortunate effect of the revolution has been the revival of the opium trade. The edict against it is being disregarded like the other edicts and revolutionary governments of the provinces of Yun-nan and Sze-chuan have permitted the planting of the poppy, which had been almost completely abandoned.——The cruiser "Hai Chi," which was anchored in the Hudson River at New York last fall, arrived at Shanghai on December 14 and at once joined the revolution, replenishing the arsenal with a large quantity of ammunition brought from England.—— The legation guards at Peking now number 2,103 men, distributed as follows: American, 320; Austrians, 86; Belgians, 21; British, 338; French, 301; Germans, 121; Italians, 177; Japanese, 292; Netherlands, 48, and Russians, 399.

**Shuster in Persia**

Mr. Shuster is more popular than ever with the Persians, and altho the Cabinet favor yielding to Russia's demand for his dismissal, the Mejliss or parliament refuses to consent, in spite of the report that Russian money is being used freely to induce a sufficient number of the delegates to leave in order to prevent a quorum. The Russian agents in Teheran have distributed 100,000 rubles to the poor and arranged for giving out food to relieve distress during the winter. The Russian troops have been stayed at Kasvin because it is recognized that a further advance toward the capital would bring down upon them a host of infuriated and fanatical Moslems. In the south the feeling against the British is almost equally bitter, and the British troops are short of food because the shopkeepers of Shiraz refuse to sell them anything whatever. The Mohammedan priests have told the people that the English money is tainted and they refuse to take it.——It is reported that Turkey is preparing to fight Russia in case of an attempt to occupy Tabriz. The Ottoman Government regards it as more important to try to defend Persia than to regain Tripoli.——Sir Edward Grey, Secretary for Foreign Affairs, stated to Parliament that the British Government agreed with Russia that Mr. Shuster should resign his position as Treasurer-General and be replaced by a foreign adviser acceptable to Russia and Great Britain. Mr. Shuster's intentions in appointing British officials in Northern Persia were good, but the spirit and intention of the Anglo-Russian agreement could not be permitted to be upset and two great nations to be embroiled by the action of any individual, no matter how good his intentions were. The Foreign Secretary said that if the difficulty were mismanaged or rashly handled by those concerned larger issues of policy might become involved. The British Government strongly opposed the restoration of the ex-Shah, and Russia had given a categorical assurance that she had no intention of that kind.——How well Shuster has managed the finances appears from the following statement which he has given out:

"On June 13 I assumed charge of the treasury and the revenues, finding banking deficits amounting to $500,000, and not a penny in cash belonging to the Government. There was an unknown sum outstanding in checks, drafts on the treasury, promises to pay, etc., issued by previous ministers of finance. Since then, in spite of the civil war, which consumed for extraordinary direct expenses alone over $1,500,000, in spite of the attendant disorders throughout the Empire, causing diminution of the revenues, I have paid the banking deficits of $500,000, furnished the expenses of running the Government, met promptly all foreign obligations accruing, and now have in the Treasury liquid assets to the amount of $800,000. The only extraordinary receipts were the net proceeds of the Imperial Bank loan, which, after liquidating the converted debt and other advances, amounted to less than $2,000,000. The ordinary expenses of the Government, therefore, have been met during a specially trying period entirely from internal resources and the balance of $800,000 accumulated, given a fair chance, would, I pledge my reputation, place Persia's finances on a solid basis for two years."

# The Martyrdom *of a* Quakeress

## *by* John Greenleaf Whittier

[This is a ballad of Whittier's I have never seen in print. It is the story of the martyrdom of the Quakeress, Mary Dyer, hanged on Boston Common, June 1, 1660. She had been exiled from Boston, but returned to preach her doctrines. Only one other Quaker was hanged after this. I have the poem from an aged lady of the Society of Friends, now residing in Iowa. She says she committed it to memory in her childhood at the suggestion of her teacher, who was a personal friend of Whittier. She wrote it for me from memory, having no copy at hand. This is a characteristic specimen of Whittier's early work.—SAMUEL T. PICKARD, Amesbury, Mass.]

How blessed and serene
Seems her releasing from the world of fears!
It is a holy scene
Too holy far to be gazed on thru tears.

The sunlight streaming in,
The solemn music filling all the air,
And the soul, freed from sin,
Mingling with sweet sounds that are swelling there.

Beauty and Death are meeting—
For beautiful she is, tho Death stands by;
Mild is his kiss of greeting
When the pure-hearted and the lovely die!

But the bright flush yet lingers,
Altho the spirit to its home hath fled,
And the pressure of cold fingers
Betrays not that the lovely one is dead.

Thus softly would I break
The link that binds my spirit to this sphere;
Thus calmly would I take
My leave of earth, with music breathing near.

My early friends should be
There with wet eyes my dying couch around,
That I might latest see
Earth's dearest things, and hear its sweetest sound.

Let no one mourn for me,
When on Death's pillow my frail limbs are lying,
But rather joy to see
That rest celestial waits upon the dying.

That angel hymns are heard
By the free spirit that is passing there,
And that the whispered word
Has called a soul in angel bliss to share.

# "Men and Religion"

BY HENRY ROOD

Publicity Secretary of the National Committee of Ninety-seven for the "Men and Religion Forward Movement."

ONE of the most remarkable enterprises of its kind which this country has seen in modern times is the Men and Religion Forward Movement, which has been sweeping thru the Middle West during the last three months, which is to strike the Atlantic seaboard early in January, and which will cover the far Western States during March and April.

Preparations for this undertaking have been actively in progress since May, 1910. Since the early autumn of that year a committee of one hundred business and professional men have been hard at work in each of the seventy-six cities of the United States and Canada, making preparations for an eight-day campaign to be conducted by a team of specialists in religious work. The whole movement is under the direction of Fred B. Smith, campaign leader, who for many years has been head of the Religious Work Department of the International Committee of Young Men's Christian Associations. Working with him is a cabinet called the Committee of Ninety-seven, whose members, selected from almost every State in the Union, have charge of the national work. Thru the encouragement of the ninety-seven each of the seventy-six local committees of one hundred were formed.

The general plan of the Men and Religion Forward Movement may be described as an effort to arouse to activity laymen in local churches all over the country. It has no new religion to offer, no new religious fad to suggest. All that is new in the Men and Religion Forward Movement may be found in the methods by which it is hoped to present the gospel of Christ. And new methods are necessary, for the simple reason that methods in satisfactory use years ago are not satisfactory today. Our whole civilization has been revolutionized. Hundreds of thousands of people live together in great cities, where they do not know each other, where it is almost impossible for a single church, or any number of churches, to reach them under old methods because of the density of population. In the vast majority of cases a man is greatly strengthened thru the influence of some one church. The Men and Religion Forward Movement proposes to take the church to the man, wherever he lives.

And right here let it be said with the utmost emphasis that this movement does not propose to interfere with or to hamper in any way any minister of the church. For too long a time practically the whole burden of the church has been laid on the shoulders of the minister and the women of the church. One of the principal objects of this entire campaign is to arouse the laymen of the churches so that, instead of remaining passive members, they will become active, standing shoulder to shoulder with their individual ministers, backing the ministers up and helping them in their work.

Secondly, in addition to preaching and teaching the gospel, the Men and Religion Forward Movement proposes, in so far as it may, to follow Christ's work of teaching men how to minister to the physical and mental needs of their fellows.

To carry out this twofold program of work, Mr. Smith and his advisors have assembled a battalion of about thirty men, chosen from this country and from beyond the Atlantic. Some of these men are evangelists—preachers like David Russell, the "Moody of South Africa," who has come directly from Johannesberg for the one purpose of taking part in this campaign. Another is Dr. W. R. Lane, the most noted evangelist of all England.

Then there are men who have proved their ability to work with boys; not merely developing the religious side of the boy's nature, but helping him to build up his body thru proper games and

[illegible]

[illegible] to have his mind healthfully occupied, to strive unceasingly for self-control and self-government of his nature,

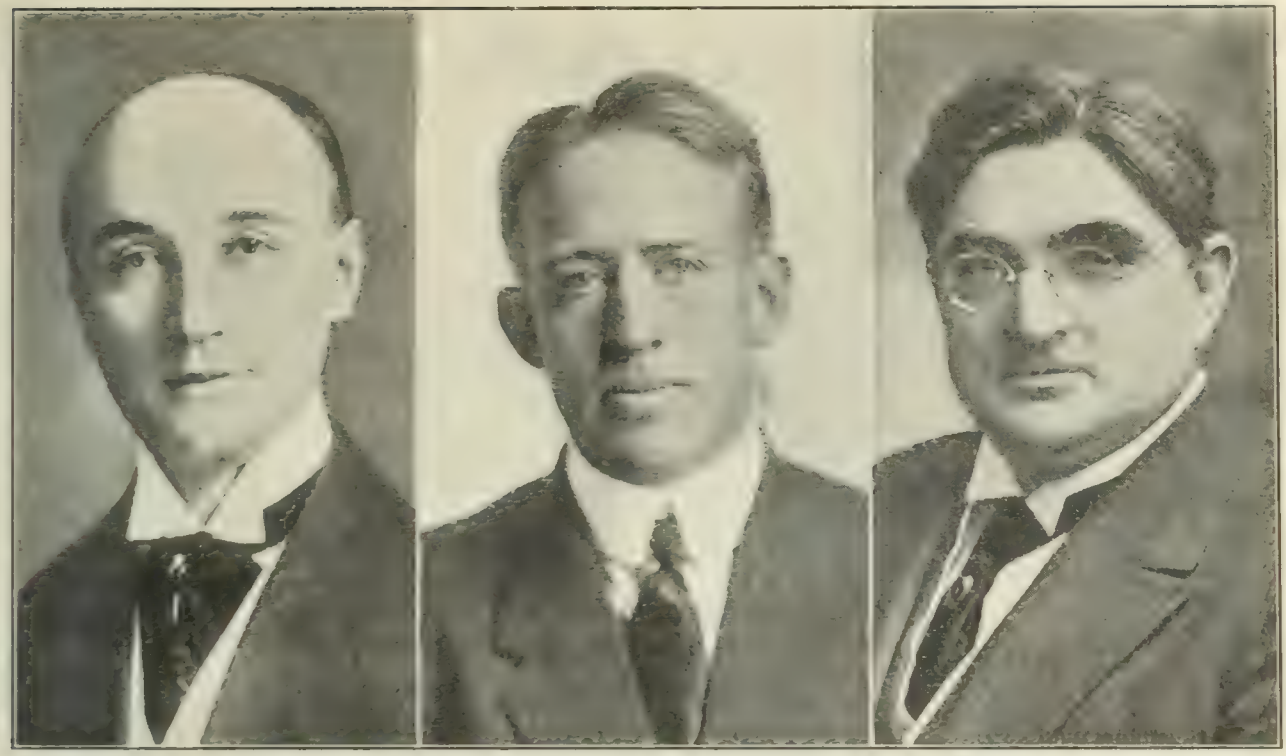
There are other specialists in the battalion who have interested thousands and thousands of men and women in the

study of the Bible and of Biblical literature in general.

There are still other men who have achieved much along the broad lines of social service to the community. And in addition there are men who have successfully conducted church work outside of the Church.

Now when the eight-day campaign opens in any city, the men of that city and its surrounding territory who are interested particularly, let us say in Bible study, will attend a course of lectures given by a Bible study specialist, who will explain definitely, step by step, exactly the methods that he has used successfully in interesting large numbers of people in Bible study. Those in the audience are expected to take notes, exactly as if they were attending a course of lectures at some university, and at the end of this Bible study lecture course they should be prepared to put those methods in operation in their own individual churches and Sunday schools and Bible classes. In this way a number of the meetings actually are like teachers' institutes, where teachers gather in order to hear some highly successful teacher explain his methods of work, so they may be adopted by a large number of individual instructors.

This idea of lectures is being carried out all along the line. Those who are interested in boys' work attend lectures given by experts in that field; and so on. By the time the campaign closes it is expected that thousands of men now active in church work will be able to carry on their efforts in their own churches with a degree of success utterly impossible without this special instruction.



There is one thing that should be clearly understood: there will not be a trace of emotionalism or sensationalism in this entire campaign. The gospel of Jesus of Nazareth—and its practical application to our practical daily life—is presented calmly, sanely, logically, so that it will convince the average man, who is a man of sane, logical, common sense. Women have no part in this movement, the reason being that Mr. Smith believes that the manly gospel of Christ should be presented to men by men.

It has been proved already in numbers of cases that this movement appeals not only to men of religious nature, but to all men of truly humane and patriotic feeling, whether they are religious men or not, and for this reason: You cannot cure an alcoholic wreck by locking him up in jail over and over again. You cannot cure the divorce evil by talking about it and by passing laws regarding it—for you do not get down to the root of the matter. By law you can punish, sometimes, but you cannot prevent graft in politics or dishonesty in commercial practice. We have tried ethical culture, various rationalistic philosophies and the enforcement of law. They have failed. The one thing left with which to remedy wrong doing and wrong thinking is religion. If we can arouse the spirit of true and sincere religion among the men of this continent—so they will put it in actual practice—we have a sure cure for existing evils of whatever kind.

Mr. Smith and his battalion of men have faith to believe that this can be accomplished; and they are going ahead calmly, quietly, surely, undisturbed by a few mistaken critics who have impugned their motives—for we all know that these critics—assuming they are sincere—would never have spoken as they have spoken were they informed concerning the men and religion forward movement.

The success of the Men and Religion Forward Movement during its first three months has been far greater than was anticipated. The amount of publicity given to it by newspapers has been enormous everywhere, excepting in two or three of the largest cities in the country, where campaigns will not be held until next April. But what level-headed laymen look for is results, and to prove that definite, positive results are being accomplished, a few statements may be picked up at random from reports made by different critics where eight-day campaigns have been held. It is impossible to tell within the compass of a brief article all that has been done, but an idea of some of the most important results may be obtained by glancing at the following statements from six or eight cities chosen at random.

*South Bend, Ind.*—Inter-church federation organized, with working commit-

REV. CHARLES STELZLE
Dean of Team I

REV. ROY B. GUILD
Executive Secretary

FRED B. SMITH
Campaign Leader

tee of twenty-five. Six hundred men have signed agreements to put forth an honest effort to win one man to Christ and prepare him for church membership within a given time. Between fifty and sixty young men are enlisted in a study of the boy problem. Men's Bible classes have been organized or enlarged in almost every church, with almost twice the attendance they had before the campaign. Religious atmosphere has been created in the city, one result being a conference of the State factory inspectors and employers of labor, which would not have been possible before the campaign. A committee of one hundred is carrying the work into the auxiliary cities as planned.

*Louisville, Ky.*—The city profoundly moved by the eight-day compaign. Thousands of men attended Sunday meetings and hundreds confessed Christ. The message and the method heartily approved by the churches, and a great campaign already inaugurated.

*Cedar Rapids, Ia.*—Organization of Sunday school work and increased attendance everywhere since the eight-day campaign.

*Minneapolis, Minn.*—Men's Bible classes formed and increased church attendance. Active steps in boys' work especially noticeable. One church organized its men for community evangelistic work, and in two weeks fifty persons were definitely secured on profession of faith and joined the church. Another church reports that the number of men attending services has doubled since the campaign. So active are the laymen in reaching the community that one denomination has employed a secretary to direct evangelistic work for three months, and he is giving all his time to organizing neighborhood meetings, which are conducted by a large number of lay preachers. Ninety selected key-men have organized to assist the central committee on social service. On November 27 a special committee of the City Council met to discuss a new dance-hall ordinance, inspired by new conditions here, and the Social Service Committee of the men and religion movement were present to urge several changes in the ordinance which they deem wise and neces sary, after a thoro study of the existing law.

*Dallas, Tex.*—Labor Union Council and Ministerial Association exchanging delegates in order to promote better understanding between these two bodies. Active steps taken to institute garbage collection, inspection of water and milk

and other civic duties. Remarkable unanimity on the part of all the pastors.

*Des Moines, Ia.*—Inter-church council formed, every church brotherhood naming two representatives to carry on the five lines of work in the man and religion program, treating the city as a whole. Men volunteering for social service, community extension, boys' work and the other lines laid down. Religious life of every church has been quickened, and men are much more willing to attend church services than ever before. Bible study classes organized, and a training institute for teachers and workers in all of the Sunday schools of the city already under way, with a faculty of fourteen instructors, composed of the best authorities on the different phases of Bible study. Co-operating with this institute, training class for boys' workers. Delegate sent from Des Moines to Chicago to study the municipal lodging house, and upon his report the City Council at once appropriated $2,500 for the establishment of a municipal lodging house and employment bureau in this city. Practical work in evangelism, community extension and missions, already under way. So far from dying out, the interest in the movement is increasing every day. It is declared to be the most practical agency for furthering religious activities that has ever been introduced in the State.

*Columbus, Ohio.*—Extraordinary religious awakening reported in every direction. Dr. Washington Gladden declared the Men and Religion Movement to have been a trumpet call to the derelict type of religion to arise and shake itself from the dust and move forward to the battle line. He adds that the message which the Christian men on the team of experts brought to Columbus was the most inspiring message to which he has ever listened; and concludes: "I never expected to live long enough to see the evangelical churches of America harnessed to a project so rational and adequate as this one, nor to hear on a platform where Presbyterians, Methodists, Baptists, Congregationalists and Lutherans were standing together, the kind of gospel preached to which I have been listening all this week."

*Detroit, Mich.*—Twenty men's Bible classes organized in Detroit as a result of the movement. One delegate from each of ninety-three churches in this city pledged to meet with the social service committee weekly. Detroit is carrying the work into the auxiliary towns thru a paid team of experts, and the auxiliary towns are taking hold of the work in a remarkable way. At the very first conservation meeting held in Detroit there were 253 men present, representing sixty seven churches. Several Episcopal churches, which never before allowed outside speakers to enter their pulpits, are now granting that privilege to speakers in the interests of the men and religion movement, and these men of the Episcopal Church are showing a splendid enthusiasm. Evangelistic meetings are being held in auxiliary towns.

That the underlying motives and principles of this great men and religion forward movement are understood thoroly is indicated by the fact that words of hearty commendation concerning it were published in an article written by a leading Roman Catholic in Connecticut, which appeared in the Hartford *Courant* of November 12. It is a coincidence that within two days of this publication on the Atlantic seaboard, the *Jewish Tribune*, of Portland, Ore., at the further end of the continent, printed an inspiring editorial which also gives words of generous praise for the motives underlying the movement.

Up to the time the campaign opened in Minneapolis last September a total subscription of less than $80,000 had been secured in subscriptions. Since that time an additional sum aggregating about $20,000 has been subscribed, leaving still a deficiency in the budget of $25,000, which must be obtained in order to complete the original budget of $125,000 necessary to carry out this extraordinary undertaking. In consequence the national treasury has been so drawn upon that the most rigid economies have been necessary. The largest single subscription received did not exceed $5,000. It is earnestly hoped that Christian men thruout the country may see the importance of at once investing some of their surplus funds in this great effort. Subscriptions should be sent to James H. Post, Treasurer, 120 Front street, New York City.

NEW YORK CITY.

# The Year in Finance and Trade

BY FRANK D. ROOT

[Mr. Root, a member of the staff of THE INDEPENDENT, has for years devoted attention to the general course of financial and industrial affairs. All the details of the record of American financial and commercial activity during the current year cannot, of course, be set forth within the limits of this brief article, nor can there be any elaborate analysis. His aim has been merely to touch upon the leading points in the record, and to direct attention to a part of the statistical evidence which deserves to be considered.—EDITOR.]

SLOW recovery, in 1908, from panic depression was followed by a restoration of normal prosperity in the second half of 1909. In both years there were large additions to the market prices of securities. In 1910 there were considerable losses. But crops were large, the record for iron output was broken, and the volume of railroad traffic was largely increased, altho an accompanying growth of expenses permitted only a small increase of net earnings. In the latter part of the year business was affected to some extent by elections which seemed to foreshadow tariff reduction. It is difficult to characterize fitly and briefly the course of trade and finance in the year now closing. Perhaps we may fairly call the year a waiting one.

Business has been carried on with caution and under some restraint. But the volume of it has not been largely reduced. Bank clearings have fallen below those of 1910 by only 3 per cent., and outside of New York they show an addition of 1 per cent. Failure liabilities (for eleven months) have been $173,400,000, against $184,700,000 in the corresponding months of last year. The volume of railroad traffic has been nearly maintained. The profits of the steel industry have fallen, but the output of pig iron will be not far from 23,300,000 tons, against 1910's exceptionally large product, which was a little more than 27,000,000. The crop of cotton is the largest ever known, but nearly all of the other crops have been reduced. In the second half of the year the effect of this reduction and of the attitude of the Government toward certain very large corporations are quite noticeable. The restraint and caution which have been mentioned are due partly to expectation of important political changes in coming legislation affecting business interests and in some uncertainty as to the extent of the proposed enforcement of the Anti-Trust law.

One measure of the general condition of business is the course of prices in the market for securities. While there were large losses in this market during 1910, the present year has (up to the present time) seen more gains than losses. As a rule, however, the net changes have been small. There has been a partial recovery from the low figures which were reached in the downward movement which first attracted public attention in August. In the following table, relating to a list of representative railroad and industrial securities, are shown the gains of 1909, the losses of 1910, and the net changes of the current year, up to the end of last week:

MOVEMENT OF SECURITIES.

| | Net change 1909 | Net change 1910 | Close Dec. 31, 1910 | Close Dec. 16, 1911 | Net change Dec. 31, 1910, to Dec. 16, 1911 |
|---|---|---|---|---|---|
| Atchison | 23⅛ | −3 | 101 | 107 | + 6 |
| Balt. & O. | 7⅝ | −13¼ | 105⅛ | 103½ | − 1⅞ |

| U. S. R. pf. | 1½ | −8⅜ | 116¼ | 111¼ | − 5 |
| W. Union | 7½ | −3½ | 79½ | 86⅞ | + 7⅜ |

Steel common shares closed 18⅞ above their lowest price of the year (50), and the extraordinary addition to the price of Canadian Pacific was due to an increase of dividend rate, to the rejection of reciprocity and to the great prosperity of the company. Thruout the past year transactions in Reading, Union Pacific and Steel have usually been about three-fifths of all the business done on the New York Exchange. Two of these stocks show a gain; the third a slight loss.

At the beginning of the year, the situation was not an encouraging one. Trade was deprest. In the leather industry many tanneries were closed. Manufacturers representing half the productive capacity of the cotton mills voted to reduce output. The Steel Corporation's net earnings for the December quarter were a little less than $26,000,000, altho those of the two quarters immediately preceding had been $40,000,000 and $37,000,000. The stock market was stimulated a little by the news that the Harriman roads had decided to spend $75,000,000 for double-tracking and extensions. On February 23 the long-awaited decision of the Interstate Commerce Commission in the rate cases, which forbade the projected increase of freight charges, was made known. It caused some surprise, because many had expected that a part of the increase would be allowed, owing to the recent addition (by arbitration) of about $100,000,000 to the wages paid. The stock market, which had been very dull, broke sharply, with large sales, but support was speedily given. Some reasoned that the commission's argument and statistics, showing the soundness and wealth of our railroad system, would encourage investors at home and abroad.

The companies decided to economize. The New York Central reduced its dividend rate, and similar action was taken by the Boston & Maine a few weeks later. Both companies asserted they had been led to do this because their net earnings were reduced by the higher wages. In April, trade was still dull. Tariff reduction bills were about to be passed in the House. On the Stock Exchange in that month only 5,369,000 shares were sold. The total for the first four months of the year was only 32,804,000, against 59,500,000 in the corresponding months of 1910. Net earnings of the Steel Corporation for the March quarter were only $23,500,000. It was said that the railroads, which usually had taken nearly one-third of the company's output, were buying only 8 per cent. of it. Below are shown the quarterly earnings since 1908:

| | 1909. | 1910. | 1911. |
|---|---|---|---|
| First | $22,921,268 | $37,616,876 | $23,510,203 |
| Second | 29,340,491 | 40,170,960 | 28,108,520 |
| Third | 38,246,907 | 37,365,187 | 29,522,725 |
| Fourth | 40,982,746 | 25,990,978 | ..... |
| | $131,491,412 | $141,144,001 | ..... |

There was a steady decline of pig-iron output in 1910, from 2,608,605 tons in January, to 1,777,817 in December. In January of the present year the quantity produced was even less than in December, but some improvement followed. For the last four or five months of the year the average has been about 2,000,000 tons. The record is given below:

PIG IRON, TONS.

| | |
|---|---|
| 1905 | 22,992,380 |
| 1906 | 25,307,191 |
| 1907 | 25,781,361 |
| 1908 | 15,936,018 |
| 1909 | 25,795,471 |
| 1910 | 27,298,545 |
| 1911— | |
| January | 1,759,326 |
| February | 1,794,500 |
| March | 2,171,111 |
| April | 2,065,886 |
| May | 1,893,456 |
| June | 1,787,566 |
| July | 1,793,068 |
| August | 1,926,637 |
| September | 1,977,102 |
| October | 2,102,147 |
| November | 1,900,433 |
| Eleven months | 21,270,241 |

In May were made known the memorable decisions of the Supreme Court in the Standard Oil and Tobacco Trust cases, with the accompanying opinions concerning the application of the "rule of reason." The effect of these upon business and securities was favorable

Northwestern railway stocks advanced in price upon the news that the Hill roads were to issue $600,000,000 of bonds. But the Republic Iron and Steel Company gave notice that it had cut prices and would fight for orders, and the testimony of the late John W. Gates and others before the Stanley Committee foreshadowed much disturbance. In June the Government lost the suit by which it sought to compel the Union Pacific to divest itself of its holdings of stock in other transcontinental roads. The sale of $50,000,000 Panama Canal 3 per cent. bonds was regarded with much satisfaction, as these were the first bonds in many years to be offered without the privilege that they might be used by banks as security for issues of circulating notes. The popular investment demand was tested. Subscriptions were for more than three times the amount offered, and awards were made at an average price of 102.50, which yields an income rate of 2.905. The price was better than that which similar securities of England, Germany or France commanded in the market.

In June, crop reports began to demand attention. The prospect was excellent. There was promise of a great yield of cotton, and a wheat crop of 764,000,000 bushels was indicated. Cotton continued to do well, but in July the cereals were hurt by heat and drought. In that month the price of cotton, which had been above 16 cents, fell below 13. In later months it was still falling. Cotton was sold at 10½ cents in September and below 10 cents in October. As ginning reports showed that all records of production had been broken, the price was reduced, until at the close of the year it was in the neighborhood of 9 cents. At a conference, in August, of the Senators and Representatives of seven cotton states, the growers were advised to hold their output for 13 cents. At a later meeting of Governors and others, they were urged to reduce the cotton acreage by 25 per cent., and the construction of large warehouses by states or by growers' organizations was considered. The following table shows the latest official estimates of the quantities harvested this year with the final reports for 1910.

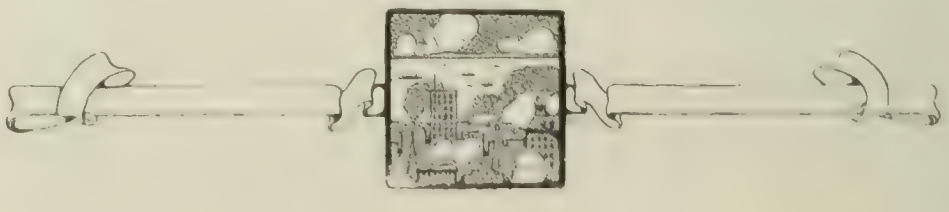
THE CROPS.

| | 1911. | 1910. |
|---|---|---|
| Corn | 2,776,301,000 | 3,125,713,000 |
| Spring wheat | 200,367,000 | 231,399,000 |
| Winter wheat | 455,149,000 | 464,044,000 |
| Total wheat | 655,516,000 | 695,443,000 |
| Oats | 873,641,000 | 1,126,705,000 |
| Barley | 145,951,000 | 162,227,000 |
| Rye | 30,677,000 | 33,039,000 |
| Buckwheat | 17,051,000 | 17,239,000 |
| Flaxseed | 21,692,000 | 14,116,000 |
| Rice | 22,582,000 | 24,510,000 |
| Potatoes | 281,735,000 | 338,811,000 |
| Hay, tons | 46,969,000 | 60,978,000 |
| Tobacco, lbs. | 700,663,000 | 984,349,000 |
| Cotton, bales | 14,885,000 | 11,941,563 |

It will be seen that there are losses of 350,000,000 bushels of corn, 40,000,000 bushels of wheat, and 250,000,000 bushels of oats. There is only three-quarters of a crop of hay, the potato crop shortage exceeds 50,000,000 bushels, and more than one-quarter of the tobacco crop has been cut off.

The crop losses affected trading on the Exchanges, where a pronounced decline of prices began to be noticed in August. On the New York Exchange the extreme dulness of July was followed by great activity. Declines in the railway field were promoted by the Commission's decision in the Spokane or intermountain rate case, enforcement of which the Commerce Court afterward prevented by an injunction. Foreign quarrels also began to affect our securities market. In July only 5,476,000 shares were sold on the New York Stock Exchange, but the number in August was almost 15,000,000. Below are shown the sales of shares and bonds for 1911, and the five years immediately preceding:

STOCK EXCHANGE TRANSACTIONS.



| | Shares, number | Bonds, par value |
|---|---|---|
| 1906 | 284,208,010 | $674,452,850 |
| 1907 | 196,438,824 | 526,170,450 |
| 1908 | 197,206,346 | 1,082,161,120 |
| 1909 | 214,632,194 | 1,317,291,000 |
| 1910 | 164,150,061 | 654,722,850 |
| 1911 | | |
| January | 10,416,526 | 91,504,000 |
| February | 10,194,217 | 73,730,000 |
| March | 6,822,868 | 65,121,000 |
| April | 5,369,350 | 55,466,000 |
| May | 11,115,578 | 91,765,000 |
| June | 10,368,400 | 80,595,500 |
| July | 5,476,550 | 66,855,500 |
| August | 14,991,533 | 48,031,000 |
| September | 12,405,957 | 62,819,000 |
| October | 10,136,901 | 73,202,400 |
| November | 14,919,486 | 87,417,700 |
| Eleven months | 118,131,347 | $790,596,000 |

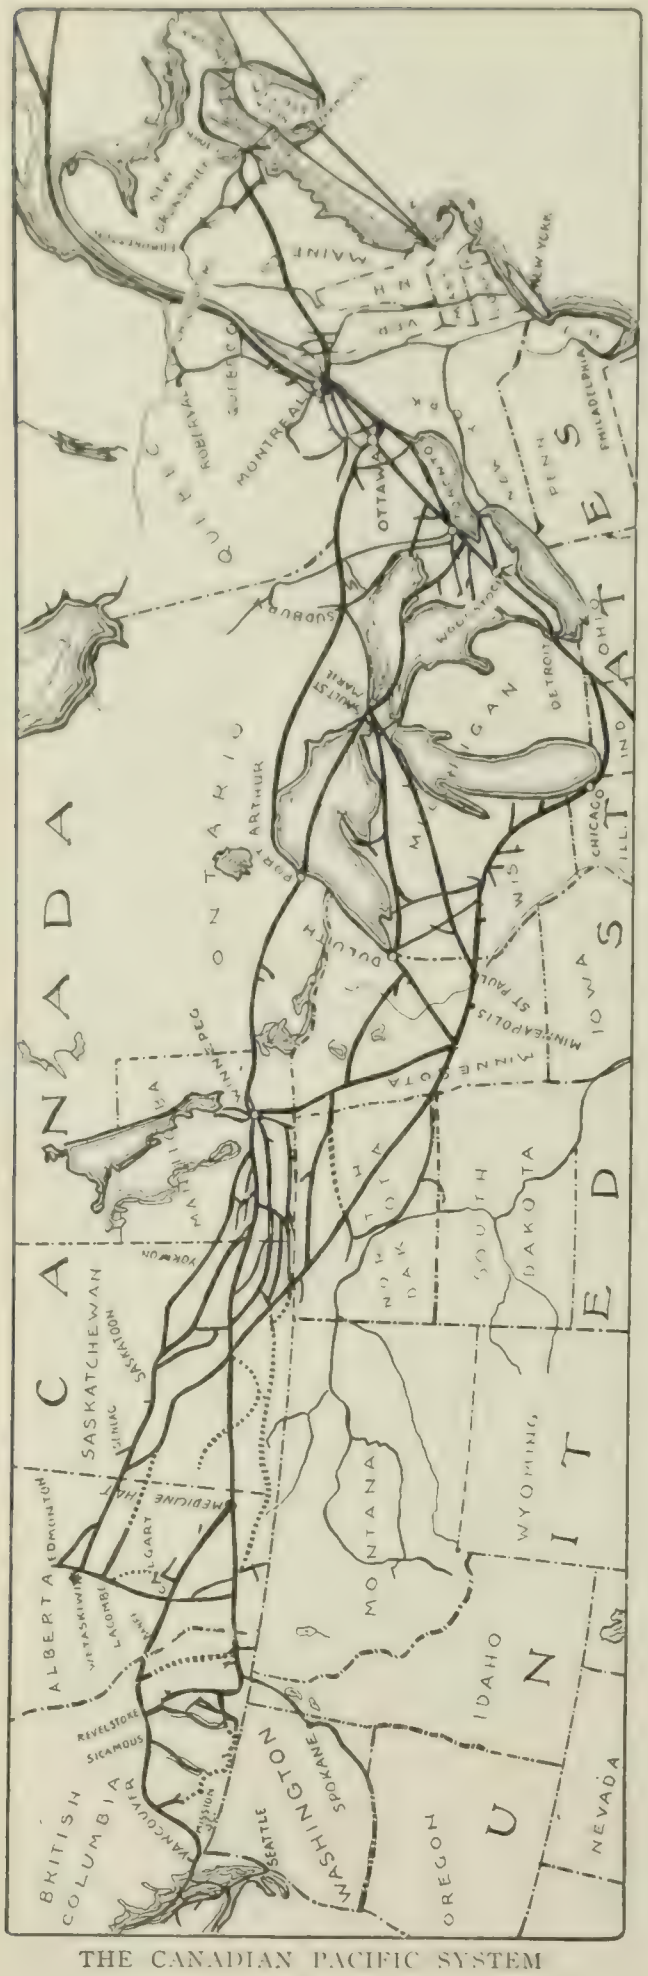
In September the business world was excited by Mr. Taft's speeches, which at first seemed to indicate that all incorporated combinations were to be prosecuted, in order that competition among the united parts might be restored. An unfavorable impression was made by the publication, on the 23d, of a long interview with Attorney General Wickersham, who said, it was alleged, that the Steel Corporation existed unlawfully and that he had made a list of "about one hundred" other companies that ought to be dissolved. The correctness of nearly all the interview he afterward admitted, but denied that he had said that the Steel Corporation existed and did business in violation of the Sherman act. A few weeks later it became known, however, that for at least two or three months attorneys employed by him had been preparing a case against the Steel Corporation. Share prices fell because of his interview and of reports that the Corporation was negotiating for terms involving its dissolution. Steel common, which had been quoted above 80 in February, was sold below 52. On the 26th, J. Pierpont Morgan and other directors of the Corporation published a statement denying the reports above mentioned. This caused an upward reaction in the market. In the last week of September nearly 7,000,000 shares were sold on the New York Exchange.

A few weeks later, on October 26, the Government brought suit against the corporation, which, on the same day, had decided to cancel its lease of the Great Northern's ore deposits. Following the announcement of this suit there was again great activity in the securities market, where the price of Steel common shares declined to 50. There was some recovery in November, due partly to the attitude of the Government and of the Circuit Court toward the Tobacco Trust's reorganization plan. This plan, which independent tobacco manufacturers denounced, was accepted by the court and had been supported by Mr. Wickersham, altho he had proposed certain restrictions to be added. These the court rejected. The Commerce Court interfered by injunction to prevent enforcement of the Interstate Commerce Commission's decision and order in the Spokane rate case, asserting that the commission had exceeded its authority. Mr. Roosevelt exprest, indirectly, his disapproval of the prosecution of the Steel Corporation, and remarked that the Tobacco Trust reorganization plan, which the Government had supported, provided merely for a "change of clothes." These incidents, with an increase of the Atlantic Coast Line's dividend, were regarded with satisfaction by some corporation interests, and they tended to support the securities market, which did not appear to be affected by the month's elections, altho these showed notable Socialist gains. At the annual convention of the Bankers' Association, the Aldrich plan for currency reform was approved, only one member dissenting. But action upon this question during the present session of Congress is not expected.

Thruout the year the interest rate at New York for loans on call was remarkably low, rising above 2½ per cent. only in the first week of January and for a few days in November and December. Large sums of American money were loaned in Germany and elsewhere in Europe, and $13,000,000 of Prussian treasury notes were sold here. Exports were larger than ever before. For the fiscal year ending with June they were $2,048,691,392, and the total for the calendar year will also exceed $2,000,000,000. Trade reports for December show some increase of confidence and activity. But a Presidential campaign is at hand, and it may reasonably be expected that for some time to come business generally will be conducted with caution.

NEW YORK CITY.

# The Canadian Pacific as an Empire-Builder



BY H. M. P. ECKARDT

[In THE INDEPENDENT of December 23, 1909, we printed an article by Mr. Eckhardt on the Canadian system of branch banks. We have now asked him to tell our readers of the wonderful development of the Canadian Pacific Railway. The successful management of this company and the important place it holds in the Canadian business and political world makes its history one of particular importance. Mr. Eckardt is the author of "A Rational Banking System" and other financial works.—EDITOR.]

IT has been remarked that the Canadian Pacific Railway is in part indebted for its princely endowment to the virulence of its enemies. The company was born in a political turmoil. The Province of British Columbia, far away on the Pacific Coast, had been promised railway connection with Ontario and Quebec. The immense expanse of intervening territory was almost uninhabited by white men; it was believed to be cold, desolate and forbidding. At this time Canada's public treasury was by no means in an opulent condition. The Liberal Government of Alexander Mackenzie, however, had made a start at the gigantic task. The attempt ended in failure, and the Pacific scandal, as it was called, drove the Liberals from office. John A. Macdonald came into power in 1878 at the head of the Conservatives, and shortly afterward the construction of the C. P. R. was well under way, the financial end of the enterprise being in charge of George Stephen, Donald A. Smith and R. B. Angus.

The Macdonald Government allied itself closely with the C. P. R. magnates, and as they naturally gave their support to the Conservatives, the railroad was placed by the public as a Tory organization. Under these circumstances it was not surprising that the Liberals were vehement in opposition. They condemned the scheme unsparingly, declaring that it would never pay expenses. Their predictions of ruin and disaster and the pessimistic attitude of influential parties in England no doubt led the Canadian Government to grant a larger aid to the enterprise in order to increase the chances of ultimate success. The company was incorporated in 1881. Its endowment consisted of 25,000,000 acres of land in Western Canada and $25,000,000 cash. It was also presented with some 700 miles of railway which the Government had constructed at a cost of $35,000,000. The railway mileage taken over represented less than one-fourth of the amount necessary to connect Montreal and Vancouver. The cash subsidy of $25,000,000 represented considerably more than a cash subsidy of that amount would represent to-day, for thirty years ago a dollar in cash had a much larger purchasing power. With reference to the land grant, it can safely be said that, when the company was formed in 1881, few realized its value.

At incorporation the capital was fixed at $5,000,000, fully paid, at par. A year later, in 1882, the shareholders contributed a further sum of $5,000,000 in cash and received for it $20,000,000 par value in new stock. Toward the close of the same year $40,000,000 additional stock was sold at an average of about 52. Extreme difficulty was encountered in financing the road to completion. At critical stages the men responsible for that duty were obliged to pledge their private resources almost to the last dollar to procure funds. But no matter how dark the outlook was, they never faltered. They pressed the work ahead, and on November 7, 1885, they had the satisfaction of knowing that the last spike was driven. It is interesting to note that the chief promoters of the Canadian Pacific derived a large part of the funds which they embarked so courageously in it from a series of transactions undertaken by them in conjunction with James J. Hill, of St. Paul, and

THE CANADIAN PACIFIC SYSTEM

John S. Kennedy, of New York. These transactions ultimately led to the formation of Mr. Hill's Great Northern system.

I have remarked that the C. P. R. was regarded in its early years as a Tory organization. As a matter of fact, it is still spoken of as being on the Conservative side in politics. But in its development the company has been rapidly assuming a national character which must make it entirely independent of both political parties. When, in 1896, the Liberals came into power at Ottawa, the C. P. R. co-operated heartily with Sir Wilfrid Laurier's Government in forwarding Canada's interests, and the Government showed no disposition to lay a heavy hand on the company or to treat it unfairly. There are various reasons why it seems inevitable that this great railway company will endeavor in the future to keep itself clear of the charge of political partisanship. In the first place it has a cosmopolitan body of stockholders. The owners of its $180,000,000 of common stock are scattered over the world. A great many Canadians hold small lots for permanent investments. Wherever you go in the Dominion you may meet these little holders of C. P. R. The stock is regarded as typifying the national development and the promise of the future. Then England has large holdings, and the English are usually ready to buy more when the stock is offered at concessions, as the Wall Street bears have found to their cost. German and Dutch names and addresses figure extensively in the stock ledgers. And a respectable portion of the capital is held in the United States. The cosmopolitan nature of its proprietorship constitutes one reason why the C. P. R. cannot properly be either Conservative or Liberal. And the vast plans and projects which the company has undertaken are of such a nature as to make partisanship impossible.

The C. P. R. is doing in Canada a great deal of work which in other countries is done by the Government itself. The company spends money freely to promote immigration to the Dominion. Its work in reclaiming arid lands by means of irrigation constitutes a public

service of the greatest value. And from its very beginning the C. P. R. has bent its best efforts toward building up great industries in the territory served by it. By means of the low rates it quoted and the special facilities it supplied, the cattle-ranching industry, for which the Province of Alberta was famous in its early days, was promoted and developed. The Canadian flour-milling industry owes much of its importance to the encouragement given by the C. P. R. And its fostering hand has aided other important industries to reach positions of wealth and consequence.

The Canadian Pacific organization in London seconds the efforts of the Government's immigration bureau in promoting the movement of good settlers to the Dominion. Each year the C. P. R. brings the Eastern farm laborers in tens of thousands west as far as Moose Jaw at the rate of $18 the round trip, in order to facilitate the harvesting of the Western crops. A few years ago the City of Winnipeg decided to install an expensive plant to improve the quality of its water supply. The C. P. R. donated $200,000 toward the cost. In short, the plans and projects of the company are imperial in their scope. Its councils are directed with wise and far-seeing statesmanship. With reference to the policies pursued by some of the great railway corporations in the United States, it has been said that they went too directly and too roughly after their profits. What they could legally take they grasped and held, regardless of what the public might think. Those methods have never formed a part of the C. P. R. policy. The rulers of the big Canadian system have always had their eyes on the more or less distant future. They have been wise enough to see that the interests of the railway and of the Dominion were in many respects identical, and that when the company expended its money in advertising the Dominion and in inducing settlers to take up land in Canada it was creating increased traffic for itself in the years to come. The C. P. R. has been casting bread upon the waters for years. And now the returns are coming in. These returns are infinitely more satisfactory for the shareholders than they would have been had the company endeavored to despoil its shippers and the country.

Before proceeding to discuss the more important projects of the company it will be worth while to mention a few things which illustrate strikingly the progress it has made and its great wealth. First, as regards its traffic, in 1886 the gross earnings were $8,368,493, the net earnings, $3,225,217. In 1911 the figures were: Gross, $104,167,808; net, $36,699,830. In 1911 the gross earnings crossed the $100,000,000 mark for the first time. Included in the total are the earnings from the ocean, lake and river steamships owned by the company; from the C. P. R. hotels at Quebec, Montreal, Winnipeg and other cities; from the C. P. R. telegraph system; from the parlor and sleeping cars. It should be mentioned that the shareholders also derive the whole profit from the express business of the road. Referring to these matters a leading daily in New York City said a few years ago, "All the hotels, express companies, and vending privileges that on railroads of the United States have been partitioned among grafters in the boards of directors are owned by the stockholders of the Canadian Pacific." These auxiliary sources of income are developing rapidly and steadily. The steamship fleet now numbers sixty-seven vessels. The chief function of this department is to supplement the facilities of the railway proper and to feed it with freights from abroad. Every ton of European freight which the C. P. R. steamships secure in China and Japan means a haul of 3,000 miles over the railway. The company can quote such rates as it pleases for the several stages of the journey between Asia and Europe. There are no vexatious long and short haul enactments to prevent its development of this lucrative foreign business. The Dominion Government takes the view that it is beneficial for Canada to have this Oriental trade pass thru the country. Diversion of the Oriental transportation business from the United States railways means the acquisition of extensive terminal facilities by such ports as Vancouver and Montreal, the expenditure of millions of dollars in wages to Canadian workmen, and the payment of better

THE WINDSOR STREET STATION OF THE CANADIAN PACIFIC RAILWAY AT MONTREAL

dividends to the little and big stockholders of the C. P. R.

Then in 1886 the mileage controlled by the C. P. R. amounted to 4,315 miles. In 1911, including the Minneapolis, St. Paul & Sault Ste. Marie and the Duluth South Shore and Atlantic, it was 16,137 miles. In 1886 the locomotives numbered 336 as against 1,637 in 1911; there were 7,835 freight cars in 1886 and 52,602 in 1911. The company had no steamships at all in 1886 while its fleet in 1911 consists of 67 vessels. One of the impressive facts in connection with the company's growth is the steady development of its mileage. The C. P. R. management appears to be utterly contemptuous of trade depressions, monetary stringencies and panics. In pressing forward the construction of new branch lines it never flags or hesitates. At no time in the last six years has it had less than 400 miles under construction and in most of the years since 1905 the mileage under construction has approached close to 1,000 miles. The average yearly addition to its mileage proper is 380 miles. In the last two years the additions have been above the average for the six years. Thus in 1910 the addition was 460 miles and in 1911 753 miles. This yearly construction work performed by the Canadian Pacific helps materially to keep business in Western Canada in good condition.

Much attention has been given latterly to the company's land. The steady increase in the value of this asset has ministered importantly to the prosperity of the stockholders. According to the last balance sheet the company had on June 30, 1911, 7,061,184 acres of land in Manitoba, Saskatchewan, and Alberta, and 4,427,811 acres in British Columbia. In addition to the original grant from the Government the company has acquired lands thru purchasing other railways which possessed land grants. The interesting feature about these lands is their steady rise in value. In 1905 the sales were 509,386 acres at an average of $4.80 per acre. In 1909 the sales of these same lands were 306,083 acres at an average of $10.96. In 1910 the inrush of settlers from the United States and Great Britain served to increase the demand for the C. P. R. lands and 829,609 acres of the unimproved lands sold at $12.78 per acre along with 145,421 acres of irrigated lands at $26.59 per acre. And, finally, in 1911 the sales of unimproved land were 631,777 acres at the average of $14.11; and of irrigated lands 19,097 acres were sold at the very satisfactory average of $33.63 per acre. This progressive rise in value is most

impressive. Every year without exception shows an increase and in some years the increase is considerable. It is to be remembered, too, that when the company sells a parcel of land to a good farmer-settler it is just beginning its profitable relations with him. For he will in all probability be a heavy shipper of grain outward over its lines in future years, and he will occasion the shipment of much merchandise inward as well. So it is not to be wondered at that the stockholders and the investing public in general attach the greatest importance to the land asset. A consideration of the wonderful increase in value during the past twenty years naturally disposes them to accept as reasonable the predictions sometimes made by interested Wall Street bulls to the effect that the stock will eventually sell at figures much higher than those now quoted. Apart altogether from the farm lands in the three prairie Provinces are the four million odd acres in British Columbia. These include some tracts rich in minerals. Under any circumstances they will in time be developed so as to yield good profits to the shareholders. The realization of those profits would be hastened by a removal of the impediments now standing in the way of trade between the United States and Canada.

The farseeing statesmanship of the Canadian Pacific is nowhere more clearly exemplified than in its great irrigation projects and in its efforts to stimulate immigration to the Dominion. The irrigation works are at present commanding a large amount of attention. Up to the end of June, 1905, the expenditures on irrigation are given as $796,695. In the succeeding year $748,270 were expended for the same purpose. Then in the two years 1907 and 1908 a further sum of $585,351 was devoted to this improvement work. By the end of June, 1909 this stage of the irrigation work was practically completed. The further expenditure of $719,514 in that year brought the total to $2,849,830. This sum sufficed to irrigate about 350,000 acres, being the irrigable portion of the Western Block of the arid lands in the Province of Alberta belonging to the company. These lands were formerly considered to be of little or no value; they were, of course, unsalable. By this expenditure of less than three millions the company was able to sell a little more than one-third of the block for more than $9,000,000. The Western Block of arid lands contained approximately 995,000 acres, of which 642,000 acres are declared to be non-irrigable. There are two other blocks—the Central and the Eastern—each containing approximately 1,000,000 acres. The Eastern Block was next attacked and the work of irrigating that is actively progressing. In coming before the stockholders at the annual meeting in 1910 the executive asked for and secured an appropriation of $8,500,000 for providing water for the 1,100,000 acres comprised in this block. The work is estimated to take three years. It is a more difficult and more expensive proposition than the irrigation of the Western Block proved to be. Up to the end of June, 1911, something over $2,000,000 had been expended on this second stage of the irrigation project. In all, from the beginning, the outlay for irrigation amounted to $5,018,953. Not a dollar of these expenditures, past and prospective, will be represented by increased capitalization. Neither bonds nor stock will be created against them. The whole amount required will be taken from the accumulated surplus derived from land sales. There is no doubt that eventually the stockholders will reap a rich return for the investmen of their funds in this work of national development. The whole enterprise represents constructive statesmanship of the highest order.

The illustration represents the great dam at the Horseshoe Bend of the Bow River, near Bassano. This structure is almost finished. The irrigation policy fits in with another phase of the C. P. R.'s imperialism. It is using the lands as a means of providing a counterpoise to the masses of American farmers now establishing themselves in the Provinces of Alberta and Saskatchewan. Altho the majority of the farmers from the Western States are disposed to accept the responsibilities of citizenship under the British flag, there is no doubt that political stability is better ensured when the American settlers are matched with

a body of sturdy farmers from England and Scotland equal or nearly equal to them in numbers. This development the Canadian Pacific is striving to bring to pass with every prospect of success. The tenant farmers of England and Scotland have the first call on the irrigated lands. These farmers are the British farmer thru taking one of the C. P. R.'s ready-made farms in the Irrigation Belt were so convincingly set forth that the company had thousands of applications in excess of the number it could provide for. The men it is putting on the irrigated farms are the pick of the farmers in the British Isles. They

IRRIGATION DAM AT BASSANO, ALBERTA

very best that Britain has in the agricultural line. Conditions at home have been such as to preclude the hope of acquiring the ownership of the land they work. The C. P. R. agents in England dilate upon this fact from year end to year end. "Why be a tenant for life?" they say, appealing to the land hunger latent in most masculine breasts. "Go to Canada, own your big farm and get rich in eight or ten years." Then they proceed to explain how easy is the road, how complete are the arrangements which the company has made for their benefit. The advantages accruing to the are married men in good health with good-sized families. The ready-made farms are at the disposal of men of this class possessing from $1,000 to $3,000 ready cash. The company breaks and sows the land, erects a house and barn, builds the fences. The cost of this work is added to the sale price of the farm. The British farmer pays down one-tenth of the price; the balance is payable in nine equal annual instalments with interest at 6 per cent. per annum. Also the company provides competent men to explain and assist in the working of the irrigation ditches. At central points it

establishes demonstration farms designed to teach the new-comers what the land will do and how it is to be treated. Everything it can do to ensure that the land will be worked scientifically and profitably it does. The direct aim of the railway company in prosecuting this work is to benefit its stockholders. But any one can see that in thus looking after the interests of its proprietors it is promoting the welfare of the Dominion and of the British Empire in a most important degree. It is assisting manfully to provide Canada with what she stands most in need of—population. It is rapidly transforming a desert into land that is capable of bearing the richest crops. It is ministering to the Dominion's political stability thru helping to maintain an equilibrium between the races. By means of its great steamship fleets, plying on various oceans, it is bringing to Canada a steadily increasing portion of the world's transportation business. The constant manifestation by the road's executive of a public spirit has done much to earn for the company the good will of the people. In these days of general hostility to great corporations that is something the management is entitled to be proud of. And finally, the able and honest administration of the railway's affairs in the interest of the whole body of the proprietors has served to earn for the management the respect of the whole financial community on both sides of the Atlantic.

SARANAC LAKE, N. Y.

# Holy Dawn of Holy Year

## A Christmas Carol

BY HARRIET McEWEN KIMBALL

Holy dawn of holy year
When God drew to us so near,
In the Virgin's Child revealed
To the eyes by faith unsealed;
Child whose outstretched arms express
Love that longs to save and bless!

Let thy joy a semblance take
Of His love for Jesus' sake!
Let the poor thy bounty share,
And the helpless feel thy care;
Greet thy friends with gifts since He
Came the Gift supreme to be!

Then thy best as tribute bring
To the altar of the King
Where in ceaseless mystery
He repeats that Gift to thee,
And the life He would bestow
Yields its constant overflow!

# "We"

BY LOUISE DUNHAM GOLDSBERRY

HERE were thirteen girls in our class. The Seniors were ladies, very haughty ladies, who wore trains and walked the college corridors as tho born to rule the world. When they were Juniors they were abominable. Not so awfully abominable, really; but as we were then Sophomores—and the gulf between a Sophomore and a Junior is bottomless, and bridgeless, and briny with wanton insults, and cumbered with derelicts of references to "little girls" and "short dresses" and "pigtails" and so forth, and as hating a Junior is a time-honored perquisite of a Sophomore—we lived up to tradition nobly. We had heard that our Adored President had said (in an unguarded moment of utter truthfulness) that we were the brightest class he had ever had in all his career as A College President. We knew we were different. (1) We did not like boys. (2) One of us had a doll in the bottom of her trunk and that doll was the best-loved girl in college. (3) We *all* de-s-p-i-s-e-d Algebra. (4) We *all* intended to make The World better and to do Great Deeds.

So, naturally, being Sophomores a whole year was a very Bitter Dose. And Geometry was worse than Algebra!

Not a Junior wore curls. Or pigtails.

We did.

Next year, not a Senior but wore trains. And coiffures.

We didn't.

We still wore pigtails and curls and shoe-top dresses, and our Adored President publicly referred to us as "Little Girls," the night of our Junior Party. The haughty Seniors were our guests and they were fearfully elegant, and we all wore white Swiss dresses, low neck and short sleeves, and wide ribbon sashes, and we *did* look disgustingly youthful. But *awfully* pretty.

Anyway, Kate Nash, the very longest long-trained Senior of them all, always said "ick" for "ich" in the German class; and while we were too well-bred to allude to it openly, we always read it slowly and distinctly, hoping she might absorb the pronunciation from the atmosphere.

She had her German with us.

We tried to improve her.

Trigonometry came with Junior studies.

Logarithms, we discovered, have a saddening effect upon the joyous disposition.

We sent the doll to an Orphan Asylum.

Two of us and I—Patty, Polly and Peggy—the college called "the Sweet Ps." Being devoted chums, it seemed quite natural for us to be alliterative. But when the gentlemen began calling us that, we thought it not quite right. That is, Mr. Shorty Jones and Mr. Vance and Mr. Alphabetical Smith once sent us a box of pinky-white sweet peas and addressed the box to "The Sweet Ps," and the negro doorboy came to the study hall and said, "The Miss Sweet Ps'es is wanted in the parlor."

And a Senior said quite loud, "Don't you think they look more like poppies this minute?"

It was Kate Nash said that. And I smiled sweetly over my shoulder at her as I walked out and said, "*Ick* do."

Mr. Shorty Jones was seventeen; Mr. Alphabetical Smith (he had *three* front initials) was quite old; he was twenty the day we had our Junior Party, and he thanked us solemnly for the honor we had shown him in giving him a birthday party.

The very idea!

Mr. Slimmy Vance was seventeen.

And Mac was eighteen.

And Mac—well, Patty wanted him and Polly claimed him and I—owned him! Mine. I'd let the girls have every one of my cousins (and I had eight perfectly dear Boy cousins), and have all the class Brothers, but somehow I never felt in a divisible mood about Mac. Polly told me I was simply greedy to

take the very pick of all the gentlemen, and Patty told me she knew he'd find her eyes far more beautiful than my eyes if he would only *look* at them. Didn't her own Father tell her they were "nicest eyes in the world" and didn't I *suppose* her Father *knew?*

I said: "In his world, *of* course; but Mac owns a world all his own, and Mac says *my* eyes are the 'sweetest eyes in the world.'"

So Patty kissed me and sighed, "It's such a pity he isn't twins."

Our College has two Literary Societies. In ours, each member as proposed stops just over the threshold of the Society Room, and is initiated. It's just some very foolish questions, but when Patty first came to school she did not at all approve of the questions.

There she stood; just inside the doorsill. A perfectly darling girl.

Said the Society President:

"*What* is your ancestral pedigree?"

Patty stared.

Said the Society President:

"*Who* was your Grandmother?"

Patty gasped.

Said the Society President:

"*Who* is your Father?"

Said Patty, in a voice of deadly sarcasm:

"I have every reason to believe my ancestors were merely human beings; *weren't yours?* My Great Grandmother was a Washerwoman who had a coronet on her three silver spoons and called herself the daughter of Irish Kings; my Grandfather left me a million dollars when he died; my Father is one of the 'Sons of God' who married one of the daughters of men.' And my mother is an angel."

The Society President walked over to Patty and shook hands. "*You're* a brick," said she.

"Fine—5 cents due the Slang box," sung out the Mentor (We call her the "manners-mender").

The Society President walked back to her seat. And hunted her pocket.

"Well," she said, "it was worth every cent of it. *Will* somebody please lend me a nickel?"

I left my chair to go and hug Patty, and Polly followed, and we finished the Program that time with a gay little dance. Nobody felt like listening to essays and a debate on "Whether a Girl Ought to Marry or Remain an Old Maid from Graduation On and Devote Herself to Improving the World."

While I did not like the name "Cornelia," and I always thought she ought to have been ashamed to have only *two* sons to exhibit, I thought it beautiful to call them "jewels," and I had always intended to be the proud mother of a dozen "jewels" like Cornelia's.

Speaking of jewels, Patty had some lovely diamonds. Of course, she could not wear them; being a fifteen-year-old Freshman is as trying as a sweet-and-perfectly-dear-girl can stand. Of course, a Freshman and a Senior are on equality, in our two societies. And it is only *inside* our two Society Rooms that the shackles fall from Freshmen and a brilliant intellect glows above all Senior mediocrities like—like—well, like we all glowed. Nearly all. There were just two of us that never even twinkled; just made-out-of-earth girls — they might have been Seniors, those two girls, even as Freshmen—so dear and stupid!

Each of us three had three proposals that Junior Party night.

Polly was sixteen; almost seventeen. Patty was seventeen. And I was sixteen; almost fifteen.

And as a party with just girls is poky, our Lady Principal permitted every girl's brothers and cousins to come; now and then.

So we were all dressed alike. And Patty carried a bunch of pink sweet peas, tied with white ribbon, and Polly white, tied with pink ribbon, and mine was a perfectly gorgeous one of pink and white, tied with pink and white ribbons.

Mr. Slimmy Vance and Mr. Smith and Mr. Shorty Jones proposed to each of us. Mr. Alphabetical Smith explained it afterward, when we all met in a corner of the dining-room. I thought Rejected Suitors would look as tho the sunshine had turned black in their skies and life was a burden; but those creatures looked as gay and frivolous as tho they had never been refused three times apiece by Patty and Polly and me.

Said Mr. Jones:

"What did Miss *Patty* say, kid?"

And the other two chorused in soft little voices, " 'No, I will not.' "

Same here," said Mr. Jones.

"And what did Miss *Polly* say, kids?" said Mr. Jones.

"And those wretched boys chorused again, in a quite tart voice, " 'Certainly not!' "

"Same here," groaned Mr. Jones.

"And what did Miss *Peggy* say, kids?"

And they chorused in a scared little voice, " 'Oh, no, please.' "

"Same here," said that Shorty Jones.

"Now," said Shorty Jones, "since we have all had the honor of all being refused by all The Sweet Ps, I move we have cream all around and bear our crushed affections like the men of the world we are."

And we all laughed and laughed till our Adored President came across to laugh with us just because it was so catching.

And Mr. Alphabetical Smith said that of course they knew we were very young (*and Patty seventeen!*), but they had talked it over very seriously and decided each would take a chance on the three of us, and that they really did hope for one of them to win one of us; it did not matter to any of them *which* one would take *which*.

Patty sniffed. "Next time," said she, We'll all accept all of you—I'll accept all three, and Polly'll accept all three, and Peggy'll accept all three."

And those giddy boys chorused in a scared little voice, " 'Oh, no, please.' "

That was a lovely Party.

Christmas, just the three of us were left behind at school. And only the Lady Principal of all the teachers.

Patty's Father was in Algiers, and there was scarlet fever in Polly's town, and my own Beloveds were in Europe.

Patty had a Hundred Dollars in Gold. To spend. And Polly and I had just Forty-one Dollars and Seventeen Cents.

I had a weep. And Polly's eyes were red and so were Patty's when we met at breakfast.

Said our Lady Principal:

"My Dears, I am going to give you a Christmas present of TODAY. You may go where you please—under your own chaperonage—do what you please, stay until you please to return just so you are in by 8 o'clock this evening."

She kissed us. Then she came back in a moment. "I think," she said, low and tender and sweet, "I think you will undoubtedly meet CHRIST THE LORD out in that snow-white town today."

Patty's face shone young and lovely, and Patty's arms gathered Polly and me in. "Girls," said Patty, "let's go and *hunt* for HIM!"

A Salvation Army Woman was beating a kettle, down on a busy corner. We peeked in the kettle. Just about a hundred pennies and nickels and dimes to give Christmas Dinner to a thousand poor children.

So Polly and I dropped in some nice green bills and Patty a gold piece.

"God bless you," said the Woman, and *clank-clank-clank* she beat the black kettle.

The snow was deep and clean, and street signs were framed in it, and all the wires overhead were swathed round in it, and the city looked like a lovely strange city I'd never before seen, in its trails and velvets of new-fallen snow.

At the water-front the wind was rising. The Suspension Bridge was an aerial thing of beauty; all its iron ropes were ropes of white velvet and all its curves a white mystery spanning the river.

And the wind went by in gusts and in singings and blew snowy breath against us and whimpered up along the eaves of the tall commission houses. And then, suddenly, the city seemed hidden and squalor brooded over the narrow streets.

A door had a wisp of white tied on the knob. And in the dark passage between two houses, back by a door, stood women.

Patty went up to them. Their eyes watched her; a little fierce, a little sullen. Patty's lovely face leaned down to a woman huddled on the doorstep. "Oh," she said, "what is it?"

"It's me baby that's dead," said the woman. "That's all," said the woman.

Patty followed her into the house. There was a little stove, with a handful of red coals, in that room; and in the front room where the white was on the doorknob, was a tiny girl-baby. So white, so luminously white, that baby

face seemed fairer than the great snowflakes breaking against the window pane.

Patty sobbed and caught the woman in her arms. "Oh, you poor thing; you poor, poor thing!" she cried, hugging her close and sobbing against her face. The woman clung and quivered and then in a wild burst of weeping lay in Patty's arms, broken. And the other women wept softly and reached hands to comfort and one touched Patty's cheek and whispered: "You blessed child—them's the first tears she let fall since her baby died."

And Polly and I went away. We knew Patty was safe as if angels' wings covered her. And we found a coal-yard that we cajoled into sending a lot of coal that instant, and we found a grocery and we never knew before what quantities of groceries a green piece of money could buy.

While we were there a carriage came. Mother and baby-in-its-box and the poor father and another man and woman—all to ride in that carriage to the graveyard to lay the baby under the snow.

Patty asked the mother if she would not rather have the little children's White Hearse. But she sobbed and said she'd never, never again carry her baby and she'd rather have it that way. So Patty slipped some of her gold pieces into the woman's hand and kissed her, and when the carriage turned the corner and the white wisp was taken from the door knob, the neighbor women said they would have the two rooms warm and clean, and good hot dinner waiting when the carriage brought the mother back without the baby.

And Polly wrapped another of Patty's gold pieces in a yellow bill, and gave it to the woman who had called Patty a "blessed child"—she was so motherly-looking—to keep for herself and the other women for a Christmas gift. And the woman just choked and whispered when We all shook hands, "Little Ladies, pray to God Almighty you won't never go hungry and freze hungry and froze!"

We didn't talk much going back uphill. The ice-floes in the river clinked and clinked and made eerie music, and the wash of the waters *lap-lapped—lap-lapped*, and the great soundless flakes fell and whirled upward and sank and eddied. And off, uptown, behind the veils of falling snow, the Christmas Bells played; and we walked slowly up hill.

And we stopped in a little church and kneeled down and prayed as the woman bade us: that we might never "go hungry and froze; hungry and froze."

Said Patty: "Did we get her name and the name of the street and the number of the house?"

"Patty," I replied, "we did."

"Because," said Patty, "it will keep us right busy getting a trunk of clothes together and getting it down there before night."

We sorted our wardrobes for the next fifteen minutes, mentally, and laid out the things for that trunk.

But at dinner, when our Lady Principal said softly, "My Dears?"

We said, softly, "We found THE LORD——"

And she kissed us, and sitting about a great fire of logs, we told her.

She let me go out alone with Mac, after dinner; to see the wonderful white city with its diamond crown and its ropes of diamonds and rainbow; and it was beyond words beautiful, white and muffled and electric-light girded and iridescent.

And Mac said: *"Peggy, I love you!"*

"Peggy, wait for me." Mac said. "I know; you are just a schoolgirl and I am a man; nearly. But *Peggy—Peggy* all the world is just Peggy to me!"

*"Yes, Mac."*

"You *do* understand?"

*"Yes, Mac."*

"You — you — could — sometime — *love* me?"

*"Yes, Mac."*

"Sweet Ps, Sweet Ps," whispered Mac; "but mine is the sweetest of all."

When the girls all came back, and the lessons went on, and the haughty Seniors increased in haughtiness as Commencement neared, we were all happy as girls could be.

We told them we had had the love best Christmas of all our thirteen who next year were to be the Seniors.

But we never told that prayer we ever and anon shivered and prayed over: never to go "hungry and froze; hungry and froze."

WASHINGTON, D. C.

# Great Britain and Germany

BY LORD HALDANE

[The following article is the substance of an address recently delivered at Oxford by the Right Honorable Viscount Haldane, K. B. M., Secretary of State for War. We are enabled to print it thru the courtesy and assistance of President Nicholas Murray Butler, of Columbia University. We believe our readers will be interested in this discussion of the relations between the two countries.—Editor.]

GERMANY is a specially difficult country to understand. Nevertheless, a period in history has arrived when it becomes the duty of public men to endeavor to follow and fathom the currents of public life and opinion in other countries. To this end the study of national spirit is essential. How often have I seen in the newspapers of both Germany and England articles which missed the point and attributed unreal motives, simply because the writers were wanting in knowledge! And what is true of journalists may be true even of statesmen.

Two years ago a book appeared in Germany which contained several things which impressed me a good deal. It was a reprint of five addresses delivered by one of the best known of modern historians of philosophy and literature—Professor Windelband, of Heidelberg. In this work Professor Windelband traces the course of German thought, in the poets as well as the metaphysicians and moralists, thru the century that is just over. He shows how the creed of romanticism had its form profoundly modified by the growth of a demand for a practical application to life. He points out that, just as Schleiermacher tried to give religion a practical significance for the lives and deeds of educated people, so Hegel summoned them from their dreams to realize themselves in the performance of their duties to the state. This fruitful period was succeeded by one of materialism and pessimism, which again, under positivist habits of mind, gave way to the standpoint of science, and especially of psychology. The larger significance of the historical method was forgotten. "Just at the moment," says the professor, "when we Germans had begun to make history, we ceased to wish to know anything of history." The powerful personality of a man of genius, Bismarck, had created the German Empire; his call for the exercise of a national will found a response in all directions, and the impulse to volition rather than speculation, to action and creation became dominant.

But at this stage Windelband points out that a new tendency made itself felt. Democracy seemed to begin to move with giant strides. The masses realized that for the attainment of practical results knowledge was power, and the schoolmaster a veritable leveler up. The workmen demanded participation in what had been the privilege of leadership of the classes. Social problems became increasingly attractive, and there was apparent a tendency to regard it as possible to look on all men as alike who had attained to a certain standard of learning.

This tendency, he says, produced an almost immediate reaction. The fear arose that the unique value and quality of personality might be overlooked, and even lost to the nation. Personality in thought, in art, in action, had been the main source of the strength of the German nation, and now it seemed that a movement was on foot to reduce individuality to a dead level on the demand of the masses. He tells us how the protest against this demand assumed its first form in art, and how the strongest expression of the struggle of individuality to free itself from the crushing and leveling power of the masses came from Nietzsche. This, he says, was the secret of the hold which Nietzsche got over great numbers of his countrymen. But Nietzsche's was a too brutal insistence on the right of the "overman" to dominate. It was an "*Umwertung aller Werte.*" It confused the national ideas of value and moral worth, and it could

not last. A yet more modern tendency has, declares the professor, set in in Germany. The demand has been made that philosophy shall show the way to a better and more real appreciation of moral values of a permanent kind, the kind that has, amid the changing interests of the period, an abiding foundation in a higher spiritual reality. The rule of the masses has increased and is increasing so far as the things of outward life are concerned. What is needed is a strong and hightened personal life that can win back and preserve its own spiritual inwardness. Thus there is apparent in Germany a new tendency to return to the great systems of idealism which have proclaimed the spiritual foundation of all reality. It is not with the transitory forms of the old effort at logical construction that educated opinion is concerning itself. The abstract formulas of the old metaphysics no longer interest the general student. But he has begun to realize once more the splendid and convincing power with which the great German thinkers disentangled from a mass of historical material the permanent basis of moral and intellectual values, and brought to the general consciousness a significance in these values that was beyond the level of what is transitory or merely utilitarian. The relation of the self-conscious and self-developing individual to the community is the new problem, and the great question is how the infinite value of the individual inner life, and the claims of the society of which the individual is a member and on which he is dependent, are to be reconciled. This is the task which modern Germany has set to philosophy and art, and on the solution they offer will depend the question whether they are considered worthy of their mission.

Such is the view of modern Germany set before us by Professor Windelband as lately as two years ago. With us in Great Britain the state of things is not quite the same. Democracy is no doubt advancing, and with even greater strides than across the German Ocean. But, altho there is a growing demand for education, there is, I think, a greater disposition here among the masses to regard the man who already possesses it as in a class apart. It is a possession less familiar to our people. They have never been led by fighting philosophers such as were Marx and Lassalle. The professors of political economy do not come on the side of the movement toward Socialism as freely as is the case in Germany. Nor on the other hand, is the cry against socialistic legislation a battle cry of our political strife to anything like the same extent. And yet the two democracies have, in vital points, such as the desire that the state should insist on better conditions of life for those who work with their hands, much in common. It is one of the most reliable foundations for the hope of better and more intimate relations between the two countries in the days to come that this should be so. The German democracy would doubtless follow its rulers to war, as would in all probability the democracy here. But both democracies are more and more influencing the policy of these rulers, as the German Chancellor pointed out in a speech made not

VISCOUNT HALDANE

long ago, and neither democracy regards war in any other light than that of a calamity. A marked and growing interest in pressing forward the demand for the solution of social problems is a guarantee of peace. The more intimate the knowledge of each other's affairs becomes in the case of the two nations the better for everybody. But the process cannot be a very rapid one. The difference of temperament is partly racial and partly due to other reasons.

I have tried to disentangle the genesis and growth of some differences of mental habit and tradition which make it difficult for Englishmen and Germans fully to understand each other. If my analysis is even approximately right, there is room for the citizens of both countries to become less keenly conscious than at present of each other's infirmities. In the great mission of civilizing the world, in its commercial and industrial development, in the production and exchange of goods, in science, in literature, in art, the two nations have many opportunities and aptitudes in common. Theirs is a mission and a duty in the discharge of which rivalry might well be stingless. It were a thousand pities if peaceful co-operation in work so manifold and so great, and so much in the interest of the world as a whole, were marred or even impeded by unnecessary suspicions. And yet the marring and the hindering are often to be witnessed. They arise mainly from what is the source of most of the evils of life, ignorance and want of forbearance. Given fuller knowledge, and that capacity for self-restraint should quickly and surely operate which among educated races generally checks the tendencies to diverge coming from difference of temperament. Still, even this capacity cannot always be reckoned on. There are many Englishmen and Germans who have knowledge, and who practise this self-restraint. But there are still more, even among the highly educated classes, who in varying degrees fail to do so. I have seen a good many illustrations of mischief arising from the want of the practice. Some of those that were least important in themselves have left with me the most vivid impressions. I have witnessed in business relations the shortcoming in this respect of able men of both countries. I used to see it in the days when I was at the Bar, and I now sometimes see the same shortcoming illustrated in public affairs. I have noticed cases in which Germans have misjudged the meaning of British policy. And I have observed English politicians at times apt either unduly to suspect the supposed particular intentions of German statesmen, or alternatively to think that good may be done by indulging in vague and sentimental appeals to them. Now German policy is largely influenced by Prussia. It is a habit of mind of Prussians to begin by defining a principle and then to test everything by it. They are not fond of gush, and are surprised if any one doubts that the natural point of departure should naturally be to lay down clearly as a preliminary to discussion what they hold to be the interest of Germany. It is well to realize this habit of thought and to take account of it. To ignore it is only to get ourselves misunderstood and probably supposed to be concealing some hidden counter policy. German habits of thinking in abstract terms, even when dealing with the most immediate and practical affairs, and of looking for principles everywhere, make things at times trying for those who have not this useful if difficult habit of mind in the same degree.

Then the German language is another cause of hindrance to Englishmen. I wish all our politicians who concern themselves with Anglo-German relations —those who are pro-German as well as those who are not—could go to Berlin and learn something, not only of the language and intellectual history of Prussia, but of the standpoint of her people, and of the disadvantages as well as the advantages of an excessive lucidity of conception. Nowhere else in Germany that I know of is this to be studied so advantageously and so easily as in Berlin, the seat of Government, the headquarters of Real-politik, and it seems to me most apparent among the highly educated classes there. It would be a good thing to get more understanding of personal equations than is current among us Englishmen. If judges and merchants and diplomatists can be led

into wrong impressions, how much more are the multitudes here, who have no direct knowledge of foreign habits of mind, likely to make mistakes? And what is true of us is true of the Germans themselves. We also have some admirable qualities which are obscured by our other characteristics. It requires life among us and knowledge of our ways and of our language to disentangle the true relation and character of these qualities. If the process is once started, it is not difficult to continue. Frenchmen and Russians now appreciate us more than they did, simply because improved international relations have at last led them to look for our good qualities rather than to look on our deficiencies. A similar change for the better has even now come over our relations with our relatives in the United States. What an excellent thing it would be for the peace of the world if the process were to set in all round, so that just as we and the French and the Russians and the Americans have found a strong inclination to look for and believe in the best in each other, the same tendency were to set in as between the Germans and ourselves! There is no apparently insuperable reason why in forming a new friendship we should not carry on other and older friendships, and carry them with us into the new one to the profit of everyone concerned. Such a change might not supersede considerations of self-defense, but its tendency would probably be in the direction of lightening the financial burdens which these entail.

What is wanted is, then, education in mutual understanding. I can think of few things more desirable for the world at this moment than that England and Germany should come to understand each other. But such mutual understanding is not possible excepting on the basis of study and the knowledge that is born of it. On the whole, I think we are more deficient in this study than are the Germans. They know our literature and our history much better than we do theirs. Shakespeare and Scott are almost as familiar to them as they are to ourselves. For one Briton that can read and speak German there are five Germans that can read and speak English. On the other hand, they seem to me to know almost less of our way of looking at things than we do of theirs. We are not really a nation that conceals deep laid plans and selfish schemes under the guise of obscurity in word and deed. We do not seek, as of set principle and purpose, to annex more and more of the surface of the earth in advance of all others. What we have actually done in this direction we have done—not as the outcome of any preconceived and thought-out policy, but because for a long time we were the only people on the spot, and because at the moment it was the obvious thing to do and we were the only people ready to do it. Germany seems to me to have had one particular piece of ill luck, the misfortune of having been born as a nation a hundred years late in the world's history. The fact has modified the form of what otherwise would have been her mode of development. But it need not materially hamper her progress. She is already one of the greatest nations in the world in virtue of character and intellectual endowment. Her power of organization is unrivaled. She has high standards of excellence in her methods and great aptitude for what is actual and concrete. She is penetrating everywhere and to the profit of mankind. Nothing is likely to keep her back—and I think I may add that nothing is so likely to smooth her path as really frank and easy relations in commerce, in politics, in society, with this country. For some of us—a great many of us—believe that the greater the trade and commerce of Germany, the greater will be our trade and commerce. Co-operation in development is a great factor for all concerned.

No doubt there are subjective difficulties. I have already referred to those occasioned by the barrier erected by the peculiarities of the German language. It possesses advantages, but it also possesses disadvantages, and causes somewhat of a gulf between the German and his foreign neighbors. One cannot, however appreciative one may be of things German, but make certain complaints of this language. The verb is remote from the substantive, and is a sore trial to the foreigner. The Gothic type and the Kursiv-Schrift are oppres-

seem to the foreign eye. In the hands of a bad writer this language is a burden even to the student. Carlyle himself, a real admirer of German literature, has to say in his "Frederick the Great" that "German to this day is a frightful dialect for the stupid, the pedant and the dullard sort. Only in the hands of the gifted does it become supremely good." But I sometimes think that even the Germans themselves do not appreciate the power that is latent in their language of being made admirable for all purposes when the pen is that of a great master of style. I do not speak of the lyric. We all know that for the purposes of lyrical poetry German has hardly a rival. I speak of prose. I refer for an illustration to Heinrich Heine. When I visit Düsseldorf it is with sadness that I see no mark to show that the town is proud of its association with his name. He was trying at times. He laughed at his countrymen. But then he laughed at us Englishmen also, and perhaps he laughed most of all at the French. He really knew and loved Germany, and yet Germany can hardly be said to appreciate him, and this, the fact notwithstanding, that he wrote German prose as perhaps no other ever has. We have learned to marvel at the young Goethe, who before he was twenty-six produced much of his greatest work, the "Ur-Faust," "Goetz," "Werther" and some of the finest of his lyrics. But of Heine we hear little in Germany. I think it is a sign of a certain want of open-mindedness that Germany does not fully appreciate this unique figure—the man who knew so much and said it so distinctly in such perfect words. In Heine, Ste. Beuve has his rival in delicacy of appreciation. The language of Renan is not more exquisitely graceful and precise. And yet there is, so far as I know, no important memorial to him in Germany —not even in Düsseldorf, his birthplace.

I repeat that we English are apt to be narrow. We provoke the world by our apparent unconsciousness of the transitory nature of national institutions. Change is the order of the day. What will the world be like a hundred years hence? No one can foresee. Can the centralized Russian Empire hold together in the face of the march of civilization and the progress of Japan and China also? Will not these countries afford examples which will be followed outside their own boundaries? Will the German Empire a hundred years hence be anything like what it is today? And how will it be with the British Empire? Few people suppose that, even if George the Third had not been foolish, the United States would have remained bound up with us and subject to a centralized government. Some of us are quite aware that with Canada and Australia and New Zealand and South Africa the same difficulty might well arise unless great care is taken. Few people now talk of a rigid system of imperial federation on the old lines of a quarter of a century since. The proposition would be an anachronism and too dangerous. If Canada, for example, were to develop eighty millions of population, could we remain with her under any sort of apparently written or rigid system? Possibly! It all depends how elastic the system really was, how light the rein of common government, and how complete the autonomy of the Canadians. By learning to see things as others see them we may put off, perhaps for an indefinite period, days which, if there were constraint or lack of intelligence, would be inevitable. And that is why we do well to study the lesson of how to understand our neighbors all round, those who speak English and those who speak German, and to try to correct certain insular traits of mind which are characteristic of us.

The Greeks used to say that the knowledge of self is the hardest to gain of all kinds of knowledge, and this is as true of nations as it is of individuals. But it is surely worth while to make the effort to gain the knowledge. For it may help us to secure that in the particular case we are considering, that of Germany and Great Britain, neither of the two great nations shall fail to realize the magnitude of its responsibility for the understanding and appreciation of the other.

# The Delhi Durbar

BY RUSTOM RUSTOMJEE

[The author of this article is a distinguished member of the Parsee community in Bombay, which includes a number of the most influential men in all India. He is editor and proprietor of *The Oriental Review,* the most powerful organ of Indian public opinion in Western India. He is well known and highly respected by British officials in India of the highest rank, and is now in this country fulfilling a series of lecture engagements.—EDITOR.]

THE announcement of the intention of His Majesty King George V of England to be present in person at the Delhi Durbar, when he would be proclaimed Emperor of India in succession to his late father, was hailed with delight by all thoughtful sections of the East Indian communities, except by the microscopic minority of educated, or rather half educated, Indians, whom Lord Morley has called our enemies, whom we, the constitutionalists, call the Extremists of India. They would like to drive the British, bag and baggage, out of the country. That there exist such Indians it is futile to deny; that they are very insignificant in number and unimportant in influence, tho exceedingly vociferous and troublesome, can be affirmed without fear of contradiction. The vast majority of educated Indians to a man are loyal to the person of the sovereign of Great Britain. As for the teeming masses of Indian agriculturists—85 per cent. of the whole population of 300,000,000—well, they really do not care as to who govern them, as long as their rulers are kind and sympathetic and willing and able to remit the land tax whenever the annual monsoon fails and the demon of famine and scarcity visits their fields. Thanks to the existence of extensive railways and long trunk roads built by the British in India; thanks to the exertions of British officials and missionaries, both European and American, who are carrying the torch of primary education in villages and towns, the horizon even of these poor Indian agriculturists is widened; they are just beginning to know and learn that their great white *mabap,* their great white *rajah-saheb,* lives in a far-off country and belongs to a great foreign nation; and I believe the visit—the first of its kind—of the King of England will infuse new life, patience and hope in the hearts of the millions of the tillers of the Indian soil. It will lead them to believe that their *rajah-saheb* cares for them, and has come to their own country to listen to their entreaties and to remove their grievances. For it must be remembered that the Durbar is one of the oldest, most respected and "the most fundamental of all Oriental institutions." In ancient times the Durbar meant "the right of the subject to make, and the necessity of the ruler to receive and hear, petitions *in person* and *in public.*" Whatever was the character of the ancient Indian kings; however cruel and despotic they were, to whatever faith or nationality they belonged every one of them, "from Kanishka to Akbar and Auranzeb," held regular Durbars; not one of them dared to neglect

RUSTOM RUSTOMJEE

or do away with it. So to bring the va egated masses of India nearer to his person and throne King George could not have taken a happier and a surer step than that of proclaiming himself in per son Emperor in Delhi, the capital city of ancient India. The new tho happy and far-sighted move on the part of King George will also bring closer the edu cated classes of India to the throne of

Copyright, Underwood & Underwood, N. Y

THOUSANDS OF NATIVES CROWDED THE STEPS OF THE JUMMA MUSJID MOSQUE TO WATCH THE DURBAR PROCESSION OF 1902

England, as it will make them realize—as nothing else could have done—that they are an integral part and parcel of the British Empire.

I have already indicated that the holding of the Durbar by the King of England in person, and his proclamation as Emperor of India have not been well pleasing to the extremists, "the pestilential agitators," mostly Brahmins of India, and naturally, for the supremacy of Great Britain in India has all along been gall and wormwood to the large majority of the Brahmins, who are being gradually but surely ousted from the superior and commanding positions they enjoyed during the centuries before the establishment of British rule in the country.

The ostensible objection they have put forward against the holding of the Durbar by George V has been of a twofold character. They have unhesitatingly asserted that the personal proclamation of the King of England as Emperor of India has been meant to emphasize the lordship of Great Britain over the peoples of India, thereby further degrading the Indian nation in the eyes of the world. Now there is no need of asserting that nothing could have been further from the thought of the King of England than the idea of degrading the peoples of India in the eyes of the civilized world. In the sight of British rulers the peoples of their Eastern dominion are nothing more or less than "His Majesty's equal subjects"; to use the words of Lord Morley. I maintain, moreover, that the personal attendance of King George V at the Durbar at Delhi will raise India in the estimation of the civilized world and attract greater attention of the advanced nations of the earth to the country. This will be of incalculable help to the work of the moral, material, social and industrial development of its peoples. The very fact that King George and Queen Mary volunteered to attend the Durbar in person, in spite of the certain amount of risk they have run, for the bomb and the revolver, the assassin's knife and the machinations of the anarchists and seditionists are not yet in India the things of the past, shows in what high esteem India is held, and with what feelings of affection its peoples are looked upon. I am sure the devout prayers of India's millions—both of princes and peasants, both of the educated and of the illiterate—must now be hourly going up to Heaven for the preservation of the valuable lives of their dearly beloved sovereigns.

The second objection to the Durbar at Delhi was on the score of its expense. It was said that the Durbar was going to throw away upon senseless pomp and show a sum of twenty million dollars. Of course, our old friend Nero, who is alleged to have fiddled while Rome burned, has often been brought out for India's special delectation. Personally, I deprecate the tendency to apply to every act of state, great or small, the sordid test of its actual equivalent in cents and dollars. There are some things for which no expenditure can be too great, just as there are others for which none can be too small. But this abstract consideration does not and will not satisfy the extremists of India. The actual cost of the Durbar is computed to be about six million dollars; but arrangements are so made that not only will most of the money remain in the country, but that it will largely be circulated among Indians and the greatest beneficiaries will be the poorer sections of the nation. How this has been managed I have no time to show. The Durbar will in fact rob the Peters of the rich to pay the Pauls of the poor of India.

But Indian extremists are not the only objectors to the coronation of George V in Delhi. It has been asked by certain English critics, "How can the King of England be crowned again in India?" Well, I fear these critics are laboring under a misconception. King George will not be *crowned* as Emperor in India. There has never been actual crowning in India in case of any king or emperor. There are *no crowns* in the paraphernalia of Eastern kings and potentates. There has always been enthroning, and there was the peacock throne of the old Moguls. But even if there was the second crowning of George V in India, it would not have been a new thing, for English history records many such instances. Richard I, who was crowned at Westminster in 1189, was crowned again at Winchester in 1194, much against his will, on his return from captivity in Ger-

THE GREAT PROCESSION OF NATIVE RULERS PASSING DOWN THE FAMOUS STREET OF CHANDNI CHOUK, DELHI, IN THE DURBAR OF 1902

many after his ill-starred crusade. Henry III had to be content with an initial coronation at Gloucester, as the French were in occupation of London—without a crown, too, as the regalia had been lost with the rest of King John's baggage in the wash—and it was not until four years later that a second ceremony was held in

Westminster Abbey. But two centuries afterward the tables were turned, when Henry VI was crowned both in Westminster Abbey and in Notre Dame. The two Charleses were crowned in both England and Scotland. Comparison between Scotland and England and India and England is a mark of the signal growth of the British Empire. Nor is it unprecedented that Delhi should witness the accession ceremony of an emperor. That historic city has been the scene of many accession festivals, tho the ancient ceremonies present points of dissimilarity from those which will be witnessed on the 12th of December, 1911. Great Britain does not, for instance, think it necessary to conclude the festivities, as did the Mogul Emperor Aurangzeb, by the public decapitation of 500 thieves, thereby, as a local historian says, "terrorizing the perverse." The unique nature of the present occasion, as the Under-Secretary of State for India recently said, "lies in the fact India has never had before the opportunity of receiving in person and doing honor to her English Emperor and Empress." Yes, it is not only a unique event, but it is perhaps the greatest event in the history of the world—ancient and modern. The coronation of Napoleon the First pales before the event that will take place on the 12th of this month. The coronation of Alexander the Great in Persia bears a likeness, but a likeness so remote that it could not be made a historic parallel. The population under the sway of the three united ancient empires never numbered one hundred millions. The loyal subjects of His Majesty the King of England number four hundred millions. It is the greatest event in the history of India, for never was the country, from Cape Comorin to the Himalayas and from the Indus to the Irrawady under one sway. For the making of this greatest event in history King George and Queen Mary are now at Delhi.

The spectacular effect of the Durbar will be superb. It will be a sight never to be witnessed in any other part of the world, and, I trust, will not have to be displayed in India for many years to come. The Indian princes, drest in the gorgeous apparel of the variegated colors of the rainbow, decked in the costliest of jewels; the Sikh soldiers in their scarlet uniforms; the Baluchis in their blue and gold tunics; the English civil servants in their costly black and gold uniforms, with their swords dangling and their accoutrements jingling, will present a spectacle that will dazzle the eye and fire the imagination of the people assembled to pay homage to the greatest of modern monarchs.

According to the latest official program, Their Majesties the King and Queen of England were received on their arrival by the president and members of the Bombay Municipal Corporation and the Indian princes and official dignitaries of Western India. The address of welcome was read by the Honorable Sir Pherozehah M. Mehta, K. C. I. E., an Indian Parsi, perhaps the ablest and the most leading Indian now living in the country. After a short stay in Bombay, Their Majesties left for Delhi, and arrived on the 7th of December at the bastion of Delhi Fort, where a hundred and fifty Indian ruling chiefs were presented. Subsequently they went in procession with British and Indian escorts round the great Mosque and thru all the principal streets of the town. On the Ridge they were received by the British representatives, between 3,000 and 4,000 in number. On the two following days the King received visits from the chiefs, and laid the foundation stone of the All-India Memorial to King Edward in Delhi. This morning (December 11) eleven colors were presented to British and Indian troops. On the 12th of December His Majesty will proclaim himself Emperor of India amid the booming of guns and the sounding of bugles. There will be rejoicing at every hearth and home in India. The full text of the proclamation is not now known; but I believe it will contain many concessions and a declaration of the liberation of some, at least, of the political prisoners who have been sentenced to long terms of imprisonment during the last few troublous years.

The Times, London, December 11

# The Commercial Motor Truck

BY J. EARL CLAUSON

SEVEN years ago, when data were collected for the Federal Census of Manufacturers for 1905, there were in service in the United States four hundred and eleven commercial vehicles. One hundred and sixty of them were classed as heavy cars and two hundred and fifty-one as light ones. One hundred and fifty-eight of the four hundred and eleven were in use in New York State.

The close of the year 1911 finds about twenty thousand commercial vehicles performing draft service in the United States. Eight thousand are registered in New York State, and at least 50 per cent. of that number are working in the city of New York. In other words, in whatever part of the country you travel you will see fifty motor trucks today for every one you saw a short seven years ago.

Astounding figures, are they not? Small wonder that they stir to prophecy those interested in the motor car business, and the prediction that within a comparatively brief time, say two or three years, there will be fifty thousand of these useful vehicles, light and heavy, discharging a large part of the short haul business of the nation seems well within the bounds of reason. It is simple arithmetic to figure that within a few more years this branch of the automobile industry will exceed in importance and volume the passenger car business, which has become the third largest manufacturing industry of the United States, with exports amounting to twenty million dollars annually. Even the often forecasted, but never hitherto actually threatened, retirement of the horse seems a possibility with such statements.

For every phenomenon, great and small, there must exist reasons. They are easily located by the investigator of the commercial vehicle's sudden leap into popularity; their names are found to be economy and efficiency. More careful analysis of the situation resolves the qualities named into eight component factors, as follows:

One motor truck of approximately three tons' capacity, with two men, will do the work of three large horse trucks, spare horses and six men, given normal conditions.

The radius of action of a commercial motor truck is at least four times that of a horse-drawn truck.

Horses are completely outclassed in speed, which indeed is often greater than that of railroad express service.

By rendering it possible to handle goods to be delivered only twice, once in loading and once at the door of the consignee, packing cost is reduced and there is less breakage.

The personal representative of a store, factory or shipping house can travel with the goods and deliver them properly, eliminating expenditures for railroad fares, telegraph and telephone.

The motor truck is less susceptible to weather conditions than horses. This fact was strongly emphasized in New York City during the exceptionally hot spell of last July, when sixteen hundred horses died from heat in two weeks.

Storage space for vehicles, horses, hay, grain, bedding and harness is reduced to that for the motor vehicle alone. The magnitude of this economy may be better understood when it is stated that some small cities which have displaced horses with motor fire apparatus have found it possible thereafter to give each man of the crew a separate room.

The saving in labor has been found sufficient, when motors supplanted horses in delivery systems of any size, to offset the increased first cost of the motors in less than two years of operation.

Lest it should be asserted that these are merely manufacturers' claims, having no substantial rooting in fact, let us look at a couple of concrete instances of what the commercial motor car has done and is doing. A New England city of 15,000 or so owns its stone-crushing plant, where for many years it has ground out road-building material.

AN ELECTRIC TRUCK FOR CITY DELIVERY

While the quarry and crusher were the property of and operated by the municipality, it was always found economical to let out the hauling on contract. The city could not profitably burden itself with the ownership and conduct of the three or four teams of horses needed for moving the crushed stone, especially in the face of the fact that road building is a warm weather job and there was no work for the horses during the winter.

When a mayor who was also a business man came into office and began to look about for opportunities to administer city affairs to the greatest advantage of the taxpayer his eye lighted on the stone-hauling contracts. It occurred to him that a saving might be effected in this department. First priming himself with all the facts available, he laid before the board of aldermen a recommendation that the city buy a motor truck and haul its stone itself.

"Isn't it being done all right now?" they asked.

"Perhaps, but it could be done more cheaply. One truck will do the work that three teams are doing, and the saving in salaries alone would be an important sum. The city couldn't handle the business with horses, but when you lay the motor truck off at the close of the stone-crushing season you will not have to feed it."

"How much will the truck cost?"

He told them and they threw up their hands in horror. As it happened, the mayor was prepared for just such a contingency. He came back at them with a proposition—namely, that he buy the truck and hire it out to the city with a guarantee that it would haul as much crushed stone as the horses were hauling and in all respects discharge the business as efficiently. In payment the city was to give him just what it had been giving the other contractor on the job—no more and no less. When the payments had amounted to the purchase price of the motor truck, with fair interest, title to the machine would be turned over to the city.

AN AMERICAN MADE AMBULANCE IN RIO DE JANEIRO

After viewing this proposal from every angle and failing to find the suspected colored man in the wood pile, the aldermen agreed to it. The stone-carrying motor truck has now been working one season on its job. It has had no occasion to apologize, the road material is carried as expeditiously and satisfactorily as it ever had been by horses, and in two years more the city will become its sole owner and proprietor.

Five years ago the directors of the Chicago Public Library, by cutting down the appropriation for delivery service to its outlying branches, precipitated the installation of power wagons. In the first year three machines were purchased, supplanting twelve horses and five wagons. The economy of the substitution was not visible at the outset, for while boarding, shoeing, wages of drivers and similar current expenses for the horse equipment had totaled $6,770.37 a year, corresponding charges for the machines came to $6,671.39, a difference of rather less than $100.

A glance below the surface, however, revealed a more sensational state of affairs. When the horse was in service wagons returned to the library at all hours, and kept sorting and checking clerks busy long after quitting time. The power wagons not only delivered many more books, but they made deliveries on schedule time, and their promptness in returning to the central plant rendered it possible to dispense with the services of eight checking clerks, effecting a direct saving in labor of $400 a month.

With the money thus saved three more machines were purchased, making a total of six now employed. Four of the machines make two daily trips to sub-delivery stations and reading rooms from a mile and a half to nine miles distant. One trip a day is made to Pullman and South Chicago, respectively thirteen and twenty miles out. Each of five wagons averages forty-one miles daily in actual running time of six hours, including stops. The sixth, a spare machine, gives a daily service of eleven and three-

A THREE TON TRUCK IN HARTFORD, CONN

quarters miles in one hour and forty-two minutes, making seven stops of about a minute and a half each. All leave the garage at seven in the morning and are back by four in the afternoon. As to possible depreciation, which may reasonably be figured at 15 per cent. a year with either motor truck or horse, the superintendent of this service when asked how much longer his six machines could be expected to last in service replied:

"As long as I wish."

His meaning was that with intelligent care and attention to repairs and adjustments the life of a motor wagon may be prolonged indefinitely.

These are only two of the great number of uses to which commercial motor cars have been put which account for their increase in number of—is it 5,000 per cent.?—in seven years. Their range of service is suggested by some of the accompanying illustrations. Heavy trucks for big loads and light wagons for store delivery have become common sights to all dwellers in cities. In addition the motor truck has been found especially serviceable in all work which demands high speed and freedom from the accidents to which horses are peculiarly subject.

Thus the commercial vehicle has been pressed into hospital work for ambulance runs, where it has unquestionably been instrumental in saving human life, which would have been snuffed out had reliance been placed on horses. It has played its part in maintaining the public peace by hastening officers to scenes of disturbance in their gasolene propelled patrol wagon. And in no branch of work has it been more efficient than that of city fire departments, in both large and small centers.

Fire departments, as every one knows, operate under peculiar conditions. Days, and even weeks, may pass before the services of men and apparatus in an outlying station are called for. But when the call does come there must be no delay in responding to it. The apparatus

A MOTOR TRUCK CAN HOIST ITS OWN LOAD

is heavy beyond the power of men to propel at a good rate of speed for any distance. Horses or some other propulsive agency must, therefore, be held always in readiness, and until within a very short time there was nothing else than horses to consider.

During the greater part of the time these animals are idle except for practice runs, yet the expenses of their upkeep never halt. In that fact lies the economy of the motor-driven fire apparatus. Springfield, Mass., was the first city to admit the wisdom of supplanting its horse-drawn machines with motor vehicles, and its experience is typical of that of other municipalities which have followed its lead. In two years and nine months, according to its figures, the cost of maintenance of a horse-drawn chemical engine was $5,000, this total including wages, which were eliminated by the substitution of a motor chemical engine. The cost of the latter for the same length of time was $385. The driver of the motor engine was a fire fighter trained to operate the car and able to lend a hand with the crew of his station when the scene of action was reached, while the driver of horses had no time for other work. Beyond all of this immense difference in upkeep is the fact that horses, busy or idle, depreciated constantly in value, while the depreciation of the motor engine went on only while the machine was in actual use.

These principles of operation have cropped out again and again in the experiences of cities which have followed Springfield's lead by installing motor hose carts, engines and chemical wagons. At a test at Lynn, Mass., of the comparative merits of horses and motors, it was found that the former, in responding to two alarms, covered four miles at a cost of $34,15, while the latter in responding to twenty-one alarms covered sixty-eight and three-fifths miles at a cost of $6.88, the figures in each case representing a month's service. In Irvington, N. J., a combination hose and chemical wagon, motor propelled, was

run from June 1 to November, five months, at an actual outlay of $35.13 Richmond, Va., investing in an automobile fire engine whose motor could be turned loose upon the pump after it had reached the scene of a fire, discovered that the machine would not only climb the hardest hills with eighteen men and a full equipment aboard, and averaged eighteen miles an hour, with a maximum of thirty, but could develop a water pressure of eighty-two pounds thru the pump, throwing six hundred and four gallons of water a minute a distance of two hundred feet in a two hour test.

This engine, however, is only a little brother of one in the Great Jones Street Headquarters of the New York Fire Department, which pumps eleven hundred gallons of water a minute. The exprest opinion of former Chief Croker of the New York Department that the motor fire engines are most useful for the residential districts of big cities and not serviceable in more congested streets is of interest both for itself and because it calls attention to an important consideration when motor trucks are under discussion.

This is that it appears to be a demonstrated principle of their use that electric commercial vehicles are far more economical than gasolene cars for short city runs. Despite the many ends to which power wagons have been turned, the great bulk of their work is hauling merchandise. In crowded streets the horse still sets the pace for traffic, so that the speed resident in a gasolene car is of little avail. It is more expensive than the electric car, however, and all of the time while it is crawling along at a horse's walk, or waiting for a block to be disentangled, the interest on a heavy investment is running merrily on regardless. Therein appears the economy of the least expensive equipment obtainable. In the case of department stores, where a large number of house deliveries are to be made, perhaps at points only a block or so apart, the inclination of the delivery man is, of course, to leave his motor running while he takes his bundles to their purchasers, with the result that a great deal more gasolene is burned than the mileage warrants. If the delivery wagon is an electric, power is shut off while delivery is being made.

In the long haul, on the other hand, the gasolene truck is pre-eminent. There is no danger that it will give out on the road, which can hardly be predicated of the electric, and if its stock of fuel should run low there is always a "Gasolene For Sale" sign within shouting distance. When the electric car's current is exhausted the machine must be taken to the supply station.

The gasolene truck reveals its merits on the long haul. It has both power and speed. With the latter it provides a better return on the investment in drivers' salaries, which are always the heaviest bill of expense in merchandise delivery. To offer a concrete example of a motor truck's economy over a horse-drawn vehicle, a piano house in a large Eastern city was frequently called upon to make deliveries in a suburban town twenty miles distant. To drive to the suburb was cheaper than sending the piano on a freight car, with the consequent doubled handling, yet it was an all-day drive for three men, and after the piano had been delivered it was impossible to get back to the piano warehouse the same night.

The firm which had made the sale was compelled, therefore, to pay the livery charges for the horses and the hotel bill for the men over night, and was unable to use its wagon and horses until two days later, the second day having been consumed in returning to the city. With the swift motor truck the delivery is made in the morning, and by the middle of the afternoon the whole outfit is back ready for another job.

Various ingenious devices have been adopted both for controlling the speed at which the motor truck is operated and for registering its movements while it is out on delivery. While a six ton truck is not ordinarily selected for joy riding, there is ever present the danger that a driver, anxious to get home in time for dinner, will push his machine along at a hazardous rate and possibly wreck it. This risk is eliminated entirely by a controller, which the owner of the car or the delivery superintendent may set at any desired speed and lock beyond the reach of the driver. Herein is an easy

advantage of the machine over the horse, for nothing except human sentiments could prevent a driver of horses from abusing them when he was away from the oversight of his employer. Nor was it possible to control his movements in any definite degree, horses by their very nature affording excuses for any number of delays. When the machine is used, however, a tape register may be attached to the forward wheels which notes every halt and its length while the car is away from its garage, and it takes an ingenious driver to advance excuses for many stops beyond the number his errand demands.

To catalog the various uses to which motor trucks are being devoted in this, the dawn of the commercial vehicle's day, would be tedious. There are some, nevertheless, which deserve passing mention as illustrating powers which do not inhere in horse-drawn wagons. There is, for instance, the truck with hoist attachment, in which, by means of a worm gear, the power of the motor is shifted to a drum, and the load is hoisted by the same engine which drove it to its destination.

The motor omnibus has been a familiar sight to every visitor to New York in the past several years. The Fifth avenue omnibuses are alleged to pay a good return on the investment, but they probably are no more profitable than those which an ingenious citizen of Connecticut has put into operation at New Haven. The dwellers along Orange and Grove streets in the university city objected to turning over the highway to a trolley car company, and were without transportation until four gasolene propelled omnibuses were put into service. They are of the pay-as-you-enter type, and the driver is able to collect fares as well as operate his machine. The cars run on a four-minute headway, the fare is five cents, and in 1910 the line earned, after charging off 15 per cent. for depreciation, 81.2 per cent. net on the investment.

To contest the monopoly of the horse a little more strongly, the motor tractor has come into existence. The tractor is in all essentials a gasolene motor horse. It is not a truck, but an engine, with a single supporting wheel at the front and an attachment for the front axle of any vehicle to which it is desired to apply it. It will turn as short as a horse, is three times as fast, does not slip on icy pavements or wilt under the heat, and reduces the rubber tire expense of the ordinary motor truck to less than one-fourth. And, as in the case of the other machines described, it does not demand food when it is idle.

Is the horseless age actually at hand? He would be a rash person who went on record as really believing so, yet there is indisputable significance in the growth of the motor-truck industry. Four hundred power wagons seven years ago, twenty thousand today, perhaps fifty thousand by the 1st of January, 1914—what of the future, and what of the horse? The commercial vehicle's leap into popularity is, at the very least, an interesting phenomenon, and the developments of the next few years will provide even keener entertainment for the thinking mind than those of the last four.

# Fellowship

BY RALPH M. THOMSON

By the red blood in an artery,
  Or the blue blood in a vein,—
By the brute strength in a muscle
  Or the gray cells in a brain,—
We are prone to sit in judgment
  On the passing caravan,
And denominate some mortal
  In the coterie a—Man.

But there is another standard,
  Taught by Him who preached of old,
And it is not based on talents,
  Nor subservient to gold;
And it binds poor humans closer
  In its sympathetic strain
Than the red blood in an artery,
  Or the blue blood in a vein!

Savannah, Ga.

# The Business of a Commercial Bank

BY JOSEPH B. MARTINDALE

[Mr. Martindale is president of the Chemical National Bank of New York, whose reputation is certainly quite as high as the highest. His competency to give advice on the conduct of a commercial bank is unquestionable. The present article is based on his address before the American Bankers' Association in New Orleans.—EDITOR.]

AS no two concerns in the same line of business conduct their affairs along identical lines, it is needless to say that, by reason of the fact that the clientele and business of one bank differ from that of another bank (located in any large city), no general rule can be enunciated that will successfully apply in regulating the policy of two banks whose business is entirely different and divergent.

The clientele of many banks is composed of banking houses, brokerage houses and large corporations, railroad and industrial; the business of another bank (located in a different section of the same city) is principally composed of merchants, manufacturers, importers, jobbers and houses in all branches of mercantile business.

It is narrow, and unjust as well, to set one's standard up as the only standard by which all banks should manage their affairs, and criticise the investments made by other institutitions whose business is entirely different from that of your own. Yet I am constrained to suggest that the funds of every bank should be carefully and conservatively invested, and that special interests should not be permitted to absorb such a large percentage of its loanable funds that customers who are not in the "special class" find it difficult to obtain reasonable and necessary accommodation.

The affairs of a bank should not be permitted to rest in the hands of one or two men. In our institution the more knowledge the other officers and senior clerks have of the bank's affairs, the better it pleases our management, and the better the results attained thereby for the bank. In my opinion, this is a matter of the most vital importance in the organization of any institution, and experience has taught me that the results attained thru a broad policy of educating your best men and developing them to gradually accept greater responsibilities are much greater in every way for the present time and insure for your institution a better equipment for the future. I have watched this policy of development very closely with a great deal of satisfaction, and, little by little, our men are growing up to accept and handle responsibilities satisfactorily, which means much for the continuation of the success of our own institution.

It is also of the greatest importance, in commercial banks especially, that their equipment in what to them is a most vital department, viz., the credit department, should be very efficient indeed. Men should be selected when they are young fellows for appointment in the credit department, should be schooled and drilled thoroly along advanced lines and ideas, and as they develop they are capable of relieving the officers of the institution of a great deal of detail. The officer, whose final "yes" or "no" means a profit or a loss for the bank, should not be tied down to different analyses, which can be handled by younger men, when they have had a sufficient amount of instruction and training. Some men have a natural aptitude for studying and analyzing such matters, both from a theoretical and practical standpoint, and this natural aptitude applies with as much force to credits as it does to any of the sciences and professions. In other words, every young man is not adapted by nature to make a success in the work of a credit department. Young men who have this aptitude or leaning should be placed in a position where they can, thru study and training, develop so that they will be able to relieve the officers of the institution, and thru their study and analysis of each proposition will become

valuable aids to an official in arriving at a decision.

After some years of experience I am free to say that the personal equation has a great influence upon an officer of an institution in making his decision, and determining whether to say "yes" or "no" to a proposition. There is something about every man's personality that affects the man with whom he comes in contact, and no one, in my opinion, no matter how strong his own personality may be, is free from this influence to a greater or less extent. Sometimes we are wofully deceived in personalities, and it is well always, in my opinion (and we have practised it for a long time past), to have the credit department analyze carefully from a purely impersonal and cold-blooded standpoint the statements filed, eliminating entirely the personal element. I think that any officer of a bank, who has had any extended experience, will coincide with the statement that the other man's personality always has a distinct bearing upon the decision of the officer when he says "yes" or "no" to a proposition of any kind. Hence, we have found it advisable to have one of our men analyze and scrutinize our statements closely, purely from the standpoint of the figures in cold type, and come to his conclusions from an analytical standpoint solely.

Some of the best talkers and some of the most attractive personalities are the poorest business men; therefore, we must never let the personality or persuasive powers of a good talker influence us to make a loan or investment until we have looked carefully into other matters of importance which are vital to our interests.

In making investments for one's bank, or loans for one's institution, we all should realize that we are simply the trustees of other people's money, and, such being the case, we cannot take too much care in handling these funds. If it were our own money it would be entirely different, and we might, out of sympathy for a fellow, or because we liked his attractive personality, indulge ourselves in this way; but as we all are simply holding in trust money deposited with us by our dealers and the money invested by our stockholders, we must, in order to be true to that trust, use every precaution and every device and system that has practically demonstrated itself to be a safeguard. By this I do not mean to say that it is necessary for a man to become a Sherlock Holmes, or to go around with a dark lantern, but there are certain "ear marks" on many propositions that come to the attention of bank officers that, if observed carefully and scrutinized closely, should be a warning to them to exercise caution.

There is nothing too trifling, nothing seemingly too small, and nothing which seems of minor importance that come up in the daily transactions of any institution that may not be full of vital import, and to which the closest attention and scrutiny should be given.

It was the practice of banks years ago to loan money without receiving statements, whereas the custom of filing statements now is almost universal. The mere figures of the various items composing the assets and liabilities of a firm or corporation are an improvement over the old order of things, but there are various details, such as the amount of sales gross profit, expense of conducting business, net profit, losses, withdrawals, dividends paid, etc., which are as necessary, in the opinion of the writer, as the amount of cash, bills and accounts receivable, merchandise and the other items on the asset side of a firm's or corporation's statement, and the amount of bills and accounts payable and other items on the liability side of the same statement. Some people may think this is inquisitorial, but I believe you will all agree with me that, where a bank is loaning money upon the unsecured obligation of any concern, it is perfectly within the right of the bank officer to request (not out of curiosity or in an arbitrary spirit) the fullest details covering all of the transactions of a concern's affairs. This information, of course, is absolutely confidential, and no bank officer, who realizes the confidential relations that exist between a depositor and the bank, will ever divulge to the concern's competitor, or anybody else, the details furnished him in the strictest confidence.

I think it is advisable for every large bank to have one or more of the mem-

bers of its credit department a thoroly equipt auditor, for there have been a number of instances where we have been called upon to go over the books of some of our concerns, and have sent one of our own employees to do so, and satisfactory results have been attained.

Of course there is no rule or practice but what has its exceptions, and it goes without saying that there are many cases where some of the very best concerns of this country have never made, and will never make, detailed statements of their affairs. I have in mind a number of the choicest names appearing in the New York market, whose paper we would not hesitate to purchase in round amounts, or to discount liberally for them if they were our depositors, and we do not know the amount of their capital, except in a general way, and have no knowledge of a definite nature regarding the amount of their liabilities. They are, however, known to us as very reliable and able merchants, who have been in business for many years and whose names stand for everything that is honorable, and whose methods of business have always been correct; and while having no positive knowledge, we do know that they must employ sufficient capital to safely conduct their business. These are the exceptions, however, and these exceptions should not be used as an argument against the desirability of obtaining very close data regarding all the necessary items that go to make up a complete statement of a firm or corporation.

We have always taken the stand that, where a concern is selling its paper thru brokers or borrowing of its banks, it should settle its merchandise obligations in the shortest possible time and obtain the very best discounts for so doing. It certainly is not good business procedure for a firm to borrow money and then allow its bills to run to maturity, and in some instances past maturity. It has been our practice for many years to make trade investigations and revise our reports every six months or every year at least, and if we learn as a result of these inquiries that our borrowers are not taking advantage of the best trade discounts we bring it to their attention immediately. There are times, of course, when business conditions are abnormal, and naturally under such conditions you cannot be too exact in enforcing this rule, but as a general proposition we believe it is prompted by good banking and business logic.

I think we all will agree with the statement that credit is too easily obtained in this country, for while I appreciate that the development and expansion of the country depends upon the free extension of credit, my observation has taught me to believe that one of the cheapest instruments of commerce in the United States today is credit. It is not my purpose in this article to criticise, but merely to emphasize the fact that we are all apt to grant credit too liberally. This applies to the banks as well as to our friends, the note brokers, but I am constrained to call attention to the fact that many small houses are borrowing money in the open market today thru brokers who, by reason of the limited amount of their capital and volume of business, are not warranted in so doing. The danger to the man with a moderate capital is that he regards this money which he has borrowed as permanent working capital, which encourages him to inflate his business beyond prudent and safe lines, and suddenly, when disturbances in the business world occur or panic arises, he finds himself far from shore with his obligations for borrowed money maturing and with no facilities to meet them. It always occurs at such times that his collections are slow, and naturally he finds himself in a quandary. We have seen so many instances of this nature in our own experience that we cannot too strongly urge the necessity for care and conservatism. To discourage the small fellow (or the big fellow, too, as a matter of fact) from expanding his business too largely upon borrowed money represented by his obligations sold in the open market, maturing in four to six months, is in nine cases out of ten of direct benefit to the man himself.

In this connection I would suggest that the banks and the note brokers work closely together, for equal benefits are to be derived in a free interchange of views, experiences and ideas, and we are free to say that there is a desire on the part of many brokerage houses to co-operate with the banks and to freely give such

information as the banks require. We have found it so in our own case, and we believe that this relation is becoming closer each year.

I would further suggest that it is unwise of the borrower to use too many brokers. There are many instances of borrowers using one brokerage house in the South, one in the West, another in New York and another in the East. Most of the commercial paper houses now have offices in many of the important cities, and it seems to me that it would be desirable for a concern to confine its borrowings in the open market to one or, at the most, two brokerage houses of the highest standing and reputation.

In investing the funds of a bank, one's first thought is safety, but equally as important is that one should invest his institution's funds in flexible assets, and, in my opinion, there is no class of investments superior to a merchant's note of undoubted standing and responsibility. The panic of 1907 and its aftermath, with the small percentage of commercial failures and the gradual but steady liquidation which has taken place from that time up to the present time, prove conclusively that this class of investments, if examined thoroly and selected carefully, is an ideal one.

I do not mean by this that it is possible to invest your funds for all time in commercial paper without sometime facing a loss, but the experience of the last three years and the information derived from a study of the statements received during that period show how gradually, but steadily, our manufacturers and merchants have been able to reduce their liabilities thru corresponding reductions either in the amount of their merchandise or in the amount of their bills and accounts receivable, without serious result to themselves or to their creditors. Looking at the matter from the standpoint of a commercial banker I think you will all agree with me that a short-time obligation is preferable to a long-time obligation, no matter how good intrinsically the latter may be.

Bearing upon this matter of flexibility, I am constrained to mention the fact that, from the standpoint of good banking, it is not in the province of any bank to furnish permanent working capital for any one of its depositors. A bank whose liabilities are all payable on demand should observe closely the well-established rule which has been demonstrated by years of experience to be absolutely fundamental and correct, viz., that its borrowers should at some time during each twelve months liquidate their indebtedness to the bank for a reasonable period of time.

I am constrained in closing to mention briefly how important the matter of the investment of a bank's funds in commercial paper is to the business interests of this country, and how vital it is to the development of the country. Such a large percentage of our commercial business is conducted upon borrowed capital that if our country and each trade and every industry are to reach their greatest development it is essential that banks in all parts of the country should be in a position to handle these means for our development and expansion understandingly and safely. Looking at this subject in its broader sense, and not from the standpoint of individual bankers, I believe that if this country and its business interests are to reach their highest development it is our duty to assist in this development by granting credit to our agriculturalists, our manufacturers and our merchants conservatively and safely, but freely, and not to use the funds of our institution to promote and foster speculative enterprises. I cannot too strongly urge upon all of the bankers of this country their duty to the business interests of this country to be prepared to intelligently handle this great mountain of credit that enters into our daily transactions.

In conclusion, I would briefly summarize some of the safeguards to be employed in investing our funds:

1. Know your man thoroly and be frank with him.
2. Examine his statements carefully.
3. Examine closely his trade record.
4. Examine his transactions with his banks and brokers.
5. Be frank and truthful with the other fellows when they make inquiries of you.
6. Above all, realize that you are the trustees for other people, and that it is not your own funds you are handling.

This thought, I believe, is the best safeguard of all.

## The Chinese Court From Within

It is a rare good fortune that gives us thru the eyes of the Western-educated daughter of a high Manchu official—now the wife of an American in Shanghai—an authentic view of the intimate court life of the most remarkable Asiatic sovereign of our time.* As luck would have it, the Princess's brother got the Empress Dowager interested in photography, and the story is illustrated with superb photographs of royalty at its pastimes.

The book gives the very atmosphere of an Oriental court—the innumerable malicious eunuchs, the ignorant, chattering court ladies, the petty jealousies and plottings, the skeins of intrigue, the flattery, ceremony, luxury and waste that surround rulers of the Asiatic stamp Such as this must have been the palace air of old Assyria or Persia.

It is the Empress Dowager on her personal—not her political—side that we get here. It is an intimate valet view; but it certainly makes her out a very real human being. What big woman's club does not have a woman of this sort? Her feminine vanity was such that when our Admiral Evans was to be presented she took two hours to dress her hair. On another occasion, after looking over twenty to thirty gowns, she found "nothing to wear" and sent for a fresh lot. She cared much to make a good impression, and when she gave audience to foreign ladies she was "very amiable, with *such* a pleasant smile—so different from her everyday manner." Delightfully naïve were her notions of us. Our dancing meant "Two people hold hands and jump all over the room." She thought we feel quite at liberty to beat our parents and turn them out of doors. She detested Christianity, and believed that missionaries gather up Chinese orphans in order to dig out their eyes for use as medicine. She admired the armies, navies and engineering of the West, but was sure Chinese civilization is the higher.

Miss Carl, an enterprising American artist, painted Her Majesty's portrait, and the sitter's comments are delicious. She was aghast at the idea of posing. "Why must I sit for the portrait? Couldn't some one else do it for me?" The artist's technique worried her. "Why is one side of the face painted white and the other black? I don't want the people in America to think that half of my face is white and half is black!" "Why does she always want to have the things before her while painting them? An ordinary Chinese artist could paint my dress and shoes after seeing them once." She protested against painting her pearls with pinks and greens when any one could see that pearls are "just white." She objected to the artist's name on the picture. "Fancy putting her own name on *my* picture. This will naturally convey the impression that it is a portrait of Miss Carl, not of myself."

With doctors she had a very rational method. Each wrote her a different prescription, and she chose the one "she thought was nicest to take." The doctor had to take a dose of his own medicine before she would touch it. How just! She wished she were a man, and liked to be addressed as "Great Father." It is interesting to learn that this sanguinary lady found it soothed her and made her merciful to dress up as Kwan Yin, the Goddess of Mercy. One of the photographs shows her in this pose. It's a pity she didn't dress up oftener for the part. She says of herself, "I can make people hate me worse than poison, and I can also make them love me. I have that power." At times the Princess thought her "the sweetest woman in the world." For all that she showed "a keen sense of enjoyment at the troubles of other people."

How Chinese is the picture of Her Majesty self-complacently setting free on her birthday 10,000 caged birds while the cunning eunuchs on the other side of the hill were recapturing them! She was

*Two Years in the Forbidden City. By Princess Der Ling (Miss Thaddeus C. Weale), First Lady-in-Waiting to the Empress Dowager of China. New York: Moffat, Yard & Co. $2.

delighted that certain parrots refused to fly away, and took it as a recognition of her "merciful heart." She did not know that for weeks the eunuchs had been training the parrots to act in this manner.

The spectacle of boundless extravagance and Manchu indifference to the fate of their subjects casts a high light on the causes of the present upheaval. The New Year's gifts Her Majesty received from her viceroys outshine Arabian Nights. Thus the Viceroy of Canton sends four bags, each containing thousands of pearls perfect in color and shape. "However, Her Majesty had so many jewels, especially pearls, that she paid hardly any attention to them beyond remarking that they were very nice." Yuan Shi Kai presented a yellow satin robe, embroidered with colored gems, representing the peony, the leaves being of green jade. It cost a fortune, but after once wearing it was discarded as "too heavy." No wonder that when the Chinese pray for more schools the officials reply, "We can't find the money!"

THE EMPRESS DOWAGER OF CHINA AND THE PRINCESS DER LING
From "Two Years in the Forbidden City" (Moffat, Yard)

EDWARD ALSWORTH ROSS.

## Irish Byways*

Mr. Moore's publisher writes a prefatory note to explain that critics have referred in advance to this long awaited work as "the reminiscences of Mr. Moore," but that 'there is to a certain extent an injustice done to the author by this classification," since "his intentions were to take a certain amount of material and to model it just as he would do in a novel." What all this hair splitting amounts to we are by no means sure. Certainly no man's memoirs are really other than a kind of romance—that is, if they are worth reading at all.

Mr. Moore more than once names Rousseau, and, specifically, his "Confessions." There is something felicitous about the allusion. Mr. Moore is no such force in literature as the great infamous Swiss; but the Swiss who wrote notable French and the Irishman who writes excellent English are alike at least in morbid taint and femininity of nature. George Moore is, one may say, infinitely more subtle than the greater man; one is, in the perusal of the present volume, more than ever conscious of his felinity. Like the cat, he scratches; like the cat, men have called more than one place his home, but has he ever had a home? The heir to Rousseau is a cosmopolitan, and as such leaves Ireland and Moore Hall for Montmartre (in art's name); sups with painters and musicians and breakfasts with Zola at Meudon; leaves Paris finally somewhat bored and takes up residence in London; lives there in the Temple, somewhat poor and more than previously industrious, writing "Esther Waters" and other notable novels; enjoys a larger income and opens house in Victoria street, keeping servants and writing fewer chapters; goes to Dublin with calculated enthusiasm for the art that is winging its way westward out of Europe to Ireland, on its long (anticipated) flight for this America of ours; nimbly casts the dust of Dublin from his garments and returns to comfortable, foggy London, with many caloric resources for the assiduous bachelor, the haunting liber-

*Hail and Farewell! A Trilogy. Ave. By George Moore. New York: D. Appleton & Co. $1.75.

tine stricken with middle age. It is a curious personality, and disquieting, that of this Irish Catholic who developed too soon into an agnostic cosmopolitan.

To the man of letters or the student of literature this book is full of precious pages; written in a prose flowing, limpid, wonderfully shaded and controlled. One of the pages, telling of his adaptation of an unsuccessful play written by Edward Martyn ("The Tale of a Town," renamed "The Bending of the Bough"), suggests what wry faces Martyn made at some of Moore's recommendations. "Edward's aversion from my suggestions discovered the amateur in him." He did not want to adopt the alterations, not because he disapproved of them, but because they were Moore's:

> "The amateur always puts himself before his work, . . . whereas the artist is interested in the thing itself, and . . . *Le fiends mon bien où je le trouve* is his device."

Well phrased tho this distinction is, there is something eternally amateurish in Moore's own work, however professional in quality. And one has always the conviction that here is an onlooker, dispassionate (in spite of the vices he brags about); selfish, but coldly selfish; essentially without Church or creed or school—perhaps even without convictions of his own, or high sincerity.

For the future historian of recent literary history, this book, fuller of shades than of colors, is bound to prove invaluable: more essential than De Quincey's or Gautier's treatises on the Romanticism to which they contributed. Delicately sensible of the values of the art which the men about him have created, or struggled to create, Moore treats his former intimates as coleopterists treat beetles they have met; impaling them all quivering with life, and turning them on their pins this way and that toward the light. This is not a book to win Moore new friends, or to strengthen ties such as may exist. The malice is all the more intense because it is delightfully unassuming. Consummate Moore!

While fickle New York gives momentary welcome to the Irish players from the Abbey Theater, having clapped

down the hissing of sundry Irish manifestants who criticise plays with potatoes and dairy products, there is interest in Moore's words concerning this same enterprise and its beginnings. When William Butler Yeats and Edward Martyn came to him, twelve years ago, with talk of founding a playhouse in the Irish capital, he was incredulous, even scornful: "for to give a literary theater to Dublin seemed to me like giving a mule a holiday." He envied by collaborating. But the story has been told elsewhere. Nowhere, however, have such neat little portraits been drawn of Martyn and Yeats—the owl and the rook, he calls them!

"Edward, great in girth as an owl (he is almost as reckless), blinking behind his glasses, and Yeats, lank as a rook, a dream in black silhouette on the flowered wall-paper."

The pair are sketched more than once—Martyn, indeed, is the hero of this volume, so far as it has one; Yeats with a long black cloak drooping from his shoulders,

"a soft, black sombrero on his head, a voluminous black silk tie flowing from his collar, loose, black trousers dragging untidily over his long, heavy feet—a man of such excessive appearance that I could not [at first seeing] do otherwise—could I?—than to mistake him for an Irish parody of the poetry that I had seen all my life strutting its rhythmic way in the alleys of the Luxembourg Gardens, preening its rhymes by the fountains."

Nor does the Irish poet escape Mr. Moore with an unflattering description: there is irreverent allusion to his theories of reading verse—on the stage and off. "One can hear that kind of thing, my dear fellow, on Sunday, in any Methodist chapel," George Moore says he told him. One could wish that the delightful players of the Abbey Theater had never been coached by the poet in his "chaunting" theories.

All Dublin passes in review in this unique volume. Nor is any one flattered. Rolleston, Hyde, Gill, O'Leary, O'Grady, Æ (George Russell)—these and others are described as attending a certain dinner, out of which Mr. Moore makes a subtler Hibernian comedy. Æ gets off most easily, perhaps only because the portrait is vaguer than that of the rest. A certain Trinity College professor is overheard saying to the waiter:

"Nothing much today, John. Just a dozen of oysters and a few cutlets, and a quart of that excellent ale."

One could fill an issue of THE INDEPENDENT with more or less entertaining extracts from this clever and malicious book—that is on the whole less unclean than any earlier volume of Moresque reminiscence. Lady Gregory, the eager and lovable co-director of the Dublin Theater, who has written so many plays of such uneven merit for that theater, and has come to New York with the players, passes thru the pages. "My thoughts moved back to the first time I saw her, some twenty-five years ago," writes the memorialist. "She was then a young woman, very earnest, who divided her hair in the middle, and wore it smooth on either side of a broad and handsome brow. Her eyes were always full of questions, and her Protestant high-school air became her greatly and estranged me from her.

"In her drawing room were to be met men of assured reputation in literature and politics, and there was always the best reading of the time upon her tables. There was nothing, however, in her conversation to suggest literary faculty. Some years after she edited her husband's memoirs, and did the work well. So at core she must have been always literary, but early circumstances had not proved favorable to the development of her gift, and it languished till she met Yeats."

As the moon is more interested in the earth than in any other thing, there is always some woman, writes Moore, more interested in a man's mind than in anything else. So that Lady Gregory has not only done her own work of writing comedies and translations for the Irish players, and learning the original language of the country, that she and Yeats "might add to the Irish idiom which the peasant had already translated into English, making in this way a language for themselves," but has also followed Yeats's private work sentence by sentence. A great deal of it, our historian adds,

"must come to her in fragments—a line and a half, two lines—and these she faithfully copies on her typewriter, and even those that his ultimate taste have rejected are treasured up, and perhaps will one day appear in a stately variorum edition."

But let us not close with the citation of a personality. There is generally a

sting of irony in the personalities, tho not always upon the surface. The occasional descriptions of scenery, or of Irish beauty in ruin, cry out for the praise they deserve. But, "Extraordinary!" the writer exclaims. "These people are willing to sacrifice everything for Ireland"—Martyn, Yeats and Lady Gregory are "these people"—"a strange country, demanding sacrifices always. . . . But who can work for Ireland without working for oneself? . . . It is the plain duty of every Irishman to disassociate himself from all memories of Ireland—Ireland being a fatal disease, fatal to Englishmen and doubly fatal to Irishmen."

John Synge recorded a conversation with a young girl in her teens who said of a certain town: "Ah, it's a queer place. I wouldn't choose to live in it. It's a queer place, and indeed I don't know the place that isn't."

Synge's peasant girl described Ireland —and the world—in terms less beautiful, but more succinct, than Moore's.

**From Constantinople to the Home of Omar Khayyám.** Travels in Transcaucasia and Northern Persia for Historic and Literary Research. With over 200 illustrations and a map. By A. V. Williams Jackson. 8vo, pp. xxxiii, 316. New York: The Macmillan Company. $3.50.

Professor Jackson, of Columbia University, is our leading American authority on ancient Persia, its history, literature, religion and language. Of his grammatical works and those of translation, whether of Zend or Sanskrit, or of his labors in deciphering ancient inscriptions in the Persian Cuneiform, we do not need here to speak, nor of his "Life of Zoroaster." It is enough to call attention to his "Persia Past and Present," of which the present volume may be regarded as a companion. That appeared five years ago, and was based on a visit to Persia, like the subsequent visits for scholarly research in 1907 and 1908, which are the bases of this work. Thus we have here not a book of travel, nor is it a scientific treatise of history and archeology, intended for the special student. It binds the two aims together by the literary skill of one who is an accomplished writer as well as a scholar. The region described is Northern Persia, just where Russia is now attempting to gain control, also Turkestan and Transcaucasia; but the purpose of the book is not at all political, but rather historical and archeological. A chapter of special interest is that which relates to the temple of the fire worshippers, in Baku, the oil wells of which may have made it a sacred place from the time of Zoroaster. But Professor Jackson can find no evidence of any such antiquity, and the inscriptions on the temple would indicate that it was built within the last two or three centuries by Parsees from India. In Teheran the author of course visited the new parliament, or mejliss, altho his archeological interest was in the famous peacock throne, whose history he leaves in doubt. One of the supports of its original base is in the Metropolitan Museum. Yet he expresses hope for the regeneration of Persia if she can be let alone, and a system of education can be established. The leaders must learn the value of work and the dignity of labor. For, says he:

> "The soft trill of the Nightingale must be forgotten and the drowsy fragrance of the Rose shaken off, if Persia is to assume once more the strength of the Lion and to follow the high path of the Sun."

The author's route followed that of Alexander's campaign and of Zoroaster's wars, but, altho he is faithful to military history, literature is dearer to him, and the later chapters will charm the reader with their relations of Firdausi and Omar Khayyám and the scenes of their poetic activity. It is very rarely that we find a traveler's story so fully based on knowledge of erudite and unfamiliar sources. It is, we say, a book for Oriental scholars and also for the intelligent reader, while the multitude of illustrations will almost beguile the reader into the thought that he is the author's companion in the land whose poets sing the rose and the nightingale, and whose emblems are the sun and the lion.

**The Song of Renny.** By Maurice Hewlett. New York: Charles Scribner's Sons. $1.50.

Back to medievalism; back, out of Senhausian sentimentalities and horticulture, to the no-man's land of undiluted romance! Mr. Hewlett had partially mod

cruized his lances, and been named an inferior Meredith for his pains, now he returns to the fields where he is at home, and master. He is very right. There are many precious pages in *Renny*—luscious descriptions of fair women, accounts of the medieval university, red warriors, soft-handed prelates. There is poetry in it—fragments of the Rune of Renny, wrought by Master Lanceilhot; also bits of "poems in prose," wastefully imbedded in the dialog.

CLOTILDA:
I am here, my lord
EARL PIERONTZ.
She is a dead man's daughter; guard her well
And let her want for nothing.
CLOTILDA
But how is
She called, this dead man's daughter?
EARL PIERONTZ
I never staved to ask. . . .

**The Healer.** By Robert Herrick. New York: The Macmillan Co. $1.35

The idyllic opening of *The Healer,* by Robert Herrick, hardly prepares the reader for the slow disillusionment of the following chapters. The change is the more depressing as it is not just disillusionment with a woman, but with life. The characters are all pagans; whether they live in the forest by the Healing Spring about which Dr. Holden has built his sanitarium, or in "Suburbia," or in the heart of Chicago. The Healer is a character hard to understand. He lives for an ideal of unpaid service, loses it in the struggle to support his beautiful wife—costly to him in every sense of the word—in her accustomed comfort. When she joyously goes to his forest hut to share his self-denial, if not his work, she inspires and uplifts him; when she goes back to her world she drags him down. He becomes a patcher of rich men's bodies for the fees in their fat purses. Surely that fall was enough. The love episode in the fourth part stains the book. Mr. Herrick has offended in this way before; for there is here an incident of a trial elopement much like that in "Together," and equally indefensible. Mr. Herrick seems to have some strange monomania that the impermanence of the relation sanctifies it in some sacrificial way. Inasmuch as the opposite is true, that the only way in which such a relation can be made sacred is by its permanence, by its being built into the structure of society, for the protection of children, his ideas of love without marriage are mischievous. Mr. Herrick is very bitter in his indictment of woman. Yet there have been, and are still, women of vision, as there are men who dream. Life is always in some sort a compromise between the practical and the ideal. Man does not monopolize the ideal, nor the lifelong adjustment, as Mr. Herrick would have us believe. Many men have sold their birthright for the pleasant potage of success, of comfort, of luxury since Jacob set the pace, but women have as often deplored as they have demanded the barter. Men may be more sentimental than women, and in the first glow of affection more self-forgetful—but more "idealistic"? We do not think so.

**The Money Moon.** By Jeffrey Farnol. New York: Dodd, Mead & Co. $1.25.

Everybody confesses to the lure of the long road, winding thru a land of adventure. Mr. Farnol, following his success of last year in "The Broad Highway," takes to the road again in the mellow light of *The Money Moon,* and leads his hero into a pretty adventure in Arcady. The public likes his English hedgerows and broad highways; the lovely grassy lanes that lead to the little homes of humble folk, and a hero who goes a-gypsying. There is something most engaging in Uncle Porges and Small Porges, his brevet-nephew, and the friendship between them is comradely and faithful to the end. It is all like a fairy story, and in spite of the Ogre of Poverty and the Dragon of a Mortgage, which threaten to devour pretty Anthea, Small Porges looks to it that all shall end happily ever after, as a true fairy story should. It is a sketch daintily done by Watteau on a lady's fan; a pastoral sung in a boudoir, and if the shepherds are a little too Arcadian and the happenings under the Money Moon a bit incredible, the pretty Anthea a thought too proud, and the hero a shade too masterful, no reader will quarrel with the pleasant fantasy, which is told with so much grace.

**The Footlights, Fore and Aft.** By Channing Pollock. Boston: Richard G. Badger. $1.50.

Mr. Pollock is a seasoned theatergoer and an all-around man of the theater. He has seen the playhouse in all of its different aspects, and he has a style that is breezy and graphic, if it is not altogether polished. In reading his book, we must be careful to distinguish between the drama as it should be and the theater as it is on Broadway. In fact, *The Footlights, Fore and Aft* is a New York record, giving the atmosphere of the glare of the Great White Way, and making one realize the sordidness of the average theatrical office. Yet we do not wish to imply that Mr. Pollock does not approach his topic with sympathy. In saying that he is a man of the theater, we not only mean that he has been critic, but he knows the ins and outs of the press agent, of the dramatist, of the manager, and of the play reader. These trials are set down in diverse chapters, and will prove an excellent guide book for the uninitiated who believes that the only thing to do, after saying "I will go on the stage," is to do it; and for the budding dramatist who is thoroly convinced that Broadway is clamoring for his play of five acts. In the spirit of banter, of sarcasm, of humor, Mr. Pollock writes this book, and Warren Rockwell's illustrations are in accord. There is all one should know about the theater of today in *The Footlights, Fore and Aft*, but there is much ephemeral matter that diminishes its value as a record of these theatrical times.

*

**In Château Land.** By Anne Hollingsworth Wharton. With 75 illustrations. Philadelphia: J. B. Lippincott Co. $2.

The French châteaux have been made the subject of a great deal of writing, but this lady of Philadelphia is not afraid of addressing the public once more upon a subject rich in historic, artistic and purely human interest. Apart from Touraine, she describes the Italian lakes and also the Lake of Geneva, with its rich literary associations. Her style is leisurely and agreeable, and her photographic illustrations excellent.

## Literary Notes

....A highly decorated edition of *The Mistress of Shenstone*, by Florence L. Barclay, with eight illustrations in color, comes to us from G. P. Putnam's Sons ($2.50).

....Mr. William B. Parker announces his resignation as manager of The Baker & Taylor Co's publishing department, to take effect at the close of the present season, January 1, 1912.

....Rev. C. R. Brown's addresses on *The Modern Man's Religion* ($1), recently noted in this column now come to us in an attractive form from another publishing house, the Pilgrim Press.

....Norma Bright Carson is the author of *The Nature Fairies:* an interpretation of the seasons and all they bring to us and take away (Doran; 50 cents). Mrs. Carson's fantasy is pretty indeed: and this is the book to read aloud in the nursery.

....Dr. Lewis Gaston Leary is the author of *The Christmas City: Bethlehem Across the Ages*, which we receive from Sturgis & Walton ($1.25). Here he makes use of material of a somewhat light character that he did not put into his "Real Palestine." There are illustrations from photographs, and a colored frontispiece.

....Operagoers will be interested in Anna Mathewson's *Song of the Evening Stars*, with illustrations after cartoons by high-spirited Mr. Caruso (Boston: Badger; $1). To quote one of the stanzas printed here:

> Many folks are surprised at the way
> [illegible]
> [illegible]
> [illegible]
> He can draw a full house any day.

....The editor of "The Spanish Series," published by John Lane, is himself the author of the attractive volume entitled *Sculpture in Spain* ($1.50). There are 174 pages of excellent text and 102 full page plates. The first sentence in this new work will surprise readers who do not know their Spain: "The Spanish character has expressed itself in sculpture more forcibly than in painting."

....Miss Jeannette Marks has collected in *A Girl's Square Days and After* (Revell; 75 cents) twelve addresses to college girls that are wise, sensible and practical. No better Christmas gift for the girl at college has come our way. The excellent advice is gently given; a helpful chapter on "Friendships" ought to render morbid sentimentalizing "crushes" impossible to the girl who reads and heeds its lesson.

From John Murphy Company, Baltimore, we have *Life of James Cardinal Gibbons*, by Allen S. Will ($2). This is timely just now when after almost a generation during which he has been the only American to hold the title of cardinal three others are added to the Sacred College. Baltimore was his birthplace in 1834, and after entering the priesthood he soon became secretary to Archbishop Spalding, then vicar apostolic of North Carolina, during which time he attended the Vatican Council of 1870. Soon he became Bishop of Richmond, and on the death of Archbishop Bayley was chosen his successor. He presided at the Third Plenary Council of 1884, and was made Cardinal in 1886. Since then he has been a conservative and sagacious influence in the councils of the Church, while serious questions have arisen, such as Americanism, the School Question and the labor disputes. Cardinal Gibbons is universally honored, and in Rome itself, when he went to receive the red hat, he made an address in which he contrasted the growth of the Church here under liberty with its condition in European countries and said: "Our country has liberty without license, and authority without despotism."

....Three books of the Far East were not included in a recent article wherein THE INDEPENDENT treated the new travel books. *Oceania* by Frank Fox is imported by Macmillan and contains 32 full page illustrations in color after paintings by various hands. The book is one of the series called "Peeps at Many Lands" and is altogether popular in its motive ($1.50). *Java, Sumatra and the Other Islands of the Dutch East Indies*, by A. Cabaton, translated (with a preface) by Bernard Miall, is a solid volume of 376 pages, including a map and 47 exceedingly well printed illustrations (Scribner's, $3). The style is gossipy and the matter sometimes perhaps not better than superficial, but a great deal of information as to the crops, manners and history of these islands is conveyed and something, too, of the linguistic, ethnological and archeological studies made in the East Indian Archipelago by scholars from the University of Leyden. The third volume before us, a Macmillan importation ($3.25), is Robert Knox's *Historical Relation of Ceylon Together with Somewhat concerning Severall Remarkeable passages of my life that hath hapned since my Deliverance out of my Captivity*. The preface to this interesting work is contributed by James Ryan, who tells of the finding of the seventeenth century manuscript not long ago in the Bodleian Library. The book is most quaintly illustrated; its publication is a genuine discovery of buried gold.

## Pebbles

Give us O give us the man who sings at his work! —*Lowell Institute*.

We oppose murder, but in some cases—

MERRY groups of gentlemen and ladies suitably attired for the evening, the ladies beautiful in their half-impatient anticipation, crowded the foyers.—*Chicago Tribune*.

"FOUL tactics," declared the quarterback.

"What's the trouble now?" demanded the referee.

"I tried a kick for the stomach, but this fellow blocked it with his face."—*Kansas City Journal*.

Apportez vite les sprigs de holly,
Le miseltoe, et soyons jolly
Autour du poudin plum.
C'est Noël, jour de bœuf et dindon,
Quand avec un tel vif abandon
On boit le grog de rum!
—La Touche Hancock, in New York *Sun*.

"GEORGE," she asked, "if we were both young and single again would you want me to be your wife?"

"Now, my dear," he absent-mindedly replied, "what's the use trying to start a quarrel just as we have settled down to enjoy a quiet evening?"—*Chicago Record-Herald*.

FRIEND—So you're going to make it hot for that fellow who held up the bank, shot the cashier, and got away with the ten thousand?

Banker—Yes, indeed. He was entirely too fresh. There's a decent way to do that, you know. If he wanted to get the money, why didn't he come into the bank and work his way up the way the rest of us did?—*Puck*.

IN the *Twentieth Century Magazine* is printed the spectrum of the newspaper press—as follows:

White—(clear and clean):
Kansas City Star.
Chicago Tribune.
New York Globe.

Gray—(when in doubt tell the truth):
New York Times.
Indianapolis News.
Charleston News and Courier.
Springfield Republican.

Colorless—(anæmic):
Philadelphia Public Ledger.
Chicago Evening Post.

Yellow—(lemon, touched with gold).
Hearst's papers.
New York World.

Green—(never set anything on fire):
St. Louis, Pittsburgh, Cleveland, Buffalo, San Francisco, Detroit, Washington, Twin City papers.

Indigo—(blue stocking temperament):
New York Evening Post.
Boston Transcript

"A dash of violet"—
Louisville Courier-Journal.

Red—(inflamed, not luminous):
New York Sun.

Black—(but not opaque):
Los Angeles Times.
Cincinnati Enquirer.

# The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

## Peace on Earth

It was the angels that sang the forecast of peace on the world's dearest birthday. But it was a long, very long forward look. Our Lord had nothing to say of peace on earth, beyond blessing the peace-makers, while all the four gospels tell us that he said he had not come to bring peace on the earth, but a sword. The word *peace* appears but once in Mark's Gospel, and hardly oftener in the other three. For it was not peace that our Lord came to bring, and it was not peace that he talked about, but the Kingdom of God.

And yet the Kingdom of God means peace, but it means a great deal more. "The kingdom of God," we are told, "is righteousness" first, then "peace," and then "joy in the Holy Ghost." It would seem as if the great Apostle who thus defined the Kingdom of God remembered that our Lord had declared that he came to bring the sword first, and so Paul put righteousness before peace, for righteousness means conflict, division, and peace only after victory; and thus Paul only anticipated the motto of Massachusetts, which makes peace "*ubi cidam quietem,*" by the sword, "*per ensem.*"

So the song of the angels looked far, far forward. It has not yet brought peace. But the Kingdom of God began with the Advent and is still progressing, and it is with us richly. Every spiritual sword-play cuts a larger reach for it; for thus is spread the rule of righteousness, and righteousness is the first condition of the Kingdom of God. At no previous Christmas season could the world feel such massive impulse of that kingdom as now. We see it in the eagerness of the world for liberty, and liberty is righteous, and where the Spirit of God is, there is liberty at work. We may be pretty sure, then, that it is at work in China, and also in Portugal, in Turkey, and also in Persia. It is not merely in what we call Christendom, but no less, if not even more belligerently, in Paganism and in Islam.

And why may we not say that the Kingdom of God can begin to show itself even among Mohammedans and pagans? Have not they a sense of righteousness, and is not liberty a form of righteousness with them as well as with Christians? And who dares deny that the Spirit of God can work in them as truly as with us? They too have the sense of justice; they hate oppression, and they have a native love of what is good and true, of what is righteous, and therefore is of the Kingdom of God.

But it is in enlightened Christian lands that we see the wider content of the Kingdom of God in the more successful conflict against social and industrial wrongs. Our great political questions are not those of policy, but of justice, of right. What are woman's rights, what are children's rights, what are laborers' rights, what are the rights of the community—these are the great questions before the people; and the very asking of these questions, and the debate over them, is a part of the coming of the Kingdom of God, for it represents the righteousness that must precede peace.

And the peace will come, is coming with every victory achieved, has already come in good part. For have not the righteousness and the peace so far advanced that they can kiss each other?

We hear in law of a "friendly litigation"; have we not already in our own land reached a stage where in a friendly way we can settle our questions of difference over rights and wrongs, and be satisfied with the result? Not wholly, but in good part this is true, and if so, and so far as it is true, we can assure ourselves of that third element in the Kingdom of God, "joy in the Holy Ghost," and we can carol out the angels' song of Peace on Earth, Good-will to Men.

## Playing Politics

THE most contented and happiest man in Congress is probably Victor Berger, the lone, but not lonesome, Socialist member who represents Milwaukee. He has no responsibility for his associate members, for he is a party by himself and can keep himself unanimous. He can control no legislation and has no worry, for he has no influence. But he can laugh when, like Cowper's jackdaw, "he sees that all this motley rout"

> "Its customs and its businesses,
> Is no concern at all of his,
> And says—what says he? Caw."

Last Friday the House of Representatives was discussing a Democratic bill to require that no contractors doing work for the Government should require laborers and mechanics to work more than eight hours a day. Mr. Berger believes in that, and he thought he would have some fun with the members, and particularly the Democratic majority, who were playing politics over it to catch the labor vote. So in his speech he said:

> "I must congratulate the Democrats of the House. For the first time in fifty years they are playing politics successfully. Day before yesterday you bid for the old soldier vote; yesterday you bid for the Jew vote and today you are after the labor vote."

True enough. There was first the bidding for the old soldier vote. To do it they had to pass a bill for a pension to soldiers already pensioned, which would add from fifty to eighty millions of dollars to the annual outlay—and this an "economic" Congress, because Democratic and pledged to economy. But the bill has a noble, patriotic sound, and will catch votes, they think. To be sure, one or two wiser leaders, who really want economy, warned their associates, but it did no good. So a dollar a day must be given to these old soldiers, many of whom did noble service, but none of whom had their lives shortened by their military hardships. It was nothing but playing politics.

Then the next day came the bid for the Jewish vote; and the Republicans bid for it with rivalry of unanimous vigor. When has such a vote on an important matter been heard of, only one single member voting in the negative. It beats the bishops' final vote for Papal infallibility, for at the Vatican Council two bishops at last voted against it. The question of denouncing the treaty with Russia because of discrimination against American citizens of Jewish faith was one of policy in which divergent opinions would naturally be held. All would agree that Russia ought not to treat Jews differently from other believers, but it was a very serious question whether it were not better to exercise even more patience and try to persuade Russia to modify her rule of exclusion. It was very doubtful whether the abolishing of the treaty might work more ill for Jews in this country and also in Russia, by exciting resentment whose bounds we could not anticipate. We do not believe that all the Congressmen but one were satisfied that to denounce the treaty would do any real good, but they flocked in a mad rout like sheep, because, Mr. Berger tells us, they thought it would please the Jews and get the Jewish vote.

Next day came the bill to catch the labor vote. It was sure to pass. Why shouldn't it? Are there not some millions of laborers and mechanics who have votes and who prefer to work only eight hours a day for wages not reduced; and will it not be told in the next political campaign from ten thousand platforms how the Democratic Congress gave this boon to labor? It may be the fact that eight hours is enough for some kinds of labor—we presume it is—and it may be that nine is not too much, or even ten, for some other kinds; but this is not a question of that sort; it is, says Mr. Berger, who is an authority, a question of politics.

And while Mr. Berger was speaking

the big committee which has to do with what is called the "pork barrel," that on public buildings, etc., was voting by a large majority—only two in the negative—to present a bill that would carry forty or fifty millions of expenditure. The Democratic party leader came before the committee and warned them of the danger, told them of the party's pledge of economy, assured them that it would make this the most extravagant Congress that ever met—this Democratic Congress—but the short-sighted members were looking only at their own districts, how it would please their dear constituents to have the money expended near their homes, and they voted to present the monstrous bill. This, too, was playing politics, even if small and not large politics, politics for the individual candidate, if not for the party or the country.

So goes the merry game of politics, and Congressman Berger looks on with a sardonic smile, for he has no responsibility. He is a wild maverick.

## A Futile Riot

It was in Carnegie Hall, named after the Apostle of Peace, and in Carnegie's city. Carnegie was on the platform to give his blessing to the meeting. It was a meeting called to express the sentiments of the American people in favor of the arbitration treaties with Great Britain and France. With Carnegie as speakers on the platform were the city's most distinguished citizens. Joseph H. Choate, head of the American bar and former Ambassador to Great Britain, presided. Other men of the highest honor were Henry Watterson, F. R. Coudert, President Butler, Chancellor Brown, William H. Bliss, Isaac N. Seligman, Francis B. Loomis and Henry Clews. We give their pictures on another page. Mr. Choate opened the meeting. Then followed Colonel Henry Watterson. All was quiet decorum, and it was evident that the great audience was with the speakers. It was a meeting that would have influence with the Senate, at least with the two Senators from New York. The time had come to express formally the views of the meeting. President Butler arose to introduce the prepared resolutions with an address. He was heard with sympathetic approval. He read the resolutions and was about to move their adoption. Then came forward from the rear of the platform a gentleman unknown to those who had conducted the meeting, and offered a substitute motion to the contrary effect, that the two treaties should be rejected by the Senate. But for the interruption this was in strict parliamentary order, tho unusual, and the substitute motion would have been instantly and overwhelmingly defeated. But there was no opportunity therefor; for immediately, and by concerted prearrangement, some hundreds of men who had packed one of the galleries, with smaller squads seated together in other parts of the hall, burst into a bedlam of shouts, catcalls and poundings, so that no speaker could be heard. It was evident that the rowdy element, which could not capture, had determined to break up the meeting. Mr. Choate called for order, but no order there was. Rabbi Wise attempted to speak, but he could not quiet the tumult. What it meant those on the platform could not imagine. Rabbi Wise supposed they were Irishmen who hated England, and he tried to tell them that Cardinal Gibbons had spoken warmly for the treaties, but that would not quiet them, for they were Germans. The platform was all excitement, men rushing about, and those on the floor were not certain but a fight might come next in which aged and distinguished men would be injured. Mr. Carnegie stormed about, righteously angry at the disturbance. In the midst of the pandemonium the resolutions were put and declared carried, but there was no quiet until the man who had moved the amendment and appeared to have engineered the outbreak arose and waved to his adherents to be quiet and to let the speakers be heard. They immediately obeyed him, but the excitement was too intense and the meeting was dissolved, with Mr. Carnegie and other speakers unable to take their part, for the few policemen had been quite unable to quell the tumult and expel the offenders. This was a very unusual event in our American political meetings, altho frequent enough in British heckling hustings, and we do not want the over-

an influence introduced here. Who were the rioters? What did they want?

They represented an insignificant element in our German population, not yet Americanized. They had it in mind that these are treaties with Great Britain and France, and that these two countries are in political accord just now, and have in a measure of late arrested the designs of Germany. They imagined that our treaties with these two countries would mean a league of the three against Germany. They did not, or would not, understand that we would have been equally willing to make similar treaties with Germany if she would consent. The intelligent and influential German-Americans here have no sympathy with these rioters, and they have very clearly made it known that they favor the present treaties as drafted and desire similar treaties with Germany. The unusual riotous demonstration at Carnegie Hall has done no ill to the cause of arbitration, but has only discredited the opposition to it. By all means the treaties should be approved by the Senate, and we are glad to know that Senatorial favor is turning toward them.

## Race Deterioration?

A PARAGRAPH only a "stickful" long appeared in the newspapers last week which possibly told us more about the actual status of American civilization than we could have learned from the rest of the news of that date.

It was only a few figures, reporting the results of three months' work directed by Dr. William J. Gallivan, chief of the division of child hygiene of the Boston Board of Health.

During this time school physicians, under Dr. Gallivan's orders, have examined 42,750 children for physical defects. Of this large number only 14,957, or 35 per cent. were found to be healthy and physically normal. The defectives numbered 27,795, or 65 per cent.

The defects found were: Mental deficiency, 223 cases; defective nasal breathing, 3,562; hypertrophied tonsils, 9,738; defective teeth, 19,518; defective palate, 86; cervical glands, 4,425; pulmonary disease, 456; cardiac disease, 1,129; nervous disease, 213; orthopedic defects, 521; skin disease, 3,500; rickets, 575; and malnutrition, 1,611.

The interpretation of these figures is not an altogether simple matter. They show, of course, that we are producing in America various things besides crops, automobiles, dynamiters, presidential candidates and "acceleration." And these various other things are those final products in relation to which most of the objects of our activity are as means to ends. What do we raise corn and politicians and speed up our machinery for, if not for the making of healthy and happy human beings? And if healthy and happy human beings should be our ultimate product, these Boston quotations make a sorry showing.

Not all of the defects are serious. The vast majority of them, defects of teeth, are not necessarily premonitory of the decline and fall of western civilization. We must remember, also, that modern medicine and surgery keep alive, at least into the years of school age, thousands of children that in earlier generations would have died in infancy. Of these a larger proportion probably are accounted for in the 65 per cent. of abnormal children than in the 35 per cent. of normal cases.

But after all allowance has been made, we can hardly escape the conclusion that there is something wrong with a civilization in which only 35 per cent. of school age are healthy and altogether normal. Like the diminishing birth rate, it indicates a heavy sacrifice of the race to the individualistic demands of the present generation.

Extravagance is a relative term, but a fairly correct definition of it is, an expenditure upon present gratification which diminishes future power to produce and to enjoy.

A nation is wanton in its extravagance when it is expending so much of its energy upon present indulgences that it does not maintain its birthrate, and does not produce and rear children that in most instances are physically normal. Race deterioration such as that which the English people make confession of in the reports of their Poor Law Commission is an indictment of a nation.

Figures from Chicago and other cities are so closely in agreement with those

from Boston that we must probably accept the Boston report as fairly representative for American urban populations. Of course, we shall hear a demand for "immediate remedies," and undoubtedly none of the immediate remedies proposed will be worth a *sou*. Medical inspection, surgery, dentistry and so on are palliatives and can be made to affect the ratio of defectives to normal children to some extent. But they will not reach the cause of the evil.

The cause is the strain that the masses of the people are under today to maintain a standard of living for which their incomes are inadequate. This strain is produced by the ill-balanced distribution of wealth. The enormous fortunes of the rich are largely expended in costly indulgences which people in moderate circumstances try to emulate, and their expenditures, in turn, are envied and imitated by the poor. We shall have no sound social economy until the whole community recognizes that it would be better for posterity, as well as for those now living, that the multi-millionaire should have less money to waste and the poor should have more to use.

## Another British Revolution

THE British Parliament has adjourned after having accomplished, against immense and bitter opposition, most momentous work. After having previously enacted a system of old-age pensions it has added a national insurance bill for workers. This creates a social revolution quite as important as the political revolution involved in curbing the powers of the House of Lords to stop all advanced democratic legislation.

In this, as in some other respects, Great Britain is very much more progressive than the United States. We still let every old person, past the years of profitable labor, depend on charity or go to the poorhouse. Great Britain says she will give to each such person a support sufficient to supply absolute need. It was objected to when under debate on the ground that the state paid all the cost, without any previous contribution during years of labor. Now comes the next bill, which provides insurance against illness or unemployment, not caused by strikes, of the working classes. Can we imagine such a boon given to the laboring classes in this country? It is calculated that it will affect 9,200,000 men and 3,900,000 women. Would we not think it extraordinary paternalism, a step almost, if not quite, revolutionary, if our carpenters, masons, farm laborers, miners, factory hands, both men and women, coachmen and servant maids, were all provided for when ill, their doctors' bills paid, and a certain allowance given them weekly when out of work? This is what the new act does, while the previous act had cared for them in old age. This is a long step toward Socialism.

But the Socialists did not like it. It would have been more popular, and the Socialists would have been better pleased, if the state had paid all these allowances, but that would have been impossible. The bill is more after the German plan of insurance. It provides that a small graduated portion shall be paid by the employer, an equal portion by the employee, and the same by the state. The three parts added make the total premium which will carry the insurance. If insurance is good anywhere it is good here; and it will be provided for at the very lowest expense. Of course it has been bitterly attacked and severely criticised, but not even the Unionist Opposition has dared to attack the principle of it; only the details of the plan.

Loud as were the complaints of the provisions of the bill, and black as were the prophesies of expense and failure, the House of Lords made no delay in accepting it. They knew it was bound to come and that they could not prevent it. The real reason for opposing it and trying to hold it over till after the recess was because they would put off and defeat if possible the next coming bill, which will be for home rule in Ireland. There is much more bitterness against that, and that will be a third revolution, and once more a peaceful one, unless the Orangemen of Ulster are crazy enough to carry out with actual violence a threat they are making. They say that if Parliament should decree home rule for Ireland and an Irish parliament should be established they will not recognize it. We hardly think they will hold to their threat. The Irish parliament will treat them with all consideration. There is no

desire of Irish Catholics to oppress Irish Protestants. All that is proposed is that the Irish parliament shall be subordinate to the Imperial Parliament, as our State legislatures are subordinate to Congress and attend only to local affairs. Besides, we do not yet know what the conditions of the bill will be. Who knows but what it will provide for four subordinate parliaments, one for Ireland, and one each for England, Scotland and Wales? This is bound to come, and it is already being talked of under the designation of devolution. Parliament needs such devolution, for it is swamped with local business. If such a bill were presented Ulster could present no reasonable complaint, and at most could make the absurd request that she be set off with a little parliament of her own.

It is true, as the Unionists complain, that the closure—there called the guillotine—has been rather sharply used to end debate and bring the vote. They say it was because the Irish members demanded it so that the next session may be devoted to home rule. This is true. The Unionists made all the delay they could because they did not want home rule, while the Liberals used the guillotine because they do want home rule—and because they want a good many other things accomplished before this Parliament comes to an end. They have been held back for many, many years by the House of Lords. Now they have shackled and fettered the House of Lords, given it only the power of delay, and have taken away its veto and they have a number of old grudges to settle, old aims to secure. First came old-age pensions and laborers' insurance; next will come home rule; and when that is fought there will follow Welsh disestablishment and perhaps English disestablishment, and then an education bill which will provide a national public school system not controlled by one or more religious denominations. In some things Great Britain is far ahead of us, but in matters which concern Church and State she is far behind not us only, but her own self-governing dependencies. It is humiliating to see how there religion is so timorous that it must hang on the State for support and also for the instruction of its children.

Great Britain has never had an abler and braver Cabinet than she now has. They have amazing courage, and the two powerful men in it are Prime Minister Asquith and Lloyd George.

## Nobel Prizes in 1911

For eleven years now the Nobel prizes have been awarded on the anniversary of the founder's death, December 10, and every year we have given some account of the personality and achievements of the recipients, because it is important to know who, in the opinion of this competent body of men, are doing the most for the advancement of science, literature and peace. In our issue of December 16, 1909, will be found a complete list of the Nobel prize men to that date.

This year differs from some of the preceding, in that two of the recipients are already well known to the general reader, M. Maeterlinck and Madame Curie. It was with the knowledge that Maeterlinck had for several years been gaining strength in the Nobel committee and with the expectation that he would soon receive the prize provided for the best work in idealistic literature that we placed him first in the series of "Twelve Major Prophets of Today," and a reference to our issue of May 4, 1911, will, we believe, show that there is ample reason to think him worthy of the honor now conferred upon him. Starting as a precocious poet, experimenting in esoteric and morbid styles, he has steadily gained in popularity as he has grown in clarity and breadth of view until now, at the age of fifty, he is better known and loved abroad than any other contemporary writer of French. He has loaned to science the allure of poetry and disclosed to us the hidden beauty of the common things of life. Maeterlinck has refused to renounce his nativity to become a French citizen, even tho a chair among the Forty Immortals was in prospect, so his name goes to the credit of Belgium, thus increasing the disproportionate number of Nobel prizes obtained by the smaller countries of Europe. A French journalist, having in mind Maeterlinck's modest and retiring disposition, calls the Nobel prize in this case "The Treasure of the Humble."

The same question of allegiance arises also in the case of Marie Sklodowska

Curie, who was born in Poland forty-five years ago, but owes her career to France. As a child her playhouse was her father's laboratory in Warsaw, and test-tubes took the place of dolls for her. She has had to earn her own living ever since she was fourteen, and when, escaping from her native land on account of the political persecutions, she took refuge in Paris she came near starving until she got a place as laboratory drudge. She has had to struggle not only against poverty, but against Latin sex prejudice. This year she was refused admission to the Academy of Sciences by a vote of 30 to 29 because she was a woman. But other countries have not been so narrow-minded, and she has been elected to membership in the Russian and Swedish academies as well as to the London and American chemical societies. In 1903 half the Nobel prize in physics was awarded to Professor and Madame Curie jointly, for her husband always insisted that she deserved equal credit with himself for the discovery of radium. Polonium, a still rarer and shorter lived element, is her own discovery, and she has, since her husband's death by a Paris truck, continued her researches with the same success, her latest triumph being the isolation, for the first time, of the metal radium from its salts. She was recently appointed to prepare for the use of laboratories all over the world the international standards of radioactivity. Her large two-volume treatise on radioactive substances is the leading authority on the subject.

It is, as usual, work in radiation which wins the physics prize this year. The recipient is Prof. Wilhelm Wien, of the University of Würzburg. He was born January 13, 1864, in Gafften, near Fischhausen, East Prussia, and studied at Göttingen, Heidelberg and Berlin. In 1891 he became assistant to Helmholz at Charlottenburg, and later held professorships at Aachen and Giessen. A large part of our recent knowledge of the radiation of light and electricity we owe to him, for example, "Wien's law," that the wave lengths of maximum energy vary inversely with the temperature. Just now he is engaged in a hot controversy over the question whether, as he holds, the canal rays which stream out backward from a hole in the kathode consist in part of neutral atoms or whether they are all positively charged.

Prof. Allvar Gullstrand, professor of ophthalmology at the University of Upsala in Sweden, to whom the Nobel prize for important advance in the medical sciences, is awarded this year, is in no sense a popular scientist, tho among his brother specialists he is looked upon as the continuator in our generation of the great scientific traditions of applied optics that had their rise in Helmholtz. He is so little known outside of his own country that even the index catalog of our Surgeon-General's Library in the volume of its revised edition, issued in 1901, mentions none of his works. Ten years before that, in 1892, he had published a very interesting study of the "Differential Diagnosis of the Paralyses of Ocular Muscles," with photographic reproductions. In 1896 he published "Photographic, Ophthalmometric and Clinical Investigations of Corneal Refraction," This was the keynote to his lifework. In 1900 he presented to the Royal Society of Sciences of Upsala his "General Theory of Monochromatic Aberration and Its Applications in Ophthalmology." This is a magnificent contribution to mathematical optics. Nothing gives a clearer idea of how, when science becomes exact, mathematics enters largely into it, than this work, which has page after page of long mathematical formulas and discussions of abscesses and co-ordinates. Professor Gullstrand has succeeded in taking the applications of optics in ophthalmology out of the realm of mere approximation and putting them into that of an exact science. By so doing he has eliminated not a few absurdities in ophthalmological practice. At the present time he and Professor Kries, of Freiburg, and Professor Nagel, of Rostock, are engaged in editing a monumental edition in three volumes of Helmholtz's "Handbook of Physiological Optics," to which they are adding all the developments in the science since Helmholtz's time, and especially what has been contributed by the disciples of Helmholtz, who have carried on the master's work.

The prize for the promotion of peace is this year divided between Tobias Michael Carel Asser, of Amsterdam, and Alfred Fried, of Berlin. Professor

Asser was born in 1838, and served as the Dutch representative in The Hague Conference of 1899 and the International Court of Arbitration in 1900. He is the author of "Outlines of International Law" (1879) and "The Codification of International Law" (1901) and founder of the Institute of International Law, which received the Nobel prize in 1904. Fried was born in Vienna in 1864, but has spent most of his life in Berlin, where he founded the German Peace Society. He is editor of the Vienna *Friedenswarte*.

**Expenditure of the McNamara Fund**

"There is not likely to be much left of the $200,000," said a Federation of Labor official, "when Darrow gets thru." He was not the man, it would seem, to let so handsome a sum slip thru his fingers. His retaining fee was $50,000, and he had a per diem wage besides, and he received $170,000. The sum paid for bribing prospective jurors must have come out of the fund, and the various expenses for the search of evidence and for paying the associate counsel must have cost many thousands. But the chief beneficiary was Darrow, who knew pretty well how to feather his nest, considering that he was a Socialist and believed in leveling things. He says the advice he gave he knew would wreck his career, but even so he will be able to retire to a comfortable competence secured by assessment on labor men after he knew that the McNamaras were guilty. We may ask, Who were his clients? Were they the men he was defending, and whom he advised to plead guilty, or the unions that hired and paid him? If the latter, was his advice good for the unions that paid him? But money went freely before the arrest. From a secret fund of $1,000 a month President Ryan, of the Iron Workers' Association, supplied J. B. McNamara with money, and he seems to have led a riotous as well as a lawless life, giving ten and twenty dollar gold pieces to a San Francisco musician who pleased him, and furs to a girl he liked. That is the way these assessments went, and it would seem just as well to be a little more particular in future as to what the money of honest men goes for.

**Satan Learns Something**

"From his brimstone bed at break of day
A walking the Devil is gone,
To visit his snug little farm, the earth,
And see how his stock went on.

"And how, then, was the Devil drest?
Oh, he was in his Sunday best;
His coat was red, and his breeches were blue,
And there was a hole where the tail came thru"

He had no better time than at Jackson, Ga. There he found a preacher—a negro preacher—in jail convicted of having killed a white man. He was to be hanged in the jail-yard; but a crowd collected and the sheriff was afraid the crowd would take the preacher from him, that they might have the pleasure of doing the job themselves and seeing it done. Some people enjoy that kind of a scene. So the sheriff appeased the crowd by offering to take the prisoner to the opera house and hang him on the stage, where the people could see a realistic drama, and where, we are told, the preacher's relatives and his negro friends and hearers could sit in the gallery (the white people in the parquet) and get the advantage of the moral lesson, and perhaps hear the preacher's last sermon. Was it not a happy hour for the gentleman in a red coat and blue breeches? Back he went to his brimstone bed content:

"And the Devil was pleased, for it gave him a hint
For improving his prisons in Hell."

**The Durbar**

A great sigh of relief will arise over all England when Emperor George and Empress Mary are safely embarked on a British vessel on their way back to be welcomed home as plain King and Queen. Considering the unrest in India it was a brave and perilous undertaking for them to go; and the repeated fires in the great Delhi encampment, however explained, are as suspicious as the succession of dynamite explosions in this country. Of course King and Queen have been most closely guarded—we have to guard our Presidents on their travels. The Durbar was made a magnificent success, with the attendance of all the bejeweled Maharajahs of India and a vast assemblage of people. To be sure, the expense was great, and there were regions in India where the poor were starving with famine, but famines

they have always with them, and we are inclined to think that the Durbar will be a real element of peace and so of prosperity. Gifts for education and for the soldiers were made, and an attempt to relieve the strain caused by the unfortunate governmental division of Bengal; and it was announced that the seat of government would be transferred from Calcutta to the ancient capital of Delhi. The attempt was made, with some success we hope, to show to the people of India that Great Britain honors her richest possession, and will govern justly the people who have for a thousand years been under foreign government, but never so well governed as now.

**Russia's Resentment**

If the Senate is to denounce the treaty with Russia it is just as well that it should omit putting the reason on record. We do not need to denounce Russia when the act of denouncing the treaty involves the reason for it. Already Russia expresses, thru her Ambassador, resentment at the wording of the preamble to the resolution so nearly unanimously adopted by the House. She considers the act unfriendly and against international usage, as seen in the fact that Great Britain, Germany and Austria have made no complaint against Russia's exclusion of such as she regards as undesirable visitors, including Protestant and Catholic missionaries who wish to spread their faith. But we understand that such clergymen and priests are allowed to visit Russia, but not to proselyte, while even as visitors Jews are excluded, it is suggested because so many are revolutionists. This further response is made in behalf of Russia:

[illegible] we exclude visitors from Russia, as well as immigrants who are Mongolians, the argument against us is weighty.

THE INDEPENDENT called attention to it before the committee of the House discovered it.

Would it not look better if the fee system at the Vatican should be dispensed with? We knew it was general, from the lowest service or official to the highest, but we now have the statement of what it costs to be made a cardinal. According to the report a $25,000 purse was presented to Archbishop Farley for the expenses of his investiture as cardinal. Of this he gave $10,000 to the Pope on his first audience. He has since presented to the Pope $10,000 more in the name of the clergy and diocese. So far as we can see, all this may be perfectly legitimate, like Peter's pence, if not required. In addition to the remaining $5,000 he paid out of his own funds $10,000 in fees, "gratifications" and stamp duties on his ring, red hat and scarlet robes. We would not insinuate that the honor is sold, for it is not; but it would be well to avoid the appearance that it is paid for, and so made part of the Vatican's income.

We may fear that if, as suspected, Great Britain and Japan should unite to intervene for terms of peace in China, the constitutional monarchy will win over the republic. In that case Yuan Shih-kai will be in control. It is indicative of his opinion of Christian missions that he has this year sent four of his sons and a nephew to the Anglo-Chinese College in Tientsin, the London Missionary Society's great educational institution in China. He has given large sums for its buildings, and one of them bears his name and has his portrait hanging in it.

We are glad that the Hilprecht trouble at the University of Pennsylvania is now brought to an end by the refusal of the trustees to restore him to his professorship after his resignation. All American Orientalists will agree that the trustees have now acted wisely, much as they respect Dr. Hilprecht's scholarship and his personal charm. He will have the same access to the University's collection of tablets as other scholars, but will no longer control them.

# Insurance

## The Disquieting Increase in Policy Loans

The steadily increasing number of loans which American life insurance companies have been compelled to make to their policyholders during the last few years is either a reflection of the increased cost of living or a sign that people are spending more than they should. That men who have shown their circumspection by protecting their families with insurance on their lives should weaken that protection by using their policies as collateral for borrowing money is a disquieting sign of the times. This was referred to by the presidents at their meeting in New York last week.

As wealth increases in this country, as vested interests grow larger, as the wilderness is more and more opened up to agriculture, as new towns spring up, as homes, large and small, blossom thruout the countryside, it is a good sign to see savings banks flourish and the life insurance companies increase in size and strength. But it is distinctly a bad omen that policyholders weaken the vast bulwark of life insurance funds by the constant drain of loans now made in them.

The law now compels the companies to allow loans to be made on policies on the theory that, when a man finds himself in dire need of money and cannot pay his premiums for the time being, he may borrow in order to keep himself from losing his life insurance. A man can thus keep up his life insurance protection even when he is temporarily embarrassed financially. But from this theory a dangerous practice has developed. Men now borrow on their policies in order to use the money in their business, to meet other loans with, to speculate with, to secure additional insurance and even to buy automobiles. The man who prefers to give his family the luxury of motoring now, rather than assure their comfort after he ceases to be their breadwinner, has a warped idea of his household responsibilities.

The alarming growth of this borrowing tendency is seen in the following figures relating to the three largest companies in the country. In the year 1900 the New York Life had over $14,000,000 of policy loans in force on a total life insurance of $1,202,000,000, the loans thus representing a little over 1 per cent. of the insurance. In 1910 it had nearly $100,000,000 of loans out of a total insurance of $14,382,000,000, or nearly 5 per cent. In 1900 the Mutual Life had about $1,500,000 in loans and about $1,140,000,000 in insurance, or about ¾ of 1 per cent. In 1910 it had about $71,000,000 in loans and a total insurance of about $1,500,000,000, or nearly 5 per cent. The Equitable Life in 1900 had $7,372,000 in loans on a total insurance of $1,110,000,000, or about ⅔ of 1 per cent., and in 1910 it had in policy loans $65,250,000 on a total insurance of $1,347,000,000, or nearly 5 per cent.

Each company is not only loaning an enormously increased amount each year, but a very much larger amount in proportion to its total insurance in force, and only a very small portion of these loans is ever paid back.

Should not the laws, therefore, which compel the companies to make these loans be changed? Would it not be far wiser to have laws which would discourage rather than encourage this uneconomic practice? Should they not, instead of compelling the making of loans, definitely forbid them except up to a small percentage of the reserve value of the policy, a percentage, for instance, just large enough to allow the policyholder to keep his policy from lapsing? Thus the present intent of the laws would be carried out. They might also require a considerably less cash value to be allowed on policies, so that policyholders would be deterred from taking a cash value, because they would thus have to sacrifice a large proportion of their insurance.

This subject is a very vital one today in the insurance world, and while insurance men differ in opinion as to how the laws should be changed, it is very generally believed that this practice is so dangerous that something should be done by the Legislature to discourage it.

# Financial

## Tables Relating to Bonds

In the first eleven months of the present year bonds having a par value of $799,596,600 were sold on the New York Stock Exchange. Last year the total was $634,722,850. But the largest annual sales of recent years were those of 1908 and 1909, when the totals were respectively $1,082,161,120 and $1,317,291,000. We publish in this issue, on the pages immediately following, complete and trustworthy tables relating to all the bonds reported in the regular daily lists of the New York Stock Exchange. These include the bonds of the steam railroad companies, coal and iron companies, gas and electric lighting companies, street railways, telegraph and telephone lines, manufacturing and other industrial corporations, express companies, the United States Government, foreign Governments, and the States. These comprehensive tables have been prepared for us by Francis Emory Fitch, the well-known compiler and publisher of standard quotation statements and other records of the Stock Exchange. They show the title of each bond; its rate of interest; the year of its maturity; the dates of interest payments; income (or annual return, irrespective of maturity); yield (or approximate annual return, if the bond be held until maturity); the highest and lowest prices, with dates, in recent years; and prices at latest sales, with dates. Other useful information is given in them. Complete as the tables are, however, and useful as they must be in guiding those who desire to buy, the wise investor will seek also the advice of competent persons. If he finds in the tables certain issues which are attractive by reason of their income figures, and which may be of fine quality, altho they are not prominent in the market, he should procure the counsel of bankers who have carefully studied the history of bond issues and who know the actual value of the securities in question. Such authorities can easily be found in New York and some other cities.

....Canada has 1,151 postal savings banks. There are 147,478 open accounts, with deposits of $43,330,000.

....During the first eight months of this year 281,898 immigrant settlers arrived in Canada, and 101,692 of these came from the United States.

....On November 30 there were 7,334 national banks, with authorized capital of $1,032,602,135 and outstanding bond-secured circulation amounting to $712,115,338.

....A combination of the leading packing companies of Canada has been completed. The authorized issues will be $2,500,000 of common stock, $2,500,000 of preferred, and $2,000,000 of bonds.

....Between December 2 and December 14, at the New York Post Office 329,184 money orders, amounting to $5,104,723, were purchased to be sent to European countries. Nearly all of these are what are called Christmas orders.

....The Republic Iron and Steel Company, which began to cut prices some months ago, has ordered an advance, and the Steel Corporation has followed with similar action. It is thought that this indicates a turn of the tide in the steel trade.

....The F. W. Woolworth Company, which conducts five and ten cent stores, has applied at Albany for a charter to organize a company which will acquire for $64,998,000 many additional stores in this country, Canada and England, making the entire number about 600. It is proposed that there shall be $50,000,000 common stock and $15,000,000 preferred.

....Owing to an increase of business, the directors of the Home Title Insurance Company, of Brooklyn (Henry B. Davenport, president), have decided to double both the capital and the surplus of the corporation, making each $500,000, and to open a branch office in Jamaica. A scrip dividend of 20 per cent. will be paid, in addition to the regular annual dividend of 12 per cent. The new stock, 2,500 shares, will be issued at $200.

*Under INCOME will be found the annual return of the investment, irrespective of maturity.*
*Under YIELD is given the approximate annual return if held till maturity.*
*● Legal for investment for Savings Banks in New York State.*
*All statements herein are obtained from official or from other sources, which we regard as reliable. While not guaranteed we believe them to be correct.*

VOL. LXXI NEW YORK, THURSDAY, DECEMBER 28, 1911 No. 3282

## Survey of the World

**The Russian Treaty Abrogated**

President Taft has notified Russia of the intention of the United States to abrogate the treaty of 1832. This action was taken December 15; the notice was served thru the American Ambassador and was delivered two days later. On December 19, after seven hours' discussion, the Senate unanimously adopted the substitute for the Sulzer (House) resolution, as reported from the Senate Committee on Foreign Relations. The only point at issue was the wording of the resolution, and the vote was 72 to 0. Next day the House of Representatives concurred in the milder resolution substituted for Mr. Sulzer's, without a dissenting vote. The revised resolution presented by Senator Lodge and accepted by both Houses of Congress is as follows:

"Whereas, The treaty of commerce and navigation between the United States and Russia concluded on the 18th day of December, 1832, provides in Article XII thereof that 'it shall continue in force until the first day of January in the year of our Lord 1839, and if one year before that day one of the high contracting parties shall not have announced to the other by an official notification its intention to arrest the operation thereof this treaty shall remain obligatory one year beyond that day and so on until the expiration of the year which shall commence after the date of a similar notification,' and

"Whereas, On the 17th day of December, 1911, the President caused to be delivered to the Imperial Russian Government by the American Ambassador at St. Petersburg an official notification on behalf of the Government of the United States announcing intention to terminate the operation of this treaty upon the expiration of the year commencing on the 1st of January, 1912, and

"Whereas, Said treaty is no longer responsive in various respects to the political principles and commercial needs of the two countries, and

"Whereas, The constructions placed thereon by the contracting parties differ upon matters of fundamental importance and interest to each, therefore be it

"Resolved, By the Senate and House of Representatives of the United States of America in Congress assembled that the notice just given by the President of the United States to the Government of the Empire of Russia to terminate said treaty in accordance with the terms of said treaty is hereby adopted and ratified."

——Mr. Malby (N. Y.), the only Representative who voted on the preceding Wednesday against the Sulzer resolution, opposed the substitute, holding that American Hebrews would not profit thereby. More could be accomplished by diplomacy. Mr. Berger, the Milwaukee Socialist, held that more would be accomplished by terminating the 1887 treaty of extradition, and introduced a joint resolution to that effect.——Official notice of the abrogation will be given January 1, 1912, to take effect January 1, 1913, under the terms of the 1832 treaty. Whether this means January 12 is a question of doubt; for the Russian calendar is eleven days behind our own. From St. Petersburg it is reported that Russia will yield no concessions on the passport question, no member of the Russian Cabinet daring to attempt such action. The American Ambassador to Russia is former Governor Curtis Guild, of Massachusetts. If he is to negotiate a new treaty his task is a difficult one. The hands of the Russian Government seem to be tied by statutes which cannot be changed without legislative action by the Duma and the Council of the Empire, as instituted in 1906. The Russian press holds that the material losses involved will be the greater on the American side, and there is talk of Rus

sia joining with Japan in excluding American goods from Manchuria and Northern China, as also of doubling the duty on American importations into Russia. The pan-German press seizes the opportunity for an attack upon President Taft's "shirt-sleeves diplomacy" and the parvenu spirit of America. This is the tenor of the *Pall Mall Gazette's* comment in London; but the *Times* says editorially:

"Public opinion has been widely stirred. . . . We can see and understand the viewpoint of both parties, and we sincerely hope that a compromise will be found making the friendship of Russia and the United States closer than ever."

——On December 19 the President sent a cable dispatch of congratulation to the Czar upon the anniversary of his "name day"—in accordance with the Russian custom. Next day the Czar replied with "cordial thanks" for the President's "congratulations and good wishes."

**Presidential Messages**

The President, in sending his message to the Senate on the Russian treaty, did so in expectation that it would be delivered in executive session; but, on the motion of Senator Cullom, chairman of the Committee on Foreign Relations, it was received in open session. In this message the President reported the text of the instructions sent to Ambassador Guild, and requested the Senate's ratification and approval. ——Other Presidential messages were sent to Congress last week. That of December 20 dealt with tariff reform. Mr. Taft characterized the present wool schedule as "indefensible"; there is ample reason for revision downward in accord with the protective principle. He points to the fact that the report of the Tariff Board (without which he was unwilling to see revision undertaken, last August) unanimously holds that practically all items in the notorious "Schedule K" are taxed at a rate of duty higher than that which represents the difference of cost of production here and abroad. The President does not attempt to recommend definite rates. However, he urges, not reduction alone, but a radical change in the method of assessing duties on raw wool:

"The present method by a specific rate on the grease pound (*i. e.*, unscoured) operates to exclude wools of high shrinkage in scouring, but fine quality . . . and thereby lessens the range of wools available to the domestic manufacturer. . . . Such wools if imported might be used to displace the cheap substitutes now in use."

The ad valorem duty is "open to grave difficulties from the point of view of administration and revenue," says the Tariff Board, and the new method of assessment recommended is—to quote President Taft—

"a specific duty on grease wool in terms of its scoured contents."

At the last session Senator La Follette's recommendation was a 40 per cent. ad valorem duty on the raw product.—— The report of the Tariff Board extends to several volumes; it was presented to Congress in typewritten form. Of the report drawn up by the board, as chairman of which served President Hadley, of Yale, Mr. Taft says:

"No legislative body has ever had presented to it a more complete and exhaustive report than this on so difficult and complicated a subject. . . . It is a monument to the thoroness, industry, impartiality of the men engaged in its making. . . . The findings of fact by the board show ample reason for revision downward. . . . I recommend that such revision be proceeded with at once."

——The comment was made at Washington that the wool revision message had been greeted with a closer approach to unanimity in the Republican party than any prior act or recommendation of the President. The Democrats have, in advance, shown evidences of intending to ignore the findings of the Tariff Board, working out a revision of their own along the lines of last summer's Underwood bill. Mr. Underwood said of the President's message and of the wool duties:

"I have no doubt that the committee . . . will place an ad valorem duty on raw wool instead of a specific duty. . . . There is one satisfaction that the Democratic members of Congress find in the President's message. He clearly justifies our course in passing the wool bill which he vetoed at the last session."

Senator La Follette stood for a 40 per cent. ad valorem duty last summer; Mr. Underwood for a 20 per cent. The compromise was fixed at 29 per cent.——A statement of Senator Warren, of Wyoming (Rep.), says that there will be no opposition to the Taft recommendations

from the National Wool Growers' Association, he himself being one of the largest American wool growers. A statement by the secretary of the organization is to the contrary effect. It is said that if Mr. Taft does not like the tariff revision offered in the Democratic bill which will come out of Mr. Underwood's committee he will veto it, as he did that of last summer.——In a special message sent to Congress December 2, the President approves the main features of the report of the National Monetary Commission, of which former Senator Aldrich is chairman. Its main features have been approved by the practical and professional opinion of the country, says Mr. Taft. He pleads for

"as prompt action on the report as the convenience of the Congress can permit."

The President comments in this message upon the satisfactory fiscal condition of the Government; renews his recommendation of legislation fixing tolls and the government of the Canal Zone; urges a more systematic method of appropriation for the improvement of the Mississippi River and its large tributaries; urges legislation to prevent delay and unnecessary expense in litigation in the Federal courts; calls for the creation of a rural parcels post for parcels of not more than eleven pounds (with a view to extension into a general parcels post system), and urges that all local officers, such as collectors of internal revenue, customs officers, postmasters, immigration commissioners and marshals, be transferred to the classified service and taken out of politics. Such a change would, he says, remove the power of the Government to use patronage for political purposes, and tend toward greater economy and efficiency. He hopes that the Employers' Liability and Workmen's Compensation Commission will

"Suggest legislation which will enable us to put in the place of the present wasteful and sometimes unjust system of employers' liability a plan of compensation which will afford some certain and definite relief to all employees who are injured in the course of their employment in these industries, subject to the regulating power of Congress."

Of postal savings banks Mr. Taft says that deposits have kept pace with the extension of the system; and depositors number about 150,000, representing forty nations.——The President would have the United States construct two battleships a year till the Panama Canal is completed in July, 1913, eighteen months before the time promised by the engineers; and until in our first and reserve lines we have forty available vessels of proper armament and size. He favors an immediate increase of 2,000 men in the enlisted strength of the navy, and the abolition of the smaller navy yards.

*

**The Presidential Canvass**

There is evidence tending to show that La Follette leaders are dissatisfied with the outlook. They view the growth of the Roosevelt boom in the West with alarm; and it has even been suggested that if Colonel Roosevelt does not work for the nomination when the time comes his delegates may go over to Mr. Taft. A petition has been filed in Nebraska that the name of Theodore Roosevelt be placed upon the official ballot to be voted for at the Presidential preference primaries in that State. North Dakota and Oregon, also, have Presidential preference primary laws; and the former State, with the primary elections booked for March, is said to favor Colonel Roosevelt. Oregon Republicans seem to be strong for the Wisconsin candidate; but the attitude of Senator Bourne, who advocated Roosevelt's renomination in 1908, is not yet known. Senator La Follette's publicity department at Washington (the Progressive News Bureau) is none the less active. With President Taft renominated, its estimates show, Michigan, New Mexico, Pennsylvania, Rhode Island, Utah and Vermont are the only States which could be counted upon to go Republican in 1912. From Arizona comes news that that State's delegation to the Republican convention will oppose Mr. Taft. Arizona went overwhelmingly Democratic at the first State election, held December 12. Mr. Taft's unpopularity in Arizona is due in part to his veto of the Statehood bill, which would have ratified the Constitutional clause providing for the recall of judges.——John D. Fackler, secretary of the Ohio Progressive Republican League and leader of the La Follette movement in

his State, has issued a statement denouncing the chairman of the Republican State Committee, W. L. Brown, for his efforts to prevent the indorsement of La Follette. Chairman Brown has come out for Roosevelt, and this declaration is termed "the kiss of Judas." Senator Burton, of Ohio, has said:

"I am heartily in favor of the renomination of President Taft. He is a much misunderstood man."

**West Indies and Central America**

An incipient revolution in Santo Domingo has been easily suppressed. Ex-President Morales and his followers landed on the east coast on the 20th. They were routed in battle. Morales and General Jiminez were captured. They are now in prison at the capital, with many friends of General Horatio Vasquez and Señor Velasquez, recently Minister of Finance. At Macoris, General Torribio was forced to surrender.——There are 114 Syrian merchants in Hayti, and twelve of them are American citizens. Their licenses were revoked last week by the Government. They are allowed six months in which to settle their affairs, and it is expected that at the end of that time they will be expelled. Haytian merchants rejoice over the Government's action. Syrian merchants in New York have sent a protest to the State Department at Washington.——Plans have been completed for the establishment in Nicaragua of an American bank, to be called the National Bank of Nicaragua, by J. & W. Seligman & Co. and Brown Brothers & Co., of New York, the bankers, who have made a temporary loan of $1,500,000, and from whom the proposed loan of $15,000,000 will be procured, if the convention pending at Washington be ratified. This bank, with a capital of $5,000,000, will use this loan in refunding the foreign debt and improving the currency. A part of the money will be expended in constructing a transcontinental railroad. Colonel Ham, formerly surveyor of the port of Manila, is the agent whose nomination by the bankers is approved by our Government and who will supervise the collection of the customs revenue which is security for the loan. He is now in Nicaragua. ——There have been street riots in Panama between the supporters of President Arosemena and the friends of Dr. Porras, rival candidates for the Presidency. In one of them the Minister of Justice was hurt. The Governor of the city and the Chief of Police have since been removed from office.——The Cuban Veterans are not satisfied with the action of President Gomez, who, having signed the bill suspending the civil service law, has proposed to submit to a commission complaints about office holders who opposed the revolutionists. The veterans say that the two places in the commission reserved for them will not be filled.——Legislation at Washington has prevented the sale of any part of the wreck of the "Maine" for exhibition. That part which can be floated will be towed out of the harbor and buried at sea, with appropriate ceremonies.——In the Philippines, the Moros who refused to give up their arms have taken a fortified position at the top of the volcanic mountain Bud Dajo, where a memorable battle took place five years ago, and another battle there is expected.

**Surrender of General Reyes**

General Bernardo Reyes surrendered to General Trevino, commander of the Federal army in northern Mexico, at Linares, thirty miles from Monterey, on the morning of the 25th. To President Madero he sent the following telegram: "I called on the people, I called on the army. They did not respond, and so I must give up. I place myself at your disposition." Madero gave orders that every consideration should be shown to him.——A plot for the assassination of Madero was discovered and frustrated at the beginning of last week, when General Hurtado and General Aguilar, of the army, with several others, were arrested at the capital. Hurtado has since confessed his guilt. Madero was to have been shot, on the following day, from the balcony of a hotel as he was riding to Chapultepec. Afterward there was to have been an attack upon the palace, with an attempt to kill members of the Cabinet. All this was to have been done in the interest of General Reyes. It is reported that $125,000,

a fund sent from Paris, has been deposited in New York and is to be the reward of any one who shall kill Madero; also that certain men who intend to earn the money are being watched by agents of our Government. Reyes was unable to assemble any considerable number of followers near the border. Accompanied by eight men, he fled from a ranch in Nuevo Leon at the end of last week, and was pursued by Federal soldiers, who hoped to capture him before he reached the coast. Reyes's son, now in El Paso, said last week that his father would be President in three months. It is said that peace has been retsored in Oaxaca. Zapata's bandit army was whipped twice last week. There is much unrest and discontent in Mexico, but nearly all the recent violence has been due to bandits. A party of these a few days ago murdered Frank Gillette, an American coffee planter, in Tepic, and robbed his ranch of $40,000. Madero has decided to ask the permanent committee of Congress for a suspension of the Constitutional guarantees in Yucatan, Morelos, Puebla, Nuevo Leon, Tamaulipas and two or three other States, where he intends to use the iron hand. Candido Procel, the Reyist leader in Guanajuato, has been summarily executed. Two or three newspapers at the capital are striving to excite the people against the United States, asserting that our Government plans an invasion.

*

**Shuster Dismissed**

On December 21 the Russian Government presented Persia with a further and more peremptory ultimatum, demanding the immediate dismissal of W. Morgan Shuster, the American Treasurer-General, within twenty-four hours, under threat that the troops now at Kasvin would advance to the capital. The Persian Minister of Foreign Affairs appeared before the Mejliss and pleaded with the representatives to yield to Russian pressure. The situation of the country, he said, was hopeless. The ex-Shah, Mohammed Ali, was advancing on the one hand and Salar ed Dowleh, his brother, on the other, and Russia was irresistible. The regent, Nasir el Mulk, announced that he would resign unless the Mejliss gave way. After a heated discussion, lasting from 8 o'clock to midnight, it was voted by 39 to 19 to appoint a commission of five deputies with plenary powers to come to terms with Russia. All of the demands of the Russian notes are conceded, but at the intercession of Great Britain the word "consent," in the stipulation that no foreign advisers shall hereafter be appointed without the consent of the two Powers, has been changed to terms less offensive to Persian dignity. In order to prevent disorders the Persian Government has forbidden the holding of political meetings without official authorization. The Russians at Enzeli and Resht, on the Caspian, have been attacked by the Persians of the neighborhood and several sharp conflicts have occurred. To the west of the Caspian, near the Transcaucasian frontier, the fighting has been more serious. A Russian garrison of 200 men has for several years been stationed three miles from Tabriz, and these are now having difficulty in guarding the consulate, bank and public buildings of that city against the Persian constitutionalists, who are infuriated at the invasion of their country. The Russian Government is apparently determined to inflict summary punishment on the Persians who have resisted the invasion and even after the surrender at Teheran the Cossacks at Tabriz swept thru the city, killing men, women and children to the number of 500.——Lord Curzon, of Kedleston, former Viceroy of India, exprest very plainly in the House of Lords his dissatisfaction with the Anglo-Russian agreement of 1907 and the way it is working in Persia. The British sphere of influence was, he said, a small triangle of territory in the southeast corner, adjacent to the Indian frontier, selected solely for strategical reasons, deficient in commercial importance, possessed of only one considerable city and of only one trade route. The great bulk of the country containing a large population and all its trade was within the Russian sphere. Economic partition, which was the only thing contemplated in the agreement, was now leading to administrative partition, and this, he thought, would inevitably be followed by political partition and

this by geographical partition. The whole policy of buffer states was being done away with and the strategical frontier brought into the heart of Persia, where it can only be defended at the cost of a great burden on Indian finances and an addition to the Indian army. Viscount Morley, in replying in behalf of the Government, stated that Russia has given positive assurances that the military occupation was but temporary and there would be no violation of the independence and integrity of Persia. The Russian Government, he said, would not support the ex-Shah in an attempt to regain his throne, and the British Government would never recognize him.

**The Turco-Italian War**

There are now about 80,000 Italian troops in Africa, and they are extending their lines and beginning to send expeditions into the interior. The environs of Tripoli have been cleared of the enemy as far as Ain-Zara and Tajura, 10 or 15 miles to the eastward. Here abundant evidence was found of horrible atrocities committed by the Turks and Arabs on living and dead. Italian prisoners were crucified or tortured by breaking their bones, cutting off their limbs, or plucking out their eyes. Some of the bersaglieri had been buried alive by being put into a well and the top walled in. The Red Cross hospital at Henni had been left outside the lines on October 23, when the Italians retreated on account of the Arab revolt in their rear, and the Turks tortured and slaughtered the wounded and the attendant doctors and nurses. These charges of inhuman cruelty are proved by the affidavits of the Red Cross physicians, who examined and photographed over 300 bodies of murdered and mutilated Italians at Henni. The Italian Government will bring this evidence before the Hague tribunal and denounce Turkey as outside the pale of civilization.——The Turks and Arabs continue to make desperate attacks upon the coast towns, but the Italians have no difficulty in repelling them, tho often with considerable losses on both sides. ——It is reported that Germany and other Powers are endeavoring to persuade Turkey to submit to the inevitable, and that the war is likely soon to be brought to a close. Italy is willing to assume the Tripolitan share of the Ottoman national debt, and to pay for the public buildings and other property, but insists upon the absolute cession of Tripoli and Cyrenaica, which the Porte is determined never to grant. The Turkish Minister of War has asked the Chamber of Deputies for an extraordinary credit of $2,500,000 to carry on the war. Macedonia is in great disorder. Many Greeks have been murdered and the Christians are organizing for resistance and retaliation.——The Italian Government has appropriated altogether $90,000,000 for the expenses of the war to the close of 1911. ——British troops have been sent to occupy the port of Sollum, on the Tripolitan-Egyptian frontier. This has long been claimed by Great Britain to belong to Egypt, but has been hitherto held by the Turks. Now it appears that Turkey has consented to its occupation by the British, at least until the close of the war, to prevent its annexation by Italy. The bay of Sollum affords fine anchorage, and as the only port between Alexandria and Tobruk it has great possibilities as a naval base. Meanwhile France has asserted her claim to the oasis of Djanet, in the hinterland of Tripoli, and has occupied the oasis.——The Italian cruiser "Puglia" stopped the British steamer "Menzaleh" in the Red Sea and took from her all the Turkish packages and goods, and $150,000 consigned to Turkish banks.

**The Chinese Rebellion**

The conference at Shanghai between the imperialists and revolutionists has apparently made no progress toward agreement during the week and the outlook for peace is poor. Dr. Wu Ting-fang and his five colleagues are determined upon a republic, and Tang Shao-yi, representing the Peking Government, has apparently been convinced that it is hopeless to support the Manchu dynasty longer and to have urged that view upon Premier Yuan Shi-kai, but the Premier refuses to give up his plan for a limited monarchy. Great Britain and Japan are

supposed to be supporting him in this determination because both these Powers fear the influence of a Chinese republic. It would certainly encourage the nationalistic aspirations of India, and it is doubtful whether a republic could hold the outlying dependencies of China, and, if not, Mongolia, Tibet and Turkestan might easily fall into Russian hands. Premier Yuan is out of money and cannot borrow any because the four Powers who have a monopoly of Chinese loans, Great Britain, United States, Germany and France, are afraid to furnish funds to the Peking Government since the revolutionists have declared their determination to repudiate any such loans if they come into power. Any such open demonstration of sympathy with the reigning dynasty would be likely to lead to a general boycott of foreign goods in the southern provinces and perhaps to massacres of the foreigners. The six Powers, Great Britain, United States, Germany, France, Russia and Japan, united in handing identical notes to the leaders of the opposing faction at the Shanghai conference, Tang Shao-yi and Wu Ting-fang urging a speedy agreement. The United States is said to have taken the initiative in this joint movement, the effect of which was, in spite of the assertion of strict neutrality, to strengthen the monarchical and weaken the republican cause.

**The New Capital of India**

The announcement of the Emperor of India at the Durbar that the capital of India was to be removed from Calcutta to Delhi took the world by surprise, for nobody outside of a very few members of the Indian and Home governments had any suspicion that such a movement was contemplated. The reasons for the change are given at length in the London *Times* of December 13, in the form of a letter dated August 25, from Lord Hardinge, Governor-General of India, and his Council, to Lord Crewe, Secretary of State for India, and the reply of the latter, dated November 1. It is pointed out that Delhi is more centrally situated than Calcutta and has a better climate. The Government could stay in Delhi from October 1 to May 1, and the annual migration to Simla could be reduced in volume, would take up less time and would be far less costly. For sentimental and traditional reasons also Delhi is the logical capital, for it is as rich in historic associations as Rome or Constantinople. On the plains of Delhi occurred the struggles which form the theme of the great Hindu epic, the Mahabarata, and the Mohammedans also are attached to it as the seat of their last Mogul empire. While the capital remains at Calcutta the administration will be inevitably under the influence of Bengal political and commercial interests, while its removal will give an opportunity for a development of self-government. This is such an important declaration, coming from the Indian Government, that the passage should be quoted:

"It is certain that, in the course of time, the just demands of Indians for a larger share in the government of the country will have to be satisfied, and the question will be how this devolution of power can be conceded without impairing the supreme authority of the Governor-General-in-Council. The only possible solution of the difficulty would appear to be gradually to give the Provinces a larger measure of self-government, until at last India would consist of a number of administrations, autonomous in all provincial affairs, with the Government of India above them all, and possessing power to interfere in cases of misgovernment, but ordinarily restricting their functions to matters of Imperial concern. In order that this consummation may be attained, it is essential that the Supreme Government should not be associated with any Provincial Government. The removal of the Government of India from Calcutta, is, therefore, a measure which will, in our opinion, materially facilitate the growth of local self-government on sound and safe lines. It is generally recognized that the capital of a great central Government should be separate and independent, and effect has been given to this principle in the United States, Canada, and Australia."

One of the chief advantages of the change will be the reuniting of Bengal, and the letter of Lord Hardinge admits with remarkable frankness that the resentiment of the Bengalis on account of the partition of the Province by the former administration is "as strong as ever, tho somewhat less vocal," and that the bitterness of feeling engendered by it "is very widespread and unyielding." Behar, Chota Nagpur and Orissa, just west of Bengal, are to be brought under a Lieutenant Governor in Council, and a Chief Commissioner appointed for the Province of Assam, east of Bengal.

# The New Cardinals and the Next Pope

BY RICHARD SCHEIL

RECENTLY Pope Pius X held his fifth consistory, in which he created Cardinals. In his first, he named two; in the second, four; in the third and fourth, held in 1907, eleven. Now he has just put the red hat on eighteen, the largest number at one consistory since Leo X, about four hundred years ago, named thirty. Moreover, Pius X departed from all precedents in not announcing to the favored ones their coming elevation. They received the appointment itself. Secrecy was thus secured, while opposition from governments and Curial enemies was shut out. The new way made easy sailing. Of the eighteen, but one-third are Italians and two-thirds *forestieri*. The former, however, are still in a majority; 34 Italians to 29 foreigners. Of those named, Cardinal Bourne, of Westminster, is the youngest at fifty years, with O'Connell, of Boston, next, aged fifty-one. The oldest is Cardinal Cabrières, of Montpellier, aged eighty-one. The conferring of the red hat on this aged bishop is another blow for Duchesne. The two were rivals for the vacant seat of Cardinal Perraud among the forty Immortals. Cabrières was Rome's choice, seconded by the Royalists and Clericals of France. Duchesne, however, won, but now gets a further setback, following hard and fast upon the ban pronounced against his history of the ancient Church from the seminaries of Italy. The aged Cardinal has been Bishop of Montpellier since 1873—a very unusual tenure in France. He was never promoted because he was a staunch royalist and made no secret of it.

A purely diplomatic elevation is that of Belmonte, a Neapolitan noble, whom, while Nuncio at Vienna, the Emperor of Austria chased from the country. Because the Hapsburgs met the King of Italy—the robber of the temporal power—at Vienna, many years ago, Leo XIII and Rampolla stirred up serious troubles for the Government in Hungary, which Belmonte fostered, with the result that he became a *persona non grata*. He quietly retired to Naples, knowing full well that in due time the red hat would reach him. The most unusual appointment is that of Van Rossum, who is the first Dutch Cardinal since the solitary Dutch Pope, Adrian VI (1522-1523) named Von Eckevoort, also a Hollander. Van Rossum, however, lives in Rome and is a Redemptorist. He is a member of the Commission for Codifying Canon Law. To even up with this son of Alphonso Liguori, a Jesuit received the red hat, viz., Billot. We are familiar with his name, for he was the principal author of the encyclical on modernism. So well up were he and his associates in the writings of Loisy that on excerpting fifty odd propositions as worthy of censure from the French scholar's works, they did not cite even one passage correctly. Some years ago Billot boasted that he had taught theology at the Gregorian University for twenty years, and his students did not even know there was a biblical question. His father was a custom house officer, and if Billot had been born since 1870 he would have been German, as his birthplace was in Upper Alsace, near Mulhouse. As a seminarian he was in three different seminaries—Blois, Bordeaux, Angers. Afterward he became a Jesuit. Various names are in use among the clergy to designate the student who gyrates from one seminary to another: tramp, *vagus*, *vagabundus*, rambler. The new Cardinal is the author of several theological works. In that on the sacraments of the Church, he explains their innate efficacy—*ex opere operato*—in such a naïve way as practically to nullify it. The closest comparison to his teaching of this innate operation is the effect of a fine opera on a listener or of a glorious sunset on a beholder. Just as a magnificent burst of song and music, or the lessening shadows of the crimson-hued king of day, enraptures him who listens or sees, so the sacra-

ments affect the soul. Quite a transient result.

With the accession of these two, Dutchman and Frenchman, there are now in the Sacred College a Redemptorist, a Jesuit, a Carmelite (Gotti), two Franciscans (Netto, former Patriarch of Lisbon, and Garcia, Primate of Spain), one Capuchin (Vives y Tuto), one Augustinian (Martinelli, formerly Delegate Apostolic at Washington), one Benedictine (Abbot Vaszary, Primate of Hungary). All these men have the vow of poverty, but also the palaces and revenues of Cardinals. There is no Dominican. In all courtesy, Lepidi, who has been for many years Master of the Sacred Palace and hence Papal Censor, should have received the red hat, as his office has from time immemorial enjoyed that favor. He has been passed over five times. The Black Friars are come on evil days. The Jesuits are on top.

No doubt the most extraordinary of all the creations is that of Lugari, assessor of the Inquisition. He entered the Curia as a layman and was not ordained priest till 1896, when he was fifty years old. Rather unusual for an old Curialist to take on himself celibacy. The new Cardinal is a canonist and has dabbled in archeology to such a degree that he is able to defend and uphold all the pious Roman traditions, the French and American archeological schools to the contrary notwithstanding. Such another Curialist is the new Cardinal Pompili, who has always enjoyed a post *in Curia*. He was Secretary of the Congregation of the Council and is a member of the Commission for Codifying Canon Law.

Many were named Cardinals as it were by inheritance; for example, the Nuncio, the primates of Spain, Hungary, Austria. Among these may be included Cardinal Amette, of Paris. For the great metropolis has not been without a Cardinal since Napoleon's time but once, namely, in the time of Archbishop Darboy, who spoke and wrote against papal infallibility. He was shot by the Commune in 1870, a victim of Jesuit hate, as is stated in the memoirs of Prince Hohenlohe, Ambassador of Germany to France and brother of Car-

Copyright, Underwood & Underwood, N. Y.

THE THREE AMERICAN CARDINALS

Cardinal Farley, Archbishop of New York, sits at the left; Cardinal Diomede de Falconio, an Italian by birth, but an American citizen and Apostolic Delegate to the United States since 1902, in the center; on the right, Cardinal O'Connell, Archbishop of Boston. This is the first photograph to be taken of the three Cardinals in their new robes

dinal Hohenlohe. Westminster is the same. The four primates of England—Wiseman, Manning, Vaughan, and now Bourne—received the red hat. This last has the unpleasant notoriety of having been sued for the loss of a large sum entrusted to him, when Bishop of Southwark. The sentence went against him as careless and wasteful of the fund, but not as dishonest.

To the Sacred College the recent consistory added six Italians, four Frenchmen, two Austrians, two Americans, two Spaniards, an Englishman, and lastly, a Dutchman. Among them is found neither German, nor Belgian, nor Bavarian. With a Catholic population not far, if anything, behind that of the United States, Germany has less than twenty bishops, while there are over one hundred among us. The German dioceses come down from medieval times. The great cities of the Fatherland have no bishops. Neither Berlin, nor Hamburg, nor Hanover, nor Dresden, nor Leipsic, has a mitred head. Today the youthful hierarchy of the United States boasts of three Cardinals, whereas the hoary-headed sees of Germany have but two. And yet Kaiser Wilhelm could have as many Cardinals as France and as many bishops as the United States, and perhaps more of both. But he does not want them. It is Wilhelmstrasse which keeps one Cardinal in East Germany and a second in West, together with a handful of bishops. It is easier to handle them, and furthermore they are chiefly along the Rhine, in Catholic sections. Belgium has just one Cardinal, Mercier, of Mechlin, to whose forgetfulness of his own mentality which he showed in attacking Tyrrell in a pastoral letter we owe the most readable of the latter's books, that on modernism. Bavaria has never had a Cardinal at Munich. Hohenlohe was a Bavarian, but he lived *in Curia* in Rome. The reigning family—the Wittelbachs—are poor and have no wish to be saddled with the burden of a Roman purple. Of course, Rome still feels the blow which Döllinger and the Old Catholic movement gave it, and may not wish to put a red hat on the banks of the Iser. Today, moreover, socialism and anti-clericalism are waxing strong. The struggle over the schools is now on. The time seems not far distant when the Nuncio at Munich may get his passports. It would not do to send a red hat amid such danger.

The readers of THE INDEPENDENT are familiar with the orthodox views of the two American Cardinals, or three, including Falconio, who was at one time president of St. Bonaventure's College, at Alleghany, N. Y. It was as gall and wormwood to the hierarchy of the United States to have Alleghany's head set over them as Delegate Apostolic. It has been only with the younger generation of bishops that the naturalized Italian cut a figure.

An incident of last July, in which Cardinal Farley was a central figure, may have been a *causa movens,* if not *efficiens,* why he received the red hat. When in Rome during that month he presented to Pius X the house at Sinigaglia in which was born Pius IX, an offering looking forward to his beatification. It was in this same house that Eugène Beauharnais, Viceroy of Italy and stepson of Napoleon, lived when the future Pope sought to join his guards during the four years of lay life.

Of Cardinal O'Connell it is worthy of note that he is thoroly up in music. He has polished ways and cultivates Boston's select circles. Many times have we heard citizens of "the Hub" describe him as "charming," "broad-minded" and such like. They are outsiders. Seldom was a bishop more hated by his own clergy than is this same Cardinal. He was named archbishop against the protest of the clergy of Eastern Massachusetts, whom he now rules with a rod of iron. But as they are chiefly Irish, he wields it over a race historically monarchical and fond of being in leading strings. A strange whirligig is it that the prelate who, according to a current story, offered a nosegay of flowers to Dal Val's mother, the wife of the Spanish Ambassador to the Vatican, in sympathy for the Spanish defeat at Manila, should now be a Cardinal, while the greatest of all American churchmen should be left on the banks of the Mississippi to mingle his sighs with the laughing waters of St. Anthony's Falls. No bishop did more for his Church than John Ireland: Irish colonization, Catholic University, Delegation Apostolic at Washington, death of Cahenslyism, com-

been sued for the loss of a large sum the Vatican, with Taft at its head, *in re* the friars' lands in the Philippines. Ignoring these services and many more, including total abstinence, and mindful perhaps of the Roosevelt-Storer rumpus, the Cardinal Secretary of State shelves the veteran like a blunted tool. John Ireland sought the red hat by means of political friends, who in no small measure are responsible for his missing it. "Petrified in his old courses," as Balfour puts it, Ireland may not have known how to veer around.

Turn we now to the coming Pope. At the present moment there are sixty-four Cardinals and six vacancies; with the eighteen just elevated there are to the credit of Pius X thirty-five, excepting the few who died. In other words, about one-half of the Sacred College are creatures of Cardinal Dal Val. Of course, he includes Vives y Tuto and De Laï. Of this Curial sacrament, De Laï is the invisible grace, whose outward form is the friar Vives y Tuto. Dal Val is the minister, without whose action there would be no result. At present his chief competitor is Cardinal Maffi, Archbishop of Pisa. Both are young, Dal Val forty-six and Maffi fifty-three. The former holds the reins, as did Rampolla under Leo XIII. But he is Curial and hence has many enemies. The old Cardinals look askance at their young confrère. On his part Maffi is non-Curial, as was Sarto when elected. Again, his Italian blood is a strong asset. There has been no Pope save an Italian since the Dutchman Adrian VI (1523). Against Dal Val stands the record of the last Spanish Pope, Alexander VI, the infamous Borgia (1492-1503). Yet another consistory, which is not at all improbable, would help on his chances.

A precautionary measure on the part of the Cardinal Secretary of State is the new oath, administered for the first time to the last batch of Cardinals, who swore not to recognize the "veto" on the papal election of any civil power. That oath will be binding as long as Pius X lives. But in the future conclave, astute canonists will soon make shreds of it. Nor again, would any man be chosen Pope if Austria or Spain "vetoed" his election. Austria or Spain is worth much more than Dal Val, or Maffi, or any other Cardinal. Nor again, if France should object, altho she has forfeited her "veto," would the rejected Cardinal be chosen; for today, thanks to the *entente cordiale,* France spells England also.

What about Rampolla? His worst enemy now is his poor health. As he is old and feeble, he would prove a good compromise between Dal Val and Maffi. He would last as Pope but for a few years. The latter two may each be strong enough to keep out the other, but not to elect himself. This would be Rampolla's opening. Besides, he stands for liberalism *tantum quantum.* It seems to be the usual case that a succeeding Pope reverses the policy of his predecessor. Rampolla is sure of the support of France, which is not to be slighted, as France is the leader among the Latin races. It is an old saying, however, that he who enters a conclave as Pope comes out a Cardinal. Some one not yet in the limelight may gain the tiara when Pius X puts it down.

The large number of non-Italians now in the Sacred College seems a step toward making it a real senate, representative of the whole Church. Years ago Cardinal Manning drafted a *schema* which outlined a national Sacred College. His plan, if we are well informed, was a Cardinal Senate, somewhat resembling that of the United States. Every Catholic land should have the same number of Cardinals. Brunetière, the well-known French critic, who, with over a score of other French laymen, addrest a letter to Pius X in favor of separation, pleaded for a similar body, asking merely "that Catholic nations or fractions of Catholic nations be represented in the Sacred College." The question is now being agitated on the basis of representative Cardinals, of whom every one would stand for a fixed number of people, as, for instance, Congressmen are chosen at home. This last seems a long way off. Manning, who wished the hierarchy of every country to choose its Cardinals, and Brunetière both offer a tangible solution. At present, the system is a vicious circle—*circulus vitiosus* of the scholastics. The Cardinals elect the Pope, who in his turn names the Red Hats. The tail in the serpent's mouth.

New York City.

# The Indian and Civilization

BY VILHJALMAR STEFANSSON

[Mr. Stefansson was sent out by the American Museum of Natural History to collect [illegible] data concerning the tribes in the northern part of Alaska. The most recent news from him is that a year old, at which time he had discovered in Alaska earthenware [illegible] objects new to ethnologists. He visited tribes who had never before seen a white man. This article was written at Point Barrow, Alaska, during the Arctic night, and sent [illegible]—EDITOR.]

TWO years ago an "Indian agent" of the United States Government became communicative in the smoking room of a Pennsylvania train on its way to Washington. In the course of a talk on what he had "done for the Indian" he showed us photographs of a settlement as it was when he took charge and as it is today. The first picture showed mostly tents, the last of the series showed houses only. This was wonderful progress in ten or twelve years, and the agent was called upon to receive, deprecatingly, the compliments of two or three listeners. I was just then returning from a district where, in single villages, the aggregate tuberculosis death list of six years was several hundred per cent. (from 200 to 400 in one case) of the number now living. I therefore asked the agent whether he had also by any chance a photograph of the village graveyard. He evidently saw no point to the question, nor did any one else apparently, so I let the matter drop. I was in no mood to quarrel with my civilized fellows the first few days after a year of isolation, and I knew of old that an officer of the Indian Bureau is typically pretty sure of himself.

It is generally known that the death rate among the American aborigines is considerably higher in proportion to birth rate than that of the white population; it is also vaguely understood that the whites are in some way responsible. Many are aware of the terrible havoc wrought by the imported diseases, measles and smallpox, and "whisky" is frequently denounced in this connection by the missionary and humanitarian. The views of the scientific student of the situation are more nearly met, however, by saying that the aborigines are being killed off by ignorant kindness, and that about the most reprehensible tenet of those who "work for the Indians' advancement" is the belief that inducing them to move from tents into houses is an accomplishment of which to be proud.

It is the present belief of most of those who make tuberculosis a study that the essential in its successful treatment is getting the patient to live in the open air—in a tent or a house without walls. Sanatoriums with this as the fundamental idea are springing up here and there, while everywhere people sleep on porches, balconies or on the roofs of their homes. And the same month that a magazine prints photographs to illustrate these methods of preventing and curing consumption, a missionary journal give us pictures of cabins built thru the efforts of their representatives. One article tells us of progress in a campaign *for* the tent as opposed to the house, the other tells of success in a campaign *against* the tent and of people herded into houses by the united efforts of missionary and Indian agent, and both exult in their accomplishment. But it seems clear that if those are right who believe in open air as a preventative and cure of disease, the "civilizers" have true cause for congratulation only in the eyes of those who believe that there are no good Indians except dead Indians.

Those of us who as boys gloated over the picture in "Buffalo Bill's" book, showing "how I shot my first Indian," are long familiar with the saying that "the only good Indian is a dead one." It runs thru all the literature of frontier fighting; it is repeated to us by every hero of our youth, by Simon Kenton, Daniel Boone, David Crockett, Kit Carson and the rest. It was a truism to me so long as I knew nothing of the Indian; now that I know him thru intimate daily association it has become as malicious a falsehood as the charge of Pliny's time against the followers of

Christ that they were all depraved and "haters of the human race." The sentiment is still occasionally exprest by men whom political preferment (or some better reason occasionally) has placed in authority over these people. In 1906 I said to an officer of the Canadian Government's Indian service that it was a pity the Mackenzie River people were dying so fast. He replied it was a "damned pity they are not dying faster."

But whatever be the attitude and opinion of a subordinate here and there, it is certain that mission boards and most of the higher officers of the Indian service, both in the United States and Canada, have ideas and plans beyond the juvenile "Buffalo Bill" literature; it is more certain still that in application their policy works considerable harm, serious, tho unintended; it is most certain of all that some of the objectionable features of the general policy, some of that policy's most harmful results, can be easily removed. And the most objectionable of all is the house-building movement. Of course the Indian now and then builds without being urged to it, but here, and where his own vanity prompts him to building houses (as Chinese women's and white women's vanity prompts the lacing and squeezing of their bodies out of shape), his well-wishers should at least not egg him on.

From the point of view of health, and therefore of happiness, it is a safe proposition that the fruits of the house-building policy are evil. In stating the matter thus one has in view the continent as a whole and the Indian in his average condition. It would, of course, be silly to argue about those exceptionally placed; those individuals are beyond the range of our discussion who live in Oklahoma or elsewhere, in rambling country mansions filled with servants and marble statuary; the policy of a mission board has little direct influence upon an Indian who is president of a life insurance company with hundreds of thousands of policyholders and a surplus in the millions. Being unfamiliar personally with the pueblo region, let us admit, too, that the houses there now are probably better from a sanitary point of view, than were those of the true aboriginal type. I have seen houses along the Pacific Coast, between Skagway and Seattle, that are said to be cleaner, better ventilated and more rain-proof than the native dwellings were formerly. Let us, then, to be indubitably conservative, admit that where the aborigines live in houses of their own to begin with, it is well to

COMPLETED HUT PAST AT PELLY RIVER MARCH 30, 1911

BREAKING CAMP AND PACKING THE SLEDS

"improve" them along lines which please when photographed; we will concede this in general and shall forget temporarily the well-known and tragic exceptions to the rule (if it be a rule)—exceptions such as the Alaskan Eskimos, among whom damp, cold, unventilated "frame" houses are taking the place of the dry, warm "hovels," with their ever open ventilating shaft—a change that has been accompanied by (if it be not the cause of) a steadily increasing death rate from all causes combined, and notably from bronchial and pulmonary diseases.

We will consider, then, the tent dwelling tribes, who are numerically and territorially (or at least were so) the more considerable part of the aboriginal population. It is well to be concrete, and in being concrete it is well to speak exclusively of things one has seen, tho one have complete faith in the reports of men of one's own profession who tell the same story from Sioux, Cree and Blackfoot lands. We turn, therefore, to central and northern Canada, with the premise, however, that the story of the Canadian Athabascan fits as well sections of the American Algonkins as do accounts of New York tenement life fit those of Chicago.

The Athabascans were tent dwellers formerly, tho a proportion of every tribe has houses now at the various fur trading posts from Athabasca Lake to the Arctic Sea, thru over a thousand miles of the great Canadian coniferous forest; there are houses also scattered along the rivers between the trading posts (which are, on the average, 200 miles apart). Some of these houses were built merely in imitation of the houses of the white traders and missionaries, others upon the urging of this or that white man—truly, by no means always a missionary or government agent. (The government agents here—either because they understand conditions better or because they are not interested enough to bother—do not seem nearly so solicitous about getting houses built as are the typical American Indian agents. Even the young man who said it was a pity the Indians were not dying faster seemed to be refraining from urging house building upon his protégés.)

As we naturally want to make our argument as strong as possible we will consider by itself the case of Fort Wrigley, on the Mackenzie River (near 63° north latitude). Ten, and even eight, years ago this was a good trading post. It had two stores buying furs, the Hudson's Bay Company and the Hislop & Nagle Company. There

were, in the loose style of the North, considered to be 200 Indians trading here. I visited this post in 1906 and again in 1908. On the latter occasion I traveled in the company of Mr. Nagle when he went down there to close up and dismantle his store. By that time the two rival resident traders agreed that there were only about 40 Indians left of the 200 of six or eight years before—some had moved away for commonplace reasons; a larger number had fled the place with the (doubtless superstitiously grounded) fear that it was "unhealthy"; a larger number still had died, and most of them of pulmonary diseases, tho dysentery had helped the work along.

From Fort Wrigley south the condition at the other trading posts is almost as bad. Indeed, if one had no facts of a statistical character at hand, one could predict the results from a knowledge of the conditions. The Athabascan Indian is not what we consider "cleanly." If it is difficult to keep New Yorkers from expectorating on the floors of street cars and public buildings even, it might be guessed that an Indian is hard to manage. A wigwam, it is true, gets filthy about as quickly as a clean house will, but when it does the tepee is moved to a clean site, while the house remains to get filthier still. Even if the Indians did not (as they do) move their tents merely to get a clean site for them, the exigencies of the hunt would, nevertheless, dictate frequent changes. Not so with the house; and even if it were abandoned for a time now and then as hunting and fishing exigencies require, the family would usually be back before the forces of contagion in the dust on the floor had lost their virulence.

The Indian is so "lazy" that it is sometimes difficult to get him to build a house. The house, once built, he cleaves to it because of the prestige it gives and because it is warmer than the tent. If his wife and daughter sicken and die he does not put the blame on the house, any more than does many an ignorant white whose house or room is a breeding place for the tuberculosis germ. When the family of the man who built the house is dead, the work of destruction does not cease, for Indians who were too "lazy" to build for themselves will move in to take the vacant places. Thus there is a steady stream of people thru the houses on their steady march from the wigwam to the grave.

It would be curious, indeed, if many of the white men did not realize the situation. All the general officers of the Hudson's Bay Company now do, tho some of their predecessors did not; some of the local post managers are equally alive to the situation, as are many of the missionaries of the Church of England and the Roman Catholic Church. There has, too, been a notable change of feeling even in so short a time as the two years between 1906 and 1908. In 1906 there was talk of the necessity of teaching the people to keep their houses clean; two years later that phase was in the shadow, for the menace of the cabin and hut had grown so much more insistent that one's thoughts naturally turned to their destruction rather than their improvement. To my mind, the man who deserves most credit in this matter is the Rev. Mr. Marsh, of Hay River, Great Slave Lake (missionary for the Church of England). His campaign began with the ejecting by actual physical force an Indian family from their house at the beginning of the winter of 1905, and driving them away from the post with orders not to come back before spring. At that time this Indian's grown daughter was in the earlier stages of consumption. When the family came back in the spring from a winter in their hunting tents the girl was apparently cured. Unfortunately it is not every missionary that has the moral hold on his people that Mr. Marsh has, nor the muscle to back it either; nevertheless, his example created a precedent and makes it easier for others to do likewise. Views similar to Dr. Marsh's were exprest (as bluntly as this paper is intended to put them to the reader) last summer by his successor, the Rev. Mr. Vale, and Mr. Marsh's collaborator, Mr. Johnson, as also by the Church of England's representatives at Fort Chipewyan and Fort Simpson, and the Fathers of the Roman Catholic Church at Providence. The same opinion was given me by Mr. Firth, of the Hudson's Bay Company, at Fort Macpherson.

who has lived among Athabascan tribes for over forty years, and by Mr. Cadzow, the owner of the trading station at Rampart House, on the Porcupine (branch of the Yukon). Each of these gentlemen could cite entire families destroyed to the last member.

Such is the condition, then, over a quarter of the Indian area of Canada; we know by report that it is bad, too, in other parts of Canada and in various sections of the United States. If we did not know it thru hearsay, we should yet know by inference that the situation is approximately equally bad wherever environment and habits of life are similar to those of the districts with which we are familiar. If the Indian departments of the two countries do anything deliberately to accentuate these conditions, the departments are in so far censurable (for we dismiss the theory that the only good Indian is a dead one, and forget for the time that our farmers and our mining corporations need the Indians' land); if subordinates of these departments are active in pernicious directions without the knowledge of their superiors the departments are open to criticism of another sort, for the eye of the man in control should be upon every action of his subordinates. But more culpable still are mission boards, whose sole avowed object is to do good, if they carry on or sanction campaigns which, however well intentioned, are harmful in their general results. No matter if certain churches value the souls of the natives in pounds and their bodies in pennies, nevertheless, the penny which is the Indian's body is worthy of consideration. The accomplishments of such a man as Mr. Marsh, of Slave Lake, are not a credit to the Church he represents *until* that Church makes the doing of such things as he does a feature of its general mission policy. There may have been keen need for Jacob Riis in the destruction of the Mulberry Bend, but the need is just as keen today for a force of stout men to reconvert the present sites of Indian cabins to tenting grounds.

There are doubtless members of mission boards who knew long since that the white men's house is not an unqualified blessing to various "primitive" peoples; so do occasional clergymen know of the iniquity of corporations in whose shares they invest their savings, but they let the great machine with which they are connected grind on in its established way. Perhaps a board here and there has removed from its program the championing of certain "reforms" that have long been in fashion, but it is up to them to do more. If a railway engineer sees a child upon the track he not only applies the brakes—he reverses the engine also. Missions do not consider it sufficient to refrain from selling rum, they conduct a vigorous campaign against its sale and use. If they realize the injuriousness of the house they should fight it as they fight strong drink. If they do not realize it, or do not consider the matter "serious," or do not consider the house on the whole detrimental to health, let them at least admit that there is a question and set about gathering information, on this head specifically, from their own medical missionaries and others qualified to give unbiased information.

Mission boards continuously complain that lay travelers and scientists are hostile to their efforts "for the uplifting of the heathen." We will not go into the question here of whether they pauperize the Indian and make him shiftless and lazy by indiscriminate charities, nor yet into any other of a dozen of the most common complaints against the Indian missions. There are many travelers whose most serious charges are based on the Church's activity in introducing "civilized" food, clothing and houses—and of the three the house is the worst. It seems to me unreasonable to expect a man who has seen these "improvements" in operation to give support or countenance to an organization (no matter how benevolent in its heart) which prides itself on success in herding the open-air peoples into houses—a process which is an unnecessarily gruesome form of "benevolent assimilation."

When we understand fully the effect upon the children of the wilderness of such civilizing agencies as frame or log houses, cotton clothes and "trade flour" we shall know in part the why of a saying that has long been in our speech and that of our ancestors: "The Indian cannot stand civilization."

POINT BARROW, ALASKA

# The Chinese Republic

BY WU TING-FANG, LL.D.

[The following appeal to the Nations of the world is by an honored statesman well known in America. He was formerly the Chinese Minister to the United States and is now Director of Foreign Affairs and the recognized leader in the organization of the new Chinese Republic. The conference now going on with Yuan Shi-kai will settle whether China is to be a Republic, and if so Wu Ting-fang will be the Prime Minister. Our readers will recognize in the spirit of this appeal the lessons he learned while in this country. It first appeared in the *China Press*, of which, we believe, Wu Ting-fang is one of the owners.—EDITOR.]

THE Chinese nation, born anew in the travail of revolution, extends friendly greetings and felicitations to the world. As the Republic of China it now asks that recognition by the civilized Powers which will enable it, with the assistance of their kindly offices, to erect upon the foundations of honest government and friendly trade and intercourse with all peoples a peaceful and happy future. The Chinese people are not untried in self-government. For countless ages they ruled themselves; they developed observance of law to a degree not known among other races; they developed arts and industries and agriculture, and knew a peace and contentment surpassingly sweet. Down upon them swept the savage hordes of an alien and warlike race. The Chinese people were conquered and enslaved. For two hundred and seventy years this bondage existed. Then the Chinese people arose and struck a blow for freedom. Out of the chaos and dust of a falling throne emerges a free and enlightened people, a great natural democracy of 400,000,000 human beings. They have chosen to set up a republic and their choice we believe is a wise one. There is no class of nobility among the Chinese and they have no recognized royal family to set up in place of the departing Manchu royal house. This is a great democracy. The officials spring from the people and to the people they return. There are no princes, lords, dukes among the Chinese. With the Manchu throne removed there is but a made-to-order republic. Already we have provincial assemblies and our national assembly. Already we have a republic with a full set of competent officials. Within a very few days our constitutional convention will meet; arrangements for it were made long ago. At this convention there will be fully authorized delegates from every province in China. A constitution of the most enlightened character will be adopted and new officers of the provisional government elected. Following this will come, under the provisions of the constitution, the provincial and national elections. It is imperative that our Government be recognized at this time in order that business may not be subjected to prolonged stagnation. There is peace everywhere save at Hankow, but business cannot proceed until the new republic shall be welcomed among the nations of the world. We ask recognition in order that we may enter upon our new life and our new relationships with the great Powers. We ask recognition of the republic because the republic is a fact. Fourteen provinces have declared their independence of the Manchu Government and promulgated their allegiance to the republic. The remaining provinces will, it is expected, soon take the same course. The Manchu dynasty finds its power fallen away and its glitter of yesterday become but a puppet show. Before going it has stripped itself of authority by consenting to the terms of the proposed constituiton which already have been made public. The most glorious page in Chinese history has been written with a bloodless pen.

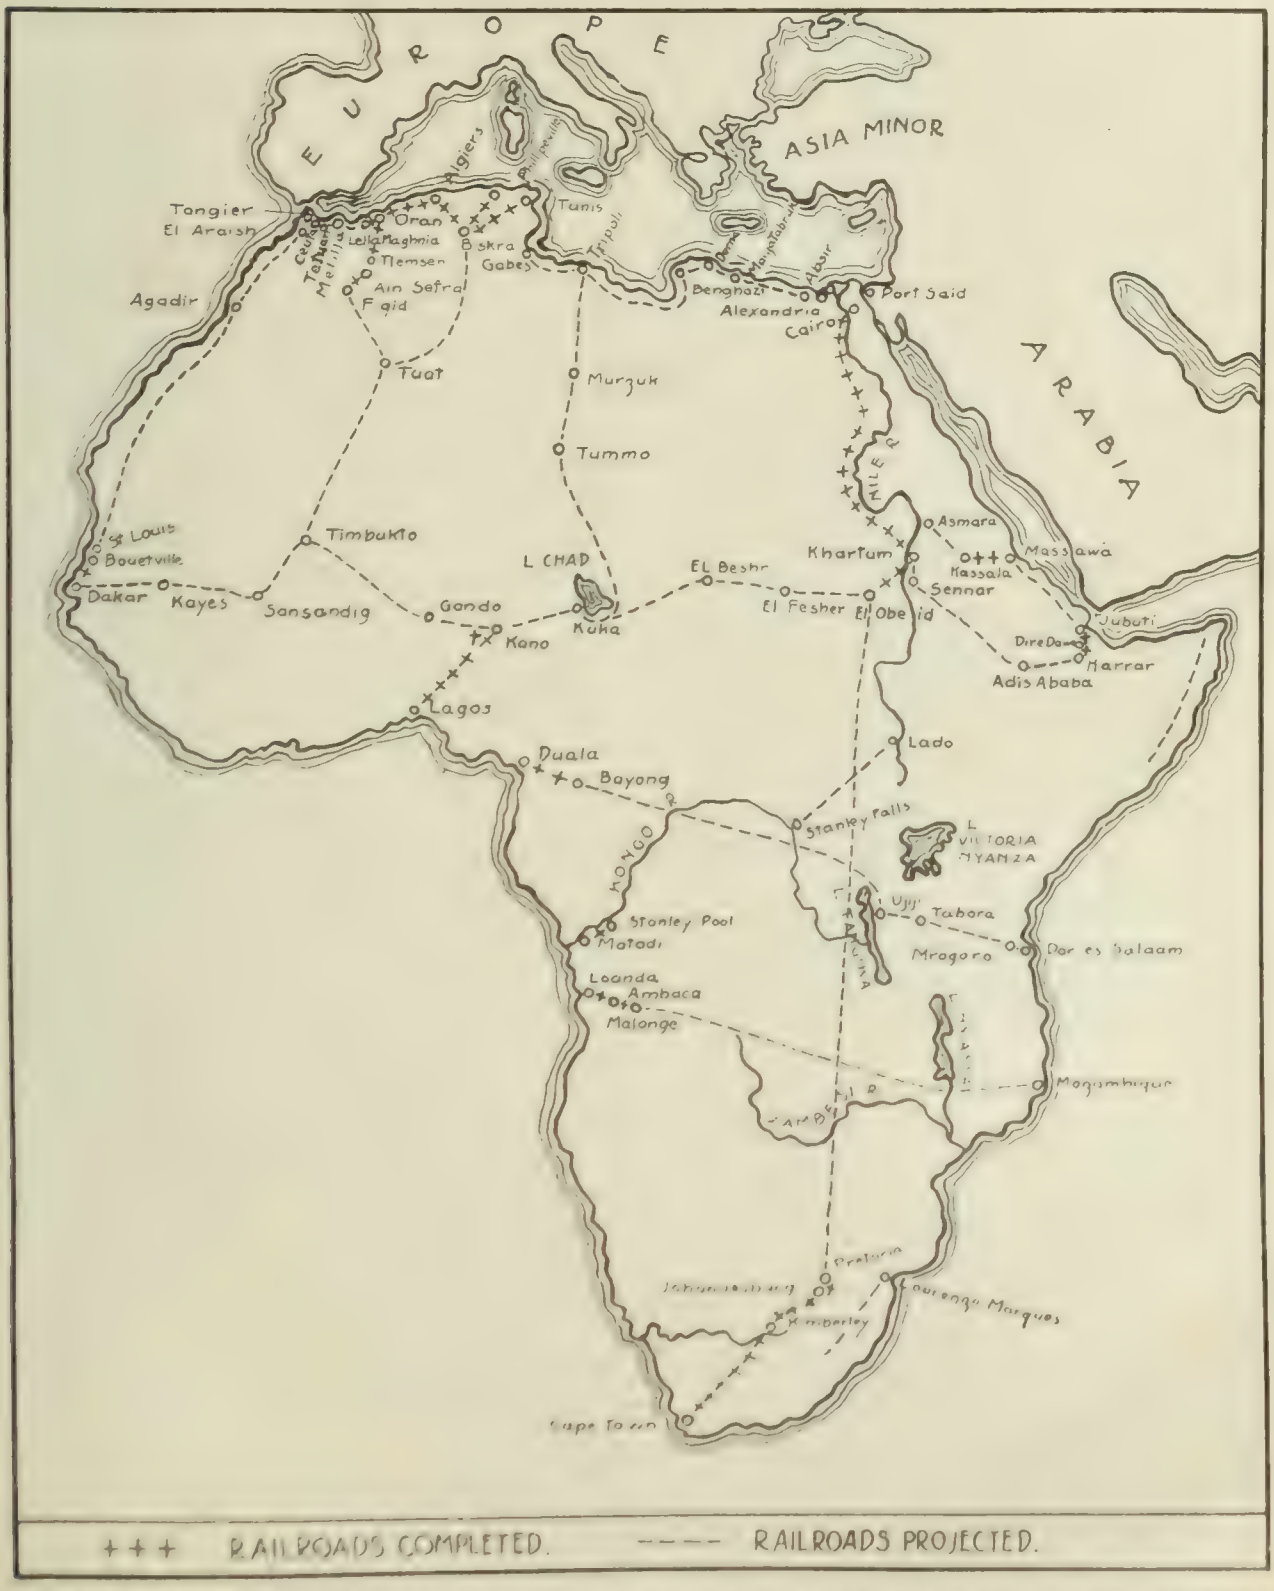
# The New Latin Africa

BY NATHANIEL SCHMIDT

[The acquisition of the privilege of a protectorate over Morocco by France and the invasion of Tripoli by Italy have made it necessary for us all to revise our notions of African [illegible]. The new agreements have opened the way to the railroad development of the continent and the projects that have been under consideration for many years may now be undertaken. It was largely the conflict of these railroad projects which caused the recent stress between France, Great Britain and Germany, and almost precipitated a European war. Professor Schmidt is one of the leading authorities of the United States on this subject. He gives in Cornell University a unique course extending thruout the year on the history, present condition and future prospects of Africa.—Editor.]

THE fall of Carthage in B. C. 146 determined the historic development of North Africa for more than seven centuries. It also decided the ultimate destiny of the whole continent. Africa was to be placed under European influence as truly as America and Australia, tho the native and Asiatic contributions to its civilization would be greater.

With the capital, Tripolitania came into the hands of the conqueror. Apion, the last king of the Ptolemaic dynasty in Cyrene, bequeathed his realm to Rome, and its independence ceased when he died in B. C. 96. Egypt, sold to Rome by Auletes, became a Roman province in B. C. 30. Juba II, the cultured Numidian monarch, who had married Cleopatra's daughter with Mark Antony, was dethroned in B. C. 25; and Claudius, in A. D. 40, put an end to the reign of their son, Ptolemy, in Mauretania. Until A. D. 429 Roman rule continued from the borders of Syria to the Atlantic.



It was a flourishing period. The Romans had learned from their ancient enemy the art of agriculture, and laid the land under cultivation to an extent never reached before. They built roads, bridges and aqueducts. The old cities grew; Alexandria, Tripoli, Carthage, Cirta, Cæsarea and Tingis were fine centers of Greco-Roman culture. The nomads were taught how to live in villages; their villages soon became cities; the ruins of Timgad, "the African Pompei," and Thysdrus, with their temples, palaces, theaters and triumphal arches, show what could be accomplished even on the borders of the desert. To defend them against the inroads of nomadic tribes a chain of camps and fortresses, such as the famous Lambæsis, served. While in Egypt and Cyrene the Greek tongue retained its hold and was used by Clement and Origen, Plotinus, Hypatia and Synesius, Latin gradually won its way into the West, was taught in the academies, and spoken by Apuleius, Tertullian, and Cyprian, Arnobius, Lactantius and Augustine. Roman religion, whether pagan or Christian, was enforced by the state as rigidly as Roman law. In a moderated form this civilization continued under the Vandals (429-533) and the Byzantines (533-700).

Its downfall was due chiefly to two causes—the *latifundia* and the religious wars. Absentee landlords exploited the provinces thru their agents. The actual tillers of the soil were reduced to extreme poverty, and their ability to work the land properly diminished. At first the pagan government cruelly persecuted the Christians; then the Christians, the pagans; then the orthodox, the Donatists; then the Vandals, the orthodox; and lastly, the Greek Church, whatever remained of heresy. Thus the population was pauperized and depleted until it fell an easy prey to invasion.

The Arabs followed the Byzantines; Islam succeeded Christianity. This meant that Africa, in the course of time, would have a share in the civilization that was some centuries later the highest in the world. Fostat, Kairowan, Tlemsen, Fez and Marrakesh became the new centers of industry, learning and refinement. Jurists, historians, scientists and philosophers taught in the academies, and poets sang at courts. One religion and one law once more reigned

thruout North Africa. But politically this realm could not remain united. Damascus and Baghdad were too far off. Local dynasties arose in Fez, Kairowan and Egypt.

In the thirteenth century the heirs of the Roman empire began to appear in Africa. Philip Augustus of France failed to conquer Egypt, and Louis IX died in vain in Tunis in 1270. The time was not yet ripe. Henry the Navigator went down the coast of Morocco, and Spain subsequently took possession of Portugal's claims; but neither power had much to give. The expulsion of the Moors was avenged by an era of piracy which could not be checked by Louis XIV, and the Barbary States sank into

MAP OF AFRICA SHOWING THE PROPOSED RAILWAY DEVELOPMENT OF THE CONTINENT

barbarism. The Turks, who invaded Africa in 1517, could not permanently extend their power beyond Egypt and were not prepared to prevent the downward course.

Napoleon dreamed of restoring Latin Africa, but was successful only in Egypt, tho the fruits of his attempt were to be reaped by Great Britain. The conquest of Algiers was begun by France in 1830. It took fifty years to accomplish it, and in that time France was guilty of much cruelty and disregard for the rights of the natives, for which she has had to atone. Tunis was annexed in 1881. Such appropriation of territory can only be justified historically by work achieved for civilization. Judged by this test, France has proved her right. She has continued the work of Rome, and has done what Rome could not do. She has brought into Africa a superior civilization, more regardful of the rights of man, of the duties to the past, and of the sacredness of personal conviction.

As a result of the recent "conversations," Germany gives its consent to the establishment of a French protectorate over Morocco, and there is no reason to suppose that the nations of the world will demur against this solution of a vexed problem. Morocco ceases to be an independent state. In its relations to foreign nations it will be represented by France. A French governor-general will be prime minister, and Frenchmen will be appointed as the heads of all governmental departments. France will take care of the finances and protect the Moroccans abroad and Europeans in Morocco. The Sultan, shorn of his power, will be extricated from his debts and relieved of his responsibilities and opportunities for mischief. All disputes are to be submitted to the Hague tribunal. There are still the Amazighs on the Atlas slopes to reckon with and—Spain. With the former some fighting may be necessary, and with the latter some "conversations." The Spanish claims will no doubt be whittled down, and it would be no serious loss to any interest concerned if, by friendly agreement and suitable compensations, both the Rifian coast and the cities of Tangier, El Araish and El Kasr could be a part of the French protectorate.

Italy has now officially announced its annexation of the Tripolitaine and Cyrenaica. There were unquestionably serious grievances. Turkey's attitude towards foreigners, especially Italians, in these provinces was indefensible; and her reliance upon the jealousies of the Powers to allow the continuance of a régime of inefficiency and wrong was provoking. But there was no excuse for resorting to war. It can not be said that Italy had exhausted all peaceful means of securing redress merely by protests to the Turkish government, or that she was actually forced to begin hostilities. The matter should have been submitted to the Hague tribunal.

In the conduct of the war it is evident that the laws recognized by civilized nations as binding upon belligerents have been infringed by both parties. The defenders of their homes have resorted to desperate measures, drawn no line between combatants and non-combatants, broken the rules of which they never heard, and committed atrocities which they knew were reprehensible. Unimpeachable evidence also shows that the invaders, infuriated by a warfare to which they were not used, have acted with inexcusable cruelty, killed defenseless women and children, and ignored the rules of mercy in regard to the treatment of the wounded and dead of which they must have been cognizant. While not technically bound by the Hague declaration, Italy has not done well in being the first nation to introduce into the element just conquered by man's genius the horrors of war, having dropped projectiles from airships upon the oasis of Ainzara and in other places.

The prestige of the nation, the maintenance of its present government, the harmony of church and state, and the freshly awakened sense of a great national destiny will not permit a withdrawal. Italy will have to pay the penalty in blood and treasure during the pacification of these African lands, in continued and increased military burdens, and in social disturbances and difficult economic readjustments. As an essentially noble and progressive nation, she will also have to pay the penalty that humanity unfailingly exacts in justifying her occupation by work that shall

inure to the benefit, not only of Italy, but of the conquered provinces, and the world.

Since the outbreak of hostilities Turkey has acted with admirable restraint and dignity, indicating her willingness to arbitrate, appealing to the judgment of the Powers, and protecting the Italians within her borders. It is a pity that a generation which has earnestly endeavored to reform the national life should have to suffer such losses, endangering the continuance of the good work. It rightly appeals to the sympathy of mankind. But, however we may protest, with Ezekiel, against the old adage, "The fathers have eaten sour grapes and the children's teeth have been set on edge," no nation can cut itself loose from the consequences of its past, and Turkey has a long past of incompetence, stupidity and disregard for righteousness for which to atone. Except for the peril of a reaction and the encouragement of the greed of ambitious neighbors, the loss of the provinces will not be a serious one; and the world, which will be a gainer by a change of administration, should not be appealed to in vain for assistance in maintaining the autonomy of Turkey in a critical period of reconstruction.

The new Latin Africa has before it serious problems. It cannot follow the old Roman policy of simply defending the littoral by a chain of fortresses, for it has interests beyond the desert, political and economic. It must be a road builder on a larger scale than ancient Rome. The success of its historic mission depends largely upon the iron horse. Railroads have already been opened, and many more are planned. Some of them have been begun, others are only vaguely projected. The following are the most important:

1. The Tunis-Tangier line. This is already finished, so far as Lalla Maghnia, 44 miles west of Tlemsen, on the Moroccan border. Its completion from this point to Tangier depends upon the result of the coming "conversations" with Spain. If the Rifian coast remains Spanish, the line may go south to Tangier, which, no doubt will be French, and Spain will be free to construct branches from Melilla and Tetuan, and from Tetuan to Ceuta, tho the uncertainty of tenure may delay the work.

2. The Trans-Saharan line. There is a railroad from Ain Sefra to Figig, which is being pushed to Tuat. It is planned to connect this road with Tlemsen and Oran, and to extend it southward to Timbuktu. The already existing line from Philippeville to Biskra may also be continued to Tuat. There is no obstacle in this direction.

3. The Atlantic Shore line. Of this projected railroad only one part, from Dakar to Bouetville, opposite St. Louis, is finished. According to the plan, its northern terminus will be Tangier, and it will run thru El Araish, El Kasr and Agadir. Whether it will pass thru the Spanish Rio d'Oro will probably depend on the coming agreement with Spain. It will be of special value in shortening the sea route to South America. From Dakar steamships will then proceed directly to Pernambuco, in Brazil, which is to be connected by rail with Rio de Janeiro and Montevideo.

4. The Trans-Sudanese line. This is a projected road from Dakar to Kuka, on Lake Chad, and from there to El Obeid. It will run thru Kayes and Sansandig to Timbuktu, thru Gando and Kano to Kuka, and thru El Beshr and El Fesher to El Obeid. For the distance between Kuka and El Obeid an arrangement will have to be made between France and Great Britain.

5. The Lagos-Kano line. This road, running thru British Nigeria, is already completed, and will, according to the plan, be connected with the Trans-Sudanese road.

6. The Tripoli-Kuka line. The shortest road to Lake Chad is from Tripoli, and the project has already been broached for a new railway from Tripoli thru Sokna, Schbka, Murzuk, Tummo, Kawa and Dibbela to Kuka. South of Tummo the consent of France would have to be gained.

7. The Gabes-Alexandria line. This is only vaguely projected. The first parts likely to be constructed are those between Gabes and Tripoli, and Tripoli and Benghazi. A connecting line to Tunis would then, no doubt, be built by France. As Cyrenaica, once so wonderfully rich, is again developed, a road

will be necessary from Benghazi to Derna and Marza Tabruk. The connection of this town with Abu Sehn, Abukir and Alexandria will probably follow.

8. The German equatorial line. This road is finished from Hickory, opposite Duala, to Bayong. The recent cession by France of territory in Kamerun will make it possible to continue this road to the Kongo. Permission seems already to have been given for a line thru the Kongo Free State, connecting Kamerun with German East Africa. A railroad has been begun there, extending from Dar es Salaam to Mrogoro, whence it is to be continued to Ujiji by way of Tabora.

9. The Trans-Kongo line. From Matadi, where the Kongo ceases to be navigable, to the cataract district at Stanley Pool, a railroad runs for 260 miles. From here to Stanley Falls (980 miles) the river can again be navigated. By an agreement with Great Britain, Belgium has secured the right to construct this road thru the Lado Enclave to Lado, on the Nile. Here it will join the Cape-to-Cairo line, from which a branch will go to Suakim, at Berber. Thus a water-and-railway route will be provided from the mouth of the Kongo to the Red Sea.

10. The Portuguese Trans-African line. A railroad to be called the Royal Trans-African line was projected by the Portuguese Government some years ago. That will certainly not be the name given to it by the republic, if it is completed. It was intended to run from Loanda to Malonje and then thru the Kongo Free State, where it would join a road thru Portuguese East Africa to Mozambique. Only the section from Loanda to Ambaça was finished. A road has been planned and begun from Lourenzo Marques to Swazi Land and the Transvaal.

11. The Cape-to-Cairo line. A fine railroad is finished from Cape Town thru Kimberly, Johannesburg and Pretoria to Katanga, on the border of the Kongo Free State. The plan is to construct the line to El Obeid, south of Khartum, the present terminus of the railroad from Cairo. It is probable that concessions have already been given for the construction of the part of this railroad which lies in the territory of the Kongo Free State.

12. The Eretria-Somali line. From Massawa a railroad has been projected to run south to Jibuti, and another to run down the Italian Somali coast. The two would have to be connected by a line thru British Somali Land.

13. The Jibuti-Sennar line. There is a French line already finished from Jibuti to Dire Dawa, not far from Harrar. The road from Harrar to Adis Ababa, the capital of Abyssinia, is under construction. From here it may be continued thru Gondar to Sennar.

14. The Massawa-Khartum line. This road is finished from Massawa to Asmara. From here it will be continued to Kassala. Its further course has not yet been fully decided, but it is probable that it will go to Khartum.

It will be noticed that all of these lines go thru Latin territory. Portugal may not be able to finish her projected line, and is said to have abandoned temporarily her plan. Germany and Great Britain will certainly adhere to theirs. It is to be hoped that they will be satisfied with permission of transit without cession of territory. The neutrality of the Kongo Free State is of vital interest to humanity. The Powers guarantee the neutrality of Belgium, and Switzerland could not urge any reasonable objection against the extension of the number of guarantors. A measure should be proposed at the coming Hague Conference for a recognition by *all* the sovereign and independent states of the neutrality of such nations as wish to take advantage of this privileged position.

The Latin nations — France, Italy, Spain, Belgium and Portugal—as well as Great Britain and Germany, have two decided advantages over ancient Rome. They are dominated by the new force of democracy, whose temper is such that it will not permit the exploitation of the continent for the benefit of absentee landlords or private syndicates of trade. And these nations have no desire to force upon Africa a new religion. The principle of toleration will prevail and work toward a religious fellowship not based upon an officially preferred doctrine or cult.

They reckon ill who count the recent outburst of lawless resort to the sword, or to so-called "pacific penetration" by

the leave of one or two dangerous rivals, as a sign of diminished confidence in the better method of settling international difficulties. New questions are pressing forward for consideration at the next Hague conference, and the public sentiment of mankind will express itself more unmistakably in the near future than in the past. There are problems that cannot be adequately dealt with by the supreme court of the nations, and which call for the speedy establishment of an international parliament.

In the light of all history, and in full view of the present situation, without condoning the wrongs done or expecting immunity from their natural consequences, it is impossible not to look upon the development of a new Latin Africa as a step forward in the direction of a higher destiny.

ITHACA, N. Y.

# Kipling's Psychology

BY MARION C. SMITH

I saw an old cow grazing in a meadow by a stream;
Her mouth was full of grasses and her eyes were full of dream;
I was filled with apprehension as I watched her switching tail,
For Kipling says the female is more deadly than the male.
But the day was warm and sultry, and while gazing at the cow,
With a red bandanna handkerchief I wiped my heated brow,
And—presto!—came a raging bull, and drove me up a tree,
For the he-male of that species is more deadly than the she.

And when at last I got away, full well I used my legs;
I jumped a fence, and scared a hen who sat upon her eggs,
With cacklings wild she waddled off, I felt myself grow pale,
For I feared the fearsome female that's more deadly than the male!
But the cock came running up, with wrath and ruffles on his brow;
He saw another rooster, and he blamed him for the row;
And the way they made the feathers fly was terrible to see,
For the he-male of *that* species is more deadly than the she.

Then a frenzied turkey gobbler got mixed up in the fight,
And I turned to leave the barn-yard, when I saw a startling sight—
A wide-eyed, wondering nanny-goat—she really made me quail,
For I thought, suppose this female *should* be deadlier than the male!
So I tried to shoo her off, but I had reckoned without Bill,
Who galloped up, and butted in, and helped me down a hill;
More mussed up and discouraged then I felt I could not be,
For the he-male of that species is more deadly than the she.

Some sheep were feeding near me, and I caught the old ram's eye,
So I went and begged for shelter at a little house near by;
And there I saw a woman, and my courage 'gan to fail,
For here *was* Kipling's critter who's more deadly than the male;
But as she let me in, I heard a person raging 'round,
Whose intemperate actions filled me with astonishment profound,
And I fled before the aspect of Tim Sullivan O'Grady,
For the gentleman of the species was more deadly than the lady!

SOUTH ORANGE, N. J.

# FAIRY OPERAS AND OTHERS

BY HENRY T. FINCK

AMERICANS are supposed to be much more interested in realism than in the realm of fancy, and most of us doubtless are; yet was not Edward MacDowell, our foremost composer, as romantic in his choice of subjects as any German poet? At the Metropolitan Opera House, last season, Humperdinck's "Königskinder" had eleven performances, or two more than even "The Girl of the Golden West," the sensational novelty by Puccini, who is at present, after Wagner, the most popular of all opera composers. Yet "Königskinder" is a fairy opera—not one of the Grimm or Andersen tales, but a story having so much of their style and atmosphere that it is difficult to differentiate.

There is in it a real fairy-tale witch, with a hut in the forest, and a flock of geese tended by a girl who is presumably a kidnapped princess. She has grown up without ever seeing a man. When the witch goes to gather poisonous herbs, and a prince comes along, the girl of course falls in love at sight. But she cannot flee with him, because of the witch's spell, and is therefore still in her clutches when a delegation of three men arrives. The realm has lost its king, and the three men have been sent from the town of Hellabrunn to consult the witch as to whom they are to choose as his successor. She replies: "Your king shall be whoever first enters your town-gate tomorrow on the stroke of twelve." When the time comes and the gate opens the astonished burghers of Hellabrunn behold the girl with her flock of geese, wearing a crown which the prince had left her. The prince is among the populace, unrecognized. He greets the goose-girl as queen, but the two are driven into the woods amid the derisive shouts of the Hellabrunners. After days of weary wandering in search of the prince's home they arrive at the witch's hut, now occupied by a woodcutter and a broommaker. On the verge of starvation the kingly children eat some of the witch's poisoned bread and die under a tree while the fast falling snow covers their bodies.

It might be said that the exceptional success of the opera based on this fairy tale was due in part to the popularity of Geraldine Farrar, who made of the goosegirl one of her most charming impersonations. But the story itself inspired her to her best efforts, as it had inspired the composer himself. That a large proportion of music-lovers are interested in fairy operas as such is further indicated by the lasting popularity of "Hänsel and Gretel," which has no Geraldine Farrar in its casts, altho, to be sure, Bella Alten is perfection itself as Gretel. This, too, is a story of children lost in the woods, entrapped by the witch who has a gingerbread house, but who is herself pushed into the oven she had heated to bake her latest captives.

That the New York public likes also the blood-and-thunder operas of the Italian "Verists" is shown by the lasting popularity of "I Pagliacci" and "Cavalleria Rusticana" given as a double bill—especially when Caruso is in the cast. For the most part, no doubt, these utterly diverse kinds of operas appeal to entirely different classes of hearers. It was, nevertheless, a happy thought on Conried's part to mingle these by giving one of each kind—"Hänsel and Gretel" and "I Pagliacci"—on the same evening, besides having special afternoon performances at popular prices of that fairy opera, for children.

Giulio Gatti-Casazza, the present manager, not only has followed Conried's good example, but he has borne witness to the local popularity of fairy operas by hunting for more of them. Kurt Schindler, the conductor of the MacDowell Chorus, who formerly was a pupil in Munich of Ludwig Thuille, called his attention to the fact that the Tyrolean composer had written an opera, "Lobetanz," which doubtless would appeal to the thousands of New Yorkers who have taken to their hearts "Hänsel and Gretel" and "Königskinder." Mr. Gatti-Casazza thereupon attended a performance of it in a German opera house and promptly wrote to Berlin to order for its New York production one of those artistic and sumptuous stage settings for which he has become famous. So eager, moreover, was he to place this novelty before the public that, contrary to all precedent, he produced it during the first week of this season. It was sung at the Saturday matinee to a crowded audience and was cordially applauded. Since then it has been sung repeatedly, and has achieved the distinction of keeping even boxholders in their seats until the curtain had fallen on the final scene.

While the plot of "Lobetanz" is not concerned with witches or supernatural incidents, the story nevertheless belongs in sentiment to the fairy-tale order. It was written by Otto Julius Bierbaum, well known in Germany as a poet and writer of fiction. His Lobetanz is a wandering fiddler who one summer day jumps over the fence of the royal garden and finds himself surrounded by a bevy of pretty blondes and brunets, who, after chiding him for intruding, tell him that the princess, who used to be so happy, has fallen into a mysterious state of melancholy. The king has, they continue, tried in vain to cheer her up by

THE POETIC GOOSE GIRL OF HUMPERDINCK'S OPERA

The part was [illegible] of the Metropolitan Opera Company. When Miss Farrar take curtain call [illegible] the Boston performances the [illegible] by Mr. Conried [illegible] Opera House [illegible] Engelbert Humperdinck, but that of [illegible] being the case in New York.

offering her anything her heart may desire, but in vain. As a final effort he has made arrangements for a rose festival, this very day, at which the court poets and singers are to try the power of music to heal wounded hearts. The girls cover Lobetanz's shabby clothes with roses, and he remains to see the procession, including the poets, the king and the princess. The pale princess takes her seat beside her father and the poets begin to sing in eager rivalry, the result being dire discord. Suddenly the sounds of a fiddle are heard, to the indignation of the court singers. The princess, however, begs the king to invite the fiddler to sing. Lobetanz comes forward and sings a song of love, recalling the happy day when he met her, a girl of sixteen, alone, and they exchanged kisses. The pale princess promptly faints away. "A sorcerer! Hang him!" cry the court poets, but Lobetanz makes his escape.

Once more, in the second act, he meets the princess alone. Seated on a high platform under a linden tree, they again exchange kisses and vows of love, but are suddenly interrupted by the king and his retinue coming thru the forest. This time Lobetanz is captured and hurried off to the prison, in which, when the curtain rises on the third act, we see him amid a number of culprits condemned to be hanged. They taunt him about his adventures with the princess. He retorts by singing them a grim ballad of death, to which they dance as well as their chains permit. Suddenly the wide door opens and the hangman, all in scarlet, appears to take Lobetanz to the gallows. The scene changes to a desolate plain, in the center of which is a gibbet, flanked on each side by a man in scarlet. In the dawning light the populace assemble to witness the hanging. King and judge arrive, with the hangman and the prisoner. The girls, all in mourning, follow, and at the end of the procession is the princess, who has never recovered from her swoon and lies on a bier as one dead. The judge reads the sentence and predicts that the death of Lobetanz will restore the princess. "How could my death mean life to her?" exclaims Lobetanz, and turning to the king, he begs permission to play once more. "I feel as if your child's life lay in my fiddle!" "Play!" cries the king, "and sing, and if she comes to life, you shall be my son." Hardly has the music begun when the princess sits up. The fiddling continues, and ere long all—king, hangman, judge and courtiers—are dancing to its merry tune. Lobetanz marries the princess, and "if they have not died since, they are living to this day," as the German fairy story usually concludes.

Possibly this merry ending had something to do with the favorable reception of Thuille's opera—so few modern operas end happily! The fine scenic effects accounted for something, too. In this respect Mr. Gatti-Casazza has revolutionized the Metropolitan; the shabby stage settings of the Grau regime are for the most part a thing of the past. The singers, headed by Gadski and Jadlowker, contributed their share to the success; but to the composer fell the chief honors, notwithstanding that the first two acts are on the whole rather dull. The fiddle music which has such a wonderful effect on the princess is commonplace. In the first act, the rose-girls sing a pleasing chorus; the efforts of the court singers have value from the realistic point of view; and the love song of Lobetanz is good. The second act has the merit of brevity and little else, altho Lobetanz's song has an attractive folk-tune character. The music assigned to the princess thruout these two acts is usually as anemic as she is herself.

Were it not for the third act, this opera would not have been kept alive in Germany or been produced here. With this act we enter an entirely different musical world; it does not seem as if it could have been penned by the same composer, so surprisingly does it contrast with the preceding acts by its vivacity, its forcefulness, its realism. To be sure, the situations are as unlike those of the first and second acts as unlike can be; but that does not account for the whole difference. The music of the third act is not only more alive, more highly colored, more elaborately constructed, but it has more invention, more ideas. Of the Wagnerian reminiscences which abound in the first and second acts there is very little. It is Thuille, pure and

THE SCAFFOLD SCENE IN "LOBETANZ"

The hero of Bantock's opera is a wandering fiddler, but a more youthful one than the Spielman of "Königskinder." In spite of the grotesque accessories of the scene, this opera ends like the best of fairy tales—that is the biggest "And so live modern operas end happily."

simple—a new note in the operatic gamut. Modern opera composers have means for expressing the grotesque and the gruesome of which those who wrote before Wagner, Liszt and Berlioz had no conception. In the dance of the chained prisoners Thuille uses the wooden clank of the xylophone, the rattle of the castanets, and the uncanny sounds of the muted horns and trumpets most effectively; while the brutal blare of the three trombones hurling their hollow chords as they stand near the gibbet strikes terror to the soul. In delicious contrast to this is the mellow music of the horns and strings which accompanies the procession that bears in the princess; and the final waltz of life and love brings the opera to a pleasing termination.

The next novelty at the Metropolitan is Leo Blech's "Versiegelt" ("Under Seal"), which is in one act and will probably be sung on the same evenings with "Lobetanz." Wolf-Ferrari's "Donne Curiose" will follow soon, with Geraldine Farrar in the principal rôle. Whether the "Cristoforo Colombo" of Franchetti will be produced seems doubtful, but the famous Russian opera, "Boris Godounoff," will probably be staged, altho it is difficult to see how it can succeed unless Chaliapine or Renaud is engaged for the all-important leading role. Among the promised revivals of operas not heard for some years, Mozart's "Don Giovanni," Boïto's "Mefistofele" and Rossini's "Wilhelm Tell" are of particular interest.

It must be said in behalf of the present manager and directors of the Metropolitan that they are doing more for the American composer than was ever before done for him. It is true that Victor Herbert's excellent opera, "Natoma," was not put on the Metropolitan stage

by Cutler Cleaves but by Dippel and his Chicago-Philadelphia company. But the New York company produced Converse's "Pipe of Desire" and would have staged Nevin's "Twilight" before the end of the last season had it not been found that it needed revising. It is in the repertory again, and in February or March those who are interested in home-made opera will have an opportunity to hear Horatio Parker's "Mona," the opera which received the $10,000 prize. Its libretto has already been published by Dodd, Mead & Co., as a separate book, while the Schirmers have printed the score, so that there will be plenty of opportunity to "study up" beforehand. Professor Parker is not of the Strauss-Reger school, so it will hardly be deemed necessary to issue also a guide to the themes of his opera.

Reginald de Koven, who undertook a few years ago to write a grand opera, has not yet done so, apparently, but he has been elected president of the National Society for the Promotion of Grand Opera in English. The chief object of this society (which would inspire more respect if its chief advocate were not a translator of librettos) seems to be to persuade the directors of the Metropolitan to sing foreign operas in English versions. This would degrade our institution to the level of foreign opera houses which are obliged to produce all operas in one language because they cannot afford to engage Italian singers for Italian operas, Germans for German operas, French for French operas. Most foreign vocalists would be hampered greatly if they had to sing in English, and it would take years and a congress of poets and composers to provide satisfactory translations. Those now available are entirely inadequate.

NEW YORK CITY.

# What Is Life?

BY PETER COOK

[The following article was sent to us as a comment on an editorial note in our issue of November 12 on an utterance by Professor Verworn, an exchange professor at Columbia University, in which he denied, from the side of science, the immortality of the soul. The present writer shows that altho he reaches the conclusions of materialistic philosophy, he reaches them from a quite opposite Monism.—EDITOR.]

IT would be difficult to mention a name of greater authority in his special department, that of cellular physiology, than Max Verworn, and he has made all the world his debtor in writing that masterly treatise on the "General Physiology of Life," which stands unsurpassed as an example of careful reasoning and lucid scientific exposition. It is safe to say there is no man living who knows more of the mysteries and secrets of nature hid away in the living organism than Professor Verworn, but it seems the American public wholly misunderstands him. He is being taken for a materialist, while the fact is, to put it bluntly, so far as his philosophy goes, Professor Verworn does not believe in matter at all. For him, the final reality consists of nothing but psychical elements: he is a Psychic Monist. I need only refer to the section on Psychomonism in the first chapter of his "Allgemeine Physiologie," pages 30 to 43, and will quote a few sentences:

"There is only one thing existing, that is the soul (Psyche)," p. 39; "Attributes of matter are merely concepts of the soul"; "Material phenomena are properly explained only by being reduced to their psychic elements," p. 41.

These fundamental conceptions underlie all that Verworn says, and since the American public is not over familiar with this sort of philosophy, it is no wonder he is misunderstood. To the question of the editor of THE INDEPENDENT about "mechanistic force in-

herent in atoms," as explanatory of life-phenomena, Professor Verworn doubtless would answer that there is no mechanistic force at all, for he says, page 43, an "atom is not an element of reality, but a complicated concept" [of the soul.] It is strange, then, that he should be accused of trying to get "rid of the invisible soul" when that is the only thing which he admits as the final reality.

It is true Professor Verworn has always been an opponent of vitalistic theories, but largely because in his philosophy he has no room for an ultimate distinction between matter and soul. He resolves all attributes of matter into concepts or elements of soul. It is hardly the Christian theologian, but rather the chemist and physicist, that will have his final quarrel with him.

Such a monistic philosophy, it seems to me, should be very welcome to the theologians, for it is just as easy to draw conclusions from it, the exact opposite of Professor Verworn's. If the only actual existence there is, is the soul, it should not be difficult to prove all sorts of immortalities, but Professor Verworn is a scientist and does not draw such tempting inferences, he prefers the sourer grapes.

On the other hand, however, it is true, Professor Verworn cannot be taken as a complete representative of modern scientific views. In a way he must be classed with the camp that would identify life with organic chemistry and this camp is losing ground in common with the adherents of the older Darwinian theories of evolution. With the waning faith of scientific men in the all-sufficiency of these older evolutionary views, there is something of a return to vitalism, but it is of a different sort from that of Haller or Johannes Müller. To scientific men today life is a greater mystery than it ever has been to mankind in the history of the world. All the new knowledge which the scientific laboratories have brought us has simply shown us how insufficient and utterly untenable all our theories concerning life are. We admit its existence as a reality, but we have not an adjective to qualify it. We know it is not a force in any ordinary sense of the term. It cannot be weighed or measured in footpounds, it is not an energy, exerts no pressure, cannot be converted into anything else, has no dimensions and no mass. It is not a chemical affinity. It is mere illusion to regard it as ever so tenuous an emanation of matter. It adds no new quality to any atom or molecule. It cannot abrogate, change or oppose any chemical or physical law. Yet it guides and directs both chemical and physical forces, exhibits purpose and will and in its higher spheres also sensation and consciousness. It is a pointblank contradiction and very nearly a philosophical impossibility in scientific systems. What is it?

# Suppose

BY WALTER KELLEY MORLEY

Suppose the blossoms heaped upon men's biers
Were strewn along the highways of their life;
Suppose the praises chanted in dead ears
Were whispered tenderly in hours of strife;
Suppose the hearts, that pour their bitter tears
Upon our graves, had lent their strength in years
When just one heart could turn a losing fight,
And make us strong by Love's supernal might;
Suppose! Only suppose!

# Journalism in Japan and America

BY HAMILTON HOLT

[Mr. Holt, our managing editor, has been journeying during the last four months thru Japan, Korea and Manchuria in company with Mr. Lindsay Russell, president of the Japan Society of New York. On November 11 a dinner was given in their honor at Tokyo by the International Press Association, an organization of the leading Japanese and foreign journalists of the capital. We herewith publish the substance of Mr. Holt's remarks.—EDITOR.]

As international friendship and trade depend upon the amount of accurate knowledge nations have of one another, it follows that the press, upon which the diffusion of intelligence most largely depends, is the most powerful agency in existence for promoting good relations and international peace.

But how can the peoples of any two countries understand each other—or, to be specific, how can the peoples of Japan and America understand each other—if Japanese journalists are ignorant of America and American journalists are ignorant of Japan?

In the United States we have about 2,500 daily papers, over 15,000 weeklies, and nearly 3,000 monthlies. Yet I doubt if there is a single one of the editors of these journals who can read Japanese and very, very few who have ever visited Japan. An exceedingly small number of American papers have a Japanese news service, tho much too brief and bare. Fewer still have special correspondents in Japan or print occasional articles about things Japanese. But even these journals have no knowledge of Japan based on any special or personal study of their responsible editors.

Is it such a wonder, then, that when a misunderstanding arises, erroneous opinions about Japan, intentional and unintentional, are rife, and false public sentiment is engendered in America that does incalculable damage to our good relations?

In Japan, while many of your editors and reporters speak and read English fluently, and are therefore much better qualified to form correct opinions of America than our journalists are of Japan, I understand that your press service from America is even more inadequate than is ours from Japan. I am told you spend less than $13,000 a year on your news service and only $8,000 or $9,000 a year on your special correspondents, some of whom send you quite inferior matter from an American point of view. Your correspondents in the United States who are Japanese often do not understand sufficiently American conditions or the standing of our papers. Thus when a yellow journal in San Francisco publishes a slander about the Japanese, your correspondent at once cables it as representing the sentiment of California, if not of the entire American continent.

Not only should you have better informed correspondents in the United States, but you might well consider the advisability of spending more money on your news service. News service and special correspondence perform entirely different functions in a newspaper. The news-gatherer cannot or should not color his dispatches with opinions and interpretations. The special correspondent, on the other hand, is expected to be an expounder rather than a reporter. As it takes a month, however, before his words can be read across the Pacific, there is always the danger that what he says may become stale. If you could see your way to improve the quality of your special correspondence and at the same time increase the quantity of your cabled news, I think in the course of a reasonably short time it would have not only a very good effect on the public opinion of Japan in respect to America, but it would also prove a profitable money investment.

In the United States I do not expect that our editors can be prevailed upon to learn Japanese. But it is quite possible that all our leading journals may be made to realize the importance of im-

proving their Japanese news service and of printing more reliable material about Japan. If they could be furnished, say once a week, with an abstract in English of the more important editorials in the current Japanese press, and given such other printed matter as year books, digests of trade and commerce, a publicity campaign could be carried on with every expectation of most gratifying results. With proper financing the Japan Society of New York, or the Oriental Information Agency, or some other specially created organization composed of distinguished Americans and Japanese, whose names would be a guarantee of the quality and impartiality of the service to be rendered, could easily supervise such a bureau of Japanese information, and the American editors would welcome its advent, and use the material it furnished, just as far as it had the ability to meet American newspaper needs and conditions.

But the greatest thing of all at the present moment to promote good relations between Japan and America would be, in my opinion, an exchange of visits of very distinguished American and Japanese journalists, traveling either in groups or individually, as may seem best. Suppose the editors or proprietors of say the thirty leading daily, weekly and monthly organs of American public opinion were selected to come to Japan next year and make you a three or four months' visit, and then the following year a number of Japanese journalists—you would know how many—should be sent to the United States, is there any doubt as to the almost incalculable effect such an exchange would have on the good relations of our two countries, to say nothing of on the editors themselves.

Such visits would probably cost more money than the editors could well pay out of their own purses, for editors in America are not all as rich as Mr. Pulitzer, however wealthy they may be in Japan. Some of you may have heard of the American editor about to go to Europe who was asked by the publisher how he would like to have his salary sent him, and the editor replied, "In postage stamps."

The financial aspects of the matter might well engage the attention of the peace societies and commercial organizations of Japan and America, who, no doubt, could find ways and means to carry it into effect.

A suggestion that I have met with here in several quarters is that the law of libel should be extended so as to prevent the publication of false news and rumors calculated to create ill-feeling and unrest. There seems to be no doubt that there is persistently and frequently promulgated in widely read newspapers both here and in America so-called "foreign" news, fabricated for the purpose of political intrigue, class interest or mere financial profit. Such "forged" news poisons the hearts and minds of people against people and is calculated to lead to disastrous consequences. Suppose a paper that had libeled a friendly Power was brought into court and made to divulge the name of its foreign correspondent who sent the offensive news as well as the editor responsible for its publication, and had to print on the front page in large type the verdict of the court, would not nearly all this slandering of nations by foreign papers cease, and a great step toward the prevention of international misunderstanding, enmity and even war be taken?

While in full sympathy with the main purposes of this interesting suggestion, I think there are some practical difficulties in the way of its adoption, at least as far as my country is concerned. It is true that the United States Congress could enact an international libel law applicable to papers having an interstate circulation, tho such a thing has never been done. Our libel laws have always been made by the separate States and not by the Federal Government. It is almost inconceivable that our forty-six State Legislatures, or any considerable fraction of them, could be made to agree upon any one law.

Then you must remember that the yellow journals—and not all of them, either—are about the only papers in America who libel Japan. By far the great majority of American publications are as sincerely warm in their friendship for you as they were when they universally supported the cause of Japan in the Russo-Japanese War.

Our yellow papers are issued and sold

in many daily editions. We have "Night Special Editions" published before 10 o'clock in the morning. All these editions are sold on the streets by newsboys, and not by subscription, as is generally the case in Japan. They will not be purchased unless it is announced in red ink, in type four inches deep across the page, that a sea serpent 1,000 feet long was seen in New York harbor, or that the French women are refusing to bear any more children, or that Japan is preparing to land 500,000 troops in California and fly over the Rocky Mountains in aeroplanes to seize the rice fields of Louisiana. All these stories are more interesting to read about than our proposed humdrum arbitration treaties with England and France, or the dry statistics of the import trade in Japanese silk.

I am far from making any wholesale condemnation of the yellow press. It champions the masses as no other papers do. It frequently forces reforms from selfish politicians and the privileged classes which all right-minded men agree ought to be granted. On the other hand, the yellow press appeals to the baser passions of the populace, and as far as international relations are concerned, it instils in the popular mind a pseudo-patriotism which is little less than national self-conceit. The yellow press always urges a big and ever bigger navy to avenge supposed insults. Of course, some rival power is only waiting a favorable opportunity to pounce on us. Fifteen years ago it was England. Ten years ago it was Germany. Now it is Japan. Shortly Japan will be forgotten and then doubtless we shall be warned to defend our hearthstones from our old and tried friend France.

The danger is not so much from the utterances of after all a comparatively few yellow papers as from the fact that the other papers have not the necessary knowledge of Japan to correct all these slanders.

I am happy to tell you, however, that the yellow press in America has already reached its zenith. We now are witnessing a positive reaction against it. Tho it still wields great power thru its wide appeal to the masses, it is losing its prestige as a moral and political force, and that presages the dawn of a better day in American journalism as well as in international relations.

I have spoken of conditions prevailing in the press of America as far as Japan is concerned. Perhaps you will expect me to say something about the Japanese press. As I do not read or speak Japanese, I can make no personal comparisons of the press here and at home, and I am quite unwilling to offer you any second-hand opinions.

Your foreign press, however—at least that which is written in English—I have read with much interest and some care. I think the news in your foreign press is well proportioned, the reading matter excellently written, and the editorials exceptionally clever. On the other hand, the attitude of some of these papers is too often characterized by a lack of courtesy and a plethora of hypercriticism, which I cannot but believe has tended to foment and maintain international misunderstanding and ill will. Please do not misunderstand me. I have no fault to find with the attitude of these foreign papers which feel it necessary to criticise the Japanese Government. A critical press is a good thing for any government, and I see no reason why Japan should expect or desire to be an exception. What I refer to is its wearisome controversy over editorial statements in rival papers, such as American editors used to regale their readers with thirty or forty years ago, and in general making mountains out of molehills. Still, I am told that conditions in these respects were much worse in the past than they are now, so perhaps the balance is on the bright side after all.

In conclusion let me congratulate you on having formed in this city an International Press Association. We have press clubs in many cities in America. But I believe we have as yet no international organization of journalists. The surest way for the press anywhere to work together for the common good is for the journalists to become personally acquainted. It is only when we do not know men that we distrust them and impute to them wrong motives.

This association, then, should do a great deal of good in Japan and thruout the world. The foreign journalists will learn here from their Japanese col-

leagues the truth about Japan, and the Japanese journalists in turn can depend upon their foreign brothers to give them correct information about events in Europe and America.

I trust the association will grow in prestige and power until it has its own well-equipped clubhouse and is universally recognized as standing for all that is best in the journalism of Japan and the Far East.

NEW YORK CITY.

# An Answer to Dr. Sheldon

BY LUCIUS F. C. GARVIN

[We have received many answers from our readers to the recent article by Rev. Charles M. Sheldon. We print the following communication from Ex-Governor Garvin, of Rhode Island, who has devoted his time, when not engaged in politics, to the study and practice of medicine.—EDITOR.]

TO every "Why?" enumerated by Rev. Charles M. Sheldon in THE INDEPENDENT for November 23 there is some answer. Perhaps not all of them can be answered completely and satisfactorily. I shall only deal with those which relate to physicians and druggists.

One of his queries is, Why is it that a consulting doctor, when afterwards called up by telephone, refuses to answer the questions put to him by the husband of the patient?

A physician in consultation, altho called in the interest of the sick person, is the guest of the attending physician. Any advice which he has to give as to treatment is directed to the attending physician. In accordance with our code of ethics the opinion of the consulting physician, both concerning treatment and the nature of the malady, must be given in the presence of his host.

The reason for this provision of the code is not hard to understand. It is assumed that the family has confidence in its regular physician, or he would not be employed. Hence any information concerning the patient desired by the head of the family, who may be absent at the time of the consultation, is properly received thru the host rather than thru the guest. Comment upon a case, additional to that given at the time of the consultation and in the presence of the family physician, may easily cause trouble both between the physicians and between the attending physician and the family.

As to the income of physicians, surgeons and clergymen, the question is asked by Mr. Sheldon, "Why" that of the last is smallest of the three.

The average income of clergymen is found to be about $600. I have never seen that of physicians and surgeons stated, and indeed it is difficult to arrive at, since medical men have a fee system instead of a salary. Men at the top of the profession get large fees, especially the surgeons, but the average income of all is probably not much in excess of that received by ministers. It is estimated that practitioners of medicine and of dentistry get paid for not more than two-thirds of the work which they perform.

To the "Why" of charges made by druggists for the putting up of prescriptions, an answer may be found which possesses some weight. Pharmacists who fill prescriptions are obliged to keep in stock a large number of drugs, many of them expensive, and, all told, at a very considerable outlay. At least one person employed must be qualified for the business and paid a fair salary. Furthermore, every prescription filled means responsibility, and sometimes the ingredients cost the dealer many times five cents.

LONSDALE, R. I.

# Literature

## Chesterton in Many Moods

The rapidity with which new books by Chesterton accumulate on the shelf of a reviewer gives grounds for the suspicion that he is a syndicate. Surely no one man, however large, could turn out so much and so varied work as he does. But, on the other hand, is there any man capable of serving as Chesterton's proxy? Doubtless it would be easy to imitate his tricks of style, but certainly not to equal his ingenuity in discovering novel points of view and his fertility in the invention of striking illustrations. Who else can mingle superficialities and profundities, absurdities and sublimities in such inextricably delightful confusion?

Who else, for example, would use the detective story as a medium for the conveyance of philosophical and moral lessons? That is what he did in "The Man Who Was Thursday," and now his theories of life appear under a new and much more subtle guise in *The Innocence of Father Brown*.[1] The little, quiet, gray-eyed priest, with his air of guileless simplicity, outrivals the feats of Old Sleuth and Sherlock Holmes, for he is a true expert in criminology, trained by years in the confessional, wherein every penitent is a teacher. Chesterton's method in these stories is much the same as he employs in his essays; that is, he piles up paradoxical impossibilities, and then by some simple expedient resolves them into apparent reasonableness. The author's obvious enjoyment of his own ingenuity adds to the reader's delight. It would be interesting to know whether he has in mind the solution when he lays out the plot or whether he is not playing a game with himself, like jackstraws, pitting his skill as a disentangler against a muddle of his own making.

But Chesterton, not content with his success in journalism, biography, literary criticism and fiction, longs for other worlds to conquer. He aspires to nothing less than a national epic, and in *The Ballad of the White Horse*[2] he tells a tale of the ancient fight for Christian civilization against heathen nihilism. Now, when an Englishman takes to writing poetry about Arthur or Alfred we naturally surmise that he has his eye on the laurel. The recent revival of patriotic poetry in England insures that there will be no lack of worthy candidates when the next vacancy occurs, whichever party may be in power at the time. Matched against Kipling's imperialistic verse we have, for instance, this ballad written by a "Little Englander" if there ever was one. When Alfred in his retirement among the marshes of Athelney is called upon to drive the Danes from England, he replies:

> "When all philosophies shall fail,
> This word alone shall fit;
> That a sage feels too small for life,
> And a fool too large for it.
>
> "Asia and all imperial plains
> Are too little for a fool;
> But for one man whose eyes can see,
> The little island of Athelney
> Is too large a land to rule."

For Chesterton is not "an idle singer of an empty day," as Morris called himself. He digs up the dust of one of the "seven sunken Englands," not in an antiquarian mood, but in the true spirit of an ancient bard, to inspire us to present-day conflicts. Tho his verse is uneven in tone as well as meter, and his stanzas are apt to limp in their last lines, he has many striking images and unforgetable phrases. The Danes of our day against whom he would have us take up arms are the Neo-pagans, whose pessimism and amoralism are professedly based on scientific heredity and determinism. King Alfred, in his vision before his last great fight, even goes so far as to designate their books by name, a remarkable instance of prophetic insight.

[1] The Innocence of Father Brown. *By G. K. Chesterton.* New York: John Lane Company. $1.30

[2] The Ballad of the White Horse. *By G. K. Chesterton.* New York: John Lane Company. $1.25.

"By terror and the cruel tales
Of curse in bone and kin,
By weird and weakness winning,
Accursed from the beginning,
By detail of the sinning
And denial of the sin;

"By God and man dishonored,
By death and life made vain,
Know ye the old barbarian,
The barbarian come again—

"When is great talk of trend and tide,
And wisdom and destiny,
Hail that undying heathen
That is sadder than the sea."

Traces of his interest in Alfred may be seen in several of the essays republished in *Alarms and Discursions*;[3] for example, "A Romance of the Marshes," that embattled island in the Parrett where King Alfred held his last fort against invaders "in that war that nearly washed us as far from civilization as the Solomon Islands"; "The White Horses" of Salisbury Plain, and "Ethandune," the scene of Alfred's victory, which can be located nowhere, "and yet but for this doubtful thing you would have probably no *Daily News* on Saturday and certainly no church on Sunday." Alfred, he says, "was defeated by the barbarians again and again; he defeated the barbarians again and again; but his victories were almost as vain as his defeats. Fortunately, he did not believe in the Time Spirit or the Trend of Things, or any such modern rubbish, and therefore kept pegging away." It is impossible to specify all the other essays contained in this volume. The most characteristic, that is to say the best of them, are "Gargoyles," "The Anarchist," "The Sentimentalist" and "The Three Kinds of Men."

Chesterton is most effective, like medicines, when taken in small doses and at intervals. For that reason, pocket editions of his writings are desirable, such as *Five Types*,[4] a little thin volume with pictures pasted in and containing essays on Byron, Pope, Stevenson, Rostand and Charles II, a selection from "Twelve Types."

The large volume of *Criticisms and Appreciations of Dickens*[5] is composed of his prefaces to the separate books of Dickens. Altho not so important a piece of work as Chesterton's biography of Dickens, they are well worth bringing together in this form, because they form not only a brilliant piece of literary interpretation, but because they show that it is possible to write prefaces to the classics which will increase the desire to read the book instead of dampening one's ardor at the start with a mass of dry and trivial details of the author's life and environment. Chesterton has the first requisite of a good introducer, an enthusiasm for his subject and a belief in the importance of his message for the times in which we live. His comparison of Dickens and Thackeray, if not quite fair, has at least sufficient point to suggest thought.

"Thackeray has become classical; but Dickens has done more; he has remained modern."

"There was a painful moment (somewhere about the eighties) when we watched anxiously to see whether Dickens was fading from the modern world. We have watched a little longer, and with great relief we begin to realize that it is the modern world that is fading. All that universe of ranks and respectabilities in comparison with which Dickens was called a caricaturist, all that Victorian universe in which he seemed vulgar—all that is itself—breaking up like a cloud-land. And only the caricatures of Dickens remain like things carved in stone."

But whether his medium is fiction, criticism or editorial, Chesterton is always a moralist, differing, however, from most moralists in that he is never prosy and never directs his preachments at obsolete evils and deceased sinners. He is, therefore, a man worth listening to, and few writers of today have a wider audience.

EDWIN E. SLOSSON.

**The Cage.** By Harold Begbie. New York: George H. Doran Company. $1.20.

"Becky Sharp said it was easy to be virtuous on ten thousand a year: Christ said it was impossible." Mr. Begbie quotes the above sentence twice in his new novel, *The Cage*, but in his attitude toward divorce, which is the theme of the book, he repudiates the teaching of Christ on the subject, taking the extreme view that divorce is not justifiable even under circumstances of unusual hardship. Anne Peyton finds herself at nineteen the wife of a man both drunken and

dissolute. When her life becomes intolerable she leaves him and lives quietly and not unhappily with her grandmother, who is a remarkable and wholesome personality. Years later, the husband reforms his bad habits thru the influence of Christian Science, and sends for his wife. That is a bold outline of the story. The point is that there is not a particle of love for him left in his wife's heart; there are no children to be considered; she has learned to love a man who has always been noble, pure of mind and clean of life; she does not think of marrying him, but wishes his friendship and to live out her life in peace. Yet the Canon who advises her, and the author himself, approve her return to her husband, "to save his soul and hers"; the acceptation of life's "inevitable sorrow" is urged upon Anne. If it were "sorrow" alone, her mentors would be right, but they appear to ignore the spiritual degradation of a loveless marriage. Many will disagree with Harold Begbie's extreme view, which is, of course, that of the Churchman, not so certainly that of Christ; but it is a tonic, bitter and bracing, after the malarial novels that take the other extreme of easy divorce for any trifling cause.

**Social Forces in American History.** By A. M. Simons. New York: The Macmillan Co. $1.50.

It is too early to say whether the true interpretation of modern industrial society is to be along the lines of "insurgency" or socialism. These are certainly the two most active propagandas of today, and their adherents are equally clear and sure in the analysis of society to which their theories lead them. We have here an interpretation of American history from the pen of a professional socialist, half-trained in Professor Turner's theories of the West and Professor Commons's doctrines of industrialism. It is interesting, inaccurate and biased. With rare success, the author has selected exceptional and unusual incidents, upon which he has based his thesis of the upward struggle of mankind against the grasping capitalist. The book is full of the lingo of socialism, used, as so often is the case, in place of fact or argument. Occasionally his descriptions, tho adverse, are happy. We have enjoyed his comment upon the decade of the Centennial:

"It was the time when the American dollarocracy of beef, pills, soap, oil, or railroads became the worldwide synonym for the parvenu and the upstart. In literature it produced the cheap, wood-pulp, sensational daily, the New York *Ledger* type of magazine, the dime novel, and the works of Mary J. Holmes, Laura Jean Libbey, and 'The Duchess.' In industry its dominant figures were J. Gould and Jim Fiske. In politics it evolved the 'machine,' the ward heeler, and the political boss, with Tweed as the finished sample. Its religious life found expression in sensational revivals upon the one hand, and a cheap negative atheism upon the other. In public architecture it erected the hideous piles that now disfigure our cities, and for private homes it added the type of the 'Queen Anne front' and the 'Mary Ann back.' Its triumphs in sculpture were the bronze and cast-iron dogs with which the millionaire decorated his front lawn. It moved forward to the music of Moody and Sankey hymns and ragtime bands, while its one contribution to the pictorial art of the world was the chromo."

Were it not that he takes this sort of thing seriously, we should appreciate it as satire. If socialism is ever to receive a solid historical setting in America, its history must be based on facts less distorted than these. No writer can have permanent value who can say and believe that "the organic law of this nation was formulated in secret session by a body called into existence by a conspiratory trick, and was forced upon a disfranchised people by means of a dishonest apportionment in order that the interests of a small body of wealthy rulers might be served."

**Statesmen of the Old South, or From Radicalism to Conservative Revolt.** By William E. Dodd. New York: The Macmillan Company. $1.50.

We have come to expect graceful and illuminating biography from the pen of Professor Dodd, and this little volume justifies our confidence. None of the young Southern historians has an easier pen or a keener insight into the section whose history he has made known. Composed as popular lectures, these essays on Thomas Jefferson, John C. Calhoun and Jefferson Davis contain much of interest to the general reader. They are non-technical and entertaining, and ought to be read by citizens who want to know what the new South thinks of the old.

**The Kingdom and The Messiah.** By E. F. Scott, D. D., Professor of New Testament Literature in Queen's University, Kingston, Canada. Imported by Charles Scribner's Sons. $2.

The relation of Jesus's thought and teaching to the apocalyptic views current in his time is one of the most intricate and difficult problems in present day New Testament investigations. Professor Scott has singled out the two cardinal apocalyptic ideas of the kingdom of God and the Messiah, and after tracing in outline the course of their development in the Old Testament and the later Jewish literature has considered at length the attitude and teaching of Jesus in reference to them. He adopts a modified eschatological view, holding that the apocalyptic hope supplied Jesus with the basis and framework for His spiritual teaching and that some of His rules of conduct were meant only for the short period which would elapse before the establishment of the kingdom. But Jesus, according to Professor Scott, differed from the apocalyptists in looking not for the destruction of this present world, but for its absorption to a large extent by the new kingdom which was near at hand. The author thinks that the consciousness of His Messiahship gradually took possession of Jesus's mind until he fully identified himself with the traditional Messianic deliverer and expected to be the head of the kingdom which was soon and suddenly to be ushered in. In arriving at this conviction, however, Jesus modified the Messianic conception by transfusing it with His own lofty spirit. The conclusion of Professor Scott is that the apocalyptic elements in the Gospels form but the shell or necessary media for the transmission of Jesus's message, which is the real kernel of Christian faith and has a truth and validity of its own not at all dependent on the accidents of revelation. The book is moderate and reverent in tone, and furnishes many sidelights on the interpretation of the Gospel narrative and teaching. Every chapter is marked by broad scholarship, clear expression and good judgment. The whole subject is presented in a worthy and untechnical way that invites the consideration of the candid reader.

## Literary Notes

....*Chundra Lela,* by Rev. Z. F. Griffin, is the story of a Hindu devotee who afterward became a Christian missionary. The record of her early experiences is given almost entirely in her own language. (The Griffith & Rowland Press; 50 cents).

....A discriminating and frank discussion of the questions involved will be found in *The Moral Condition and Development of the Child* (Doran; 75 cents), by W. A. Wright, Ph. D., D. D. The matter is handled in a fresh way and the style is brisk and attractive.

....Choice selections from the spoken and written words of Robert Collyer have been made by Imogen Clark and put into the form of *Thoughts for Daily Living* (Boston: Am. Unitarian Association; $1). Both the contents and the cover suggest its appropriateness for a religious gift book.

....Those interested in the movement for Commission Government in American Cities should see the November number of the Annals of the American Academy of Political and Social Science (Philadelphia; $1) which contains within its 300 pages 29 articles on principles, plans, problems, results and objections.

....The author of "Brain and Personality," Dr. William H. Thomson has supplied much food for religious thought in his new book on *Life, Death and Immortality* (Funk & Wagnalls; $1) in which he considers some of the great mysteries from the standpoint of a man of science. His conclusions will be a support to faith.

....The literature of the United States will be taught for the first time in South America at the University of San Marcos, at Lima, Peru, said to be the first established university of the New World. That institution has included it in its curriculum for the ensuing scholastic year, according to a report from Consul General William H. Robertson at Callao to the State Department.

....From the Rev. Dr. G. Campbell Morgan's rapid pen come three new volumes which will interest many readers. Another installment of *The Analyzed Bible* is added to the volumes already published in that series, treating in analytical fashion the *Book of Genesis* ($1). Two volumes are at hand in the series of *Living Messages*, which set forth the truths of the Bible in a synthetical way. *Genesis to Esther* and *Job to Malachi* (each $1) cover the Old Testament, and present the gist of the messages of these books in sermonic form. (Revell.)

[illegible] addresses which Canon Henson delivered before non-conformist assemblies last spring on phases of Christian union are now published with an Introduction and some sermons on the same subject in a small volume entitled *The Road to Unity* (Doran, 75 cents). Canon Henson hopes for better things thru mutual understanding and appreciation.

....Prof. Hugh Black has added a fourth volume to his Friendship Series, dealing with the subject of *Happiness* (Revell; $1.50). Like his previous books, it is characterized by a pleasing style, cheerful tone and religious outlook. Professor Black has sought with much success to put his philosophy of life into the terms of daily experience and allow it to be tested by the many instead of judged by the few.

....*The Marriage Portion*, by H. A. Mitchell Keays (Small, Maynard; $1.35), like the writer's former novel, "The Road to Damascus," is a story of the romantic side of faculty life. The professors, their wives, daughters and sweethearts, are human, "all too human" as here depicted, and surprisingly unmoral persons. We had thought that most of the professorial group were swayed by convention, but in *The Marriage Portion* conventionality seems a discarded cloak.

....The first part of II Corinthians contains Paul's conception and defense of his apostleship, and is thus the most elaborate biblical discussion of the principles, motives and ideals which are involved in the Gospel ministry. Prof. A. T. Robertson, of the Southern Baptist Theological Seminary has elucidated these chapters and applied Paul's lofty interpretation of his mission to the problems of the preacher today in a book of encouragement and good cheer entitled *The Glory of the Ministry* (Revell; $1.25). Dr. Robertson writes with large sympathy for the men who face trying conditions in the ministry of the present time, but he believes that it is quite possible for the true preacher to participate in Paul's exultation and joy.

....The George H. Doran Company is issuing a series of theological works in uniform style at the very moderate price per volume indicated in the title, *Dollar Library*. The list comprises books by various well known theological writers which have proved to be of more than temporary value in directing religious thoughts. We have already received Fairbairn's *Philosophy of the Christian Religion*, Brace's *Gesta Christi*, and two of the earlier books of the late Prof. A. B. Bruce, *The Training of the Twelve* and *The Parabolic Teaching of Christ*. Other volumes are promised in the near future.

## Pebbles

MAN is the only creature endowed with a soul and a face, with the option of saving whichever he likes.—*Puck.*

"DOES your wife want a vote?"
"She wants two," replied Mr. Meekton; "mine and hers."—*Washington Star.*

"Is this fresh air experiment of yours a tentative one?"
"Quite so. I'm camping out."—*Baltimore American.*

KNICKER—What influenced your son in his choice of a college?
Bocker—He picked the one whose yell was best suited to his voice.—*Yale Record.*

"YES," remarked the telephone girl as she gazed out at the waves and wondered what their number was, "I am connected with the best families in our city."—*Catholic Universe.*

WE read of one man who was mistaken for a woodchuck and shot. There is one thing in favor of mushroom hunting—an innocent bystander is in no danger of being mistaken for a toadstool.—*Toledo Blade.*

"SHINE yer boots, sir?"
"No!" snapped the man.
"Shine 'em so's yer can see yer face in 'em," urged the bootblack.
"No, I tell you!"
"Coward!" hissed the bootblack.—*Ladies' Home Journal.*

PEMMICANIZED POEMS.

### The Iliad.

BY MR. HOMER.

The verb "pemmicanize" derives from the noun pemmican, and means "to reduce to pemmican"; and pemmican means—Odd, isn't it? Almost everybody owns a dictionary.

Helen, knitting, rolls her eyes;
Paris, naughty, cops the prize.
"Here the gossips will betray us;
Skip and sting old Menelaus."

Awful scandal to the Greeks;
Menelaus vengeance seeks;
Loudly holler hoi polloi;
Boats set out to conquer Troy.

Gods mix in and ten years spent;
Much artistic temperament;
Agamemnon bokoo say,
Takes Achilles' girl away.

Hector gets a dirty deal;
Arrow in Achilles' heel;
Gents get cloven to the chine;
Rough house all along the line.

Old Cassandra prophesies,
Doesn't get a single rise;
Alternating gloom and joy;
Curtain cue: A horse on Troy.

*Chicago Tribune.*

# The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

## The Peace Treaties

It is expected that the Senate will take up for consideration, the second week in January, the peace treaties negotiated by President Taft with England and France. Will the Senate ratify or reject them? This is the most important question now before the American people.

The majority of the Committee on Foreign Relations, headed by Senator Lodge, has reported against the provision in the treaties in which the question as to whether a given dispute is "justiciable" or not may be referred to the commission of inquiry for arbitration. They do this on the ground that such a provision is "unconstitutional" and "breeds war."

The argument that this provision is "unconstitutional" is specious for the following reasons: The Constitution provides that the President "shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur." That power is absolute, and without qualification or reserve, except that it must not otherwise infringe upon the Constitution. No Senator contends that the treaties make any such infringement. Therefore the Senate can ratify a treaty referring any or all questions to arbitration. Tho they have never yet sanctioned a treaty of absolutely unlimited arbitration, because no President has yet submitted one to them, they have the right to do so whenever the proposition is submitted. They have, however, sanctioned some twenty-three treaties with our sister nations in which all disputes, save those involving "national honor," "vital interests" and the "interests of third parties" are referred to arbitration. President Taft now invites them to sanction treaties in which all disputes, save those that are not "justiciable," shall be referred to arbitration. The majority of the Foreign Relations Committee make no objection to this provision. But when the President asks them to refer to arbitration the mere detail of whether a question is or is not "justiciable," they balk on the ground that they are abdicating their treaty-making functions under the Constitution. As arbitration in the first instance is much more far-reaching and all-inclusive than in the second, tho nowise different in principle, it follows that they are swallowing a camel and straining at a gnat.

Looking at the question from another standpoint, we may say that the special commission of inquiry, under the proposed treaty, must exercise either an administrative or judicial function. If it is administrative, Senators can have no objection to it on principle, for they have frequently delegated administrative power to bodies like the Interstate Commerce Commission, while the President, in certain reciprocity treaties, has been allowed to fix rates on his own discretion, and an act of Congress is in force even providing that

> "the Postmaster-General, by and with the advice and consent of the President, may negotiate to conclude postal treaties or conventions, and may reduce or increase rates of postage on mail matter conveyed between the United States and foreign countries."

If, however, the function of the commission of inquiry is not administrative, but judicial, then the Senate on principle has the equal power to refer to it a specific subject for arbitration. To deny this is to deny that the Senate can make an arbitration treaty, which is contrary to fact, and therefore an absurdum.

The argument of Senator Lodge and his misguided colleagues that the treaties

breed war" is hardly possible to discuss seriously and respectfully. What does the great State of Massachusetts, the torchbearer of the world's peace movement, say to such casuistry on the part of her senior Senator? There are now two methods in existence for the settlement of international disputes. One is war, the other the Hague Court. A nation can choose either alternative with perfect legality. But here appears President Taft, who has actually succeeded in securing the promise of Great Britain and France to abandon war and hereafter settle all disputes at The Hague that can be settled by a court of law. He proposes, in other words, to give the Hague Court *jurisdiction*. That is the greatest step ever taken by a man in his position in all history toward the goal of universal peace. And Senator Lodge says it "breeds war"!

Now, despite all the quibbles of the opposition, it looks as tho the treaties will be ratified. Still, we advise no one to abate one jot or tittle of his supreme endeavor to exert whatever influence he can upon the Senate during the next few weeks. The great Olney-Pauncefote treaty of 1897, between Great Britain and the United States, failed of passage in our Senate by only three votes of the required two-thirds majority. Two votes cast the other way—the ballot of a single State—would have saved the day. It is not unlikely that if the treaties fail at the present session the vote of one State may be the deciding factor.

There are forty-eight States in our Union. Will the people of any one of them run the risk of letting their servants in the Senate put back the whole peace movement a generation?

Let every man, woman and child in America now support President Taft in his great "Declaration of Interdependence."

## Persia Overpowered

A CERTAIN man was on the road from Susa to Persepolis. He was weak with travel, and he was sore, and tottered and stumbled on the way, but he had not yet lost courage and hope that he would reach the end of his journey. And it happened that a certain skilled physician past that way, and he gave him wine and assured him that he would soon be strong. But as it happened, there were two strong men who had been following the traveler, and they had agreed that they would strip him and divide his goods between them. But when they saw the physician helping him, and feared he would escape them, they rushed upon him with violence. He was unarmed, and the physician had no sword. With swords and spears they drove the physician away, for he could not resist, and then they took the traveler's goods, and left him lying wounded to die on the highway. When did this happen? Last week.

We do not say that these two strong men were equally cruel. One of them would have left him a little money to continue his journey, but the one named Russia was the stronger and more determined, and the one named Great Britain yielded and gave help. Is it a parable, a fable? No, it is very truth.

Consider the shame of it all. Persia was weak, and was trying with good hope to organize a worthy republic. It had patriotic citizens, but the nation had been debilitated and impoverished by a very bad government. This it had overthrown. The Shah had been expelled. In order to reorganize its finances on a sound and honest basis it had called a skilled American administrator and committed its interests to him. But meanwhile Russia and Great Britain had resolved to divide the control and ultimately the possession of Persia between them, and the able and hopeful effort of Mr. Shuster to aid the young republic to independent strength did not please them, so Russia took a miserable pretext to drive him out, and Great Britain assented, perhaps unwillingly. This is not yet formal annexation, but when Russia takes the administration of Northern Persia and drives out its officers by force of arms, it is virtual annexation; and when Russia takes Northern Persia we may expect Great Britain to take her half. Is it not now the ethical principle of the robber nations that when one seizes territory the others must have "compensation."

The world has seen a disgraceful act done. It is the good old rule, that they should take who have the power, and they should keep who can. They could,

and Persia could not prevent it. Where was the Nonconformist conscience we used to hear of? And where were the provisions of the Hague Conference? This was just the case in which Persia would have been justified in summoning Russia before the Hague Court, if there had only been time; but Russia gave her no time. Russia simply laid down the ultimatum, "Submit, and do it immediately. Dismiss Shuster straightway or we will enter Teheran with an army and put him out."

So Persia is overpowered. The beautiful resolves of the Powers at The Hague are despised and flouted. A country of magnificent history and good promise is humiliated and its very nationality seems likely to be absorbed, even as Poland was divided between its stronger neighboring states. The story is a shame to the twentieth century. We can take only the slender satisfaction that it was an American who tried to rejuvenate the memories and the might of Susa and Persepolis.

## An Eastern Republic

As we write the question of the future of China is yet under discussion, whether it is to be a republic or a monarchy, or whether China is to be divided, the northern part a monarchy and the southern portion a republic. Apparently two men—Yuan Shih-kai and Wu Ting-fang—must settle that between them; a tremendous responsibility to rest on the shoulders of two men.

Meanwhile two Powers of the first rank, Great Britain and Japan, who are in close alliance with each other, and who claim to have a predominant interest and influence in the East, even as against Russia, might be united in favor of the monarchy. There is every reason why they should, for that is their own form of government. Japan is close at hand, and were China to become a republic, and then to develop a national consciousness, as she is very rapidly doing, and with it to adopt all the implements and powers of modern Western civilization, as she is sure to do, she would be an undesirable neighbor to Japanese imperial government. The Japanese are a people who would be quick to desire the utmost democracy conceivable, no matter for how many centuries they have been taught the doctrine that every blessing is the fruit of the virtue of the Mikado. Japan has had one tremendous political and social renovation within half a century, and this gives promise that they might have another. Japan would not prefer a republic just across the Eastern Sea, only a few hundred miles from Nagasaki to Shanghai, or, indeed, only just over the border of Korea.

But the interest of Great Britain in the question is much more intimate. The victory of Japan over Russia in the late war had a tremendous influence on all Asia. It gave rise to the cry over the whole continent of Asia for the Asiatics. It was felt in India, and it must remain a disturbing factor there. If Japan can withstand the Great Bear of Europe and maintain her own supremacy, many an intelligent and ambitious native of India has asked and is still asking, why India should remain subject to a European Power. It is not enough to answer that in no period of its history has India been so peaceful, for sentiment, the sentiment of patriotism, and the desire for self-government, often rise far above material advantage. If, now, China should create another mighty revolution in the East, and should overthrow its Manchu throne and establish a republic, the influence in India would be very great, and might be dangerous for the rule of Great Britain. The maintenance of the present imperial government in China, even under a constitution, would have little effect in India, but a republic would be startling and provocative.

We may then anticipate that every influence that these two allied Powers, Great Britain and Japan, can use to strengthen the hands of Yuan Shih-kai will be put forth. We believe the people of China are tired of an Emperor and his court at Pekin, and would abolish the dynasty. We call attention to the appeal of Wu Ting-fang to the nations of the world, which we print on another page. It gives admirably the case of the people for a republic. It calls attention to the fact that China has no privileged class of nobility, as has Japan, and as has Great Britain. Drop the Emperor and the country easily falls into a republican form of government. Our own Government will be appealed to for support of

the form of government for China which we reject for ourselves. A multitude of young men in China, taught in this country, familiar with its institutions, led by one who as Chinese Minister to Washington had every opportunity to learn what a republic is, and who diligently improved his opportunities, believe an Emperor is neither a help nor an ornament in national development. We trust that our Department of State will be so far true to the principles of our own institutions that it will not aid other aims of Great Britain and Japan in China, but will consider the people of China themselves. Even more true is it that it would be a shame for our Government to make a fifty-million-dollar loan in which American bankers have a share, an influence for helping the imperial party as against the republican. A great Chinese republic would be a majestic spectacle to the world, and safer for the world than any centralized imperialism.

## John Bigelow

THAT years add dignity no one can deny, but only to a life which is in itself worthy. Hoary hairs are a crown of glory, but not unless they are found in the way of righteousness. No one could see John Bigelow in his later years—and it is only in his later years that this generation has seen him—without being struck with his dignity of carriage, the appearance of which was enhanced by the thought that before those who saw him were born he was doing a full man's work with distinction for his country. He died in his ninety-fifth year, and only a few months ago he delivered over to the City of New York the Astor, Lenox and Tilden libraries in order to create one great public library, in an address of singular spirit and propriety. Be it remembered that it was seventy-six years ago that he graduated from Union College, and that he was United States Minister to Paris five years during the Civil War. When he came to New York to enter on the business of law the city was only a small town. It was not built up above Houston street, and the omnibuses did not run above Twelfth street. Beyond was all vacant lots, orchards or pastures.

During all these years, even to his last days, Mr. Bigelow was a servant of the public. By the time he was forty years old he had acquired a sufficient property, so that he could give himself to public affairs, for he felt that it was his privilege and duty to serve not himself, but the people. He wrote much on public questions, an associate with William Cullen Bryant in the ownership and conduct of *The Evening Post*, and was ready to accept the position of Consul-General and later of Minister in France. It was the critical period in our history, and most delicate and important service had to be done wisely and strongly. He loved Paris, and while living there devoted himself also to important historical researches in the life of Benjamin Franklin, who was his predecessor at that court, and he published most of the result of his original studies.

He was a prolific author, confining himself mostly, except in his last years, to history and economics. It was in 1850 that he published his studies, after a visit there, of the conditions in Jamaica after sixteen years of freedom from slavery. Then followed his "Life of Fremont," for he was one of the founders of the Free Soil party, and lives and works of Franklin, Tilden and Bryant.

He was attracted to these men from his love of public affairs. As appears from his early association with Martin van Buren in political anti-slavery, he was devoted to freedom and equality, and this directed his earnest passion in behalf of freedom of trade and against protection. On this subject he wrote much, and yet he did not desire to create a business convulsion by a sudden abolition of tariff duties. He would have had them gradually reduced, year by year, so that trade could accommodate itself easily to a more legitimate and equal basis. He was a believer in woman suffrage, but even this was in his mind associated with free trade, as when he said:

"The exclusion of women from the franchise, like the discouragement of our foreign commerce by the tariff upon our imports, results exclusively from the greed and selfishness of men. Whenever the word has gone forth from Washington that every custom house on the coast of the United States has been converted into a storehouse or a school

house, I think we will be able to name about the time when women will get the franchise."

At present it looks as if he had put off too far the time for the enfranchisement of women; but he said later:

"Air ships! Wireless telegraphy! The new things are innumerable. But the tariff we have always with us."

One cannot gain a full account of the breadth of John Bigelow's interests un-

JOHN BIGELOW IN THE STUDY OF HIS HOUSE IN GRAMERCY PARK, NEW YORK

The photograph was taken last winter, and shows the author-statesman surrounded by the books he read, in the ninety-third years of his life. Mr. Bigelow dictated the third volume of his uncompleted "Retrospections of a Long Life" in this room in the course of the same year.

less he considers his spiritual and mystical side. In 1882 he wrote a "Monograph on Molinos the Quietist," and in the last few years, besides his "Recollections of a Baby Life," he published "The Useful Life a Crown to the Simple Life," "What of Man is Not His Own" and on "Dreams." His tone of mind led him to take special interest in the "correspondences" of Swedenborg, and for years he was connected with the Church of the New Jerusalem, and he presided at the fiftieth anniversary of that church in this city, and told how he had, fifty years before, when in the West Indies, begun the study of Swedenborg's works, and had devoted much time to them for twenty years.

John Bigelow was an aristocrat in his tastes and a democrat in his principles. He was an idealist and yet a man of practical affairs, but his activities were based on solid principles. He was a dreamer of dreams and a seer of visions, and yet intensely interested in organized politics. He loved his country devotedly, and during the Civil War published a book in France to warn Frenchmen against being misled into supporting secession. This he could do with authority, for he was during that war our Minister to Paris. He was one of those broad, balanced men who are called on for advice and service, and he never thought himself too old to seek to serve his country. Such men are the crown of glory to the nation.

## The Tariff in Congress

MR. TAFT has sent to Congress the report of the Tariff Board concerning wool and woolen goods. It is the result of a careful and non-partisan inquiry as to costs of production here and abroad. It makes no recommendations, but it shows plainly, as the President says, that many of the tariff rates are prohibitory and greatly in excess of the difference in production costs. He asks Congress to reduce them. How much should be cut off he does not say. Nor does the Board's report show to what point the rates should be shoved down. It does not show this because there is a broad range of costs of production here as well as in other countries. The cost of producing wool is nearly twice as much in some wool-growing States as it is in others. The cost in South America is a little more than half of the average here; the cost in Australia is said to be little or nothing, because of the revenue from mutton. It will be seen that it would be impossible for the present Board or any other to say what that difference is, which, according to the Republican doctrine of protection, should be covered by a tariff duty. There are similar difficulties with respect to the cost of woolen goods.

There is a difference in favor of the foreign producer, and the welfare of our wool and woolen goods industries depends largely at present upon protective duties which take it into account. But the duties are too high. Congress must say how much should be taken off. It has the aid which is given by an admirable report of facts, but this report is not a guide that shows just what the rate should be.

Both parties now hold that there should be a large reduction. To this extent they are in agreement. The Republicans would have the new rates determined in accordance with the protective doctrine that the difference in production costs should be covered by them; the Democrats would have them fixed without regard to protection, but in accordance with the doctrine that such duties should be for revenue only. In fact, however, in this matter the two parties are not far apart. The same schedule of reduced rates might satisfy both and be in accord with both of the two contending doctrines or principles.

But no one expects that there will be an agreement in Congress as to the wool and woolens schedule or any other. It is difficult to predict with confidence what will take place, but there will be a Republican bill and a Democratic bill, and there are indications that the Democratic bill will not be accepted in the Senate, while the Republican bill will find no favor with the House majority.

It is unfortunate that the two parties cannot now, as both seek reduction, come together, agree upon reduced rates and unite in subjecting the schedule to thoro reform. This could be done without a surrender by either party of the

doctrine to which it is loyal. But a Presidential campaign is at hand, and each will maneuver for advantage. On the Republican side the maneuvers will really be for defense, altho some in that party at Washington do not appear to think so. It is asserted by careful observers there that a considerable number of Republicans desire to make the tariff an issue in the campaign, upon the basis of the Tariff Board's report and an expected refusal of the Democrats to give it weight. We do not see that the Republican party can hope to gain anything next year from a campaign discussion of the tariff. If its leaders are wise they may do something to reduce a little the weight of the burden imposed by the Payne-Aldrich revision of 1909, but that revision promises to be like a millstone attached to the party's neck.

## The Political Suffrage

THE new year will not bring votes to women in England and it will give women in the United States who now have the ballot a chance to show what they intend to do with it rather than the emotional exhilaration of seeing a considerable lengthening of the list of commonwealths in which adult suffrage, regardless of sex, prevails. From the standpoint of men and women of the soberer sort among women suffragists the American situation is not deplorable. From the standpoint of the serious minded, regardless of bias on this question, the English situation is not reassuring.

For many years a million more or less of English women, representing a good deal of property, education and social dignity, have enjoyed the municipal franchise. About 2,500,000 English men have not yet obtained the right to vote. By comparison with the women who vote on municipal matters these men are not desirable factors of the collective British sovereign. They are propertyless and relatively ignorant. A business man would much prefer to take the advice of the million half enfranchised women to that of the two and one-half millions of unenfranchised men.

It is not a secret that the English suffragets have been fighting for the full enfranchisement of the women who already take some part in public affairs, by voting on municipal matters. Not many of the suffraget leaders have felt it wise to demand universal adult suffrage. Such a measure would at one stroke add 13,000,000 of voters to the British electorate, and no government would dream of seriously proposing so radical a step under any circumstances, and particularly in a country where it would give woman a balance of political power, with a clear majority of a million women voters in excess of men voters.

This is the juncture at which Mr. Asquith and Mr. Lloyd-George, with a cleverness which the suffragets regard as little short of diabolical, come forward with a propositon to give the ballot to the 2,500,000 unenfranchised men. Such a bill will naturally obtain support from many groups. Some radicals will approve it, on principle. Anti-woman suffragists will generally see in it an effective device for the time being. Various political interests will calculate what they have to obtain by appealing to the new electorate. Nobody will for a moment believe that the bill can be amended to include 11,000,000 women.

It is generally conceded that if the democratic demand for "one man, one vote" shall be conceded in England before the better qualified women are given the parliamentary suffrage, it will indefinitely postpone the full enfranchisement of women, for it is only the more radical political groups, including, of course, the Socialists, that do not shrink from admitting to the full franchise several millions of extremely ignorant, very poor women, admittedly good material for the mob spirit to play upon.

Political cleverness does not always accomplish its purpose, and it may seriously be questioned whether the English Government is not making a profound mistake in this case. England is facing serious issues. In no other land is the non-property owning population so enormously preponderant over the property owning minority. In no other are the political forces hurrying the state so rapidly into radical experimentation. The political enfranchisement of the million well qualified women who have the municipal franchise would be a conservative

measure. To withhold the ballot from them, and give it to two and a half millions of admittedly ignorant, and, all in all, rather brutalized men, is a perilous step.

**Why the Chinese Hate the Manchus**

This question is often asked. The Manchu rule has continued for 260 years, and the Chinese hate it as much as ever. It is not so much because they are an alien race, for they are not very alien, and they have adopted many Chinese customs. Nor is it because they compelled the Chinese to wear the queue, for they got quite as much used to it as Armenians have to the red Turkish fez. The real reason is to be found in the words of the baby Emperor in that most remarkable edict of October 30:

"When I urge reform, the officials and gentry seize the opportunity to embezzle. When old laws are abolished, high officials serve their own ends. Much of the people's money has been taken, but nothing to benefit the people has been achieved. On several occasions edicts have promulgated laws, but none of them have been obeyed. The people are grumbling, yet I do not know; disasters loom ahead, but I do not see."

Poor little baby of five years! Poor China! But the confession penned by the Prince Regent is true. The chief cause of discontent has been the rapacity of officials. Now China rebels, and it is not unlikely that she will be the first Eastern republic, for the slow-moving East has begun to move at last.

**A New Educational Authority**

Senator Boynton, of the California Legislature, is a graduate of the University of Michigan. It is not without interest to observe what kind of resolution so well educated a gentleman has introduced into the State Senate. The preamble asserts that at a meeting of a teachers' institute an address was made asserting that there was no oppressive justification for the War of the Revolution, and that the Boston Tea Party was a case of malicious destruction of private property. To prevent such teachings of disloyalty the bill proposes that no such teaching shall be allowed in the schools of California, from the kindergarten to the university, and that the Governor be requested to make investigation, and if he finds any textbooks used or any teachers employed guilty of teaching "such false and disloyal and iniquitous" views, he take steps, "to weed forever such traitors out of the school system of California." If such a resolution, now sailing joyously thru the legislature, should be passed, there will be no need hereafter for historical research; the legislature may tell us what to believe, like the Vatican's Biblical Commission.

**Ordinations**

Dr. Newman Smyth proposed some time ago to get over the infelicity under which clergy of the Protestant Episcopal Church are not allowed to recognize as ecclesiastical equals ministers of other denominations not episcopally ordained, by a dual, or, rather, a composite ordination in future of candidates for ordination in non-episcopal Churches. He would have Episcopal bishops invited to take part in such ordinations, adding their supposed apostolic succession to the merely spiritual succession of other Churches. Propositions of this sort have failed of assent, and now Mr. Seth Low, formerly president of Columbia University and Mayor of New York City, makes a somewhat wider proposition. He observes that there is difference among denominations as to valid ordinations, and he proposes to unite the denominations in their ordination services. He would have a number of them, thru their Catholic and Protestant, Episcopal and Presbyterian ministrants, present and take part in ordinations, so that whatever supposed virtue each could give would be imparted, and if this were carried on for a generation or so, all clergymen would receive ordaining grace of every sort, and nobody could find fault. But the fact is that Catholics could not be persuaded to take part in such a service; and among Protestants there is no trouble about this question of orders except with a single denomination, which requires ordination to be by bishops. This process would provide ordained ministers to satisfy everybody, but not ordaining bishops. Further, we do not believe that Mr. Low could persuade his

own General Convention to allow such a mixt service. It has not yet even joined the Federation of Churches. Again, we fear that it would not be easy to convince the non-episcopal Churches that it would be right for them so far to give countenance to what they believe to be a superstition that they would invite bishops to come and by putting hands on the heads of the candidates to convey what they hold to be an imaginary grace. Union when it comes must be spiritual, not tactual.

**Potash**

The diplomatic clash with Germany over the potash contracts resulted in a failure for our claims. Unlike our own treatment of monopolies, the German Government favors and helps them, and when the German potash mines get to cutting prices competitively, the Government stepped in and compelled the breaking of the foreign contracts at reduced prices. This set our Department of Agriculture to searching for sources of potash in this country, for we are sending $15,000,000 to Germany for potash as a fertilizer, as Germany has a practical monopoly in its mines. Congress allowed $12,500 to the Department of Agriculture and $20,000 to the Geological Bureau for the search for American sources. The drillings failed to reach any available potash beds, and the effort to extract the desired substance from salt brines gave little hope of any available supply. Then after searching the continent, Secretary Wilson explored the ocean, and there he seems to have found what he wanted and our farmers greatly need. Along the California and Oregon coasts there are dense forests of seaweed or kelp, some of them five miles long and two miles wide. The two principal species grow a hundred feet long, and if cut they will reproduce themselves annually. They take in potash salts from the ocean, as plants do from the soil, and a quarter or more of their weight is in potash salts, available for agricultural use. The Department reports that a million tons a year can be obtained, worth $40,000,000, while the by-products, such as iodine, could be made to pay the cost of extraction. This alone will justify all the expense of the Department of Agriculture, if these anticipations prove correct, and we see no reason why they should not. Japan has already set the example.

**Changing the Calendar**

The *Gaulois*, of Paris, a royalist paper, is responsible for the announcement that the Pope has resolved on changing the liturgical year. Up to now Easter has been fixed in sequence to the course of the sun. It came on the Sunday following the fourteenth day of the vernal moon. It thus ranged from about March 23 to April 25. Hereafter, beginning with 1913, Easter will be celebrated on the first Sunday of April. Hence the feasts of Ascension, Pentecost, Trinity, Corpus Christi, Sacred Heart as well as Lent will be no longer movable, but practically immovable, for the first Sunday can only fall between the first and seventh day of the month. This fixedness affects Lent also, as well as the number of Sundays following the Epiphany and Trinity. Among Catholics the real beneficiaries, who, too, may have had a hand in the new Easter date, are publishers of liturgical books. Again, the hard-working every-day priest will no longer have to carry two breviaries toward the close of the various seasons of the year. But how about the Protestant Churches, who, on leaving Rome, carried along not only the fundamental doctrines, together with scholastic philosophy, but also in great part the liturgical year. In adopting the old Catholic rite of Salisbury — the Sarum—the Anglican Establishment took it all. The others observe Lent, Easter, Pentecost, Trinity and so on like Catholics. Now Anglicanism and orthodoxy must conform or else present to Christendom a double liturgical season. This exists in Russia and elsewhere wherever the Greek Church is found, nor will it pay any attention to this latest Roman departure. How about those States of the Union where Good Friday is a legal holiday? In the statute creating it they implicitly accepted the Roman Good Friday. Should Rome and the Protestant world divide, where will the States stand? It all seems a fair warning to our legislatures to hold aloof from any identification with Church festivals.

Greek in Oxford and America

We have noted the fact that convocation—which means the 7,000 graduates who have the Oxford degree of M. A., have defeated the proposal to allow candidates for honors in mathematics or science to enter without offering Greek; that Greek is to be compulsory in the future as in the past—correspondence since received shows that this result was reached in opposition to the advice of the majority of the best Greek scholars in England. The professor of the department in Oxford is the distinguished Grecian Gilbert Murray, whom we expect to see in this country the coming spring, warned the M. A.'s that if they resisted the result might be the total abolition of Greek as a requirement for any applicant. By a vote of two to one the resident teachers in Oxford favored relaxing the present rule to the extent proposed. They are the ones responsible for the conduct of the university, and are educated in Greek, but they see no sense in requiring students of science or mathematics to know Greek, any more than in this country the Hebrew professors think that all theological students should give one or more years to the Hebrew language, which they will have quite forgotten five years later. Professor Murray does not at all wish Oxford to go as far as our American universities and colleges are going, which now so generally make Greek optional to everybody who seeks a degree. We here need more Greek rather than less, and we hope that a result of Prof. Gilbert Murray's visit to Amherst will be to help classical culture.

We have recognized the fact that a certain element—we are glad to believe a minor one—in the Federation of Labor really favors violence and even murder. It calls itself Socialistic, but is not truly such, but being really anarchistic masks under the name of Socialism and tries to capture the labor organizations. Such a Socialist body we have here in New York, and the other day it called William D. Haywood, who escaped conviction for the murder of Governor Steunenberg, in the labor troubles of Idaho, to speak to them on the McNamara dynamitings. He gave them what they wanted. He told them that he was not a law-abiding citizen, and they ought not to be. He was with the McNamara boys. He believed in coercion, direct warfare, and he gloried in the dynamitings. That is, he incites to riot and murder, and he finds adherents.

We observe that the assumption of the government of the Kongo by Belgium has led to real reforms in administration. In the Belgian Chamber of Deputies an investigation has been ordered into charges that certain Belgian missions were distilling and selling alcoholic liquors and using corporal punishment, such as chaining and flogging, forbidden by law, and that officials were still seizing by force natives as laborers. Nevertheless, the general testimony is that the barbarities which shocked the world have been greatly reduced.

There has been widely distributed an anonymous attack on the Charity Organization Society, of this city, charging that it expends only 26 per cent. of its receipts on the relief of the poor, while the rest goes for salaries and office expenses. That is true, and it is right, for the society was not organized to give relief, but to make investigations, to conduct a school for charity workers, and to combine the activities of several societies for the amelioration of social conditions. The reports made do not at all justify the attack.

One of the recommendations of the Farmers' National Congress in Columbus in October, which we failed to mention in a late issue, was a demand that Congress enact a law which would forbid those engaged in interstate traffic to carry intoxicating liquors into "dry" territory. The Supreme Court has declared State laws to this effect unconstitutional, and if a Federal law can save the prohibition States from being flooded by liquor introduced for the purpose of selling it illegally, a real evil will be corrected.

We are requested by the Christian Science press representative to correct our statement that the mother of the child who died of diphtheria was convicted for not calling in a physician. We are told that the case was indefinitely postponed.

# Insurance

## Fire Prevention Day

THE Southwest of today is not backward, whatever might have been said of it in years "befo' de wah." Insurance Commissioner Ballard and State Fire Marshal Hammonds prepared a program for the celebration of Fire Prevention Day in Oklahoma, and the celebration was held on December 15. To insure a success the program was sent to all the teachers in the schools of the State, with the request that they emphasize the importance of the occasion to the school children. The program included, in addition to "America" as an opening song, and the reading of the Declaration of Independence, essays or compositions on "Some Fires I've Seen," "The Chicago Fire of 1871," "The Iroquois Theater Fire," "The Collinwood School Fire," and "Fire Waste and How to Prevent It," together with recitations appropriate to the occasion.

Statistics do not make the most interesting "copy" for essays, but statistics of our fire losses are at least impressive. The fire loss in the United States and Canada for the month of November was nearly nineteen millions, according to the *Journal of Commerce*. The comparative tabulation by months is as follows:

| | 1909. | 1910. | 1911. |
|---|---|---|---|
| January | $20,735,000 | $15,175,400 | $21,922,450 |
| February | 16,131,000 | 15,489,350 | 16,415,000 |
| March | 13,795,400 | 18,465,550 | 31,569,800 |
| April | 19,245,300 | 18,991,800 | 17,670,550 |
| May | 17,360,400 | 18,823,200 | 21,422,000 |
| June | 14,431,000 | 13,183,600 | 20,601,950 |
| July | 15,830,900 | 26,247,900 | 25,301,150 |
| August | 16,423,000 | 21,579,550 | 12,662,650 |
| September | 15,943,000 | 11,500,000 | 11,333,250 |
| October | 17,765,200 | 33,183,300 | 13,945,000 |
| November | 14,268,550 | 16,407,000 | 18,686,600 |
| Total 11 mos. | $182,674,650 | $212,942,650 | $211,614,400 |

The principal losses of the month were: London, Ont., business buildings, $870,000, and Ogden, Utah, business buildings, $750,000.

CATTLE insurance has been common in Germany for more than a century. In 1909 there were twenty-eight large mutual aid and seven private companies doing this class of business. The cattle insured with German societies represent a capital of about $175,000,000.

Says the London *Insurance Journal* of the British workmen's compensation system:

"The 'fine art of malingering!' Whatever be the future in store for the other arts, this appears to be distinctly developing under the fostering influence of the compensation acts. A recent case in a London police court illustrates the danger. A builder's laborer claimed compensation for injury to his fingers, which had been crushed in November last year, and since then he had not tried to get work. The medical referee who examined him said that if the man had gone to work when apprised by the doctor, he would now be perfectly well. The judge thought the man had behaved very unreasonably, and made an award for one penny a week without costs. The exaggeration of claims for alleged injury, real or fictitious, seems likely to be increased rather than diminished by the operation of Mr. Lloyd George's unemployment insurance bill. Friendly societies, as they now exist, are deeply and intensely interested in preventing malingering in any of its forms. Under the bill they will be released from all anxiety on this score. Government will be bound to see that every member gets his full benefit for his payments, and the loss must fall on the national exchequer, which will have no power to reduce the sick rate."

SAVINGS bank life insurance seems to be passing beyond the experimental stage. Dividends were declared last week by the insurance departments of the Whitman Savings Bank, at Whitman, and the People's Savings Bank, at Brockton—both in Massachusetts. Five thousand policyholders are interested in this new form of insurance, and more than two million dollars of insurance is in force.

THE Pennsylvania Insurance Department has filed its report upon the examination of the Penn Mutual Life. The report shows the company's income in 1910 was $24,231,257.50, of which amount the premiums yielded $18,529,895.90. Of the $16,178,651.80 disbursed the policyholders and beneficiaries received $11,952,162.66. At the end of the year the total admitted assets were $116,803,021.49, which was a gain of $11,149,709.59 during the year. The surplus at the end of the year amounted to $4,611,381.13.

# Financial

## Revised Crop Estimates

IMPORTANT changes in totals were made last week by the Government in its final report on the crops. The quantities heretofore assigned to a majority of the cereals were largely reduced, 200,000,000 pounds were added to the crop of tobacco, and a sharp revision of the quantities reported for last year's harvest gave a new basis for comparisons. For example, last year's crop of corn is no longer 3,125,713,000 bushels, but must be counted as only 2,886,260,000, and 60,000,000 bushels have been cut from the accepted total of last year's crop of wheat. In last week's INDEPENDENT were published the latest official estimates available at that time; with the figures for last year's crops, as they had been accepted for twelve months. Below are shown the final figures for 1911 and the revised totals for 1910:

| | 1911. | 1910. |
|---|---|---|
| Corn | 2,531,488,000 | 2,886,260,000 |
| Winter wheat | 430,656,000 | 434,142,000 |
| Spring wheat | 190,682,000 | 200,979,000 |
| All wheat | 621,338,000 | 635,121,000 |
| Oats | 922,298,000 | 1,180,513,000 |
| Barley | 160,240,000 | 173,832,000 |
| Rye | 33,119,000 | 34,897,000 |
| Buckwheat | 17,540,000 | 17,598,000 |
| Flaxseed | 10,370,000 | 12,718,000 |
| Rice | 22,934,000 | 24,510,000 |
| Potatoes | 292,737,000 | 349,632,000 |
| Hay, tons | 47,444,000 | 60,978,000 |
| Tobacco, lbs. | 905,109,000 | 1,103,415,000 |
| Cotton, bales | 14,885,000 | 11,041,563 |

So far as this year is concerned, we see reductions of 240,000,000 bushels of corn, and 34,000,000 of wheat, with increases of 50,000,000 bushels of oats and 200,000,000 pounds of tobacco. We have already spoken of the revision of last year's figures with respect to corn and wheat. It also adds 50,000,000 bushels of oats, 10,000,000 bushels of barley, 10,000,000 bushels of potatoes, and 119,000,000 pounds (12 per cent.) of tobacco. These changes are required by the reports of the Census Bureau. They compel revision of accepted estimates of consumption per capita, reserves, etc. It is noticeable that the value of this year's crops (cotton excluded) named in the table above exceeds the value of last last year's by $190,000,000, altho this year's quantities are much less.

The executive committee of the Southern Cotton Congress, at a meeting in New Orleans last week, adopted a plan which, it is hoped, will reduce the cotton acreage next year by 25 per cent. There are to be State organizations, with subdivisons for counties and townships. Solicitors will be employed to secure reduction pledges, if possible, from all planters.

*

....The output of petroleum in the United States last year was 209,556,048 barrels, or 14 per cent. in excess of the record output of 1909. This country produces nearly two-thirds of the world's supply.

....A 12-foot vein of anthracite coal, which will yield 10,000,000 tons, was discovered two or three weeks ago near Freeland, Pa., in a place where it had been believed that search for such deposits would be useless.

....Canada's foreign trade in the last fiscal year was increased by $76,000,000, and $61,500,000 of this addition was in commerce with the United States. Great Britain's gain was only $2,250,000. Imports from this country were increased by $51,000,000.

....A recent report from the Census Bureau shows that from 1904 to 1909 the capital invested in the manufacture of clocks and watches was increased by 36 per cent., to $57,500,000, and the value of the output by 18 per cent., to $35,197,000. A gain of 54 per cent. raised to $67,380,000 the capital invested in the manufacture of cutlery and tools, the value of the products advancing by 37 per cent. to $53,266,000. In the manufacture of confectionery 44,638 persons were employed in 1909. They received $24,752,000 in salaries and wages, and the value of the annual output was increased in the five years by 55 per cent., to $134,796,000.
